Appendix

What the Steel Settlement Means to America

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. SMITH of Kansas. Mr. Speaker, I suppose there are many who believe that the settlement of the steel dispute was a grand and glorious achievement for all America—and should be a feather in the cap of those who put it across. To me, however, this is simply the white feather of surrender to international labor union bossism.

It is beyond my comprehension how anyone can believe that this settlement in the long run cannot help but be ruinous to the one Boss McDonald said he wanted to help most—the steelworker. It is a bit difficult to understand how a steel union boss can advocate increased wage rates when he knows full well his actions will cause the import of more steel at ruinous competitive prices. Certainly working on a job at $2.81 per hourly rate is better than an hourly rate of $3.50 with no job.

The whole question involved here is who got helped—if the worker in the steel mills loses his job to foreign competition I am certain this settlement won't help that individual.

I am sure the settlement will not help the thousands of little stockholders all over America—but then it seems fashionable these days not to concern ourselves about any policies except those that benefit big labor, big business or big government. I am sure this settlement was not in the interest of Mr. Average American citizen and of course the American farmer will be hit again because of the increase in steel prices which is sure to follow. There are those that say this would not happen but to increase wages 40 cents an hour during the term of this contract over the next 2½ years cannot help but absorb any increased efficiency that might be installed by the companies if they are permitted by labor bosses to become more efficient.

One has to have his head buried in sands of unrealities not to know that this settlement was dictated by the political power of the Government and union bosses.

The union bosses think they won but in final analysis they lost because the purchasing power of the American dollar will decrease in value. Boss McDonald's statement that this settlement would be lasting happiness to everyone is as empty as hollering down an empty rain barrel.

In final analysis this boss-dictated settlement is a union victory and a further push down the already geared road to inflation.

On the day this inflationary settlement was announced Mr. Roger Blough of U.S. Steel made a public statement relative to this forced settlement. Anyone who heard this statement over the TV, of necessity, must have been impressed with the sincerity of a man who had lost a losing battle with forces that were beyond his personal control. He gave the impression of a general standing undaunted on a battlefield who at last realizes his army and generals have left him.

The conclusion is inescapable to anyone who wants to look at this settlement that this was a labor bosses' victory. The pattern is perfectly clear in that all those in industry and those in Government who have been trying to halt the inflationary spiral suffered a tremendous defeat in the settlement. Can anyone believe that a yearly wage increase of $600 million or more than a billion dollars for period of contract can do anything but add to the inflationary spiral. Some have said this settlement was less inflationary than those in the past—but no one has said it was noninflationary.

This controversy has been called not a dictated settlement by anyone—but fairly arrived at over the bargaining table. This is rather a loose statement because unseen but ever-present economic and political factors sometime wields a bigger club than a czar or boss. Political expediency has facets—and sometimes the true picture shining through these facets is a bit obscure.

There is one picture, however, that stands out in bold relief—who is to protect the unorganized person on retirement pay, those drawing social security or persons who have worked and saved all their life—and those thrifty average Americans who invested in stocks of American industry—continuing inflation—47-cent dollar is ruinous to them.

There is also one very clear question that still has not been answered—who benefited by this settlement—except Dave McDonald, boss, chief architect of the inflationary tide.

In order that some of the basic facts of this steel settlement may be known I herewith append the statement made by Mr. Roger M. Blough, chairman of U.S. Steel on January 4, 1960, over the NBC–TV. I commend it most highly.

WHAT THE STEEL SETTLEMENT MEANS TO AMERICA

(By Roger M. Blough, Chairman of U.S. Steel, speaking for the Steel Companies Coordinating Committee over the National Broadcasting Company's Television Network, January 4, 1960)

Good evening. This is John Cameron Swayze speaking.

The threat of another nationwide steel strike was ended today when the steelworkers union and 11 of the Nation's major steel companies reached agreement on a basis for settling the primary issues in the dispute.

Final contracts should be signed before the week is out, and would assure labor peace in the industry for the next 2½ years at least—that is until July 1962.

The deadlock which had persisted for nearly 9 months was broken today when both sides accepted settlement terms recommended to them by Vice President NIXON and Secretary Mitchell.

The new package calls for increased wages and benefits—including cost-of-living adjustments—which the industry estimates will increase its hourly employment costs by an average of 3½ to 3¾ percent a year over the life of the new agreement.

While this is above the 2.7 percent offer which the companies have described as the "outer limits" of a noninflationary settlement, and which did not cover their provisions for cost-of-living, it is below the previous "rock-bottom" demands of the steelworkers union.

The Government's recommendation also calls for a compromise regarding the controversial "local working conditions" provisions of the previous contracts, and commits each party as a matter of policy to encourage prompt settlement of problems in this area by agreement at the local level. It also provides for an impartial study of the whole question under a neutral chairman with recommendations by November 30, 1960.

This sudden and unexpected settlement—coming, so to speak, in the 11th hour of the Taft-Hartley injunction period—was a welcome relief to officials in Government and brightened greatly the Nation's prospect for a prosperous new year.

Several weeks ago 11 of the Nation's major steel companies who have been spearheading the negotiations, arranged to purchase this time on the NBC network tonight in order to state their case to the Nation, and to seek the views and advice of our television audience regarding the offer they had made to the steelworkers.

The settlement which was brought about today through the intercession of the Government has changed much of that; but it leaves unanswered a number of serious questions about this whole dispute and its probable effects upon the national economy.

What does this new steel package mean to the people of America—and to their pocketbooks? How will it affect the companies, the steelworkers, and the competitive position of the American steel industry? Is it inflationary and, if so, how inflationary?

These are some of the critical questions that clamor for an answer, and it is to provide that answer that the companies will use their time on this program tonight.

My assignment here is to introduce to you the spokesman for these 11 companies. He is Roger M. Blough, chairman of the board of United States Steel. Together with the heads of the 10 other companies, he bears joint responsibility for the stand that the steel industry has taken in these negotiations and for the decision to accept the Government's recommended terms of settlement. So he should know all the answers.

Mr. BLOUGH. That is a very broad assumption you just made there, Mr. Swayze. If there is any answer to the problem that American industry faces when it tries to reach a noninflationary labor agreement, it's pretty obvious that we, in the steel industry, haven't found it.

Mr. SWAYZE. I gather from that, Mr. Blough, that the settlement is not all that the steel industry would like it to be.

Mr. BLOUGH. You gather correctly, Mr. Swayze. We are glad, of course, that it is settled. It had to be settled for the good of the Nation. We are glad, too, that the settlement terms were better than any we had been able to win from the union at any time during the negotiations. And we find great consolation in the fact that these terms appear less inflationary, at least, than any which the steel industry has actually experienced since the end of World War II.

None of his alters the fact, however, that the agreement that we must now live with is not what we tried so long and so hard to obtain.

Mr. SWAYZE. Well, then, how did this settlement come about?

Mr. BLOUGH. I suppose the most accurate way to express it, would be to say that it was imposed upon us—not by Government—but by circumstances, and the circumstances were these:

It was clear that the union—having won substantial settlements in other industries in which it has contracts—was unwilling to agree to terms we thought we could live with.

It was clear, too, that the union had the power to subject the Nation to another crippling strike and might do so.

It also seemed clear that the Government would not permit the Nation to be paralyzed by such a strike; and that it must therefore obtain a settlement, either by persuasion if possible, or by new legislation which might involve compulsion on both sides.

And, looking down that long, unhappy road in the light of the steel industry's past experience, it was apparent to us that an enforced settlement would be no more favorable than the one which the Government had proposed to us; and that, in the process of reaching that enforced settlement, not only the companies but the steelworkers and the Nation might suffer serious consequences.

And, finally, it was evident to us, after much study and exploration of the matter, that the terms which had been carefully worked out by Government officials were probably the only terms which could conceivably win even reluctant acceptance from both sides.

Mr. SWAYZE. Well, Mr. Blough, your answer raises just one more question that—as a news reporter—I have long wanted to ask you; and I'll never get a better chance.

Mr. BLOUGH. All right, Mr. Swayze, go ahead.

Mr. SWAYZE. You referred a moment ago to substantial settlements which the steelworkers union has won recently from other industries. I assume you were talking about the copper, aluminum and canmaking agreements.

Mr. BLOUGH. Yes, that's right.

Mr. SWAYZE. Well, the question that has puzzled me—and probably a good many other people as well—is this: If these companies could accept the union's terms, why couldn't the steel companies have done the same thing, and so ended this disastrous deadlock long ago.

Mr. BLOUGH. That is a tough question, and a fair question, Mr. Swayze, and I think it goes to the very heart of this dispute. And in answering it, let me make one thing very clear at the outset:

Every company has its own individual problems, and in the light of those problems, it must act in its own best judgment, in the interest of its owners, its employees and its customers, who—after all, are the general public.

So we in the steel industry have had no quarrel with any company, anywhere, which signed on the union's terms; nor have we any wish to challenge the judgment of those who met their own situations in that way.

But we were deeply convinced that to accept the terms which the union offered the steel industry would not be in the interest of the steel companies, the steelworkers or the American people generally.

Mr. SWAYZE. Why not, Mr. Blough?

Mr. BLOUGH. Well suppose we just look at the record:

In each of these industries, the steelworkers union hailed their agreement as a "noninflationary settlement." And almost simultaneously with the signing of the contracts, an upward movement in prices which had previously been lowered for competitive reasons occurred in all of these same industries.

Now, that, of course, may have been coincidence, pure and simple. But let's look a little farther.

Last year other unions signed other agreements with other companies in many parts of the country, and prices went up also—prices of such things as milk, textiles, carfare, and cement, to name only a few.

And this, too, may have been sheer coincidence.

But that is precisely what has been happening in the steel industry ever since the end of World War II; and believe me, Mr. Swayze, it was not a coincidence.

It was part and parcel of the inflationary wage-price spiral that has been sweeping this country for the past 20 years, and that has cut the purchasing power of the dollar by more than half, during that time.

It is certainly one of the major reasons why bread sells for 25 cents a loaf instead of 12 cents and why automobiles sell for $3,000 instead of $1,500. It is surely a major reason why your friend's pension will only buy half as much as he expected it would provide 20 years ago.

For us in the steel business, the effect of this wage-price spiral is exactly the same. It is, for example, the big reason why a steelmaking open hearth shop that we recently replaced cost us more than six times as much to build today as it did 30 years ago; and why all of our other new plant and equipment costs are so high.

And that is what this struggle in steel is all about. That is the problem we have never been able to resolve with the union. Yet that is the problem the steel companies must solve if they are to keep their industry strong, vigorous, and competitive. And it is a problem which the American people must face if this endless tide of wage inflation is to be checked.

So this is what faces us all tonight. May I tell you about it?

Mr. SWAYZE. All right, Mr. Blough, go ahead and tell us about it. I want very much to hear your story, and I know you want to tell it in a connected way without a lot of interruption. So I'll just sit back and listen, if I may.

Mr. BLOUGH. Thank you, Mr. Swayze. And if you and your friends of the television audience will bear with me for the next few minutes, I would like to show you on your television screens just what our situation is, what we have tried to do about it, and what this settlement means to us, to the steelworkers, and to all of you.

Now there comes a time in the life of each of us when we must face up to the fact that we have to live within our means—when the prospect of getting more money from the boss—or from customers—is pretty dim, and when we simply have to cut our pattern to our cloth.

That was exactly the situation which the steel companies faced when these labor negotiations began last April. As we looked over our records, and struggled with our budgets, here's what we found:

We found that during the past 20 years our employment costs per man-hour had been going up, on the average, about four times as far and as fast as the increase in shipments per man-hour * * * at about 8 percent per year on the one hand, compared to 2 percent on the other. And our other production costs were being swept upward at about the same rate.

The savings the companies managed to make through improved efficiency had lagged far behind their skyrocketing costs; and prices had to go up. They did so—at the rate of about 5½ percent a year, on the average.

But clearly this could not go on forever. Our customers are trying to hold down their production costs, just as we are, and price increases face mounting competitive resistance.

So we found that in many cases, our customers were buying foreign-made steel at prices considerably below American costs; and that in other cases they were finding it economical to turn to substitutes for steel products—like prestressed concrete, wood, plastics, glass, and aluminum and other metals, produced right here in America.

Now here, for example, is a ship which has brought a consignment of steel bars across the ocean and up the St. Lawrence Seaway to Cleveland. This foreign-made steel was sold to a customer in Cleveland for $118 per ton—which is $55 a ton below the price that an American steel mill, right there in Cleveland, must get for the same product. And this, of course, is only one among scores of vessels which are constantly unloading foreign-made steel products at American ports for American users.

Do you know that our industry once produced almost all of the barbed wire used in this country, but today more than half is brought in from abroad?

But how can these products—shipped thousands of miles across the seas—undersell our own right here in the shadow of America's steel mills?

Basically, the answer lies in the fact that the wages of American steelworkers are from three to seven times as much as steelworkers get abroad. The latest official reports show that average hourly earnings of steelworkers in 1957 were 41 cents in Japan; less than 90 cents in Luxembourg, Belgium, England, and West Germany, and about a dollar in Australia. But here in America, wages in 1957 were almost $3, and they have risen considerably, of course, since then.

Now, until a few years ago, American producers were able to meet this handicap because our modern mills and methods gave us a great technological advantage. But today, many of the worn out—and bombed out—plants abroad have been replaced with facilities just as efficient as our own.

So foreign steel producers have been gaining steadily on us in the competitive race for markets both here and abroad—especially in the past 2 years. Not only have imports of steel from abroad been increasing regularly, but exports of American-made steel to foreign markets have been declining sharply.

Putting both sides of the picture together, we find that the total advantage gained by foreign producers in the recession year of 1958 was 3,200,000 tons; and last year—aided by the strike—they scored an additional gain of more than 3,400,000.

Here then, was a combined loss of 6,600,000 tons of steel production to American mills and to American workers. Had this steel been made here at home, instead of abroad, it would have provided full-time employment for nearly 52,000 people in the

steel industry. But it was not made at home, and those jobs went to the lower-paid workers abroad.

So the widening gap between the rapidly-rising wage rates of American workers, and the slowly rising rates of workers abroad, is not only threatening the competitive position of the American steel companies; but it is also undermining the job security of the American steelworker as well.

Nor is this situation confined to the steel industry by any means. In a recently published interview, Mr. John L. Lewis—of the United Mine Workers Union—stated that 1,000 American companies have plants abroad and employ 1 million foreign workers.

And while American steel companies generally, have not followed this course, this trend to build plants outside our country should be cause for serious thought, not only in the councils of labor, but among all those who are concerned about our national growth and industrial strength in the great economic struggle that is being waged between the free world and the forces that are challenging it from behind the Iron Curtain.

Artificial trade barriers, such as tariffs and quotas, cannot, I believe, provide a basic solution to this problem, however, useful they may be. Fundamentally, it is a competitive problem which can only be met by holding American production costs down to competitive levels.

And this was the task which confronted the steel companies at the outset of the negotiations last year.

To close the enormous gap between American and foreign wages would be impossible; but to prevent it from widening still more was an immediate and paramount necessity—not just for the companies, but for the steelworkers themselves and for the Nation as well.

Even here at home, in fact, the high employment costs in steel have been putting the industry and its workers at a growing disadvantage in relation to those who produce substitute materials and metals; and today the steelworker's earnings place him among the highest paid industrial workers in the world.

His average earnings, as reported by the Federal Government last June were $3.11 an hour, compared to $2.94 in aluminum; $2.65 in cans and containers; $2.34 in copper smelting; $2.69 in automobiles; and $2.24 in all manufacturing, generally.

You may not know that steel wages have gone up much faster and farther than those in American industry as a whole. Ten years ago, they were 25 cents an hour above the average for all manufacturing, but last year they were 87 cents an hour above that average.

So in the light of all these circumstances, the steel companies proposed, early last April, that the high wages and benefits then in effect should be extended for another year. And since then, the companies have made six additional offers in an earnest effort to reach a negotiated agreement; but all of these were rejected by the union negotiators.

To give you an idea, however, of the lengths to which we went in our attempts to meet the demands of the union officials, let me simply say that under our last offer, the average steelworker—who was already getting nearly $30 a day in wages and benefits—would have gained a total of more than a thousand dollars during the next 3 years.

To the steel industry as a whole this would have meant that its direct employment costs would rise by at least $850 million over the 3 years.

Now you may wonder how the steel companies could possibly have increased their employment costs so enormously without suffering another inflationary rise in their production costs; and frankly, I am by no means certain that they could have done so in the end. But we believed it might have been possible if every one of us who works in our respective companies could join in a united effort to constantly improve the way we were doing our work and to eliminate wasteful and unnecessary expense.

Against this background, then, we come to the actual terms of the new settlement which would become effective as of January 1, and under which the industry will operate until the middle of 1962. How inflationary are they? How do they compare with those of past settlements? Well, here is the picture:

As I said, hourly employment costs in the steel industry as a whole have been rising at an average rate of about 8 percent a year, for the past 20 years. Under the new agreement they will rise by an average of about 3½ to 3¾ percent a year, including the proposed cost-of-living increases.

So instead of going up four times as fast as shipments per man-hour, they will be going up a little less than twice as fast.

The cumulaltive cost of the new agreement to the steel industry will amount to well over $1 billion—and that astronomical figure is something to think about.

So the end result is a settlement which could hardly be regarded as noninflationary but which does curb to some considerable extent, at least, the past excesses from which some of our troubles are flowing.

But the effects of this settlement cannot be thought of merely in terms of dollars, machines, markets and profits, nor in such abstract economic concepts as inflation, purchasing power, and productivity. Personally, I think they are meaningful only when expressed in terms of people—their hopes, their aspirations, their job security, and the welfare of their families. And measured in these terms, I doubt that any settlement will ever recoup for the steelworkers the losses suffered by them during the strike—to say nothing of the losses of the many people including other wage earners—in or outside of the steel industry—who were personally affected by the strike.

The settlement, of course, will provide increased benefits for the steelworkers in the form of better pensions, insurance, and wages; and on the other hand it can certainly weaken further their ability to compete in the marketplace against the workers in steel mills abroad, as the gap between wage costs on opposite sides of the oceans continues to widen.

What will happen to the job security of American steelworkers during the next 3 years depends in great measure upon the steelworkers themselves and upon the management of their union at all levels, local and national.

Contract language is important in removing roadblocks to progress as we have stated all during the negotiations but when we have common problems to solve as we do in the local work practice area, the truly important thing is the cooperative spirit of all of the people who are banded together in a common effort.

There is no problem in this field of production that cannot be solved through this cooperative spirit, for there is no basic conflict of interest between the needs of the company and the needs of the steelworkers. We are all in the same boat and we need to pull on the oars together.

We can do almost anything in a spirit of cooperation and accomplish almost nothing if we have a spirit of dispute and distrust.

I personally believe that the steel industry can witness one of the greatest improvements in its productive efficiency that it has known in modern times.

This will require constantly better machines of production and all the innovation that bubbles up through the great research efforts that are now being made throughout the industry. And it will also require an end to stagnating work practices.

But ending unnecessary work does not mean that the men who performed that work must necessarily be laid off. On the contrary about a hundred thousand jobs open up in the steel industry each year as employees voluntarily leave work for personal reasons; and these jobs must be filled either by retraining experienced steelworkers moved from other jobs, or by hiring and training new and inexperienced people.

So there is little reason why any steelworker should fail to help in an effort to get the work done in the best possible way. He has everything to gain by so doing.

To demonstrate this, let me just point out that today the steel industry has the capacity to produce about 30 million more ingot tons of steel than it has ever been able to sell in the peak year of demand. And if, by strengthening its competitive position, it could sell even half of this available tonnage, it would provide more than 100,000 new full-time jobs in the industry.

I want to say that throughout this whole injunction period, most steelworkers have worked loyally and uncomplainingly to provide this Nation with the steel that it has needed so badly. And with that kind of loyalty and spirit there is no problem in any single company that cannot be faced and solved.

And now in conclusion, I would like to take this opportunity to express our deep appreciation to all of our customers and our stockholders, to the editors, columnists, and commentators and to those of you in the general public who have supported and encouraged us in our long struggle to stem the forces of inflation in steel.

The thousands of letters of encouragement you have written have offered an almost infinite variety of suggestions as to how we should tell our story and what course we should follow.

We have not always been able to follow all of these suggestions, or even to express adequately our thanks to you. But we want you to know we feel indebted to you, just the same, and we hope you will continue to give us the great benefits of your thoughts, your counsel, and your suggestions in the months ahead.

For the problems I have described here tonight are still with us and they are not alone problems of the steel industry: If you live in America they are your problems, too.

Now problems like we have been talking about just don't go away by themselves. When a 10-cent bus fare eventually costs 27 cents, it is a very practical matter. You cannot sweep problems like that under the rug and forget them. You have to work your way out of them. You can't wish your way out of them, nor should you bargain your way into them more deeply.

This, then, is a common problem and an unsolved problem, and every member of this television audience can—and I believe should—make his opinion felt in his local community.

Thank you, and may all of us enjoy a prosperous and more peaceful 1960.

"Why I Am a Democrat"—Address by Senator Randolph, of West Virginia

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, January 7, 1960

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address, entitled "Why I Am a Democrat," by the senior Senator from West Virginia [Mr. RANDOLPH], which was delivered recently before Bethany College.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHY I AM A DEMOCRAT

(Address by Senator JENNINGS RANDOLPH, Democrat, West Virginia, to the Bethany College Convocation, Bethany, W. Va., December 17, 1959)

President Gresham, members of the faculty, and students, I am appreciative of the opportunity to talk on the subject which has been assigned—Why I Am a Democrat.

Representative ARCH MOORE, my personal friend, preceded me on this platform 2 weeks ago and argued the case for the Republican Party. Knowing ARCH as a man of talents, I trust that he compensated in eloquence for that which his position on party may have lacked. Those of us in the Democratic Party ranks are more fortunate. Confident in the knowledge that truth will triumph, we can afford to exercise a measure of forbearance toward those persons who have not yet seen the light.

Therefore, to those of you who may yet be laboring in the shadows and darkness of political philosophy, I address you more with inquiry than censure. To the rest of the young ladies and the young gentlemen who are or will become Democrats, I welcome you into the challenging struggle of the unfinished business of America.

Now, why am I a Democrat?

First, I am a Democrat because I am young. And do not, in your own youth, be unkind to one who still retains the vision of his. Even though the years are magnified, I will be young with the Democratic Party.

THE YOUNGEST PARTY IN THE UNITED STATES

And the Democratic Party, though the oldest political party in existence, is still the youngest in this country measured by vitality. Ours is the party of youth, for it sees the world in terms of its tomorrows while not relying entirely upon its yesterdays. Ours is the party with eyes in its forehead—not in its hindhead.

In this respect I have sometimes thought that, rather than the elephant, a more appropriate symbol for the other party would be the vain and strutting peacock with a thousand eyes in its tail—all looking backward. However, the elephant, with much memory but little imagination, will do.

It is because the Democratic Party surveys the present in terms of the future that, with only slight interruptions in the past 28 years we have merited the confidence of the majority of the American people. There is justice in this condition, for our party itself has confidence in the citizen and in the American future.

An Englishman once wrote a book "America Is West," a statement which very aptly captures the essential quality of our national strength.

These qualities—of youth, of optimism, of confidence in the frontiers of the future—lie at the heart of the American spirit and of the Democratic Party. It was this spirit which again resulted in the mandate of the electorate having been given to our party in 1958, and enabled us virtually to sweep the congressional and State elections from Maine to California.

It is this purpose which continues to animate the Democratic Party and provides it with new vigor and new ideas.

We hear much today of the need for new faces in politics. But what of the need for new ideas? It is no paradox that the grand matriarch of the Democratic Party, Mrs. Eleanor Roosevelt, is still intellectually one of the most youthful members of our party, looking always for the infusion of fresh ideas to solve the problems of our times.

But the Republican Party, which occasionally brings forth new faces—as it did in 1952—still espouses the time-worn doctrines of the age of McKinley—or, at best, begrudgingly accepts some of the ideas of the New Deal as unfortunate necessity.

The valid concept of the New Deal and the Fair Deal—and most of them were valid—have become an enduring part of our national, political, and economic life, and have prevented the recurrence of the tragedies of the era of the thirties. Just as the great depression tested the assumptions of the philosophy of "let nature take its course"—and found those assumptions insufficient, so has the period since World War II tested the basic principles of the New Deal—and found them valid. Three times since World War II—in 1949, 1954, and 1958—we have been faced with recession, and on each occasion the reforms of the New Deal have helped turn the tide before it reached a full-scale depression. Thus, the New Deal and Fair Deal programs—social security, protection for bank depositors and investors, wage and hour legislation, expansion of the public works sector of the economy, and agricultural benefits—among many others—have been fully justified.

And yet these three recent recessions have cost the Nation an estimated $400 billion in the loss of production of goods and services—enough to retire the entire national debt, modernize our highway system, provide the necessary schools and hospitals for our people, and cleanse our slums.

FULL-TIME REQUIREMENTS MUST BE MET

We can conclude, therefore, that the programs of the past need to be reevaluated and supplemented. The ever-present fact of change brings forth new problems that demand solutions. Part-time attention to full-time requirements will not suffice.

Emerson once stated that "conservatism is a fault of character." The desire merely to hold to what we have—to be satisfied with the status quo—the failure to explore the future for fear of the unknown—are attitudes born of little faith and less vision.

Now I do not wish to imply that there is no place for the function of conservatism. On the contrary, the Democratic Party has its conservative elements which provide the invaluable asset of assuring that all interests will be weighed and considered before party action is taken. The southerners, by and large, represent such an attitude, and not solely on matters of race relations. The farmers, in certain respects, represent another. And even labor, which has its vested interest in maintaining job security as a property right, occasionally acts as a conservative force in the broad sense.

But all of these elements must be balanced by the force of innovation and invention. Conservatism and experimentation in the body politic are paralleled by memory and imagination in the individual. And in both organisms, both qualities are equally necessary for life to proceed at a truly human level.

It is not enough merely to hold the ground established by those who have gone before us. It is not sufficient to rest with the legacy of the past. But, we must know what we want if we are to improve upon the world we have inherited. We must strengthen the foundation of the society we want.

There is a second reason why I am a Democrat: The Democratic Party is not afraid to dare. Our party, since its founding by Thomas Jefferson in 1794, has been willing to experiment in the public interest.

And it is no accident of history that throughout our national life the significant surges of growth toward the realization of the American dream have been associated with the Democratic Party. In the early days of the Republic it was the states-rights agrarianism of Jefferson's Democratic-Republican Party which routed the narrow mercantile philosophy of the Federalists. (I might add, parenthetically, that although Jefferson's party dropped the Republican suffix in 1828, one still finds a Democrat here and there who has not heard of that simplification.

Later, under what we now call Jacksonian Democracy, the western frontiersmen and the eastern mechanics and laborers joined forces to assert their rights of self-government. They were a vigorous group who challenged the patrician prerogatives of the gentry, but they dramatized the ideal of universal suffrage. Then, as in more recent times, it was fashionable to hold the Democratic Party in contempt in so-called polite drawing room circles. As the future Mrs. Jefferson Davis wrote in astonishment of husband-to-be in the early 1840's, "Would you believe it, he is refined and cultivated, and yet he is a Democrat."

And in the 20th century, the New Freedoms of Woodrow Wilson, the New Deal of Franklin Roosevelt, and the Fair Deal of Harry S. Truman—all stand as bench marks for the rising tide of American achievement.

A PARTY OF WORLD LEADERSHIP

The Democratic Party has been no less creative in the field of international relations now that the United States has been propelled into the international community. Woodrow Wilson's Fourteen Points, his "self-determination of nations" and his idea of the League of Nations—though defeated by the circumstances of history—served their time in stirring men's aspirations for international peace and justice.

Today, we Americans and the world at large live in debt to Franklin Roosevelt's idea of the United Nations. Nor could this hope have been brought to fruition without the courage and compassion of the Marshall plan and the point 4 program under President Truman. Party loyalties and partisan bias cannot lessen the importance of these achievements.

Before continuing with a discussion of the present challenge to the creativity of the Democratic Party, there is a third reason why I am a Democrat. It is the party which embraces the broadest interests of the American people. And I say, with all respect—and some sympathy for members of the minority party—ours is the only really national party.

The American political party system is not ideologically oriented as are most of the European systems, and, to a somewhat less extent, the British. Our parties are based upon the representation of different geographic, vocational, economic, and ethnic interests rather than political ideologies. But there is a difference between them.

It can be shown from a study of American history that the Republican Party, and its forebears, the Whig and Federalist, have been largely and sometimes almost exclu-

sively concerned with the protection of private property interests. In the 18th and early 19th centuries, when the concept of property was based upon the ownership of land and the mechanisms of a mercantile economy, the Federalists and Whigs dominated the landed gentry and the wealthy merchants.

Later, during the dynamic 19th century industrial expansion the concept of private property became identified with the ownership of factories, mines, and railroads. Thus, after the Civil War it was the powerful industrial and railroad barons who captured the Republican Party and defeated the hopes of Abraham Lincoln.

Finally, during the 20th century, the concept of private property has again shifted under the development of the corporation as the major economic institution. And in this century we have found that the representatives of the major corporations have gained ascendancy in the councils of the Republican Party. The farmer, the small businessman, the worker, the aged and the unemployed may advance their claims only if the budget is balanced to the satisfaction of the dominant business executives.

BELIEVERS IN PRIVATE PROPERTY PRESERVATION

And though some of our opponents in the Republican Party would have you believe otherwise, the Democratic Party is also dedicated to the preservation of private property. The main difference between the two parties in this respect would seem to be that we in the Democratic Party have a broader understanding of the meaning of private property.

The property interests of the corporation are only a segment of the total area of the meaning of property rights. Without a fair price for his commodities, the farmer's property rights become an ironic jest—and a poor one.

Without protection against predatory competition and monopolistic trade practices the property rights of the small businessman are void and meaningless.

Finally, within an economic system in which more and more people are becoming salaried workers, we must recognize that the pattern of property rights must be extended to the right of a worker to secure productive employment, the right of the scholar and the scientist to perform the functions in society.

In thus recognizing a broader definition of property rights the Democratic Party has sought to extend the fruits of democracy to an ever widening number of people. For this reason the Democratic Party continues to attract, in ever increasing numbers, the farmer, the laborer, the small businessman, the intellectual—and all those who look to the future, rather than to the past.

IMPORTANT TASKS CHALLENGE YOUTH

And now, before closing, a few words to you young ladies and gentlemen who are the custodians of the not-so-distant future: The suffrage battles of the 19th century have been won. And many of the critical economic issues of the 20th century have been solved. But much remains to be done today—and history will see to it that there will be ample tasks for your generation tomorrow.

Yet it is not heartening to learn that only one-third of the young men and women between ages 21 and 35 bother to vote, in comparison to two-thirds of the middle-aged and three-fourths of those 60 years and older. To some extent your elders and instructors have failed you by not communicating the meaning of democratic responsibilities. But in a larger sense, if you are among the eligible who do not or will not vote, you have failed yourselves and your community. It is not another's responsibility to lead you by the hand. It is your responsibility and yours alone to learn the meaning of democracy and to give substance to that meaning as a free individual. And to be free, to be truly free, means to be free of ignorance and apathy as well as fear.

This, then, is the first injunction your times lay upon you: To seek, to explore, and to learn the meaning of democracy. Then on the basis of reasoned evaluation—not from habit or inertia—and only partly from self-interest—to make your choices and to take part in the great dialogue of democracy.

The foremost, and the final, issue for each of you is to make your life significant—to participate, at whatever level, in the destiny of your times—and regardless of party affiliations—to make your weight felt for truth and justice and the dignity of the individual.

An Act of Heroism

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. AUCHINCLOSS. Mr. Speaker, unselfish acts of heroism happen every day and yet we are thrilled by the spirit that prompts them, but when a dear friend performs such an act it assumes a special personal significance and one wants to let the world know about it. This is natural and as it should be because we Americans are proud of the brave acts of our countrymen and derive strength and courage from their exemple. Such an American is my great and good friend Roger Ryan who operates a garage and service station in Sea Bright, N.J. He is a man past middle age, a veteran of World War I, a friendly man, modest to a degree, with a character with the highest standards and during his active life has performed many an act of bravery to help others even at the risk of his own safety. His life is an example of highest service and is a stimulating influence for the benefit of mankind.

Not long ago, September 2 last, he saved from drowning the life of a total stranger at the risk of his own and within a few hours after the incident he was back tending to his business as though he had done nothing out of the ordinary. Only a great man could act that way.

I append to these brief remarks a copy of a letter addressed to the "Town Council at Sea Bright" in which the man whose life Mr. Ryan saved, Mr. R. Drapeau, describes his act of heroism and expresses his appreciation. It is a brave thing to be willing to lay down one's life for a friend but how can courage be measured when one is willing to lay down his life for someone who is not even an acquaintance?

GENIN, TRUDEAU & CO., LTD.,
Montreal, October 6, 1959.

TOWN COUNCIL,
Borough of Sea Bright, N.J.

GENTLEMEN: On September 2 of this year, while swimming off D. Comita's property in Sea Bright, I was carried out to sea by a strong tide and found myself exhausted and unable to swim back to shore.

After calling for help, my daughter summoned by two ladies on the beach came to my rescue and she also became overpowered by this tide; she soon became helpless and called for help.

When my daughter reached me I was semiconscious, unable to keep afloat any longer, and within seconds of drowning.

We were both joined by Roger Ryan, owner of Ryan's Garage, in your city, who had heard the frantic calls for help from these two ladies running along the street. This gentleman came scurrying toward the beach undressing along the way, swam out to us and held us afloat while reassuring us that further help would be coming soon.

This help came a few minutes later from lifeguards Alfred West, Robert Kennedy, and John C. Bouton, of Sea Bright Borough beach a half mile away. I am immensely grateful to these three lifeguards who brought us ashore and without whose help this incident might have turned into a triple tragedy.

I wish to commend, however, for your special notice the courageous action of Mr. Ryan who, oblivious to his age and lack of training did not hesitate a moment in plunging into the sea and to whose bravery I owe my life and that of my daughter.

Mr. Ryan nor the above mentioned three lifeguards would accept any monetary token of gratitude, and I feel it my duty to bring their brave action to the knowledge of the leaders of your city.

I am naturally deeply grateful to my daughter who left a 2 months' old baby to the care of others and at the risk of her own life swam out to me. For this brave action I will have many opportunities to show her my undying gratitude in future years and which I will try to repay by every means possible.

Your first-aid ambulance took me to the Long Branch Hospital for medical care and a short rest, after which I was allowed to go home. To them also my heartfelt thanks.

Yours very truly,

R. DRAPEAU,
Vice President.

Address by Hon. Thomas H. Kuchel Before National Convention of National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, January 7, 1960

Mr. WILEY. Mr. President, the distinguished Senator from California [Mr. KUCHEL], speaking before the 46th National Convention of the National Rivers and Harbors Congress in Washington, D.C., on May 14, 1959, made some very challenging remarks. I ask unanimous consent that the address delivered by him on that occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

GREETINGS OF U.S. SENATOR THOMAS H. KUCHEL TO THE 46TH NATIONAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS, THURSDAY, MAY 14, 1959, MAYFLOWER HOTEL

Mr. Chairman, it gives me great pleasure to greet you this morning and to welcome you to the Nation's Capital.

We have much in common. You are concerned with water resources and their sound utilization in behalf of all Americans. I share this concern, although I am certain you will forgive me for what may appear to you to be a sometimes parochial interest in the needs of my own State.

In most parts of the country, water is something that is there when and where it

is needed, and people simply take it for granted. But to those of us who live in the West, the scarcity of water has been and remains a chronically serious condition that needs constant attention.

California is one of the 17 States generally defined as belonging to the semiarid West. In our part of the continent, water is and always has been the key to survival. Not long ago, a distinguished American historian from Senator JOHNSON's famed State declared that the greatest unifying force in the West has been the great American Desert.

Very early in this century, President Theodore Roosevelt signed the Federal Reclamation Act into law. Since the beginnings of that act, the Federal Government in cooperation with the States has sought the means and techniques needed to meet the ever-increasing demands of the States with the greatest water scarcity.

Storage facilities have been built to conserve the erratic runoff of melting snow water. Great dams have been built, and a natural byproduct, hydroelectric power generation, has followed from these storage dams and reservoirs.

I have said in the Senate and in my State many times that the people of California are indebted to the Federal Government. The Central Valley project represents the difference between economic life and death in the two central valleys. In southern California where my home is, we are indebted to the great Hoover Dam, which was fought through the Senate years ago by the late great Hiram Johnson, who fought against tremendous odds in order finally to win approval by the Senate, and thereafter by the House of Representatives, of a gigantic multipurpose structure which today brings water and hydroelectric power into almost every area of southern California.

But our needs are very great. There must be an assured supply of water for people in our cities and for industrial use. There must be water for irigation and for the expansion of industry. Since 1940 the West has experienced the greatest population growth of any part of the Nation. It most likely will continue to experience this expansion for many years to come.

It is anticipated that the population of the United States will increase to 225 million people by 1975. Water needs will skyrocket from 185 billion gallons a day in 1950 to 450 billion gallons by 1975. Can there be any doubt that meeting this demand is the proper concern of all Americans?

Spectacular developments may come in finding an economically sound method of converting sea water into fresh water. If so, we may find the earth capable for the first time in human history of providing enough food for all its inhabitants.

Your organization plays a vital role in stimulating a continuing interest in water resources. From your interest may emerge the solution to problems such as that confronting the semiarid West and perhaps, thereby, the solution of water problems on a worldwide scale.

Phenomenal Success of TVA

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. CANNON. Mr. Speaker, it is gratifying to read in the conservative New York Times an editorial under date of January 4, 1960, expressing unqualified approval of the Tennessee Valley Authority and its quarter of a century of successful and efficient service to the Nation.

While the editorial confines its comments to a discussion of the contributions of TVA to the commercial and industrial life of the Nation, we can never forget that it was an atomic bomb developed with TVA power that ended the war and saved half a million men who otherwise would have died in a frontal assault on Japan. And that TVA energy is powering the development of atomic energy upon which we must rely for future defense, and the fertilizer pilot plants which will make it possible to feed more effectively the rapidly expanding population of generations yet unborn.

The editorial is as follows:

TVA KEEPS GROWING

When we speak of the TVA we mean the Tennessee Valley Authority and not that entertainment gadget that so many of us have in our homes. When we say that TVA grows, as it has been doing, we don't mean that it has been spreading geographically, but only that it has been putting out more power.

In general, TVA, as revealed in its current report, continues to generate a little more than 8 percent of the total electricity sold in the United States. Of the electric power which it created during the last fiscal year, a little more than one-third was produced by running water and steam. Of the total actually sold and paid for, about one-half went into Federal defense operations, mainly the Atomic Energy Commission's plants at Oak Ridge and Paducah.

When TVA was launched more than a quarter of a century ago the real object was to develop the waterpower of the Tennessee River and its tributaries. This has been largely done, with some additional power from the Cumberland River. It was also planned to improve navigation on the main Tennessee, to modernize agricultural practices and facilities, to promote forestry, to offer recreation, and to raise the level of living in the Tennessee Valley. These things have been done and now, in addition, TVA is one of the front lines of our military defense.

It has achieved all this without being a heavy burden on Federal, State, or local taxpayers. Specifically, TVA and the communities and cooperatives to which it sells power pay in taxes 6.8 percent of all electric revenues from private customers. This situation seems to satisfy people in the valley. In addition, TVA is now authorized by a law passed last August to issue revenue bonds just like any other power company. These will have to be maintained and paid off in the usual businesslike fashion.

Meanwhile, private power production in the country has not languished, but has multiplied five or six times over in magnitude. In many respects TVA has shown the way, but it has been a leader and a builder, not a destroyer.

Address by Archbishop Bernard J. Sheil

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Thursday, January 7, 1960

Mr. MORSE. Mr. President, on November 11, 1959, His Excellency the Most Reverend Bernard J. Sheil, auxiliary archbishop of Chicago, made a notable speech at the 1959 Israel Bond Man of the Year banquet, Chicago, Ill.

I ask unanimous consent that the archbishop's speech be printed in the Appendix of the RECORD, and I extend to the archbishop my compliments and high commendation for the great intellectual statesmanship and social consciousness portrayed by his speech.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HIS EXCELLENCY THE MOST REVEREND BERNARD J. SHEIL, AUXILIARY ARCHBISHOP OF CHICAGO AT THE 1959 ISRAEL BOND MAN OF THE YEAR BANQUET

To answer to the things that were said about me this evening would be very difficult and very hard. And, perhaps, if you will allow me just a little bit of sentimentality—it's deep—it may, in some little way, express to all of you exactly how I feel, and what it means.

And, at this moment I would like to say just a few words to my beloved mother and father, whom I know are in heaven before the throne of the Eternal God. I ask that they will pray to bless you, and that God through their prayers will inspire you to greater efforts, for Israel.

The return of the Jewish people to their homeland, after centuries of exile, is an event of prophetic importance to the history of man. These immigrants to their own country are much like the early settlers of America. For, they possess, as these did, the ideals, the knowledge and the skills necessary to bring about a social revolution in a large area of the world. Like the founders of America, their achievement may serve as a model for other peoples who seek an escape from the oppressive past.

The establishment of the State of Israel is an indispensable step toward this larger goal. Its creation, like most human endeavors, meant much bitter sacrifice and suffering. But, these have been transcended in that satisfaction which comes only from good accomplished. There are thousands of children in Israel today who have been given a second chance at life. For years their world was one bounded by barbed wire. Now, their lost childhood has been restored to them. Their happiness is, in itself, a sufficient reward for the struggle endured.

After 10 years, Israel stands as the living, concrete embodiment of two traditional Jewish ideals, namely, human freedom and social justice. Moreover, Israel proves that both are requisite to the founding of a genuinely human community. It is only in a climate of freedom and justice that man's knowledge and skills can be used for the true betterment of man. To change a desert into a garden, to harness the powers of nature, to build factories—these are high achievements. But they must always serve the enlargement of human freedom and the promotion of justice. Otherwise, they may become subtle instruments for the enslavement of man. Israel has laid her foundations deep in the soil of freedom and justice. That is why her accomplishments carry such an important lesson for the world.

It is of crucial moment that we grasp the full meaning of this lesson. We are witnessing a farflung attempt by the Communist world to place science and technology at the service of politics. The philosophy underlying this type of politics either denies or distorts the common concepts of freedom and justice. That is why the attempt is of such immediate danger to us.

The world is fully aware that science and technology are one of the keys to the future. For, they have the power to transform the world. They can do strong battle against poverty, ignorance and disease. They can

leap across centuries and bring to people everywhere a standard of living undreamed of in a primitive yesterday. They are capable of answering the aspirations of man for a physical existence compatible with his spiritual dignity.

These are tempting prospects for all men. Moreover, the people of the world are becoming more conscious of the fact that a better life is within their reach. It is no longer a distant possibility. It is a present opportunity.

These people shall not be denied their legitimate desires for a better existence. Even now, the surface of the world is stirring, continents are surging, time itself is being telescoped. Everywhere there is movement, agitation, awakened hopes, new horizons. And all of this springs from the knowledge, no longer liable to suppression, that human life can mean more than a deadening subsistence. The time bomb of human expectancy is loudly ticking. Those who close their ears to it shall have them rudely opened by its explosion.

To help all people in their struggle for human integrity is our obligation. It is a moral duty, because it is the application of that belief in human freedom and social justice which we publicly profess. These are ends to be sought after for their own value, independently of any advantage to us. Too often they are being used merely as strategic defenses against Communist expansion.

This reversal of means and ends, perhaps, explains our partial failure to inspire much hope and confidence in the oppressed and dispossessed people of the world. In spite of a good deal of talk about our own idealism, these people think that our objective is not to help them achieve freedom and justice. They suspect, rather, that we are primarily concerned with our own security. And this suspicion, well founded or not, may explain much of the cynicism and pessimism that exist among them.

It is time, I think, for the West to return to the practice of its traditional faith in the truth of human freedom and justice. And this should be done according to our own convictions and moral standards. There is grave danger in allowing our actions to become mere countermoves against Communist policies. In so doing we not only lose the initiative in world affairs. We also sacrifice the moral leadership so necessary, if freedom and justice are to be achieved.

We are sometimes told that peace is maintained by such means. We might answer that this kind of peace is a precarious one. It rests upon our acceptance of the enslavement of hundreds of millions of people by a regime of legalized terror. Furthermore, it is a peace secured at the point of a gun. For, it is obvious that the constant threat of nuclear destruction has become a form of political blackmail. Finally, one might question the ultimate value of a peace, if it is purchased at the cost of compromising our ideals and convictions. Peace can only be built upon justice. And, neither the niceties of protocol nor the delicacies of diplomacy are capable of clouding this truth.

Let us, I say, discover again our own historic path. Let us, on our own initiative and out of our own convictions, rededicate ourselves to the task of bringing the hope of freedom and justice to all mankind. This is the way of truth. It alone can lead to genuine peace. Only it can be the foundation of a truly human society in which men may find their real fulfillment.

You may well ask what all this has to do with Israel. And I answer: a great deal. The founders of modern Israel carved it out of a wasteland. Today, it is literally an oasis in a desert. For, Israel stands in a barren land of human oppression and destitution. Millions of her neighbors exist in an outmoded society built upon ignorance and exploitation. Trapped in a dead end of history, these people have had no choice but to submit to serfdom.

Here precisely lies the importance of Israel in the wider context of history. For, Israel can become for all the people of the Middle East the model and symbol of a more humanly satisfying life. She opens up the prospect of a community founded, not on ignorance but on knoweldge; not on exploitation but an opportunity. Israel proves that human freedom, anchored in justice, is the only lasting foundation upon which the city of man can be erected.

To be this model and symbol of hope for millions of dispossessed people is the mission of Israel. To accomplish it, she herself must be made strong and impregnable. Otherwise, she becomes an easy target for those who see in her a threat to their selfish privileges. Those who benefit from the past, fear the future. To them the future may destroy these benefits. That is the reason that every weapon of passion and propaganda is being used against Israel. It is her enemies who are most aware of the real meaning of modern Israel. That is why they fear her.

If Israel is to remain strong, if she is to carry out her historical destiny she must have the support of all who recognize her importance to the cause of human freedom. The meaning of Israel extends far beyond her national borders. She is part of the free world. She is an embattled outpost of all who believe that God has endowed men with the right to life, freedom, and justice.

We who profess this belief have the serious obligation to help all those who protect and propagate its truth. To do this is more than a duty. It is a privilege. For, to serve the cause of freedom is to serve the cause of man. Man, without the dignity of his liberty, is less than man. And it is precisely this dignity of freedom which is at stake today. What we do now for the cause of human freedom shall determine in large measure the whole future of mankind.

Israel, against heavy odds, is doing her part in this struggle for man. To help her is to help the cause of human freedom everywhere. There is no endeavor more worthy of our support. Nor could there be any more satisfying return than the knowledge of having shared in the defense of man, his dignity, and his freedom. Israel offers us the privilege of participating in this effort on behalf of man. I am certain that we shall accept the offer and respond to it generously.

The Farm Problem Can Be Solved With the Soil Bank Withdrawal Plan

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. JENSEN. Mr. Speaker, on November 16 I wrote President Eisenhower as follows:

President DWIGHT D. EISENHOWER,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: I am sure you remember well when in August 1952 you called me to your western campaign headquarters in the Brown Palace Hotel at Denver, Colo., to debate the question of 90-percent supports for the six basic crops—corn, wheat, cotton, tobacco, peanuts, and rice versus flexible supports; and almost immediately afterward you announced in your speech at Kansas City that you were for 90-percent supports, at least, so long as that law, which was then in effect, and would be in effect until 1954.

After the flexible parity supports was made law in 1954, it was necessary for the corn and wheat farmers to not only increase their acres, but also to fertilize to the hilt in order to produce enough bushels of cash crops, corn and wheat, in order to have enough dollars to pay increased operating costs—higher machinery costs, taxes, etc.—in the diversified farming section of the United States, "the breadbasket of America." Now, as we all know, since 1954 our corn and wheat surpluses have mounted year after year, which was inevitable under the farm program which has been in effect since 1954, to the end that the costly price depressing surplus of corn for example, has had the effect of not only forcing down the price of corn, but has taken hog, cattle, and poultry prices down, down with it; and unless we put into effect a program which will effectively reduce our staggering corn surplus held by the CCC which now hangs dangerously over the head of all our corn and livestock farmers of the breadbasket of America, nothing can stop the further decline in such prices, and the end result can only be complete disaster for our farmers, and finally for our entire national economy. Let us never forget for a minute that all new wealth springs from the soil, is mined or pumped out of the bowels of the earth, or is fished out of the waters, in the form of raw products, on which every American must depend for employment in producing, transporting, processing, marketing or using the finished product. Also, since that is a fact, it is plain to see our economic growth can only be soundly generated from its source, and our farmers always spend over twice as many dollars, when his dollar is worth 100 cents at the counter, than the rest of us Americans spend on an average for manufactured commodities made by the wage earners of the United States.

Were it not for the fact that we have for the past several years been spending over $40 billion for military purposes, which has in effect created here an artificial prosperity, generated from the top (but which we cannot forever endure) the overall economic effect of our farmers' 80-cent dollar has been offset by employment in the manufacturing of military supplies of every nature; while sound, deep-thinking Americans everywhere are asking, "What will the harvest be if farming, our basic industry, goes down the drain?" Disaster for all, will be our lot.

Now, Mr. President, there is an answer. You had that answer in your address to Congress on January 9, 1956, when the Soil Bank Act was afterward made law, but without your recommendation that it be financed with commodities already owned and paid for by the Government; but your recommendation was ignored, as you well remember. Had your recommendation of 1956 been made law at that time, our farmers would not be in the squeeze they find themselves today. You are no doubt aware that the American Farm Bureau Federation in its convention at Boston, Mass., last December affirmed its support of the soil bank program to retire land from production with payments in kind (in corn and wheat, for instance) from Government stocks for participation in the soil bank program. You will, I am sure, be greatly interested in reading the Soil Bank Withdrawal Plan by Mr. Dave Livingston, our mutual farmer friend of Washington, Iowa, in which he gives facts and figures which prove that by paying very liberally in kind, we can solve the farm problem for the livestock and grain farmers, quickly and effectively.

Respectfully,

BEN F. JENSEN.

THE SOIL BANK WITHDRAWAL PLAN

(By Dave Livingston, Washington, Iowa)

Hog prices are now disastrously low. There are now too many hogs. There is an increase of 5 percent in the Corn Belt in the last 3 years.

Poultry prices are also too low and for the same reason.

Cattle feeders have 20 percent more cattle and calves on feed in the 21 major feed in States over a year ago. Thirteen of these States have a record number on feed as of October 1, 1959.

There is only one reason for all of this and that is the fact that there is too much feed available. The only time we have too many animals is when we have too much feed. Livestock numbers always adjust themselves to feed supplies.

There is, therefore, one answer and only one answer to the whole farm problem and that is to find a way to reduce the surplus feed supply without injuring the whole agricultural setup.

The only way this can be done is to set up a Soil Bank Withdrawal Plan whereby the surplus grain, now in the hands of the Government, as the result of accumulation under the soil bank and previous plans, can be withdrawn to pay the rent on feed grain acreage to be put out of production in 1960.

How can this be done?

First of all the Acreage Reserve Section of the Soil Bank Act should be reinstated for a period of at least 3 years. There never was anything wrong with the Soil Bank Act that could not have been corrected by stopping cash rental payments and paying the rent in grain on a realistic basis of using one bushel of surplus to stop the production of one bushel of new crop.

This would return feed grains to acreage allotments as they were at the close of 1958. In other words, we would start over again where we left off at the end of 1958 but this time we would use the grain surpluses for money to eliminate the surpluses. To quote from President Eisenhower's speech to Congress on January 9, 1956, when the Soil Bank Act was introduced, "It will be financed with commodities already owned and paid for by the Government. Time and shrinkage, storage and other costs are eroding away the present value of these stocks." To quote again:

"There are virtues in the plan.

"It will reduce the massive and unproductive storage costs on Government holdings—costs that are running into a million dollars a day.

"It will reduce the crushing burden of surpluses, the essential precondition for the successful operation of a sound farm program.

"It will provide an element of insurance since farmers are assured income from the reserve acres even in a year of crop failure.

"It will ease the apprehension of our friends abroad over our surplus-disposal program.

"It will harmonize agricultural production with peacetime markets."

The same situation obtains now as at the time this original plan was introduced and the above quotes fit the present situation precisely.

Each year beginning in 1960, 10 percent of the corn acreage allotments, as they existed in 1958, should be set aside and seeded and the rent on these acres paid with corn out of Government storage. Beginning with the oldest corn in storage (1952) this offer would be on the basis of 100 percent of the rated yield for each farm on the ASC listing at the county office. If your farm was rated at 80 bushels per acre, then you would be offered 80 bushels of 1952 corn for each acre you seeded down in 1960. When the 1952 corn was gone, then 1953 would be used and so on until all the corn in bins in this county was used up. Of course, the 1952 corn would not have the feed value of new corn, which you would raise, but on the other hand, you would not have the cost of ploying, disking, harrowing, planting, cultivating and harvesting. Therefore, it would be pretty good deal for any farmer aside from the fact that he would be assisting in the elimination of the greatest problem we have in agriculture today.

It would be voluntary. No farmer would be forced to participate. Each year every farmer would be allowed to bid acreage between 10 and 25 percent of his acreage allotment to put under the plan. This would give each farmer a chance to place whole fields under the plan. In case there were more acres bid than there was corn to go around, then "First come, first serve" just as the conservation reserve is handled now.

All this requires no new law, no new organization and no new expense. All that is required is an extension of an old law to be administered by the ASC committees to use up the corn now owned by the government. All that is required is to spell out the details more clearly, some imagination and determination and probably some new faces at top levels. To quote again from the President's speech, "It will help remove the crushing burden of surpluses, the essential precondition for the successful operation of a sound farm program."

THE COUNTYWIDE PICTURE

Now take a look at Washington County. Let's see what would happen. This same analysis can be made for the other counties too.

Amount of corn in storage in Washington County by years:

	Bushels
1953 and older	967,509
1954	111,976
1955	87,660
1956	144,090
1957	11,499
1958	11,819
Total	1,334,553

Total corn acreage 1958, 180,558.

Average yield per acre, 71.1 bushels.

This means then that we would take this corn in storage and offer it in Washington County at the average rate of 71.1 bushels per acre to get 10,855 acres of Washington County farmland out of production in 1960. Your allotment would vary one way or the other from the 71.1 figure depending on the rating of your farm in the ASC office. If you wanted to participate you would sign up next spring for the number of acres you would be willing to put under the plan (between 10 percent and 25 percent of your allotment) and then you would get your corn in October in payment.

If you take 10,855 acres out of production at 71.1 bushels per acre then you come up with 771,790 used up in 1960 as money and taken from Government bins and no new corn will be raised to take its place. It would get rid of nearly 80 percent of the 1952 and 1953 corn in this county. And that corn would not have to be shipped away or handled except to get it to the farms in this county. Do the same thing again in 1961 and all the corn in Washington County, now in Government bins, would be used up.

THE STATEWIDE PICTURE

Take a look at the totals for the State of Iowa and here is what you come up with:

1953 and older	67,658,715.05
1954	24,114,592.04
1955	36,752,156.45
1956	47,529,442.31
1957	13,547,009.95
1958	9,113,128.82
Total	198,715,044.62

Total corn acreage, 1958, 9,979,258.

Average yield, approximately 56 bushels.

Put 10 percent out of production in 1960, 997,925 acres.

At 56 bushels per acre, 56 bushels.

Number of bushels used in 1960, 55,883,800.

When that 55 million bushels is gone it is gone. No new bushels will be raised under this plan to replace them and it costs no new money.

On November 25, 1959, I received the following reply from the President:

THE WHITE HOUSE,
Washington, November 25, 1959.

The Honorable BEN F. JENSEN,
Member of Congress,
Ezira, Iowa.

DEAR BEN: I have your letter and I shall have your suggestion studied seriously; later you will receive a report of the results.

Sincerely,

DWIGHT EISENHOWER.

Mr. Speaker, just as soon as I can get reprints made of this speech I will send copies to all farm magazines in the United States, many newspapers and radio stations, to hundreds of people in and outside of my district, to Members of Congress, including every member of the Senate and House Agriculture Committees.

Now, Mr. Speaker, surely every unbiased, thinking American, including every Member of Congress is concerned about the farm problem and are anxious to have an early, effective, economical solution to it, which can be accomplished with the soil bank withdrawal plan, if Congress does its duty, and quickly.

Freedom in the New World Order

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, January 7, 1960

Mr. HUMPHREY. Mr. President, I invite the attention of the Senate to an excellent address by John Cowles, president of the Minneapolis Star and Tribune, entitled, "Will America Survive in Freedom in Coming New World Order?" which was published in the Minneapolis Star on November 30, 1959.

Mr. Cowles is a keen student of world affairs, in addition to being a gifted writer. In this address to the Minneapolis Rotary Club, Mr. Cowles predicts that in the 1960's a new world order is going to take shape and form. In this shaping of the new world order, Mr. Cowles states:

The paramount thing for us is to try to make certain that we are following national policies that will insure that our descendants can survive in freedom. He argues coherently and logically that it is a naive illusion for anyone to assume that we could live and prosper in freedom in an isolated fortress America.

I ask unanimous consent that this thoughtful and challenging speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From the Minneapolis Star, Nov. 30, 1959]

WILL AMERICA SURVIVE IN FREEDOM IN COMING NEW WORLD ORDER?

(By John Cowles, president of the Minneapolis Star and Tribune, a speech to the Minneapolis Rotary Club)

Most of us would agree, if we really thought about it, that the thing we most deeply want is for our children and grandchildren and great-grandchildren to be able to survive in freedom. And of course in addition to freedom we want them to have as full and satisfying lives as possible.

The paramount thing for us is to try to make certain that we are following national policies that will insure that our descendants can survive in freedom.

Probably some of you are shocked that I even suggest the possibility that the United States may not be surviving in freedom a generation or two from now. But if you will think about the implications of what is taking place in the world today, I believe you will conclude that our long-range national security is a good deal less certain than most of us have assumed.

To start with, most people fail to understand that we happen to be living in the midst of the greatest combination of world revolutions that has ever occurred in the history of mankind. Separate scientific, political and social revolutions, any one of which would have had a momentous effect on the world, have happened to coincide at this particular time.

The scientific discoveries and developments that have occurred in our generation are probably greater than all the scientific discoveries of the preceding thousands of years combined. More than 90 per cent of all the scientists who have ever lived since the dawn of history are living and working today. Most of us don't yet comprehend the significance and future effects on the world of the new scientific discoveries that have been and are being made.

Simultaneously, we are having another revolution. This is the alarmingly rapid rate of population growth. The introduction of better sanitation and improved health and medical measures throughout the world has caused a sharp reduction in mortality. As a result we are having an extraordinarily fast population growth everywhere, particularly in the less developed areas. Most people ignore or grossly underestimate the calamitous effect that a doubling of the world's population in the next 30 or 40 years will have.

COLONIAL AREAS WIN FREEDOM

A third revolution that is taking place stems from the fact that more than a billion people who, up to the end of the Second World War, were under colonial rule, have recently won their freedom. In addition, other presently colonial areas, largely in Africa, will also become independent nations within the next year or two.

Most of these new countries don't have a sufficient number of educated people to make a democratic form of government function responsibly. Most of the people in these new nations are illiterate and desperately poor.

It does no good to say that these peoples should not have independence until they are qualified for it. They are determined to have their independence now. They are also equally determined to try rapidly to industrialize their nations and raise their educational and living standards.

I recently studied some estimates of world income broken down by nations, with the population of each. If one assumes that $100 a year per person is required for food, clothing, and shelter—about 27 cents per day for sustenance and all living expenses of every kind—and if one then computes the amount of excess annual income above $100 a year per person that each country has, the figures are staggering.

The United States alone has 47 percent, or almost half, of the total excess world income above $100 per person.

If one adds together the excess income, that is the amount above $100 per inhabitant, of Canada, Great Britain, Japan, Australia, and the European countries including Russia, that total is only slightly greater than that of the United States alone.

These countries that I have mentioned, including the United States, therefore have between them more than 95 percent of the whole world's total income above $100 per person.

In other words, the rest of the world—Asia, Africa, Central America, and South America combined—has less than 5 percent of the world's total income above $100 per person.

The per capita income of these Asians, Africans, and Latin Americans is only slightly more than $100 a year, or less than one-twentieth of the per capita income of Americans.

DEVELOPMENT CAPITAL NEEDED

There are only two possible ways for these underdeveloped areas to get the capital necessary for their development. They obviously don't have enough of their own to make sufficient voluntary savings to raise the funds needed for schools and roads, water systems and improved ports, powerplants, and factories.

They can raise these funds internally only if a ruthless dictatorship forces savings out of them, impoverished as they are, by grinding down their already pitifully low standard of living, by reducing what each human being has to live on, from slightly over $100 a year down to $75 or $80 a year. Of course, this would mean starvation to many and serious malnutrition to more.

Although Russia started from a much higher living standard base than exists in Asia, Africa, and Latin America, this is the precise method the Communist dictatorship in Russia used to secure the billions that it has put into its capital improvement in Russia from about 1920 on.

As a result, today, the Russians are turning out enough gross national product so that they can significantly increase the average standard of living above what it formerly was and still have sufficient resources left to put as much money into military expenditures as the United States is doing.

Red China is following exactly this same policy. The government is ruthless and cruel. Probably hundreds of thousands of Red Chinese have starved to death, but China, with some help from Russia, is lifting itself by its bootstraps.

The only other way for underdeveloped countries to get the capital that they desperately need is from foreign aid: foreign investment, foreign loans and foreign grants.

Unless the United States and the other developed and industrialized countries of the free world are willing to extend aid on a massive scale for the next 10 or 20 years, I expect to see most or all of Asia and Africa and much of Latin America slide into similar Communist-controlled totalitarian dictatorships.

The United States and Western Europe cannot live permanently in freedom with most or all of the rest of the world under Communist rule. The Communists would disrupt normal capitalistic world trade. They would dump products at far below cost to disrupt international markets.

They would cut off the natural resources—minerals, oil, etc.—that are essential to the free world. The United States is much more dependent on foreign natural resources for our own prosperity than most Americans believe. We are rapidly becoming a have-not Nation so far as many natural resources are concerned.

It is a naive illusion for anyone to assume that we could live and prosper in freedom in an isolated fortress America. Every additional country that goes under Communist control reduces our own margin of future national security.

Although I am delighted that in recent months President Eisenhower has broken through the diplomatic deadlock and has opened the door at least to the possibility that within the next few years we may be able to liquidate the cold war, anyone is reckless if he assumes that the danger of the cold war turning hot has been eliminated. The Russians occasionally change their tactics, but there is no reason whatsoever for us to assume that the Russians have in any way changed their long-range ambition for world domination.

It would be an act of suicidal recklessness for us to reduce our defense expenditures until and unless we are certain that Russia is simultaneously reducing hers, and until and unless we are satisfied that we are going to have an ironclad system of international inspection and control.

I hope that events will prove that Russia does want to end the cold war, but until there is proof of that, it would be foolhardy for us to reduce our defense expenditures even a penny. I, for one, think that we should be increasing our defense expenditures so that we would have an adequate capability to meet nonnuclear limited aggression without our having to go to the alternative of an all-out nuclear holocaust.

Undoubtedly there is great waste in our armed services. Possibly several billion dollars could be saved if we could eliminate some of the overlap and discontinue further production of obsolescent weapons. But when one is dealing with our national security, with our very national survival, one must not take chances.

UNITED STATES LAGS BEHIND RUSSIA

Every informed person knows that we are far behind the Russians in outer space development. It will probably be at least 3 years before we are able to develop engines with as much propulsive power to send heavy weights into space as the Russians have already demonstrated that they now possess.

Every informed person knows that we are behind Russia—opinions of the time lag differ—in our development of intercontinental ballistic missiles.

Every informed person knows that our strategic air force or SAC bases are what is called soft, that they are too concentrated and are relatively unprotected, and that we might suffer a catastrophic devastating blow if the Russians, a couple of years from now, did decide to attack us with intercontinental ballistic missiles with hydrogen warheads and with the intermediate-range missiles which they could fire from their submarines.

While we could even then undoubtedly make a severe retaliatory strike, probably our capability, if we had suffered the initial blow, would not prove nearly as massive and destructive as most of the American public erroneously assumes.

The thing that concerns me most about America today is the fact that the public seems complacent and largely indifferent to what I regard as the realities of the international situation.

One such reality is the obvious fact that the old world order, as we have known it all our lives, is dying. It seems to me not simply probable, but certain, that during the next decade, the crucial 1960s, a new world order is going to take shape and form.

Whether or not this new world order will be one in which our children and grandchildren will be able to lead full, happy lives in peace and freedom is the paramount question confronting America, but most people are too absorbed in their personal affairs even to recognize that this question exists.

SYSTEM OF WORLD LAW VITAL

If we do move forward courageously and intelligently, with a thorough understanding of what we are doing and why, I think we probably can end up with a new world order that is to our liking. Achieving this will probably require higher taxes, or at least no reduction in present tax rates, but the tax angle becomes inconsequential if one comes to realize what the probable alternative is, if one comes to understand that we may be dealing with the question of our continued survival as a free nation.

And if we are going to be able to secure the kind of world order we want for our children and grandchildren, we are also going to have to develop a system of world law. This will involve strengthening the United Nations and making basic changes in its setup. This will also obviously involve some abridgement of what has traditionally been called national sovereignty, but nations as we have known them in the past are becoming obsolescent in an era of intercontinental missiles, nuclear-propelled ships and aircraft, and space vehicles.

The problems facing us are enormous, but certainly not insoluble.

In conclusion, I would like to quote a statement by Arnold Toynbee, who is probably the greatest living philosopher of history. Toynbee has written, I hope not too optimistically, that "the 20th century will be remembered, not as the age of the atomic bomb, but as the first time when man thought it was practicable to distribute all the benefits of civilization to all people."

U.S. Naval Academy: Reservoir of Great Traditions

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. THOMPSON of Texas. Mr. Speaker, among the many exacting duties that members of the Congress are called upon to perform I know of none that they take more seriously than the selection of young men for appointment to the great academies of the armed services. Not only that, they watch the progress of their appointees after graduation. When some of them attain distinction, they often ponder the steps by which they rose to fame.

High among these factors are their experiences at the academies where their character and ability were tested. Thus, I read with special interest in the October 1959 issue of Trident, the professional magazine of the brigade of midshipmen at the U.S. Naval Academy, a moving story by Capt. Miles P. DuVal, Jr., U.S. Navy, retired, of two midshipmen, one of whom later became an important Member of the House of Representatives from Alabama.

The article is accompanied by the following biographical sketch of its distinguished author:

Graduating from the U.S. Naval Academy in 1918 (class of 1919), Captain DuVal has had an extensive naval career spanning World Wars I and II. During 1946–49 he was Navy Department liaison officer and head of its isthmian canal studies under the Chief of Naval Operations. He is author of a Panama Canal series: "Cadiz to Cathay" and "And the Mountains Will Move"; as well as other writings on interoceanic canal problems. This is his second article in Trident.

At this point, Mr. Speaker, I wish to stress that the Nation's academies serve as reservoirs of great tradition so vitally important to the morale of the officer corps. Captain DuVal's story of the experiences of two midshipmen will no doubt become a part of naval tradition and serve as an inspiration for many other midshipmen.

The editor in chief of Trident, Midshipman Thomas E. Hutt, Jr., and other members of its capable staff are to be commended for the choice of such an article for publication. I trust that they will seek other stories of like character in the future and publish them.

In order that the indicated story may be recorded in the permanent annals of the Congress and thus be available to the libraries of the Nation, I include it as part of my remarks:

EMERGENCE FROM COVENTRY

(By Capt. Miles P. Du Val, Jr., U.S. Navy, retired)

In 1888 a number of midshipmen returning from the summer practice cruise, who did not go home, were spending their September leave at the old U.S. Naval Academy. One Sunday afternoon some first classmen went sailing in the harbor with Midshipman Richmond Pearson Hobson in charge.

Temporarily free from the burdens of study and removed from the close scrutiny always prevailing within the academic limits, they were thoroughly enjoying the outing on the Severn. Taking advantage of the opportunity, some started smoking in the sailboat—a violation of Naval Academy regulations.

Their supposed security, however, did not last long, for the officer on duty that day chose that time to make an inspection of the harbor in a steam launch. Thus, Midshipman Hobson, who did not smoke, became concerned about the violation of rules by his classmates lest he, himself, be charged with neglect of duty for failure to enforce the antismoking regulation and requested them to desist. They did not comply.

The steam launch came closer. Hobson directed those smoking to stop, warning that he would report them for that offense if they did not. Instead of obeying, they guarded against discovery by holding their cigarettes under the gunwhale of the sailboat as the launch approached.

Though the duty officer did not spot the offenders, Hobson, after arrival at quarters, reported his violating classmates for smoking in the boat—an action that started a long chain of related events.

After return of the midshipmen from their September leave to resume studies for the academic year, the first class, largely under the leadership of one member, met to consider what they thought a serious infraction of class traditions by Midshipman Hobson, and voted him into coventry.

All members of the class obeyed this ruling except one—Midshipman Louis M. Nulton. Thereupon, the class held another meeting.

Calling Nulton before it, the class spokesmen demanded that he comply with the coventry ruling. Nulton explained that he and Hobson were close friends and that he would not accede to their demands. The class, promptly voted him into coventry along with Hobson.

The greatest part of that academic year passed without any relaxation in the persecution. Toward its end, however, the members of the class were shocked by the forced separation from the Naval Academy of its leader—the one who had engineered the proscription of Hobson and Nulton.

Thus awakened, the class called another meeting to reconsider their actions. Members explained to Hobson and Nulton that the class had come to realize that they had wronged both of them and asked for their forgiveness and friendship.

Hobson rose and stated: "During the past year you have done your utmost to ruin my life and career. In spite of your determined efforts, I have stood one in this class and proved to myself that I do not need your support. You may go your way and I shall go mine."

Nulton followed Hobson with these words: "Though I can never forget, I can forgive. I shall welcome your friendship in the future."

The years passed. By the winter of 1917–18, both Hobson and Nulton had attained real stature: Hobson, as a hero in the Spanish-American War; and Nulton, as the author of textbooks used at the Naval Academy and commandant of midshipmen (1915–18).

It was during this winter that Captain Nulton told the moving story of his midshipman experiences to another first class, when I was present, in Memorial Hall at the new Naval Academy. To it he added: "Even today, as I pass by some of the familiar landmarks of the old Naval Academy, I can recall the sneering voices of some of my classmates. Those who were my worst enemies then are now among my best friends."

He further explained that Hobson and he had resolved the same problem by different solutions and that he was glad that he had chosen the one that he had.

Fifteen years passed. On March 25, 1933, the U.S.S. *Dupont* (DD 152), my first command, arrived at Boston for duty. One of the first duties was to call on the commandant, First Naval District—Rear Adm. Louis M. Nulton.

In the ensuing conversation, I expressed appreciation of his 1918 story of his midshipman days and what a deep impression that it had made on all who heard it. He repeated the story, confirming significant points.

Knowing of his distinguished record, I could not resist saying: "Admiral, your treatment at the Naval Academy must have been a profound psychological experience serving as a drive in your later career."

"Yes, it was," he replied, "but I never thought of it in that light."

Now, that both of these men and their classmates are dead, what are some of the highlights in their careers that distinguished them?

Hobson first attracted national attention by sinking the collier *Merrimac* in the entrance to Santiago, Cuba, on June 3, 1898, in a heroic attempt to bottle up the Spanish fleet, for which he was subsequently awarded a Congressional Medal of Honor. Resigning from the Navy on February 6, 1903, he started a second career, serving in the Congress as a Representative from Alabama, 1907–15, and becoming a national and international leader in causes related to the suppression of nar-

cotics. Finally, he was promoted in 1934 by act of Congress to the rank of rear admiral.

Nulton, in addition to the achievements already mentioned, became Superintendent of the U.S. Naval Academy, 1925–28, and commander in chief, U.S. Pacific Fleet (then called Battle Fleet), 1929–30, with the rank of admiral.

Today, when scanning the roster of the class of 1889, which produced a number of eminent officers, including one Chief of Naval Operations, and judging its members on the basis of recognized attainment, two names stand out—Hobson and Nulton.

Civil Defense

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, January 7, 1960

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Maj. Gen. Ralph J. Olson, Wisconsin State Director of Civil Defense, before the Wisconsin Associated Press Association at Milwaukee, Wis., on December 5, 1959.

This address deals with a subject in which we are all interested, and it is of vital importance, particularly in the light of the President's address of today, that we keep our house in order.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY MAJ. GEN. RALPH J. OLSON, STATE DIRECTOR OF CIVIL DEFENSE BEFORE WISCONSIN ASSOCIATED PRESS ASSOCIATION, MILWAUKEE, WIS., DECEMBER 5, 1959

Mr. Chairman, distinguished guests, ladies, and gentlemen, I am going to operate on the premise that a threat exists and there is a definite need for civil defense for our individual and collective survival. I, therefore, submit that civil defense as a full copartner of military defense is necessary as a vital arm of total national security to protect our people, the economy, our military bases, and to serve itself as a strong deterrent to an all-out attack on this country.

Prior to World War I there was actually little need for civil defense, but with the advent of modern submarines and long-range aircraft plus the mounting missile threat, our cities, industrial centers, and military bases present a lucrative target. Our military leaders admit that we lack the air defense to prevent an all-out attack on this country at the present time. You will recall the late General Vandenburg estimated that 70 percent of attacking planes would reach their targets. Then, too, we must realize that one plane or missile today carries more destruction than our entire Air Force did in World War II. And with the present thermonuclear weapons there is a new dimension of modern warfare; namely, fallout.

What is fallout? When the fireball from a nuclear weapon touches the earth's surface, great masses of dust and debris are sucked up, mix with the minute particles of the weapon, and become intensely radioactive. Radioactive fallout may carry lethal destruction hundreds of miles downwind from a bomb burst. Therefore, a strike on the twin cities of Minneapolis and St. Paul could endanger the lives in many Wisconsin communities. This fallout, except for the dust it carries along, is invisible, odorless, and tasteless. That means that no village or city is immune from radioactive fallout, nor can anyone predict the area where the bombs may strike.

What is our defense against fallout? Only by putting distance or mass between you and the radioactive fallout can you be protected. If there is time, it would seem logical to evacuate the target areas prior to attack and get people into fallout shelters. The Federal plan recommends the construction of fallout shelters stocked with food, water, and medical supplies for 14 days.

Survival for 2 weeks is essential, but the big question is: What do we do on the 15th day?

The answer must be in a well conceived survival plan which spells out procedures to be followed by all echelons of government and their people. Since 1950 it has been my firm conviction that if civil defense is to be realistic and effective, it must be an expansion of existing government functioning under emergency conditions. This means the utilization of existing State departments, city, county, and village agencies functioning under their regular department heads and permanent employees plus whatever volunteers are necessary to meet the situation.

This philosophy of civil defense being government in its entirety mobilized for emergency purposes has been recognized at both the National and State levels. The Office of Civil and Defense Mobilization, an integral part of the Office of the President, exercises control at the Federal level and the same concept has now been developed in the State of Wisconsin. Only this week the legislature completed action on a substantial revision of the Wisconsin Civil Defense Act, establishing the bureau of civil defense as a part of the executive department. This bill is now awaiting the Governor's signature. The Governor is given broad emergency powers in the event of war, and he may employ all of the resources of State and local government in the civil defense effort. The State director of civil defense is, in effect, the chief of staff to the Governor and exercises authority delegated by the chief executive. May I suggest to you that you of the fourth estate give this legislation your careful attention. It is a significant and far-reaching step toward effective civil government in a war emergency. In addition to the revised Civil Defense Act, the Wisconsin Legislature has passed and the Governor has signed a series of bills known commonly as the Continuity of Government Acts. There is now authority for both State and local governments to move their headquarters beyond the limits of their established jurisdictions; provision has been made for succession to office at the local level, and the first step has been taken toward amending the constitution in order that succession will be provided for State offices in the executive, legislative, and judicial branches. The legislature has also provided a system for preservation of essential State records.

Related to the basic statutory authority we have promulgated the State survival plan. The State plan is a comprehensive operations guide covering the general scheme of operations for survival and spelling out the responsibilities of the several agencies of the State government and the responsibilities of local units of government.

Our Wisconsin plan has just been distributed throughout the State together with prototype plans for city and county civil defense organizations, as well as operational plans for the target areas of Superior, Green Bay, Madison, and the Milwaukee-Racine-Kenosha complex.

The Wisconsin survival plan provides for administrative and operational control by dividing the State into 10 areas. These consist of 4 target areas, 4 reception areas to receive evacuees from the target areas, and 2 support areas. The division of the State into 10 areas permits the giving of direct guidance and the exercise of administrative control throughout the State in this period of preparation. In time of emergency, it will give the Governor and his State director firm command and control of all activities within the State.

It must provide for the orderly evacuation of people, when time permits, to reception areas. This will necessitate the marking of routes and the organization and training of reception teams.

Mr. Wilbur J. Schmidt, Director of the Department of Public Welfare, who is my codirector for emergency welfare services, has the responsibility of the reception of evacuees which includes their housing, clothing, feeding and rendering financial assistance. He is also responsible for the care of institutionalized personnel, groups that need special assistance, and State institutions under his control.

All the work that has been carried on during the past 9 years is incorporated in this plan.

To mention just a few, first we have the warning system. This warning system is complete down to the counties and in some instances to cities, villages, and institutions within the county. Much work remains to be done. Every man, woman, and child should be familiar with the warning signals and the plans for action in their particular communities.

2. Communications: Our communications plan is under the supervision of Norman E. Blume, my codirector for communication. This plan calls for the utilization of not only landline telephones and teletypewriter but radio as well, be it commercial, police and fire, or amateur radio.

3. Medical services: It is difficult to comprehend the requirements of our professional services, our hospitals and institutions. We know our requirements will be fantastic, and you may be interested to know that at present we have 45 emergency 200-bed hospitals strategically located in various parts of our State. These hospitals cannot be opened except in an enemy-caused disaster, but we do have one training unit which is in use throughout the State. These hospitals cost the Federal Government $27,000 each and are complete with surgical and sterilizing equipment plus medical supplies.

Dr. Carl N. Neupert, State health officer, my codirector for medical services, has the responsibility for planning to staff and operate these hospitals in time of emergency. This calls for close cooperation with county medical societies throughout the State and the recruitment of volunteers necessary in this program. He is also responsible for the organization and training of medical teams which can be dispatched to disaster areas in time of need. It must be quite apparent to all of you that professional services will be in such demand that we may be forced to call on our own first aid training to tide us over the initial period. Even if we never have an attack on our country, there are numerous occasions when first aid has saved a life, similar to the young Boy Scout who breathed life into his baby sister until the doctor arrived. In natural disasters such as fire, flood, and tornadoes, we find that, first aid is essential; and I have always recommended that at least one person in every family be trained in first aid.

4. Police services: Our police services will face a monumental task in traffic and panic control. No city, village, or county will have adequate police-trained personnel. Therefore, one of the important facets of our training program has been the training of auxiliary police throughout the State. Under the supervision of Commissioner James L. Karns, who is my codirector for safety services, we have an exten-

sive training program in existence today. Already we have approximately 6,000 men trained in accordance with standards and specifications drafted by the State office of civil defense as recommended by my police chiefs advisory committee.

5. Economic control program: Certainly the control of food and fuel supplies, which includes monetary stabilization and transportation services, will require careful pre-attack planning. The Governor has a committee which is studying the problem and will recommend procedures which may be adopted in an emergency.

Time will not permit a detailed discussion of our State office operations. Our administrative and training program demand much of our time, especially the surplus property program and the Federal matching fund program which is the responsibility of the State office.

Although much has been accomplished, much remains to be done. Our country can never expect to have a perfect civil defense or survival plan, and therefore we must operate on the basis of doing first things first. I know there are many who feel that the problems are of such magnitude that many communities do not go beyond the first steps in organizing civil defense.

I submit that a nominal effort is not enough. Lip service and catch-as-catch-can organization will not suffice. There is no question but what a total war emergency would create problems the like of which the world has never experienced. Having recognized the threat and considered the magnitude of the effects of total war, we must make an all-out effort to prepare for a potential catastrophe. This effort will require the best of all of us and we must have positive direction from the leadership echelon at all levels of society. If this informed and positive leadership is forthcoming, I have no doubt that our people will respond. We in the Middle West are only two generations away from the pioneer generation, and I firmly believe that we have within us the courage and ability to face up to the problems of our age in the same manner that our forebears met the challenge of the frontier.

You as editors have a responsibile and influential position in your communities. I sincerely hope that we in government who are charged with the direct responsibility for the civil defense mission, can count on you for continued interest, counsel and support.

Our First Year Under the New Education Act

EXTENSION OF REMARKS
OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. THOMPSON of New Jersey. Mr. Speaker, it might be well to review some of our accomplishments during the first year under the new National Defense Education Act.

U.S. Commissioner of Education Lawrence G. Derthick has just announced that 35 modern foreign language institutes for the training of 2,000 elementary and secondary school language teachers will be established at colleges and universities next summer, and that he has approved 406 programs of graduate study involving 1,500 3-year fellowships authorized by the National Defense Education Act. The fellowship awards, provided under title IV of the act, are for study during the 1960–61 academic year.

I include here a fine and informative article by a good friend and former constituent of mine, who at one time was connected with Princeton University in the New Jersey district which I have the honor to represent. The article was carried in the Washington (D.C.) Star, October 18, 1959.

OUR FIRST YEAR UNDER THE NEW EDUCATION ACT

(By George W. Oakes)

Appraisal of the accomplishments under the National Defense Education Act, in its first year of operation, finds educators and officials agreed that considerable progress has been made.

In brief the act, signed in September 1958, has resulted in:

More emphasis on language study.

Improvement of science and mathematics instruction.

Stimulation of the abilities of talented schoolchildren.

Easing the financial burden of college students.

Increasing the numbers of qualified college teachers.

"Better teaching of foreign languages probably is the biggest single step forward under the act," according to Office of Education officials. Various programs now in operation will help considerably to correct the decline in foreign language instruction which, oddly enough, has occurred during the last 40 years, just at the time this country rose to a position of world leadership.

LANGUAGE INSTRUCTION

School and college foreign language teachers are learning new methods of instruction, in such ways as these:

1. Last summer 925 elementary and secondary schoolteachers of French, German, Spanish, and Russian attended 12 special 6- or 8-week institutes on the campuses of universities in Michigan, Texas, and Colorado. They concentrated on the latest audiolingual methods of teaching modern languages which involve first hearing the language through audio aids, then speaking it, and finally writing it. Foreign language teachers have been particularly lacking in modern methods of instruction.

Most teachers took French and Spanish. The demand for admission to the institutes was so great that 5,000 teachers who applied could not be accepted. As a result, next summer 85 courses will be held for 2,200 schoolteachers in the same languages, plus Italian. In addition, full academic year institutes are now being held in 4 universities for 95 schoolteachers of French, Spanish, and Russian to offer them a more concentrated course of study.

2. Audiovisual laboratory equipment is being installed in public elementary and secondary schools. Federal funds are made available on a matching basis to the States who—with the local school authorities—determine how and where the money is spent. A foreign language laboratory for beginners in a junior high school costs between $3,000 and $4,000. State allocations of Federal money are decided on the basis of the number of students and the average income per child of school age. Consequently the poorer States with large school populations benefit the most.

ENCOURAGING THE STATES

3. The stimulus of Federal activity has had the additional benefit of encouraging the States to speed up their own efforts to improve foreign language teaching. Only four States had supervisors of foreign language instruction before the act got under way. Now 27 States have 32 supervisors.

4. Several research projects are being financed by the Federal Government to develop new methods of teaching foreign languages. For example, the University of California is experimenting with new visual aids on basic grammatical problems of Spanish.

5. The act is encouraging the study of unusual languages not commonly offered but required by persons in government, industry and education. There are 50 languages spoken by millions of people in various parts of the world that are not even taught in the United States.

CENTERS ORGANIZED

Nineteen university language centers have been organized on a full academic year basis. The six highest priority languages to be studied in these centers are Arabic, Chinese, Hindustani, Japanese, Portuguese, and Russian. Related area studies are also included. Fellowships for advanced study in the same 6 languages have been awarded to 171 graduate students planning to enter college teaching.

Badly needed new science and mathematics equipment is being installed throughout the public school system. Probably more than $50 to $60 million of Federal grants will be spent before next June by probably every State and Territory. These new facilities should raise the level of science and mathematics teaching considerably, and supply most of the required modern equipment during the next 3 years of the act.

This money is provided on a matching basis for the purchase of new—and remodeling of old—science and mathematics equipment, including laboratories and instructional materials.

A general science laboratory for 28 junior high school students costs between $8,000 and $10,000 for furniture and equipment. Eighteen thousand dollars to $20,000 is needed for a new high school chemistry laboratory.

As an indication of the scope of the program in Washington, District school officials believe that their science and mathematics equipment requirements will be covered adequately during the 4 years of the Education Act.

Only 8 States had 11 supervisors in science before the act took effect. Now 24 States have 34 science supervisors. An even larger percentage increase took place among State staff members whose duties are to consult with local school authorities in mathematics instruction. The States also have set up courses to train teachers in the use of new science and mathematics equipment.

In addition, teaching of the sciences in the private schools has been substantially aided by Federal loans for the purchase of science and mathematics equipment.

One of education's problems has been to prevent the waste of talent by finding outstanding students in the Nation's 25,000 public schools. Through proper guidance, these able students can be persuaded to exert their best efforts in school by taking challenging courses and then they can be encouraged to seek a college education.

A major reason why approximately 100,000 topflight high school students do not continue their education is that probably less than half receive adequate guidance and counseling. Dr. James B. Conant's recent report on the American high school stressed the importance of correcting this situation.

FOR HIGH SCHOOL AIDES

Last summer, under the Education Act, 50 short-term institutes were conducted by various universities for 2,200 high-school counselors. This experience in improving the qualifications of these counselors for their specialized duties was so successful that next year 70 summer institutes will be held.

The $60.5 million of college student loan funds in the new act and already allotted by the Federal Government, is likely to have an explosive effect by converting students to pay for their education on credit. Although the detailed figures are not yet available to substantiate this view among educators, they expect that the 1,400 recipient institutions, representing 88 percent of our total college population, will drain this new source of loan funds.

Money is given to the States according to their full-time college enrollment and, in a revision of previous policy, will be granted to each college on the basis of need. The Federal Government puts up $0 for each $1 from a college.

The program's popularity has surprised many educators, for only 4 years ago the total lending operations of all colleges and universities was less than half the amount the Federal Government supplied in the past academic year.

It remains, to be seen whether the $1,000 a student may borrow at 3 percent for 5 years will influence poor but able students to seek a college education rather than to go to work in order to support their families. Many educators believe it will mainly reduce the large number of good students who drop out of college for financial reasons. In addition, a loan will enable college students to spend more time on their studies rather than taking so many part-time jobs in order to meet expenses.

FELLOWSHIP PROGRAM

The act's graduate fellowship program, aimed at reducing the shortage of qualified college teachers, got under way last month when 1,000 fellows out of 6,000 applicants took up residence in 123 graduate schools. Each fellow receives $2,000 plus $400 for each dependent. The students are intentionally spread throughout the country in order to strengthen the smaller graduate schools and take the pressure off the large universities.

At present only 10 graduate schools grant 38 percent of all Ph.Ds. $2,500 per graduate student is granted to each institution to help finance the additional expense. Although the program is not directed toward science, nearly half of the graduates are working in scientific and technical fields.

In administering the act, the Office of Education has attracted as many educators of national reputation as its pay scale, in many cases below comparable jobs in some States, would permit. The office's personnel was increased by 300 to a total of about 1,000 in order to operate the program.

Man of the South for 1959

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, January 7, 1960

Mr. TALMADGE. Mr. President, on December 14, 1959, the Man of the South Award for 1959, made by Dixie Businesss magazine, of Decatur, Ga., was presented to Hon. Norman A. Cocke, chairman of the board of Duke Power Co., at a banquet held at the Country Club of Charlotte, N.C. One of the speakers of that occasion was Hon. Reuben B. Robertson, former Deputy Secretary of Defense, the president of the Champion Paper & Fiber Co., who was himself honored as Man of the South in 1950. In his remarks, Mr. Robertson paid tribute both to Mr. Cocke and to Hon. Hubert Lee, who has for 30 years been editor of Dixie Business magazine.

I ask unanimous consent that the text of Mr. Robertson's remarks be printed in the Appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

TRIBUTE TO NORMAN A. COCKE, MAN OF THE SOUTH FOR 1959, BY REUBEN B. ROBERTSON, THE MAN OF THE SOUTH FOR 1950

At the outset of my remarks I want to express cordial thanks to Col. Hubert Lee for 30 years editor of Dixie Business of Decatur, Ga., for his initiative and for the friendly human interest which led him to organize the plan by which flowers are handed to the living while they are still able to enjoy them. He has carried forward the plan almost single handed for nearly 15 years. Obviously time, effort and dollars are involved in gathering the nominations, arranging the balloting and supervising the awards; with Colonel Lee it has been a labor of love. He has had no reward other than the satisfaction of knowing that he has done something that makes life more stimulating and more interesting for those who live in the South. I believe the verse written by Burton Braley expresses well the human motive that lies back of this project of Colonel Lee: "More than fame and more than money is the comment kind and sunny and the hearty warm approval of a friend, for it gives to life a savor and makes you stronger, braver and gives you heart and spirit to the end. If he earns your praise bestow it—if you like him let him know it. Let the words of true encouragement be said—don't wait till life is over and he's underneath the clover for he cannot read his tombstone when he's dead." In a world full of turmoil and anxieties we often allow our feelings of friendliness and generous admiration to lie dormant, unexpressed.

Such meetings as we are having tonight provide opportunity for the expression of the good will that is in us. We enjoy an adventure in kindness.

The man whom we are honoring tonight is, from whatever angle you look at him, a successful man—successful in the handling of the great diversity of activities that have been entrusted to him. In public utilities, educational institutions, hospitals, natural resources and in the spiritual realm we see the results of painstaking, intelligent, conscientious effort backed by sterling character. All of us here have enthusiastically supported the idea of honoring our greatly admired friend through the token award of Man of the South. In honoring him we are really at the same time honoring ourselves, for we are putting ourselves on record as recognizing and supporting the finest and most elevated principles of American life. With one exception, I can say without fear of contradiction, that all of those who in the past have received the Man of the South award are men of distinction and richly deserved the honor which came to them. Each represented a special field of endeavor and each was outstanding in that field. Norman Cocke's record of achievement is unique in that he has been outstanding in such a wide range of activities. The living members of this group of award recipients, men like Ernest Kurth, Thomas Martin, Senator Wilton Hall, Donald Comer, Robert Jones, C. Hamilton Moses, Bishop Arthur Moore, A. Dee Simpson, and Frank P. Samford will enjoy honor by association as their names are coupled with that of Norman Cocke.

As an industrialist I have always liked the verse entitled, "The Thinker," which goes:

"Might of the roaring boiler,
Force of the engines thrust,
Strength of the sweating toiler,
Greatly in these we trust.

"But back of them stands the planner,
The thinker who drives things through,
Back of the job the dreamer,
Who's making the dream come true."

Such a man is the one to whom we give honor tonight. Success has come to him in unusual degree—he has used that success in modestry and humility to better the lot of his associates as well as that of his fellow citizens in his city, his State and Nation. He has dreamed dreams but has had the practical skill and perserverance to make those dreams come true so we say to Norman "Vaya con dios and hasta la vista." May the good Lord bless and keep you 'till we meet again.

German Wave of Anti-Semitism Viewed as a Symptom of Resurgent Nationalism

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. McDOWELL. Mr. Speaker, dismay and apprehension is being expressed in a number of European countries about the wave of anti-Semitism which is sweeping over Germany. The memory of the recent past of World War II, and the anti-Semitism which paved the way for it, is fresh in the minds of millions of bereaved families.

Here in our own country the memories of millions of our citizens who fought in World War II against the terror unleased by Hitler's legions are all too fresh to let the new rise of German nationalism pass without notice.

American aid has helped restore Germany to an economic prosperity ahead of most of those European countries who were our allies in World War II.

Now U.S. military leaders and the President are planning to provide Germany with nuclear weapons.

It is high time that the President and the Congress review this matter of German anti-Semitism and resurgent nationalism. A survey taken for the U.S. High Commissioner some time ago showed about 38 percent of the Germans questioned acknowledged anti-Jewish attitudes, and the survey report said "it would appear distinctly unsafe to conclude that anti-Jewish tendencies characterize less than a majority of the West Germans."

Our concern with Soviet power in Europe and the world must not cause us to lose sight of the threat to peace and our way of life which a new rise to power of nazism in Germany would bring about.

The United States has fought in two World Wars within a single generation in which Germany was arrayed against the West and our own country—and millions of our young people suffered and lost their lives in these holocausts.

It is high time the President and the Congress gave thought to this situation, and considered whether economic and military assistance in the massive proportions which we have given Germany has not, indeed, contributed to this German resurgence. Easy wealth and affluence which does not stem from the labor of a people may be more harmful than good. If study shows that our economic and military assistance is making a contribution to the present sad events in Germany then we must reconsider the matter of continuing such assistance before it ends in a third world disaster. In any event, we must not continue to drift in a situation which is daily growing worse.

I include several items from the New York Times which documents the present grave situation with which we are faced:

[From the New York Times, Jan. 4, 1960]

NEW ALARM IN BRITAIN—GERMAN WAVE OF ANTI-SEMITISM VIEWED AS A SYMPTOM OF RESURGENT NATIONALISM

(By Drew Middleton)

LONDON, January 3.—A cartoon on the front page of the Daily Express pictured a plump German dusting the tunic of an S.S. uniform. The caption was from Heinrich Heine: "A Tale of Long Ago That I Cannot Get Out of My Mind."

The cartoonist, Osbert Lancaster, thus reflected some of the dismay and apprehension aroused in Britain by signs that anti-Semitism remains endemic in West Germany. The news from Germany seems to have affected more people in Britain and to be taken more seriously here than elsewhere among the West Germans' allies.

The serious popular concern about Germany, partly instinctive and emotional, embarrasses the British Government. Prime Minister Macmillan and his ministers see the maintenance of unity as one of the chief problems facing the Atlantic alliance in a period of negotiation with a superficially friendly Soviet Union.

They already face considerable opposition on the left to any movement toward providing West Germany with nuclear weapons. Now the latent fears of the middle class about Germany have been intensified. Any Conservative government here must be responsive to the feelings of the middle class.

At this juncture, criticism of Germany can no longer be ascribed, as it often has been here in the last decade, to envy of higher German living standards. A consumption boom has put the British ahead of the Germans when material comforts are measured in terms of cars, television, food, and clothing.

ANTISEMITISM NOT KEY ISSUE

Nor can the British feelings be put down to immediate disgust at anti-Semitism. Britain has her own anti-Semites, although the disease is by no means so widespread or so deeply ingrained as it is in Germany.

Both the Government and public opinion deplore the anti-Semitic acts that have occurred here. These are regarded largely as the work of Sir Oswald Mosley's Fascist group, but the police say they also are attributable to irresponsible young persons infected by examples from abroad.

The chief basis for the present British concern about Germany is the fear that the anti-Semitism there is only one aspect of the worst side of German nationalism, which cost Britain and the Commonwealth just under 4 million casualties in two World Wars.

The psychological effect of their experiences in these two conflicts has left the British much less ready than the Americans to accept the Germans as allies and much more receptive to the half-formed, instinctive thought that "the Germans are the enemy."

Probably because of this ingrained sentiment, the British are less surprised, although more concerned, about what is happening in Germany now. Early in 1953 British occupation authorities arrested Dr. Werner Naumann, an unregenerate former Nazi, in an effort to nip a revival of the National Socialist ideology among the Germans.

GERMAN ATTITUDES SURVEYED

About the same time, a survey taken for the U.S. High Commissioner's office in Bonn shed some light on anti-Semitism in West Germany.

The survey, entitled "A Yearend Summary of Rightist and Nationalist Sentiment in West Germany," noted even then a growth of anti-Jewish sentiment.

About 38 percent of the Germans questioned in the survey acknowledged anti-Jewish attitudes, and the survey report said "it would appear distinctly unsafe to conclude that anti-Jewish tendencies characterize less than a majority of the West Germans."

A majority, the survey found, believed that the Germans need neither feel guilty for what was done to the Jews during the Hitler regime nor responsible for righting those wrongs.

FEAR OF SOVIET IS DECLINING

Apprehensions over Germany's future conduct were balanced in Britain, especially among the middle and upper classes, by the fear of Soviet military action during the cold war.

The lessening of the Soviet threat, slow and uneven though it has been, has allowed the British to take a more censorious attitude toward their new allies in Bonn. Germans in London often assert that this criticism is inspired and aggravated almost entirely by the left wing.

Yet no German eager for better relations with Britain can discount the suspicion and distaste for his country that exists in the middle class. It was this class that was affected the most by the two wars. Much of the resentment at the changes in British society that brought about its eclipse have been transferred to the Germans.

[From the New York Times, Jan. 5, 1960]

TOP BRITISH JEWS GET NAZI THREATS—THREE MEMBERS OF PARLIAMENT WARNED BY CALLERS—BONN EXPRESSES CONCERN—DESECRATION SPREADS

(By Drew Middleton)

LONDON, January 4.—The counselor of the West German Embassy expressed to the Foreign Office tonight his Government's deep indignation at the desecration of synagogues and private homes in West Germany by paintings of swastikas and Nazi slogans.

Dr. Fritz Caspari's assurance that his Government would do its utmost to bring those responsible to justice coincided with another eruption of anti-Semitism in Britain.

An unnamed spokesman for the British Nazi movement called the Press Association, Britain's chief internal news service, to say that a number of prominent Jews had been selected as hostages.

"Every time a German nationalist suffers by the action of the Adenauer government under pressure from the Jews," the caller said, "one prominent Jew in this country will suffer likewise."

THREE MEMBERS OF PARLIAMENT THREATENED

Three Jewish members of Parliament and one former Member of Parliament have been victims of anonymous telephone calls. Sydney Silverman, Member for Nelson and Colne, was told he had been selected as a victim. Mr. Silverman hung up at that point.

The British Nazi movement also telephoned the homes of Dr. Barnett Stross, Labor Member of Parliament for Stoke-on-Trent, Janner, Labor Member of Parliament for Leicester Northwest, and Ian Mikardo, former Labor Member of Reading.

"They kept me awake half the night, the blighters," said Mr. Mikardo, who is a leader of his party's left wing.

Swastikas were daubed on six shops owned by Jews in Chapeltown neighborhood of Leeds, on the Royal Bath Hotel at Bournemouth and on a watchtower near Bolton in Lancashire.

The attitude of the police in the areas concerned and at Scotland Yard is that the incidents are largely the work of hooligans infected by the German example. But the National Council for Civil Liberties said it was "deeply disturbed" at evidence that there were people in Britain "prepared to support the Nazi program."

"We now call on the public to assist the authorities in their efforts to stamp out the evil, which brings shame on the British people," the Council's statement said.

Members of the Jewish community in London were upset by the revival of anti-Semitism. They saw it as the worst outbreak since the autumn of 1947, when anti-Semitism was fed by fighting between Jews and British troops in Palestine.

There was reassurance for them, however, in the bitter criticism of British anti-Semites that appeared to pervade official circles and the unofficial but powerful body of opinion that makes its view felt in pubs and clubs.

VIGILANTE JUSTICE URGED

BONN, GERMANY, January 4.—A private vigilante type of counterterror was one of the measures urged in West Germany today to combat anti-Semitic vandals.

The appeal found no support among responsible authorities, but the somewhat dazed search for a solution of the renewed problem of anti-Semitism continued to agitate the country.

The call for vigilante justice on the ground that only Nazi-type methods can work against Nazi-type ideas, came from two mass-circulation newspapers.

Federal officers appeared to be thinking more in terms of arranging a parliamentary debate on the daily incidents that have occurred since the Cologne synagogue was defaced Christmas eve with swastikas and anti-Jewish slogans.

Some politicians cautioned, however, against provoking more incidents by surrounding the problem with the publicity from a full-scale debate in Parliament. The attitude of the parliamentary leaders was to await the results of investigations now underway before deciding on a debate.

Reports of new acts of vandalism came from West Berlin, where the police broke up a Nazilike songfest of 25 students Saturday night; Bingen in Central Germany, Marl in Westphalia and Echterdingen in North Wuerttemberg.

NEO-NAZI STUDENTS ASSAILED

BERLIN, January 4.—West Berlin student leaders demanded today the expulsion of neo-Nazi members of the League of National Students from the city's universities.

The move came after the Rightist league staged a Nazi-type torchlight parade Saturday night in which about 25 youths marched behind a swastika flag and sang Nazi songs.

[From the New York Times, Jan. 6, 1960]

JEWISH UNIT SEES NAZI RESURGENCE—AMERICAN COMMITTEE, IN TALK WITH BONN'S ENVOY, SAYS BIAS PERILS FREEDOM

(By Irving Spiegel)

WASHINGTON, January 5.—Leaders of the American Jewish Committee said today at a

meeting with the West German envoy that West Germany was plagued by a resurgence of nazism, Nazis in high government posts, and Fascist leaders from Hungary who have found a haven in Germany.

These charges were detailed in a strongly worded report presented to Ambassador Wilhelm Grewe. They named the Hungarians said to be involved in helping to foment the Nazi-like agitation.

Herbert B. Ehrmann, president of the 54-year-old committee and head of the four-member delegation, said to Ambassador Grewe that Germany, "as in the past, is serving as a focal center of infection for anti-Semitism, which is being spread by sick, susceptible bigots" in other parts of the world.

The recent anti-Semitic incidents in West Germany "threaten not only Jews but all free people," he declared.

In his first public statement on the issue, Ambassador Grewe said after the hour-long meeting at the Embassy that he disagreed in part with the committee's report on the current Nazi resurgence. The report was based on information from the committee's European offices.

Mr. Grewe declared that neo-Nazi elements were not strong enough in his country, financially or in numbers, to organize the anti-Semitic effort. He attributed the appearance of the swastikas on houses of worship, particularly synagogues, to irresponsible, youthful elements seeking publicity.

COORDINATION HELD POSSIBLE

He said that these incidents "might have been coordinated," but not on West German territory. However, Mr. Ehrmann said the incidents indicated a disease.

He said that former Nazi criminals still were in public office. On this point, Herr Grewe said that his government, through its laws, removed such persons.

The Ambassador took the view that there were many causes for the recent behavior but conceded he could not point to any single cause as the major one.

In the delegation with Mr. Ehrmann were Frederick F. Greenman, chairman of the agency's national executive board; Ralph Friedman, chairman of its foreign affairs committee, and Dr. John Slawson, executive vice president.

The "large number of Nazi criminals in prominent government positions, in the courts, schools, and armed services," the report said, "have helped create a climate of opinion in which the crimes of Hitler are often minimized and the general impression prevails in Germany that, while the former Fuehrer may have committed some excesses, he contributed to the nation's welfare.

The report scored the "extraordinary leniency by some judges" in dealing with neo-Nazi crimes and warned against what it termed "widespread public sympathy for antisemitism." It called attention to the recent merger of seven neo-Nazi youth groups into a single movement of 40,000 members.

Further, it criticized the West German Government for not having outlawed the German Reichs party as "totalitarian, anti-democratic and anti-Semitic."

The report named Ulrich von Rudel as the leader of the party. For 10 years he guided an international anti-Semitic publication, Der Weg, published in Argentina.

The report named Ferenc (Franz) Fiala, a former Hungarian Nazi leader, as one of the heads of the Hungarian group involved with the German Reichs party. After World War II, Fiala was sentenced to death as a Nazi criminal in then democratic Hungary but escaped to Germany during the Hungarian Communist uprising.

The document charged that Hungarian Nazi group in West Germany and Austria under Fiala's leadership include three former Nazi puppet generals, Andras Zako, Ferenc Farkas de Kisbarnak and Arpad Heney, all of whom were appointed by the Hungarian Nazi leader Ferenc Szalasi during the war. Szalasi was executed.

Nazi propaganda, the report continued, is also being conducted within West Germany Lajos Marshalka, Istvan Alfoldi, and Dr. Kalman Rattkay, former Hungarian Nazi party members. Three Hungarian Nazi weekly publications, with strong anti-Semitic propaganda, are published in West Germany, the report said.

Of particular concern, the report emphasized, is the "almost complete ignorance of the majority of German youth regarding the Hitler period." The document cited a survey indicating that 9 out of every 10 students in the 15-to-17-year group either "know nothing about nazism, or believe that, on the whole, Hitler was good for Germany."

The committee leaders and the Ambassador agreed that a long-range educational program was needed to instill a consciousness of the Nazi period.

Since its establishment, the American Jewish Committee, which has its headquarters in its new building at 56th Street and Third Avenue in New York, has been devoted to combating bigotry and discrimination and safeguarding the civil and religious right of Jews.

BONN IS URGED TO ACT

Seven national Jewish organizations declared last night that "Germany remains the breeding ground of anti-Semitism." They called on the West German Government to "take fundamental social measures" against such infection.

Evidence thus far, they said, does not indicate that recent anti-Semitic acts around the world were "the result of central planning or direction," although such events were called cause for concern and close attention. U.S. incidents, they said, appear to be the work of cranks and hoodlums imitating German examples.

The seven groups are the American Jewish Congress, Jewish Labor Committee, Jewish War Veterans of the U.S.A., National Council of Jewish Women, Union of American Hebrew Congregations, Union of Orthodox Jewish Congregations of America, and United Synagogues of America.

Their statement said there was no occasion to doubt the sincerity of the West German Government in its denunciation of anti-Semitic acts and its measures taken against perpetrators. But the statement added that former Nazis occupied positions of power in the Government.

They complained that no systematic efforts have been made to educate the German people away from the racist and fanatically nationalistic ideologies of nazism, and said German schools were especially deficient in this regard.

In Orange, N.J., Rabbi Joachim Prinz, president of the American Jewish Congress, said the anti-Semitic activities around the world might be part of a coordinated effort to demonstrate that a formal anti-Semitic movement still flourishes.

Rabbi Prinz said that this was the strong suspicion of Jewish leaders with whom he had talked by telephone in London, Paris, Stockholm, and Buenos Aires and that it was indicated in reports from Germany and elsewhere.

INTERNATIONAL PLOT SUGGESTED

TEL AVIV, ISRAEL, January 5.—Minister of Justice Pinhas Rosen said in the Knesset (Parliament) tonight that an international conspiracy might be behind the rash of anti-Jewish manifestations.

Mr. Rosen acknowledged that there was no definite proof but he said there was no other explanation for the series of acts in various countries. He also noted that the German language had been used in several instances.

The Way of Integrity in TV

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, January 7, 1960

Mr. JAVITS. Mr. President. The searching examination to which programing in the television industry is currently being subjected as a consequence of the quiz show exposures has demonstrated the need for a set of standards of ethics to govern the industry. The public's indignation and shock at the disclosures of dishonesty and deception have presented a moral issue which concerns all of us. In this connection, I have found the sermon of Rabbi Ben Zion Bokser, spiritual leader of the Forest Hills Jewish Center, Queens, Long Island, on the ethical lesson to be learned to be especially cogent and moving. I ask unanimous consent that the sermon be printed in the Appendix of the RECORD.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

THE WAY OF INTEGRITY

(By Rabbi Ben Zion Bokser)

There are many books of philosophy which deal with the issues of ethics and morality. Life's greatest lessons, however, are learned in the school of experience, our own experience and the experience of other people. I propose to discuss the moral situation of our time, and I would like to do so by reference to the experiences of two men. One lived long ago in the days of the Bible; his name was Noah. The other is a contemporary, a teacher of literature and a TV quiz winner; his name is Charles Van Doren.

There is no need to review the details in the sad story of Van Doren's rise to fame and his fall from it. I feel sad in dealing with this unhappy story, because I know the Van Doren family. The father of Charles has appeared in the Eternal Light summer radio program, which I am privileged to edit. He is a person of great wisdom and I have deep affections for him. I know how much he has suffered. The younger Van Doren is a stranger to me, but through the father I feel as though I know him also. He is a brilliant young man who had the world open to him, and now he has seen his name covered with shame. I speak with sympathy and not with anger.

Charles Van Doren was the chief participant in a hoax on the American people. He allowed himself to be presented before the country as the know-it-all of learning, but the whole thing was a fraud. And then when the truth began to come out he continued to proclaim his innocence before the TV audience and before a grand jury. He confessed when he had no other way out.

Let me say, however, that I regard him not only as a perpetrator of a hoax but also as its chief victim.

The producers and their associates, the sponsors and their public relations managers tempted him. They promised him fabulous riches and they talked him out of his

moral scruples. But they are not the only ones who must share in his guilt.

Judaism teaches to look further for the context of wrongdoing. In the confession of sins, we recite on Yom Kippur and on other days during the year we say: Ashamnu, bagadnu, we have offended, we have been treacherous. The question is why this is stated in the plural rather than the singular since this is the individual's confession. And the answer is that it is to teach us the collective responsibility we all face in whatever goes on in society. Whenever any person offends or is treacherous, everyone must search his heart as to whether he has not shared in it.

What tempted Van Doren? He spoke about a service to education as one of his motives. I think this was a rationalization, to satisfy a troubled conscience. Even if the quiz shows had not been rigged, this was not a service to education. Education does not consist in the knowledge of an odd assortment of facts. Education consists in the knowledge of how to find truth, how to think through problems.

Why did the people follow these programs with such excitement? Some, no doubt, felt they were having an educational experience; they saw learning in action. But others watched it as they watch a boxing match. It was a fight, egghead pitted against egghead. And they received the vicarious thrill of watching someone get rich. It satisfied their own hidden wish to get something for nothing, to get rich in a spectacular and dramatic fashion. Mr. Van Doren agreed to become an actor in this drama not to promote culture, but to promote himself, as he reluctantly admitted before the congressional committee. He was tempted by the offer to get rich quick.

The worship of fame and riches as the highest goals of life is unfortunately part of our society, and it cuts deep into every aspect of life. Ever since I remember, congressional committees have been investigating corrupt practices in public life and they have found corruption wherever they have turned, in politics, in labor, in big business, and in little business. Did not an assistant to the President, Mr. Sherman Adams, resign under fire because he was exposed as corrupt and dishonest? A hundred other witnesses on the TV quiz scandal lied before the grand jury. Mr. Van Doren's action was not unique. It was within the pattern of the low morality which prevails in the land.

I live in a sheltered world and I do not know all the pressures of life, but from where I sit I have seen ample evidence of the depth of corruption in all walks of American life. I have been offered bribes to recommend a particular band of musicians for weddings, to say a good word for a particular childrens' camp. I have been invited to pay cash rather than by check and save money on the sales tax; I have been offered money to give my name as editor of an encyclopedia without having to do any editing; I have been invited to falsify costs of repairing my car in order to cheat the insurance company. The people who made these offers were fine people. They made these offers because everybody or nearly everybody is doing the same thing, because they do not regard fraud as evil.

I would like to refer to the other character whose experience I regard as vital to our problem, Noah. This is what the Bible tells us about Noah: "Noah was a righteous man, whole-hearted in his generation; Noah walked with God." The rabbis wonder why the text adds the phrase "in his generation." One answer is that it is to set forth the true measure of his greatness. He lived in a generation that was deceitful and corrupt. Nevertheless, in that generation he mustered the strength to be righteous. And when he spoke he was wholehearted. The word "wholehearted" has the same meaning as the Latin "integer," which also means whole. This Latin word gave us the English term "integrity." This was Noah. He lived in a corrupt generation, but he was a man of integrity.

We say this of Charles Van Doren. The fact that we live in a corrupt world does not condone his action. He should have known better. I do not mean to throw stones at him. In his confession he said that, alas, the past cannot be changed. It is not true. In Judaism the past can be changed through true penitence. Every man can redeem himself if he wills it sincerely, deeply.

But I have preached this sermon not for Van Doren's benefit, but for ours.

We are all tempted on occasions to transgress morality for the sake of advancing our status, our power, our wealth. We are tempted to do it because we know everybody else is doing it. Let this be a lesson to us. Everybody can be wrong. We don't need to be a conformist to evil. The test of a man is in his strength to say "no" to attractive propositions. Our ideal is not the weak man who succumbs but the strong man of whom it is said that he was a righteous man, a man of integrity in his generation.

Let me add one word more. The Biblical description of Noah adds "Noah walked with God." It is a helpful footnote to the story. Noah was strong to resist the temptations of his world because he felt that God was close to him. Morality has weakened in our time because the sense of God's presence has declined among us. If we are not accountable before God, then anything goes as long as we can get away with it. But we are accountable before God and He sees our misdeeds even when no one else sees us. Van Doren's confessions opened a window to the soul of a man under God's judgment. For 3 years he has had no peace, he said. I believe it. One of the reasons our generation is often so troubled and mentally sick is because it is being smitten by a God of judgment who demands integrity and chastises corruption. Tranquilizers will not give us peace, but integrity will.

We shall be strengthened to meet the test of the world's temptation by being strong in our sense of God's presence. Let us walk with God in our hearts and then we shall do what is right even in our generation.

Dr. Robert O'Neill, a Great Montanan

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, January 7, 1960

Mr. MANSFIELD. Mr. President, I believe most of us in the U.S. Senate will agree that far too often a public expression of appreciation for an individual's contributions or talents is withheld until retirement or even death.

This fall an energetic community in my State, Roundup, Mont., took upon itself the task of showing its doctor, now in the prime of his medical career, how much it has appreciated his services for the past 20 years. The local residents organized Dr. Robert O'Neill Day on November 27, 1959. It was their way of showing how they feel about Dr. O'Neill and how much they appreciate his 20 years of service as the community doctor and outstanding civic leader.

This is an example of the fine spirit these folks have. The Roundup community has had more than its share of economic bad luck in recent years because of depressed mining conditions. However, they have a great will to move ahead, and Dr. O'Neill has been a major voice in this public spirit.

I am especially pleased that Dr. O'Neill was so honored, for he is one of my closest friends. This is a friendship of many years, one that I shall cherish for many years to come.

I again wish to extend my very best wishes to Dr. and Mrs. O'Neill and their two fine daughters. It is indeed heartwarming to find a situation where there is such a mutual admiration as between the O'Neills and the Roundup community.

Mr. President, I ask unanimous consent to have two newspaper articles printed in the Appendix of the RECORD, one from the December 6, 1959, issue of the Great Falls Tribune, and the other from the December 13, 1959, issue of the Montana Standard.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Great Falls Tribune, Dec. 6, 1959]

ROUNDUP PAYS TRIBUTE TO DR. R. T. O'NEILL

(By Louise Rasmussen)

ROUNDUP.—About a thousand friends and well-wishers gathered at the Roundup High School gymnasium Friday evening, November 27, to pay homage to Dr. Robert T. O'Neill on his completion of 20 years of service to the community.

O'Neill has endeared himself to the Roundup area, not only through his unselfish, faithful ministrations to the sick and aged, but for his service to the community in many other ways. The community is presenting almost $1,800 in cash to the Roundup Memorial Hospital as a living memorial to its doctor.

An interesting program was presented for O'Neill with William S. Mather acting as master of ceremonies. There was an unusual sidelight to the program. Dr. O'Neill is Democratic county chairman and Mather the Republican county chairman.

Mrs. Sid (Marybelle) Smith of Billings, a lifelong friend of O'Neill, told of the doctor's early life in Anaconda. She described the eventful days of their childhood in the Smelter City's "Goosetown," in the shadow of St. Peter's Catholic Church and the Anaconda Co. smelter stack.

A nun, Sister Dominica, inspired O'Neill to study medicine. He started his college education at Gonzaga University, Spokane, and completed medical training at Creighton University, Omaha.

Others who spoke during the program were Dr. Paul J. Sullivan, of Billings, a classmate of Dr. O'Neill at Creighton, and Father Patrick J. Morgan, pastor of St. Benedict's Parish at Roundup.

Dr. O'Neill has always had an active interest in sports, from boxing and basketball in his younger days to golf and fierce partisanship for all of the Roundup High School activities. He also sponsors a comic basketball game each year for the March of Dimes, in which he usually plays and many times has been high-point man.

Dr. and Mrs. O'Neill came to Roundup in 1939 from White Sulphur Springs. Their two daughters, Sharon and Kathleen, were graduated from high school here and from Montana State University in 1959. Both girls now reside in Yakima, Wash., one teaching school, the other a pharmacist at the medical center there.

Congratulations were presented by Dr. R. E. Smalley, of Billings, a former Roundup resident, and Dr. Herbert Caraway of Billings, immediate past president of the Montana Medical Association. Congratulatory telegrams from Senators JAMES E. MURRAY and MIKE MANSFIELD were read.

In O'Neill's short talk, he said the evening had left him with the sincere desire to practice here until his days are done. He paid tribute to the late S. A. Crouse of Musselshell County, calling him the greatest doctor he ever knew. Following his talk, the crowd gave him a standing ovation.

Musical entertainment before and after the program was presented by Nat Allen of Ryegate at the organ and Ralph Gildroy at the piano.

[From the Montana Standard, Dec. 13, 1959]

ANACONDA BOY MAKES GOOD—PARTY IN ROUNDUP HONORS PHYSICIAN

More than a thousand people of Roundup and vicinity turned out recently to honor Dr. Robert T. O'Neill, a native of Anaconda, as he rounded out 20 years of service in that community. About half those present had a special reason to honor the good physician. He had assisted in bringing them into the world. But there were numerous other reasons to pay tribute to Dr. O'Neill. He has been a fine citizen in the Roundup community.

We think the people of Roundup showed exceptionally good judgment in staging a party for their doctor. Doctors are getting scarce in Montana and elsewhere in the West. As the population grows, they will be even more difficult to find.

A report just completed by the Western Interstate Commission for Higher Education (WICHE) gives us the lowdown.

Entitled "The West's Medical Manpower Needs," the report lists two major conclusions:

1. The 13 Western States must substantially expand their nine existing medical schools and set up at least three new schools.

2. Planning for such expansion must begin now, since it takes 8 years or more to build a new medical school and graduate new physicians.

Three Montanans are on the commission. They are Dr. Frank McPhail, of Great Falls; Dr. Gordon Castle, a member of the faculty of Montana State University, and Paul Working, Wilsall.

The report showed that the entire West had a ratio of 137 doctors per 100,000 population in 1957. But in Montana the same year the ratio was 95 doctors per 100,000 population.

It was recommended that the establishment of a regional medical school would probably work well for Montana, Wyoming, and Idaho since the population growth of these three States is expected to be slower than other Western States.

In its peak year of 1950, Montana had 31 freshmen in all medical schools, but in 1957 the number had dropped to 24. And the report indicated that the outlook is for a continued decline in the number of Montana medical students entering schools. There were some 20 medical students eligible to attend medical schools last year but the legislature allocated enough money to send only four, the report indicated.

Moreover, it is getting more and more difficult for young men aspiring to become doctors to gain entrance in out-of-State medical schools. Other States have enough such students to fill their own schools to capacity.

The Roundup Record-Tribune had this to say concerning Dr. O'Neill:

"It is a privilege to live in a community where some individual builds a little snowball with an idea, and that idea turns out so good that the whole community rolls and pushes it and suddenly what do we have—a new hospital, a new high school, a new church, community TV, and now a very successful Dr. O'Neill Day."

It would seem that money spent in educating a medical student is indeed a good investment. And it is certain that another Anaconda boy has made good.

Dictatorship for U.S. Civil Aviation

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES

Thursday, January 7, 1960

Mr. ENGLE. Mr. President, there is growing alarm among private and business pilots in this country over the arbitrary attitude toward civilian aviation taken by the Federal Aviation Agency. An editorial on this subject is contained in a December release by the largest and one of the most outstanding organizations representing private and business pilots, the Aircraft Owners Pilots Association. The editorial also points to the obvious broad delegations of authority in the Federal Aviation Act passed in 1958, which make the arbitrary exercise of powers possible by the Federal Aviation Agency.

I commend the editorial to the attention of my colleagues and ask unanimous consent to have the release printed in the Appendix of the RECORD.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

First year's operation of the Federal Aviation Act of 1958 has revealed that civil aviation in the United States has been placed in the hands of a dictatorship with little right of appeal from its decrees, the AOPA Pilot says editorially in its December issue which is now being distributed. The Pilot is the official magazine of the 75,000-member Aircraft Owners & Pilots Association (AOPA). Text of the editorial follows:

"We've had just about a year of the FAA now. Because it so closely affects everything about our flying, we've watched it with care, sometimes with concern, sometimes with approval. One thing is certainly true: the FAA is a lot different from the old CAA, or any of its predecessors. It's aggressive, tough, forthright, fast-acting, and—above all—virtually the mirror of its Administrator, 'Pete' Quesada. It's also well on its way to becoming one of the biggest Government bureaus in the history of the country.

"AOPA has praised Quesada and the FAA on a number of occasions. We've criticized them on others. Now that we have a year's work behind us we think we can look at the FAA fairly objectively, and reflect on the overall results.

"From a broad, overall point of view, we don't like much of what we've seen. We like even less what we think we can see ahead. Because it's quite clear now that civil aviation is in the hands of a dictatorship. This is not to say that Mr. Quesada is a Hitler; far from it. He's one of the nicest guys you'd want to know, as are most of his people. He's been helpful, considerate, and we've yet to find that he 'speaks with a forked tongue,' as the Indians put it.

"It's the basic law which makes FAA the dictatorship it actually is. It's not the fault of Quesada & Co. that they have almost unlimited authority to do what they please, virtually without question. It is the fault of the Federal Aviation Act—specifically, the Members of Congress who slid this act into being while giving the impression they were somehow saving the civilized world from absolute and total destruction.

"We see now, a year later, that civil aviation must have an absolutely independent source of appeal from arbitrary or capricious acts of FAA officials. We saw it a year ago, but foolishly let ourselves get talked out of it in a general aviation meeting—as did every other major civil aviation organization except one: the Flying Farmers. Their president held out to the bitter end, and we're ashamed to say that we encouraged him to go along with the majority and stop insisting on a source of appeal from the acts of the FAA, a source something like the CAB used to be when we had the CAA.

"Looking back on this year, we feel that this lack of unbiased appeal is the greatest single need. We now have many instances on the record in which FAA officials have acted arbitrarily and with frequent disregard for the facts. In airspace matters they tell all and sundry that they and they alone can and will make decisions for us all, and all of us have been fighting for the past year just to get their permission to sit in a room (as we used to do once a week) and discuss airspace problems, all of which are of daily and pressing concern to all users of the airspace.

"Most glaring of this year's case histories to AOPA, of course, is the arbitrary manner in which the FAA has railroaded into being the new medical rules. They didn't care a damn what anyone else thought, they said so frankly, and ordered the new rules into being with hardly a shred of factual evidence to support their actions—another fact which they candidly admit.

"FAA officials insist, of course, that we do have constitutional safeguards. One of these they talk about so much is called the Administrative Procedure Act, which requires all Government agencies to give the people affected by their acts a chance to be heard. The FAA complies with this. Once you've been heard they ignore you—but they've complied with the law. Only other recourse is the Federal courts. Best legal advice AOPA can get is that this is a hopeless business, from a practical point of view. The courts, we're told, will merely see to it that FAA abides by the law. They will not challenge, for example, the position of the newly created Civil Air Surgeon on heart conditions, diabetes, or nervous disorders. Under the old CAA, civil aviation did have an appeal, and the CAB invariably overruled CAA officials when it appeared they were being arbitrary and capricious. The CAB was staffed with aviation people competent to judge, something the courts cannot do.

"As we see it, this lack of practical safeguards makes the FAA a dangerous distatorship. Mr. Quesada is friendly and understanding. But the next man may not be, and the abuses could treble overnight. Granted, the old democratic processes do slow things down, while affected people discuss and debate. But that's the principle on which our country was founded, and neither the FAA, nor any other branch of the Government which is supposed to be serving the people, has any business changing that. Ahat's why AOPA has joined with the Air Line Pilots Association in objecting to the

arbitrary manner in which the FAA has said it intends to ground airline pilots after age 60. The special problems of airline pilots do not concern us—but arbitrary rulings, and the refusal to substantiate such rulings publicly and with facts, do concern AOPA.

"Fundamental changes in the Federal Aviation Act are needed. The FAA is not omniscient. It must be held accountable to the people it serves, and the law of the land must assure this. As Thomas Jefferson said: 'When a man assumes a public trust, he should consider himself as public property'."

Cobb Creek Reservoir, Okla.

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Thursday, January 7, 1960

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news item entitled "Dam Finished, Users Saving Half Million," which appeared in the Anadarko Daily News on December 4, 1959, and an editorial on the same subject which was published in the same newspaper on December 9.

This news item tells about the completion of the Cobb Creek Reservoir, which will serve as a source of water supply for Anadarko, Okla., and other municipalities, as well as supply water for irrigation of approximately 12,000 acres of land.

The work that was performed by the Bureau of Reclamation in constructing this project is exceptional, and the Bureau is to be congratulated on the fine work they did and the economies they made possible to keep the project under the estimated cost.

The news items was the subject of an editorial of December 9, 1959, under the byline of Wallace Kidd, and the editorial says some very complimentary things about the personnel of the Bureau of Reclamation and the way in which they entered into the community life of the city of Anadarko. Both the article and the editorial should be of interest to those who are interested in the operation of this Department of our Federal Government.

There being no objection, the article and editorial were odered to be printed in the RECORD, as follows:

[From the Anadarko Daily News, Dec. 4, 1959]

DAM FINISHED, USERS SAVING HALF MILLION

The Fort Cobb Dam has been completed, it was announced today by C. O. Crane, Washita Basin project engineer for the Bureau of Reclamation.

Not only that, but the water users have already saved over half a million dollars on their repayment contract with the Government.

Crane said the Cook Construction Co., which built the dam, had completed the work at a cost which was over $160,000 below the bid price and over half a million dollars below the repayment contract the water users, Fort Cobb, Anadarko, and Western Farmers Electric Cooperative, signed with the Government.

That means, he said, that the water users will have that much less to pay back before the dam and reservoir become theirs.

Actual work on the dam was completed November 16 and Crane wrote the construction firm a letter of acceptance for the Government on November 19.

Today Crane received the release on contract signed by Cook.

Notice to proceed on construction of the dam was given on February 11, 1958, and the company had 700 calendar days in which to complete the job. It used only 643 days.

During that time 512,044 man-hours of work went into the dam and the company's payroll poured $1,178,532 into the area economy.

The dam is about 5 miles north of Fort Cobb on Cobb Creek. It is 101 feet high and 9,800 feet long, containing 3,740,000 cubic yards of dirt fill. The reservoir capacity is 142,600 acre-feet of water.

Cecil Tackett, the Bureau's field engineer on the job, is now slated for transfer to the San Angelo, Tex., project, and will leave for there in the latter part of January, Crane said. Crane said other Bureau personnel who have worked on the dam project will now work on the aqueduct.

He said Wayne E. Stewart had been employed as caretaker of the dam by the Fort Cobb Master Conservancy District and would move into the house at the dam about December 14.

Control of the entire project will be turned over to the conservancy district officials when the aqueduct is completed and delivery of water begun.

In regard to the half million dollar saving for the water users, Crane said that was just on construction of the dam itself and said other savings were being made on Bureau overhead and aqueduct construction as well as on many other smaller items, and these, too, will reduce the repayment contract.

[From The Anadarko Daily News, Dec. 9, 1959]

NOT KIDDING

(By Wallace Kidd)

If you expect to hear someone complain about the continual waste of money in government—and you most certainly can expect it—reach back behind the waste basket for your December 4 issue of the Daily News. There you'll find a story about the completion of the Fort Cobb Reservoir, companion project to the Foss Reservoir, of the Federal Bureau of Reclamation Washita project.

Sure, everyone knew the reservoir would be completed, though the majority doubted it would ever be started. "So," you say, "there must be some other reason than that for saving a clipping from the December 4 Daily News." And you're so right. The reason that clipping should be saved is to remind you that there are government agencies and independent contractors dealing with government agencies who are interested in saving taxpayers' money.

Down in black and white, where you can know exactly what the fellow said, is a statement from C. O. "Spike" Crane, Washita project engineer, which says the Fort Cobb Reservoir has been completed in 57 less days than scheduled and at a cost of over $160,000 below the bid price. Do you realize what that means? It's a savings of over a half million dollars below the repayment contract agreed to by the residents of Anadarko and Fort Cobb and Western Farmers Electric Cooperative—an industry without whose agreement the Washita project might well have never happened.

That's a strange twist to much all of us have said about Government projects and about all agencies which spend taxpayers' money. And it's a fine thing to note. It puts confidence at the local level into something that probably deserves more than any of us have given in recent years—the Federal Government.

Here in this area we've come to appreciate and consider the Bureau of Reclamation a part of the community. Its employees have become active in civic organizations, churches, school activities, youth work. Now we find on record a performance that brings added worth to having these people as our neighbors and friends. Fort Cobb has found the same experience with the Cook Construction Co. employees as well as those assigned by the Bureau of Reclamation. It's an experience contrary to much that has been planted in the public's mind by cynics and those without actual experience with Federal agencies and contractors dealing with those agencies.

We have benefited from the presence of these reclamation project workers in recent months. We'll continue to benefit from their performance for the full repayment period of the project.

Language Training in Armed Services of Strategic Importance

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, January 7, 1960

Mr. ENGLE. Mr. President, for some months the Defense Department has had under consideration a move which could drastically curtail the work of the Army Language School at Monterey, Calif. In this connection, I invite the attention of my colleagues to an excellent article in the Army-Navy-Air Force Journal, written by Col. James L. Collins, Commanddant of the Army Language School. In his article Colonel Collins does a most convincing job of pointing up the strategic importance of placing greater emphasis on language training in our armed services. With the Soviets giving priority attention to training thousands of linguists, I agree with Colonel Collins that "much more need to be done, and time is at our heels."

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Army-Navy-Air Force Journal, Jan. 2, 1960]

LANGUAGE SCHOOL CHIEF STRESSES STRATEGIC NEEDS; CITES SOVIETS' GREAT EFFORT

(By Col. James L. Collins, Jr., U.S. Army Commandant)

In recent months the U.S. Army Language School has been the object of congressional and military interest unprecedented in its 18 years of service to the Army and the national defense effort. The consensus of most observers has been that the school can and should play a significant role in Government language training, an area where strategic considerations are becoming more important than the educational ones.

It is a strategic area because the U.S.S.R. has devoted great effort to the training of skilled linguists who introduce Soviet methods and ideology to the uncommitted third

of the world. In countering these military and propaganda gambits this country, the Army included, must produce people who can get our Western ideas and ideals across. This requires a knowledge of the language and thought patterns of the peoples with whom we are dealing. If we fail to do this we cannot discharge the responsibilities of free world leadership to which we have fallen heir.

The Army alone has men, money, and materials in 70 different foreign lands yet only about 1 out of 30 of our thousands of military and civilian representatives abroad can even carry on a passable conversation in the language of the country in which they are living. Almost everyone who has studied the problem agrees that language training is of the same order of importance as the technological race.

WORLD'S FINEST

In the midst of the diverse speculation on, among other matters, the future utilization of the Army Language School—an institution generally acknowledged by scholars the world over as the finest place for language study anywhere—it might be worthwhile to outline the circumstances which gave rise to the ALS.

The school is the outgrowth of the Military Intelligence Service Language School (MISLS), which, in 1941, was conceived in secrecy by a small group of imaginative Army officers, who recognizing the threat of war between Japan and the United States, were convinced of the need for an intelligence unit equal to the language test.

After an exhaustive search of a narrow field of possible instructors, these officers decided that it was from among the Nisei in America, the second generation of Americans of Japanese descent, that the faculty and trainees might be found and prepared for the work ahead. Thousands of these young men were screened but only a scant few were suitably proficient or had the background to absorb the intense training needed to meet the challenge.

On November 1, 1941, the school was opened in an abandoned hangar at the Presidio of San Francisco's Crissy Field. There were 60 students and a handful of instructors. Forty-five men were graduated in the first class.

CRACK ENEMY BATTLE PLANS

These "guinea pig" language specialists were instrumental in translating the Imperial Japanese Navy battle plans, which proved to be a major factor in the U.S. Navy dealing the Japanese Fleet its worst defeat in naval history off the northeast coast of the Philippines. Likewise, the complete Japanese plans for the defense of the Philippine Islands were made known through the work of early graduates.

Moved to Camp Savage and later Fort Snelling, Minn., MISLS was an established service school by autumn of 1944 and had turned out some 1,600 enlisted graduates, 142 officer candidates and 53 officers, nearly all of whom were Nisei. By June 1946 the school had graduated more than 6,000 men who served in some 130 different Army, Navy, and Marine Corps units and on loan to our allies. Many were attached to the Joint Intelligence Center, Pacific theater, with headquarters in Hawaii. Ten-man teams of linguists were selected for headquarters assignments with more than a score of infantry divisions in the Pacific. Other language teams were assigned to the Joint Intelligence Collecting Agency, which later combined with British intelligence to form the Southeast Asia Translator and Interrogator Center in New Delhi. Groups were assigned to Merrill's Marauders, Mar's Task Force, Far Eastern Air Forces, and to the Headquarters of the China-Burma-India theater.

ORANGE CRATES TO TV

Since its establishment at the Presidio of Monterey, Calif., in 1946, the school has grown from its primitive state in 1941, when it had orange crates for desks, to a well equipped institute complete with a wide array of teaching aids. These include electronically equipped, ultramodern language laboratories and a closed-circuit television system.

Widely used in World War II, the linguist is of equal if not greater importance to the modern Army and the Army of the future. Today 28 languages are taught at the school, ranging from Arabic and Albanian to Ukrainian and Vietnamese. Also represented on the curriculum are more common languages like French, German, Spanish, Italian, and Portuguese. Yet these languages do not occupy the preeminent place accorded them at most civilian colleges. Russian and Chinese claim the energies of almost half the student body.

Nearly 1,800 students ranging from colonel to private, come here each year from all walks of military life. This month, on October 23, the 25,000th student was graduated. He symbolizes the millions of hours of intense, 6-hour-a-day language instruction over nearly two decades. That man is Sfc. Simon Ramos, a student of Arabic of the 77th Special Forces Group at Fort Bragg. A cursory glance at the names on the graduation roster which bracket his reveals the wide requirement for military personnel skilled in foreign languages.

In Sergeant Ramos' class were several young enlisted college graduates destined to become translators and a lieutenant colonel who will report for duty with the U.S. military mission to Saudi Arabia. Ranked No. 4 academically in a class of 11 students, Sergeant Ramos, to the casual observer, is not readily or logically identifiable with the average student one might encounter in a typical college Arabic class. A career soldier, the 27-year-old paratrooper belongs to a unit organized in response to the new military doctrines which in turn are the outgrowth of nuclear weapons and advanced concepts of modern warfare. Today's Army demands highly skilled professional military forces of great mobility, capable of operating anywhere on the face of the globe. Nuclear combat will involve not only armed forces, but entire populations over widespread areas. A knowledge of foreign languages obviously has become an intellectual sidearm indispensable to the modern soldier. Not only his life but a vital mission may hang in the balance of his linguistic ability.

SERGEANT STUDIES ARABIC

A high school graduate, Sergeant Ramos could never have studied an exotic language like Arabic in secondary schools in this country. Had he gone on to college 10 years ago with the intention of studying that language, he would have been fortunate to find a half dozen universities offering a course in Arabic. Even then, unless he was an unusually gifted scholar, he could never have acquired the practical skills in the language which will be demanded of him in future military assignments.

Because of this situation, there is now an Army Language School, where practical work is geared to actual military necessities. Such realistic exercises as prisoner-of-war interrogation, map problems, document translation and intelligence techniques are used in language teaching. Quite naturally all of these are utterly foreign to language teachers in public schools and colleges.

TWENTY-EIGHT LANGUAGE DEPARTMENTS

To offer highly specialized training of this sort to men like Sergeant Ramos, the Army Language School has amassed a faculty that is as heterogenous a body of men as can be found anywhere. Nearly 450 civilians hailing from 40 different foreign countries, staff the 28 language departments now in operation. Among them are former generals, engineers and diplomats—even ex-royalty. Only a group of people like these can provide the kind of authentic language training for day-to-day realities which will help equip Army personnel to interrogate riflemen in Russian or map out impromptu battlefield strategy in German with an officer of that NATO member nation in the event of a Soviet-bloc attack in Europe.

But language requirements are not limited to combat application. For centuries countries throughout the world have been importing foreign experts to aid them in economic or military projects. America was one of the first nations to do this when, in 1777, Gen. George Washington brought Baron von Steuben to our shores to train the Continental Army. Today it is American technical teams that provide military know-how to friendly nations across the face of the globe. Nearly 40 percent of our Army is stationed in more than 70 foreign countries of the world.

Money talks, they say, or in this case military aid, but the billions of dollars we have expended have not yet proved to be bilingual. Because the dollars and complex defense weapons we make available to friendly nations obviously cannot speak for themselves, many Army officers and men who will staff our military missions and advisory groups come to the Army Language School each year to acquire foreign language talents. It is at the point of contact between the aid extended and the aid accepted where much of the success of the operation is determined. The point can either be an area of friction or an area of smooth understanding.

Fundamentally, it is a matter of efficiency and human relations; hence, there are increased requirements for key people to speak foreign languages. Qualified linguists are also needed by the many joint headquarters maintained by nations of the free world. The growth of the student body at the school, from 350 in 1947 to some 1,800 in fiscal year 1959, reflects these increased demands.

The practical fluency they acquire at the Presidio of Monterey will result in more efficient use of American equipment by Allied military units and, as a concomitant, considerable monetary savings. American commitments abroad are huge. We are allied with more than 40 natons of the free world. In addtion, we provide training personnel and material in support of some 200 Allied divisions. The reason for this far-flung system of national defense is, of course, collective security. But collective security pacts will mean little if Allied units cannot function cohesively.

Optimum efficiency can be achieved only if we have optimum communication at every level of operation; this goal can only be reached if we have technical specialists who can translate American military concepts and strategy not only into other languages but into other thought patterns as well.

TRAINING PAYS OFF BIG

The value of bilingual personnel is reflected in countless phases of operations abroad: there are questions of public relations in strange lands, of liaison, of international command—and ultimately down to such specifics as showing a Turkish or Chinese Nationalist technician how to repair tank treads. The relatively small cost of training artillery officers, ordnance men, and other specialists to speak a foreign language—roughly $2,200 for a 47-week course encompassing 1,380 hours of classroom work—is recovered thousands upon thousands of times over in the efficiency, good will and understanding that stem from their increased

ability to communicate with their foreign counterparts.

American private enterprise, always proud of its traditions in pioneering new management methods thinks so much of foreign language training that it has taken a page from the Army's manual of management philosophy in recognizing the importance of linguistic skills for their international representatives. The New York Times reported just a short time ago that "a great upsurge is taking place in the teaching of languages. Business concerns sending workers abroad want them on speaking terms with the people they deal with."

What is basically essential to American business interests is selling items of manufacture. The Army has, in addition to materiel, a far more important product to market: ourselves. Learning to understand our allies and making ourselves understood involves one of the subtlest problems yet to confront military commanders. With freedom the stake in the conduct of Army business, we can no longer rely on an Allied officer being able to understand English. What must concern us is: in what language does he think?

One of the chief malpractices we have to fight in our international military relations is the tendency to use ourselves as standards. Obviously, an American is no more a standard than is a German or an Indonesian, or any ethnic individual for that matter. We are engaged in a struggle to make ourselves accepted, everywhere in the free world, for acceptance by the uncommitted nations can mean life or death for us. To win friends and allies, and retain them, we must sell ourselves, our concepts and strategy, in terms of the other fellow's values. To do this we must recognize and understand his values, otherwise we can convince him of little.

The ability to offer full yet simple explanations of how we utilize our highly developed techniques becomes more imperative every day. Simply because our equipment is superior to most is not always sufficient reason for less developed countries to accept our aid, although many Americans, reared on efficient machinery, are hard put to understand the foreigner who could prefer less sophisticated Soviet methods and equipment to ours.

SOVIETS USE LOCAL VERNACULAR

Not all the Kremlin's goals involve moon probes and space stations. They, too, have realized the merit of foreign aid and are constantly busy making arms deals. Furthermore, Soviet Army training and maintenance is often more acceptable than ours, simply because Soviet representatives who know the native culture and languages are present to explain, in the local vernacular, operation and maintenance features of Russian equipment.

If we are to win the support of these uncommitted peoples through assistance and training, it is absolutely incumbent upon us to deal with them in a language they can understand—their own.

In this time of nationwide linguistic need, the Army Language School, apart from its basic mission of language instruction, has been called upon by civilian educators to provide guidance and assistance to those public schools endeavoring to establish more diverse and intensive foreign language curricula. Recently the San Francisco school system made an exhaustive study of ALS methodology and now language teachers there have adapted our techniques of instruction in elementary and secondary schools. In addition, educators from all over the world, as well as from this country, have come to the Army Language School to share in the educational findings this institution has made in 18 years of developing and perfecting intensive programs in foreign language instruction.

SCHOOL'S POTENTIAL TOLD

As its name implies, the Army Language School is devoted to the teaching of foreign languages. In recent years, however, the scope of work being done at ALS is steadily contributing to its potential as a center for comprehensive military activities in languages and linguistics. We have developed new language proficiency tests in 34 languages for use by the Department of the Army in surveying the linguistic skills of every man on active duty. It is expected that in the near future a battery of these tests will be required.

Also on our agenda of special projects is a heavy program in lexicography. The Department of the Army has rescinded some 14 foreign language technical dictionaries and the task of revising and updating these publications has been assigned to the Army Language School. The vast and complex task of research and writing involves glossaries, dictionaries, and manuals in Italian, Spanish, Portuguese, French, German, Chinese-Cantonese, Japanese, and Russian.

SPECIAL FORCES UNITS TRAINED

Early this year we trained the first of a group of teams from Special Forces units. Our program was modified to accommodate this group in an 18-week period. The first group comprised one officer and eight enlisted men who studied as a team. Similar teams are expected to take language instruction in the future.

Currently the Army Language School is developing a department of nonresident instruction, which will provide refresher training courses for use by linguists assigned to active duty and reserve units. Among those to profit from this service are military linguists at special units assigned to Fort Bragg, Fort Hood, and Fort George G. Meade.

The Army has made some prodigious efforts to fulfill its farflung responsibilities—a mission that has been in part accomplished with contributions made by this school, just as it has been aided in myriad other ways by many who read this article. But much more needs to be done, and time is at our heels.

International Cultural Exchange

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, January 7, 1960

Mr. JAVITS. Mr. President, the fine results of our cultural exchange program in promoting international good will have been a revelation to all. The performing arts, at home and abroad, are a crown of our cultural life and achievement. For 75 years without fanfare, the American Academy of Dramatic Arts has gone on quietly providing sound and inspirational training in this field. President Eisenhower took note of the celebration of this birthday by sending a commendation. I ask unanimous consent to have the text of his telegram printed in the Appendix of the RECORD.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE,
Washington, D.C., October 2, 1959.

Miss FRANCES FULLER,
President, Director, American Academy of Dramatic Arts:

It is a pleasure to join in the observance of the 75th anniversary of the American Academy of Dramatic Arts.

This institution has provided training for a distinguished company of artists in the finest tradition of the American theater. With encouragement and discipline, it has helped them to develop their talents for the benefit of a great audience.

Congratulations and best wishes.

DWIGHT D. EISENHOWER.

Wisconsin's Industrial Growth in 1959

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, January 7, 1960

Mr. PROXMIRE. Mr. President, on December 21, 1959, Gov. Gaylord Nelson had the pleasant duty of recording publicly that Wisconsin in 1959 was experiencing the greatest record of industrial development since World War II, and possibly in the history of the State. Governor Nelson cited a report from the Industrial Development Division of the Wisconsin Department of Resource Development, which indicated that there had been at least 179 new manufacturing plants and expansions announced in 1959, and that a total of 12,000 new jobs had been created in the State.

I would like to put forward two reasons for this fine record of industrial growth. In the first place, Wisconsin is naturally attractive to industry. It possesses an abundance of the most important ingredient for successful industry, skilled labor. It is located near key markets, and is well provided with good transportation. In the second place, the Nelson administration is doing a fine job of providing a political climate which encourages industry to expand and flourish.

Mr. President, I ask unanimous consent that a statement on Wisconsin's industrial growth in 1959 be printed in the Appendix to the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD as follows:

Gov. Gaylord Nelson said today that a report from the industrial development division of the department of resource development indicated that 1959 would show the greatest industrial development in the years since World War II, and possibly the history of the State.

The report showed that there had been at least 179 new manufacturing plants and expansions announced in 1959. The previous high figure for which comparable records were kept was in 1956, when there were 152 new plants and expansions.

The 1959 expansions involved more than 5 million new square feet of manufacturing space and represented additional investment of at least $56 million. The 67 firms (of 179) which reported employee additions reported a total of 7,269 new jobs.

The division of industrial development, however, estimated that a total of 12,000 new industrial jobs had been created.

David Carley, director of the department of industrial development, reported to the Governor that "Wisconsin very likely exceeded the national average in total economic growth as indicated by personal income, percentage of labor force gainfully employed and announcements of investment in new plant and equipment."

Carley said that the report made today was preliminary, and that a final report on economic growth in Wisconsin during 1959 would be ready in February.

Carley presented the following comparison of plant expansion since 1955, when the division of industrial development was established in the Governor's office and records were kept:

Project	1956	1957	1958	1959
New industry	19	20	31	31
New branch plant, out-of-State firm	17	8	7	7
New branch plant, Wisconsin firm	23	8	3	10
Relocation in Wisconsin by out-of-State firm	2	6	6	9
Relocation in Wisconsin by Wisconsin firm, from another city	13	12	10	20
Additional new plants in same city, Wisconsin firms	17	15	18	32
Expansions of existing plants	59	33	31	70
Reactivation of old plants	2	0	0	0
Total	152	102	106	179

Governor Nelson said that although he and the department of resource development had been working to encourage the location and expansion of plants in Wisconsin, he did not claim credit for this growth.

"This report indicates that Wisconsin industry is healthy," the Governor said. "It is highly encouraging to those of us who believe in the future of industry in Wisconsin.

"Wisconsin, with its good schools and public services, its splendid reservoir of skilled labor and its opportunities for recreation and enjoyment of natural beauty, is a good place for industry. I think that more and more businessmen will realize that as time goes on."

Governor Nelson said he believes that as the work of the department of resource development takes effect, industrial growth will show an even sharper upturn.

Carley also said that Wisconsin ports, in the first full shipping year since the opening of the St. Lawrence Seaway, has handled an estimated 75 percent more tonnage than in 1958. Carley said that no figures were yet available on the number of jobs created by this upsurge in shipping.

Hon. Albert Conway

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the New York Journal-American of Tuesday, October 27, 1959, with reference to Hon. Albert Conway, chief judge of the New York State Court of Appeals and one of New York's most distinguished jurists. I have been privileged to know Judge Conway for many years, and it is indeed fitting that this new honor has been bestowed upon him for he has given many years of dedicated service to the community. In addition to an outstanding judicial career, Judge Conway has been active in many civic, fraternal and charitable organizations. It gives me great pleasure to join in this tribute to a beloved Brooklynite—Judge Albert Conway.

The editorial follows:

JUDGE CONWAY

The first of what we hope will be many testimonials to his 46 years of public service will be tendered to Chief Judge Albert Conway of the State court of appeals, this evening.

Sponsored by the New York University Law Alumni Association, a testimonial dinner in the Towers Hotel will honor the jurist as "Citizen of the Year 1959."

It will salute his "outstanding humane public service and his coming retirement at the end of the year, when he reaches the statutory age of 70."

A Brooklyn resident, dedicated all his life to the betterment of the borough and its people, the Chief Judge is indeed deserving of the tribute.

Besides the post from which he will soon retire, Judge Conway served for 20 years as a supreme court justice, was a county court judge, State superintendent of insurance, and an assistant district attorney for Kings County.

He is chairman of the State judicial conference and was instrumental in reorganizing the State courts.

High on the list of his many fraternal and social activities in behalf of others was his service as president of the Emerald Association.

The New York University Law Alumni Association is to be congratulated upon its fine gesture toward this very deserving public servant.

The Political Impotence of Business

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

Thursday, January 7, 1960

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Political Impotence of Business," delivered by Robert L. Bliss, of Robert L. Bliss & Co., Inc., New York public relations consultants, at the annual convention of the Public Relations Society of America at Miami Beach, Fla., on November 4, 1959.

Robert L. Bliss has acquired his businessman's knowledge of politics by active participation in the political process. For the past 8 years he has been chairman of the Republican town committee of New Canaan, Conn., and has served 2 years on the State central committee of the GOP. Last August he served as chairman of the Arden House Conference on Business and Politics, and is active in development of the American Business Conference on Practical Local Politics, to be held next January 7 and 8 at the Hotel Roosevelt, New York City.

Mr. Bliss was invited to address the 12th national conference of the Public Relations Society of America this year on the general subject of "Business and Politics." The following remarks were delivered on that occasion.

From 1949 to 1956, Mr. Bliss was executive vice president of PRSA. He is a founder and one of the three American council members of the International Public Relations Association, a 15-nation group of international public relations executives with headquarters in London.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE POLITICAL IMPOTENCE OF BUSINESS

(By Robert L. Bliss)

THE FRUIT OF FAILURE

The greatest danger to the future of free enterprise is the political impotence of U.S. business. This impotence is self-induced. Corporate policy, historically preoccupied with near-term profits, has postponed the discharge of long-run responsibilities to the Republic. Foreclosure of this deferred obligation is threatened by the general failure of businessmen to engage as individual citizens in the political life of America. The consequences are obvious, and perhaps tragic.

Ideas and arguments of the business community are not weighed for their real worth in the decisionmaking debates that shape our society. On the contrary, the needs and reasonable requests of businessmen are generally ignored and business itself is a convenient target of abuse and punitive action by those who have political fish to fry. All this occurs because the business community is not adequately represented in the legislatures of the land—by businessmen.

DISSERVICE AND DISGRACE

Some 60 percent of the Members of Congress, for example, are lawyers; another 12 percent are educators. I defy you to tick off in 5 minutes the names of 10 Congressmen immediately and clearly identifiable as businessmen. The voice of business is not effectively heard in the deliberations of our democracy.

Our Constitution, nevertheless, provides an open opportunity for all major groups to elect able and articulate members to lawmaking bodies at all levels of government. Organized labor and the American farmer very properly take advantage of this opportunity; their members exert direct and positive influence on legislative decisions. Businessmen do not.

Every major group in our free society has not only a right but an obligation to make our Government in fact what it is in theory: a representative system. The conspicuous absence of business men in the public life of the United States at all levels is a disservice to the Nation and a disgrace to the business community. Active and dedicated participation by business men in American politics today is a national need of the first magnitude.

THE CHIPS ARE DOWN

Competitive free enterprise to generations of schoolboys and business men has meant our American system within which sellers vie for customers. But Mr. Khrushchev has changed all that. His flat statement—which no one for a minute should disbelieve—that the Communist system is going all out to prove itself the best in the world has added a vast new dimension to those three familiar words.

Today our free enterprise system itself is in competition, for keeps, with the Soviet system. We have begun a mortal struggle which may well decide the fate of democracy across the world, not by force of arms but by

force of economic competition. The chips are down; free enterprise had better be competitive—or else.

The businessmen of America are as deeply involved in this global conflict as are the managers of State-owned enterprises in the U.S.S.R. Communism is inseparable from the Soviet Union; free enterprise is inseparable from American democracy. Mr. Khrushchev has put U.S. business squarely into world politics with a vengeance.

No businessman henceforth can turn his back on the citizen duties which attach to all sons of this Republic. The world watches to see how well democracy and free enterprise can compete. History is building to another great climax.

DOES IT MATTER?

Like our own 20th century, the 1700's were years of political ferment, which culminated in the radical American and French Revolutions. Amid the decaying social order of that day, Jean Jacques Rousseau made an observation that all of us should ponder in our hearts during this similar time of ferment. It is this, and I ask you to remember it:

"As soon as public service ceases to be the chief business of the citizens, and they would rather serve with their money than their persons," he said, "the state is not far from its fall."

Is that the case with us today? Would we rather serve the Republic with our money than our persons?

I hope it may never be said that the businessmen of America defaulted on their citizen-duty, that their failure to participate in politics contributed to the fall of democracy. Surely that would be an ugly epitaph on the tomb of free enterprise.

Rousseau went on, inexorably, to add this: "As soon as any man says of the affairs of the state, 'What does it matter to me?' the state may be given up for lost."

None but a fool could say of politics in our time, "What does it matter to me?" It does matter. It matters right down to the roots of America.

THE FINGER POINTS

Political decisions affect the whole fabric and quality of our national life. They determine the basic environment in which business lives. Absence of businessmen from the councils of democracy robs the Republic of vitality; a full range of sound ideas ably advocated is essential to the decisionmaking process of society. What businessmen think has public importance because they manage the enterprises which create the national wealth.

Yet, when crucial decisions are being hammered out in the committees and on the floors of Congress, the State legislatures, and the city councils, where are the men of business? The educators, the labor leaders, the farmers, the lawyers, the segregationists, and the bleeding-heart liberals are there. But not enough businessmen to count.

Is this because they serve the Republic more with their money than their persons? The answer is "Yes." But if you ask whether they prefer it this way—if they habitually think, "What does it matter to me?"—my answer is definitely "No." Certainly businessmen are not short of the civic virtues; conscientious discharge of responsibility is their creed of conduct. Why, then, are they so rare in public life? The finger points at the corporation itself.

CHALLENGE TO THE CORPORATION

No family man without independent means can afford to enter public life if he feels that his livelihood will be endangered. Lawyers are legion in politics because their living depends on income from numerous clients. The typical businessman depends on one source—the company for which he works. And the blunt truth is that if he attempts to discharge his citizen duty by serving with his person one of two things is apt to happen, at best; either the boss marks him down as flighty and unfit for promotion, or his colleagues close ranks behind him and use his absence to advance their own ends.

Behind the failure of the businessman in his citizen duty lies the prior failure of the corporation to develop a permissive system under which he can engage in public life without damage to his livelihood.

Development of such a system is the most challenging problem of policy in the corporate field today. Its solution is as urgent as the need for adequate representation of businessmen in the decisionmaking bodies of our time.

It is not a simple problem; the answers must vary from company to company. But the answers do exist, and responsible corporations are beginning to work them out in the interest not only of business but of free enterprise.

BEWARE THE CANNED SOLUTION

Beyond the question of encouraging political participation by employees are the problems of what directions such encouragement should take. Here again the answers must vary from company to company and community to community.

A number of public-minded managements are owed a debt of gratitude by all U.S. business. They have had the drive to do something in the direction of greater political participation, instead of just talking about it. General Electric, Gulf Oil, Johnson & Johnson, Ford, Aerojet-General, to name a few, have had the courage to strike out and blaze new trails into the political wilderness.

I applaud their initiative and the example they have set. And I admire their conviction that the plans each company has made are the best for that company at this particular time.

Yet I want to insert here a note of caution to those companies which still are undecided about encouraging political participation by their employees, or are in doubt about what form such encouragement should take.

Beware of the canned solution. Beware of a pat and easy answer to your problems. Beware, in short, of any so-called packaged plan designed to fill the bill for all companies.

NO SOVEREIGN REMEDY

As a practicing political chairman in my home community for the past 8 years, I can assure you that no solution to any political problem is easy or perfect; politics is an art, not a science. But from experience I can assure you, also, that some solutions are a lot better than others.

The best solution to any type of problem is that which is devised, after study and analysis, by able and sophisticated people using their skill and good judgment to create a particular answer to the particular set of circumstances at hand.

What works for company A probably is not right for company B. Massage may be fine for Jones' Charley horse, but it will murder Smith's broken leg.

There is no sovereign remedy for all physical ills, and there is no universal cure for political aches and pains. Each company must develop its own specific remedy, its own political prescription.

RECIPE—NOT PATENT MEDICINE

Let me urge that you bend every effort to construct a really curative prescription, not just an easy panacea. Develop a long-range plan which fits your problems in your communities; set limited objectives within the overall plan; study your progress and improve your program as you go along. If you have any doubts, by all means call in an outside doctor to consult and help you write the prescription.

But don't take political patent medicine. Don't try for a quick cure with quack remedies that come in the large economy size.

Develop sophisticated solutions, tailored to fit your company. This should be done directly by top management, working with the best staff and consultative assistance available. And remember that any plan is just as good as the competence of the people who carry it out.

Don't turn the plan you make over to the house lawyer or the sales manager for execution. It's not in their line. If top management cannot supervise directly, your best bet probably is to put your public relations director in charge. He is skilled in the processes of our society, and his interests lie squarely in that area.

IN BOTH PARTIES

If U.S. corporations study, plan, and perform their obligations to encourage political participation by employees in both parties, the businessmen of America will respond. They will discharge their citizen duty by serving not only with their money but their persons, and thus will take their proper place in the legislatures of our land.

An early end to the political isolation of businessmen from the decisionmaking process of society is a matter of national need. Let us look toward this with enthusiasm, healthy skepticism, and hope. May it never be said that businessmen, through avoidance of public life, wrote the epitaph of free enterprise in America and, perhaps, of democracy in the world.

Foreign Aid Programs

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, January 7, 1960

Mr. PROXMIRE. Mr. President, the Milwaukee Journal has editorially supported the position of the distinguished junior Senator from Montana [Mr. MANSFIELD] and the distinguished junior Senator from Tennessee [Mr. GORE] in their fight to secure for Congress evaluation reports on foreign aid programs. The Journal says, in part:

Congress is expected by the administration to vote funds for aid and military programs and is chastised when it cuts requests. But to vote intelligently Congress needs all the information it can get. And it isn't getting much.

Of course, the Milwaukee Journal is dead right on this issue. The administration should be on notice that this great newspaper has been as firm and constant a journalistic champion of foreign aid as there is in this country, recognizes that the secrecy policy of the administration on foreign aid may seriously endanger the whole vital program.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered printed in the RECORD as follows:

CONGRESS NEEDS FACTS ON FOREIGN AID PROGRAMS

The Eisenhower administration and Congress are again at odds over whether evaluation reports on foreign aid programs may properly be kept secret.

The President argues that reports on the working of aid programs in various countries prepared for his use and that of the International Cooperation Administration are executive papers and, therefore, not available for congressional use. He is, he says, willing to give Congress the facts in the reports but not the evaluation of those facts by the individuals making the reports.

The President has informed Senator MANSFIELD, Democrat, of Montana, to this effect, as well as Comptroller General Joseph Campbell. MANSFIELD, as a member of a subcommittee of the Foreign Affairs Committee, has been especially interested in the aid program in Vietnam.

MANSFIELD has just received the Vietnam facts from the International Cooperation Administration, but only after pressing for them constantly since last summer.

Campbell is interested in Iran and Thailand and also in Allied military strength in Europe and an evaluation of the plans and capabilities of the Turkish forces which get American help. This latter information has been denied by the Defense Department.

Campbell, whose job makes him the watchdog for Congress, points out that the law requires that he be given information by which to judge Federal spending programs and activities to enable him to determine whether money is being properly spent and waste is being avoided.

There must, of course, be some protection for executive papers. But something else is involved here. Congress is expected by the administration to vote funds for aid and military programs and is chastised when it cuts requests. But to vote intelligently Congress needs all the information it can get. And it isn't getting much. In the case of the Turkish and Allied military programs, Campbell has sought the information for a year. He has obtained neither the evaluation reports he wants nor the facts which the President says are available.

Senator GORE, Democrat, of Tennessee, a member of the Foreign Affairs Committee, wants Congress to force the administration to provide the necessary information. Force shouldn't be necessary. The President has no right to expect Congress to approve programs about which it is kept in the dark. Nor should the public be kept in the dark.

Refusal to provide information may imperil programs that both the President and Congress have thus far considered necessary.

Will 1960's Prosperity Lull Us Into Complacency?

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Evening Herald, Rock Hill, S.C., of Wednesday, December 30, 1959:

WILL 1960'S PROSPERITY LULL US INTO COMPLACENCY?

Two of the major questions facing the United States in the 1950's will be carried over into 1960.

The questions which must be answered in 1960 are:

(1) How much are we willing to spend on defense?

(2) Are we willing to get economically tough in order to get more defense for our money?

Despite three recessions in the fifties, the United States is prosperous. And hopes are high for greater prosperity in the 1960's.

However, there are dangers in prosperity. In this case, the danger facing a prosperous United States could be complacency toward our security.

Writing in the New York Times magazine, Barbara Ward said, "One universal temptation of riches is the temptation of the easy option. The immediate and obvious instance of this is the unwillingness of complacent and wealthy groups to take the stern steps necessary to protect their security."

To substantiate her warning, Miss Ward turned to history. She pointed out that "Cnossus, the rich and civilized capital of ancient Crete, fell in a night to the invading Mycenaeans because the rulers had not taken the military steps—which would no doubt, have entailed uncomfortable expenditure—to insure the safety of their luxurious way of life. Nor were the city states of Greece ready for the onslaught of Philip of Macedon—nor Imperial Rome for the barbarians from the north."

That is one thing the United States has to fear if the 1960's turn out to be as prosperous as predicted. We must not allow ourselves to be lulled into complacency by the search for and delight of wealth and prosperity.

As long as communism remains a threat to our way of life, defense spending will continue to be a necessary evil.

However, we can take some of the economic sting out of defense costs by cutting out some of the lax handling of defense money.

Defense spending is necessary. Financial laxity isn't—even in times of prosperity.

We see examples of the laxity within our defense system every day: Army transport planes tied up making regular flights, just like private airlines, whether needed or not; vast defense surpluses which result from overbuying. There are many, many other examples.

Some of the extravagances are big. Some laxity starts out innocently small but enough of it makes it big.

We are going to have to keep our guard up in the 1960's but we are also going to have to guard against extravagance weakening our defenses from within. We must use our wealth wisely.

Prosperity is one of civilization's major aims. Ironically, it has been the downfall of many highly civilized governments. History has shown us that. Will we take history's advice and remain strong in a period of prosperity? Or will we grow weak and complacent, wallowing in our riches?

That is one of many questions the 1960's should answer for us.

Inglorious Ending

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, January 7, 1960

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a penetrating column entitled "Inglorious Ending," written by Mr. Walter Lippmann and published in the Washington Post. Mr. Lippmann, as he so often does, goes to the heart of the matter, and I commend the article to my colleagues.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INGLORIOUS ENDING
(By Walter Lippmann)

The steel strike has been called off in a way which leaves the public without any means of determining whether the result is just or unjust, wise or unwise. It is evident that the companies lost the strike. But there does not exist any impartial and dependable report on the issues which enables anyone from the President down to know whether the companies have conceded more than they could afford to concede. For the President has steadfastly refused to countenance official fact-finding as the basis for a settlement. As a result, no one really knows what the Nixon-Mitchell settlement means.

The President, so he said last July, has been acting on the notion that there must be no Government intervention because "we have got thoroughly to test out and use the method of free bargaining." We have now had the test. What happened in the test? What happened was that the Government intervened in the person of the Vice President. He used the carrot for the union and the stick for the companies. He coerced the companies into yielding not all but most of what the union was fighting for. Moreover, it would appear, he induced them to agree that they will not raise steel prices until after the election. The strike was not settled by "free bargaining." It was settled by a political fix.

The President, whose mind has no doubt been on other things, seems never to have realized that in this struggle the process of free bargaining was exhausted very early in the day—almost certainly by July when the strike actually began. It was evident from the beginning that the two great monopolies were committed to a test of power, not to a process of bargaining. The test was which of them could hold out the longer against the other.

In July when the strike began there were reasons for thinking that the companies were the stronger. Their customers had large stockpiles. Labor unions were unpopular as a result of the McClellan exposures. The public was opposed to another round of wage-price increases. And there was some question whether Mr. McDonald was in solid control of his union. But as time went on the balance of power began to favor the union chiefly because, I imagine, it was increasingly evident that if Congress had to intervene to settle the strike, it would not be very tender with the companies. It is significant that the Nixon-Mitchell intervention succeeded because they were able to threaten the companies with the certainty of congressional action.

So we have come to a crude and embarrassing ending to an inglorious and mismanaged policy. I have reason to know that it is denied in official quarters that the strike could have been settled any earlier. But I think it is arguable from the record that a settlement on the Nixon-Mitchell terms could have been had at any time. All that was required was to give labor the carrot of the concessions and then to do to the companies what Mr. NIXON did to them, to use the big stick of a threat of special legislation in Congress leading to some kind of compulsory arbitration.

If the President had realized that the period of free bargaining had ended even before the strike began, the threatened strike could have been handled by measures which were rational, which protected the public

interest, and enlightened public opinion. By July there should have been an official factfinding report on the issues and official recommendations for the settlement. When that report had been debated, and a predominant public opinion had been formed about it, the next step would have been to enforce the findings by calling on Congress to grant the power to do so.

Presumably, it would not have been necessary to go so far as to call Congress into special session or to use the powers if Congress were called and the powers were granted. The Nixon-Mitchell deal shows that the threat to do all these things would probably have been sufficient.

In acting in this fashion the administration would have stood on the solid basis of an impartial report, and this report would have had to deal with the crucial question that Mr. NIXON has left up in the air. This question is whether or not the concessions to labor are inflationary in that they justify and require a rise in steel prices. If the report had found that the concessions were inflationary but that some smaller concessions would not be, the union would have been forced by the threat of compulsory arbitration to accept the lower terms.

All in all, we can be glad that the strike is not to be resumed. But there is nothing else to be glad about.

Rural Electric Co-op Folks Speak Out on REA Problems

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, when 745 rural electric and telephone co-op delegates met in Des Moines, Iowa, this fall for the National Rural Electric Co-op Association's region 5 annual meeting, they passed a series of resolutions on the rural electrification program and related issues. These resolutions represent the thinking of leaders of 113 cooperatives serving some 345,658 consumer-members in Illinois, Iowa, and Wisconsin.

I have given careful consideration to these resolutions, which deal with problems that have a very real bearing on the welfare of the REA program in Wisconsin and in other parts of the country. They are the earnest expression of local co-op officials who are devoting a great deal of time and effort to be of service in the advancement of the many benefits of rural electrification in their area and across the Nation.

Under leave to extend my remarks, I would like to include these resolutions in the RECORD:

RESOLUTIONS OF NRECA REGION V ANNUAL MEETING

KERR-TRIMBLE BILL

Be it resolved, That we hereby endorse S. 1591 and H.R. 8, known as the Kerr-Trimble bill, which would establish such progressive statutory standards as are needed to return to Congress control over administrative agencies responsible for Federal development of multiple-purpose river programs, and the practices and procedures of such agencies.

ATOMIC ENERGY PROGRAM

Be it resolved, That we commend the action of the 86th Congress in authorizing the Atomic Energy Commission to construct two demonstration reactors in conjunction with municipal or rural electric cooperative plants and urge that further expansion of the atomic energy program be conducted so as to make the greatest benefits available to the people of these United States as the owners of atomic development.

CAPITAL BUDGET

Be it resolved, That we urge the Congress to adopt a capital budget for Federal Government fiscal operations that will clearly distinguish between operating expenditures and capital investment.

VOCATIONAL EDUCATION

Be it resolved, That we endorse the vocational educational purposes of the George-Barden Act of 1946 and urge the authorization and approval of the full amount established by existing laws for vocational education in fiscal 1961.

COMMEMORATIVE STAMP

Be it resolved, That we respectfully petition the Office of the Postmaster General of the United States for the issuance of a commemorative stamp to reflect in appropriate and artistic design the improvement of living in rural America through the rural electrification program.

HEADWATER BENEFITS

Be it resolved, That we oppose imposition of any headwater benefit payment liability on Federal hydroelectric developments unless and until competent studies conclusively demonstrate that such legislation will not increase the cost of Federal power, result in the wasteful development of headwater reservoir sites or impair in any way the prospective authorization, financing, and construction of Federal water power developments; and unless and until it is clearly demonstrated that such legislation will in fact result in the development of additional economical firm power.

COOPERATIVE TAXATION

Be it resolved, That we oppose any increases in the cost of farming operation arising from proposed legislation to impose additional and punitive taxes on cooperatives.

FARM ELECTRIFICATION RESEARCH

Be it resolved, That we urge the Congress to continue and expand the services of the Farm Electrification Division of the Agriculture Research Service of the Department of Agriculture by appropriating $600,000 for fiscal 1961 and $900,000 for fiscal 1962, for all phases of research as it applies to the use of electricity on the farm.

REA INTEREST RATE

Whereas the Congress in enacting the Pace Act in 1944, in effect covenanted with the rural electric systems to provide a 2 percent interest rate in return for the systems' serving even in the most sparsely settled parts of their areas and the systems have provided such area coverage in reliance upon that covenant; and

Whereas a survey of the rural electric systems reveals that the present 2 percent interest rate on REA loans is essential if the rural electric systems are to continue meeting their responsibility of providing full, efficient and reasonably priced electric service; and

Whereas even with the 2 percent interest rate the number of rural electric systems failing to meet REA debt service standards has been increasing in recent years, reaching a new high of 166 in fiscal 1959; and

Whereas despite the foregoing, a number of bills have been presented to the Congress to increase REA interest rates and proposals have been made to send the rural electric systems to the Wall Street bankers for at least a part of their financing, without any study having been made, or any consideration having been given, to the effects of such bills and proposals upon the rural electric systems, and without making any studies of, or giving any consideration to, the inflationary effects of a raise in interest rates despite the opinion of many eminent economists that raises in interest rates are inflationary: Now, therefore, be it

Resolved, That we urge Congress to oppose any and all proposals which would increase the REA interest rate and/or send the rural electric systems into the private money market for their financing, and we urge Congress to continue to give its fine support to the rural electric program which means so much to the people of rural America and to the country as a whole; and be it further

Resolved, That thorough studies be made by NRECA of all alternatives to Federal financing.

PREFERENCE CLAUSE

Whereas the Government of these United States has acquired ownership of great national resources in the form of the physical natural resources of our country and of scientific developments such as atomic energy developed by the patriotism and at the cost of the people of these United States: Now, therefore, be it

Resolved, That we urge the Congress and the executive officers of these United States hold these national resources as a sacred trust for the benefit of all the people of this country in this and future generations, and not for the purpose of private profit; and be it further

Resolved, That we reaffirm our support of the preference doctrine whereby nonprofit electric distributions systems have a priority on availability of electricity generated at Federal dams as a positive discharge of governmental responsibility to return to the people the benefits of one of our national resources.

STUDY OF NATION'S WATER RESOURCES

Be it resolved, That we commend the Senate of the United States for its enactment of Senate Resolution 48 and urge the select committee constituted thereunder to give thorough consideration to the needs of the Nation for adequate supplies of low-cost hydroelectric power and energy and to the indispensable role which the development of such hydroelectric potential must bear in overall water resource utilization.

"PARTNERSHIP"

Be it resolved, That we oppose and condemn the so-called partnership doctrine as an unconscionable procedure whereby the Federal Government would assume the burden of construction of hydroelectric facilities into which profit-dominated utility groups would install the revenue-producing equipment and secure for their own selfish profit the public expenditures therein, together with the private appropriation of the benefits of our national resources.

MULTIPLE-PURPOSE WATER RESOURCE UTILIZATION

Be it resolved, That we urge the greatest development of those national resources capable of producing electric energy at low cost, together with proper uses and control of water resources of our country for the benefit of all people of these United States, but that we oppose any wasteful development of water or other resource in such manner as may occur if national parks or other single purpose type water resource development so restricts as to preclude the present or future development of any river basin on a comprehensive multiple-purpose basis.

"FIRMING" FEDERAL HYDROELECTRIC SYSTEMS

Be it resolved, That we urge the construction of such Federal transmission lines, Federal generating stations, contracts with other corporations for supplementary capacity as

will make available the maximum quantities of firm power from the Federal hydroelectric projects so as to secure for the Government the maximum revenue from such hydroelectric projects together with providing the rural electric customers of such projects with the maximum opportunity to fully utilize the national resources.

RURAL TELEPHONE PROGRAM

Whereas the cooperative phase of the rural telephone program is practically at a standstill; and

Whereas the loss of this competitive element in the program will eventually leave large areas without adequate telephone service: Now, therefore, be it

Resolved, That we urge REA to do more in the field of promotion of rural telephone cooperatives in line with the language contained in the Senate Appropriations Committee report recommending appropriations for fiscal 1959.

RURAL ELECTRIFICATION ADMINISTRATION

Whereas the Honorable David A. Hamil has administered the REA act in such a manner as to merit the appreciation of the rural electric systems and the farmers of America; and

Whereas the farmer members of the rural electric cooperatives have in recent years received less and less for the products they sell and paid more and more for the products they buy, excepting only electricity provided through rural electric cooperatives; and

Whereas rural electric cooperatives are in essence the tools used by their farmer members and any increase in costs of electricity must be added to the already heavy costs of the farmer members: Now, therefore, be it

Resolved, That we express our appreciation for Mr. Hamil's excellent administration of the REA act; and be it further

Resolved, That we deplore any spokesman for agricultural interests saying that farmers or their cooperative tools are "sitting on a gold mine."

APPRECIATION

Whereas it is only fitting and proper that we acknowledge the efforts and actions of those who have been of service to rural electrification: Now, therefore, be it

Resolved, That we express our sincere appreciation to all those Members of Congress who supported and voted for the annual Department of Agriculture appropriations bill, the Humphrey-Price bill, the Aiken resolution, the public works appropriation, and the vote to override the veto thereof, and other measures of interest to rural electrification; and be it further

Resolved, That we express to Mr. Clyde Ellis, general manager of NRECA, and his staff our grateful appreciation of their splendid contribution to our program; and be it further

Resolved, That we commend Administrator Hamil and his staff for the fine assistance we have received through the publication of periodic reports of fatal accidents and the regular publication of accident information in the Rural Lines magazine and the freedom of travel he has permitted the members of his staff for attendance at statewide, managers and job training and safety meetings of employees throughout region V.

If Peace Were To Break Out

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. WOLF. Mr. Speaker, today in America, and perhaps throughout the world, the question of the economic effects on the world of a permanent peace is being considered. My good friend and distinguished colleague from Colorado, Mr. BYRON L. JOHNSON, was the author of a very thought-provoking article on this subject which appeared in the December 9, 1959, issue of the Christian Century. Because some Members may have missed this interesting article, I take this opportunity to commend it to them for serious reading at the beginning of this new decade in American history:

IF PEACE WERE TO BREAK OUT—A CONGRESSMAN FROM COLORADO ARGUES THAT THE UNITED STATES CAN DISARM WITHOUT PRODUCING A COLLAPSE IN THE AMERICAN ECONOMIC SYSTEM

(By Hon. BYRON L. JOHNSON, of Colorado)

The current discussion of disarmament carries a tragic undertone. The fearful ask, "Won't this cause a depression?"

The United States is currently spending $46.4 billion on its military program at home and overseas, encompassing mutual security, atomic energy, military construction, and the regular appropriation for the Defense Establishment. This represents almost 10 percent of the annual gross national product which amounted to $484.5 billion in the second quarter of 1959. The national income in the second quarter of 1959 was reported at $403.9 billion.

The Defense Establishment employs directly the 2,525,000 people who are in uniform and a civilian force of 947,600; defense production employs a comparable number. The economy of many communities is tied to defense establishment and defense production. It is not surprising therefore that many citizens express concern that disarmament would eliminate as many as 5 million jobs. They fear that disarmament would cause a severe depression. The persistence of this fear is indicated by the number and variety of audiences that have asked me about the consequences of disarmament. It does no good to argue that our national policy is not decided entirely by our own answers to the question raised by the prospect of demilitarization. The existence of the fear of economic collapse is a fact, and this fact is bound to influence the attitudes of the public and of some policymakers.

I

The fundamental question which must be answered first is this: Are the fears justified? If peace should break out, will there be a new depression? Perhaps you have also wondered about this question. As it happens, I have two reasons for answering the question with an unqualified "no." My first reason is basically personal, for I had to examine the disarmament issue—a very live one at the time—in 1944 as a Budget Bureau staff member. My second reason arises out of my work as an economist and a student of national income. Modern economists know what steps to take to adjust the economy of the United States to the cessation of war production and to general disarmament—and they know how to do this with a minimum of dislocation.

Let's first take a look at economic theory and then go back to examine economic history. Our annual national income is the total result of all the effective demands for goods and services in the market in the course of a year. This demand comes in part from households—for food, clothing, shelter, entertainment, medical care, transportation, etc. It comes from the business community in its demand for goods and services, both consumable supplies and capital plant. Finally, it also comes from government in the effective demand for public service at the local, State, and Federal level. This includes the demand for personal service, new capital plant, materials and supplies.

Any sharp reduction in the demand of any one of the three sectors—consumers, business, government—without a compensating adjustment in the other two will trigger some recession in economic activity. Similarly, a sharp increase in the effective demand for goods and services in any of these sectors without an offsetting adjustment in another sector precipitates expansion in the economy. This expansion will normally take the form of increased output. If, however, the economy is fully employed, then to attempt to expand one sector without cutting back another tends largely to create price inflation, rather than to increase total output.

The war period, 1939 to 1945, was a perfect illustration of the inflationary situation. The Federal Government increased its demand for goods and services in astronomical amounts without raising taxes by a like amount. Much of the money which it created to help finance the war was new money created by the banking system. The new money first triggered a recovery from the depression; then when full employment was reached in 1942, it set in motion a significant inflationary pressure.

Let's now take a quick look at the reverse of the process, using the period from 1945 to 1948 as our test case. Total Federal expenditures for all national defense activities amounted to $81.2 billion for the fiscal year ending June 30, 1945. While studying this period early in 1944, I thought it easy to predict what would happen. There were more than 12 million persons in the Armed Forces; it was assumed that most of these would be discharged, and that at least 8 or 9 million persons employed directly in war production would be released from their jobs.

The consequences of peace seemed obvious to almost every economist in Washington with whom I talked at the time. With impending sharp budget cuts and with almost 20 million people to be cut off from their war-related source of income, numerous authorities estimated that the level of unemployment would rise very sharply within six to nine months after the end of the war. The most optimistic expected 6 million unemployed; the pessimistic prophesied more than 12 million unemployed. It was recognized that the GI bill of rights, then being developed, would remove a few of the veterans from the labor market and put them in school. It was expected that some of the aged entitled to retirement would retire, and that some of the working wives would go back into the kitchen. (For some reason, our statistics on labor do not count housewives as employed persons unless they are paid by someone other than their own husbands.)

The businessmen had been queried as to how long it would take them to reconvert from wartime to peacetime production, and had replied that it would be a long period of transition—from 90 days to 9 months. Under these circumstances, some businessmen and economists fearfully foretold that the United States would experience a major recession following the end of World War II.

In 1944, it was difficult for many people to imagine a total Federal budget much larger than $20 billion. A few had predicted that the postwar budget might reach $25 billion. The Federal budget for all purposes in 1939 was $7.9 billion; a $15 billion to $20 billion estimate therefore seemed a high figure indeed. (In actuality the Federal budget after the war never fell below the 1948 figure of $33 billion.)

President Truman, you will recall, instructed Secretary of Defense Louis Johnson to bring the military budget down sharply, and Johnson complied. The Federal budget was cut by two-thirds in 3 short years. The Bureau of the Budget reports that total Federal spending was reduced from $98.4 billion in 1945 to $33.1 billion in the fiscal year

of 1948—a reduction of $65.3 billion. Major national security programs were reduced from $81.2 billion in 1945 to $11.8 billion in 1948—a reduction of $67 billion or about 86 percent. Total military personnel on active duty was reduced from 12.3 million on June 30, 1945, to 1.5 million on June 30, 1948. The table below summarizes these facts year by year:

TABLE I.—*Military budget and personnel, 1945–48*

Fiscal year	Federal expenditures for major national security functions	Military personnel on active duty June 30
1945	$81,216,000,000	12,294,647
1946	43,176,000,000	3,056,494
1947	14,368,000,000	1,601,683
1948	11,771,000,000	1,465,773

Source: U.S. Bureau of the Census, "Statistical Abstract of the United States," 1959, pp. 247–248.

II

What about the depression? Where was the depression? What happened? The table shows what happened by quarters for the period from V–E Day through 1948 to the gross national product, to the number of employed and to the number of unemployed.

Remember the wartime book in which a Vice President suggested a postwar goal of 60 million jobs? At the time the cynics hooted in derision. But Henry Wallace was really a piker; we had more than 60 million civilian jobs by June of 1947. Unemployment never reached the levels we feared.

TABLE II.—*Income and employment, 1945–48*

Year	Gross national product	Civilian employment in the United States	
		Number employed	Number unemployed
	Billions		
1945—March	$221.8	53,230,000	590,000
June	220.2	54,570,000	890,000
September	213.4	51,400,000	1,650,000
December	197.1	51,160,000	1,970,000
1946—March	191.7	52,460,000	2,700,000
June	197.0	65,360,000	2,570,000
September	207.5	57,050,000	2,070,000
December	218.6	56,310,000	2,120,000
1947—March	226.4	56,060,000	2,330,000
June	228.3	60,055,000	2,555,000
September	227.9	58,872,000	1,912,000
December	243.8	57,947,000	1,643,000
1948—March	244.9	57,329,000	2,440,000
June	250.2	61,296,000	2,184,000
September	254.9	60,312,000	1,899,000
December	260.8	59,434,000	1,941,000

Source: U.S. Department of Labor, Bureau of Labor Statistics, "Handbook of Labor Statistics," 1950, p. 35.

How did this development take place? What became of the prophets of doom and gloom of 1944 and 1945? What happened to the warworkers who said on V–J Day, "I suppose this means I lose my job?"

In the first place, the businessmen converted from war to peace more rapidly than they had anticipated they would. In the second place, the backlog of demand by consumers for goods began to express itself immediately. Third, the tremendous supply of liquid assets (Government bonds, cash, savings accounts) in the hands of consumers and businesses provided funds with which they promptly sought to buy more goods and services. Specifically, total bank loans amounted to $28 billion on June 30, 1945, while those for August 26, 1959, were estimated at $129 billion. This represents an increase of 460 percent. In other words, all elements of the American economy—consumers, businesses, and government—worked together to employ additional resources for producing the goods and services desired in peacetime, and this outpouring of effective demand accelerated the process of reconversion. The warworkers found peacetime jobs. Many servicemen found satisfactory employment; others returned to school. Some housewives went back into the kitchen, and some of the aged retired.

Does this experience have any meaning for our present situation? I am reminded by the fearful that our circumstances today are not identical. For example, there has been no rationing, no priorities on housing, and no credit restraint. Many circumstances associated with World War II do not now pertain. Yet this is not the whole story.

While there has been no rationing or priorities to limit output, we still have not built enough houses to keep up with the growth of population and the loss of houses that comes with obsolescence, fire, slum clearance, and new highways. Business firms, in face of the high interest rates now prevailing, have not extended their capital plants as freely as many of them would like. We still have shortages of municipal waterworks, sewage treatment plants, and hospitals for our rapidly growing urban population. Every householder can think of a number of things he would like to buy if he had the necessary income.

We financed much of World War II by borrowing, so that postwar cuts in spending did not permit an immediate cut in taxes. We are financing this year's national budget entirely out of taxes. Therefore, if we could now reduce the level of spending, we could simultaneously reduce the level of Federal taxes. This would immediately increase the funds available to consumers and to business firms for new purchases of capital items and other goods and services.

I am sure all of us would be very happy to have a tax cut. Everyone can quickly think of the things that, as a result of this cut, he would buy with the extra income left in his pocket. Interest rates ought to come down at the same time; then State and local governments would increase their construction of the necessary public facilities.

Thus, if peace were to break out, it would not require a major effort on the part of the Federal Government to restore prosperity. But if such an eventuality did require Federal action, the form of the action would not be hard to imagine. We are now using grants-in-aid in fairly large amounts to build highways. A generous increase in grants-in-aids for public construction would give rise to substantial additional employment.

Similarly, an expansion of Federal services in the fields of health, education, welfare, and recreation would be most welcome. It goes without saying that one of our greatest needs today is the construction of adequate school plant facilities to meet the vastly expanded and still skyrocketing pupil enrollments. And some demographers claim that our population will double in the next 50 years. An acceleration of the present program of urban renewal would permit us to revitalize the American cities now decaying at their core.

III

Finally, if peace were to break out, we should certainly devote a larger portion of our national income to the works of peace. These include greater participation in the education and development of the so-called underdeveloped economies. A program of oversea investment would help provide constructive employment for millions of Americans, both at home and abroad.

More liberal and expanded foreign trade would be another part of this adjustment to peace. Business and agriculture must increasingly produce goods for foreign countries. The more Americans buy from other countries, the more other countries will be able to buy from us.

The results of diarmament therefore should be these: (1) a more peaceful world; (2) the devotion of a larger portion of our national budget to constructive and creative public services; (3) the expansion of the commercial sector of the American economy to provide a wider variety and a more generous supply of goods and services for the people of America and of the world; (4) a higher standard of living for the American consumer; (5) an international campaign to eliminate hunger, disease, illiteracy, and poverty from the face of the earth.

If peace were to break out, there should be a new era of prosperity, here and elsewhere. History is on our side in this argument. If peace should break out, if disarmament should come, and we still fail to accomplish these goals, it will be because we do not have the will to accomplish them.

The necessary financial and economic institutions and techniques are available But they will only be used if we have the wisdom, the faith, and the courage to use them. Certainly every Christian agrees that Jesus Christ came that we might have life, and have it more abundantly. Every constructive step toward that more abundant life deserves our support. The fearful and those of little faith may be among the real stumbling blocks to the accomplishment of the new opportunities of peace. Be ye numbered not among them. Let history, logic, and faith sustain you in undertaking and pursuing the paths of peace.

Montana Indian Is Historian

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, January 7, 1960

Mr. MANSFIELD. Mr. President, on occasion I have spoken to the Senate about the journalistic talents of one John Tatsey, news columnist on the Blackfeet Indian Reservation. Recently my attention was directed to one of the State's historians living on the Northern Cheyenne Reservation.

John Stands-in-Timber, of Lame Deer, Mont., has been described as "one of Montana's truly outstanding historians." John is a 75-year-old Cheyenne Indian who has been collecting the history of his people practically all his life. He has been writing stories since he was a young man, and storytelling is John's favorite pastime. Stories of the Cheyennes at war are among his most numerous. His stories include many accounts of famous battles against white soldiers.

John Stands-in-Timber has had an active life. He has been a major influence in tribal council matters, he has been a rancher for many years, and his travels have even taken him into show business. He is active in his church, and he is a stanch believer in education for the younger people, their only recourse to progress and improvement.

John is a walking encyclopedia on the history of the northern Cheyenne Indians, and we would indeed be fortunate if more of it were put down on paper.

Mr. President, I ask unanimous consent to have an article from the November 29, 1959, issue of the Great Falls Tribune printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STANDS-IN-TIMBER WRITES CHEYENNES' HISTORY—75-YEAR-OLD INDIAN OUTSTANDING HISTORIAN

(By Margot P. Liberty)

LAME DEER.—In a small log cabin overlooking the Indian agency town of Lame Deer lives John Stands-in-Timber—one of Montana's truly outstanding historians.

Now 75 years old, although he doesn't look it, John is a member of the Cheyenne Tribe of Indians, and he has been collecting their history practically all his life.

"My grandparents started me," he says. "They raised me—I was an orphan—and they used to visit other old folks often. They talked Cheyenne history the whole time, and I used to stay right there, even when I was very young. I loved to hear them." Later, on his return from Government schooling in Kansas in 1905, John began writing down the stories, an activity he's been busy with ever since. Today with coworker Margot Liberty he has collected much of his material into a manuscript on Cheyenne history, now in the hands of a publisher.

Storytelling is John's favorite pastime and stories of the Cheyennes at war are among his most numerous. His stories include many accounts of famous battles against white soldiers.

"My grandfather, Lame White Man, was killed in the Custer fight, one of seven Cheyennes who fell that day but the only Cheyenne chief," he'll tell you.

"I showed them the place at Custer battlefield and a marker is there now, telling about it."

Then, with a twinkle, he adds, "They didn't put up too many, for Indians."

Lame White Man was not the only Custer fight participant whose story John knows well. Many others have given him their accounts, and he has been over the field so often he knows it like the back of his hand. But his interests go back far beyond that fight; beyond the coming of the white man to Indian country. Traditional tribal legends, early movements of the people and their battles with Indian enemies, the acquisition of horses and movement into the plains country, and finally the story of the white invasion are all part of his vast store of information.

He has written so many notes on all of this they overflow a number of boxes and trunks and suitcases, threatening to crowd the family out of the house. "Josie is going to burn them," he says, grinning at Mrs. Stands-in-Timber, but though she laughs and agrees with him, he knows she won't.

Many researchers have tapped John's knowledge, and he has worked directly with dozens of them. Acknowledgments of his contributions can be found in places as far apart as Custer Battlefield in Montana and the Smithsonian Institution Bureau of Ethnology in Washington, D.C., while many writers on Indian history have given him their thanks. Among them are Verne Dusenberry of Montana State College; Father Peter John Powell of Chicago; J. W. Vaughn, author of "With Crook on the Rosebud," and Mark H. Brown, author of "The Frontier Years." However, it was only recently that Stands-in-Timber attempted writing a manuscript of his own.

"The Cheyennes call me tribal historian," he says, "so I am glad to have written down their stories in one place, where they can't get away." He is busy revising the first draft manuscript of these, and making additions and notes. But there is much more for him to tell, especially concerning his own life and career throughout the reservation years.

"When I was born, everything was Indian," he says, "clothes and transportation and food. I was rocked to sleep on a travois as a baby, tied back there when we traveled. But things are different now, and the Indians have to change to meet the future."

He has been instrumental in working toward such changes. Chosen as adviser by many reservation superintendents, John has also served his people for many years on their tribal council, and has been to Washington, D.C., on seven different tribal delegations.

But politics and history are not his only interests. He has farmed for many years and run cattle on the reservation, after working as a Government line rider or cowboy caring for tribal herds. He has been in show business often, organizing groups of Cheyennes to appear at rodeos and festivals as well as movies, including "The Oregon Trail." And he is a leader in the local Mennonite church, giving frequent sermons in the Cheyenne language.

"I have always tried to work for the good of the tribe," John says. "I keep telling the young people education is the answer; they must go on with it. Many times the Indians lose out because they don't know how to take advantage of their situation. Everything's changing; only an educated man will get ahead. It's going to be even harder for these young people than it was for us."

With his background in recent history as well as that of the oldtimers, John is in a good position to advise them. Although he is retired from active political life, he still has considerable influence on Indian and white policy-planners alike, and he entertains visitors of all kinds for many hours in his cabin on the hill.

But he still finds time for writing, and hopes to get underway on the story of his own life before long.

Address of Senator Talmadge

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith copy of Senator TALMADGE's speech. On Friday, November 20, 1959, in Columbia, S.C., the distinguished Senator from Georgia, the Honorable HERMAN TALMADGE, delivered the principal address at the South Carolina Democratic Party dinner and rally. The occasion was a fund-raising affair for the Democratic Party of South Carolina.

In his magnificent address, Senator TALMADGE, among other things, called attention to the fact that there are groups in this Nation today determined to divide and plunder the greatest political name a democracy has ever seen. In his address, he has offered to make every effort to work in unity with Democrats from every section of America. He has advised all Democrats that their party cannot win in 1960 by being a house divided against itself. He has called to the attention of so-called democratic leaders that abuse of the South cannot continue if our party is to prevail as a major segment in our American political life. He has warned all Americans that the South will not continue to tolerate the baseless and irresponsible charges directed against our people by others of lesser stature in this Nation.

Mr. Speaker, Senator TALMADGE's address is a dignified message to Democrats all over America that the South is willing to march with them in unity but unwilling to march as an unequal or second-class member of a party which must campaign in unity if we are to win the congressional or presidential elections in November 1960.

Mr. Speaker, Democrats should heed the words of the great Senator from the great State of Georgia:

ADDRESS OF SENATOR TALMADGE AT SOUTH CAROLINA DEMOCRATIC PARTY DINNER AND RALLY

Governor Hollings, Senators Johnston and Thurmond, members of the South Carolina congressional delegation, Chairman Pope, distinguished officials, honored guests, and my fellow Democrats, thank you for according me the privilege and pleasure of sharing this great occasion with you.

In these days when one needs a program to tell the difference between a "Paul Butler Democrat" and a "modern Republican," it is refershing indeed to meet with men and women like you who are proud to be plain, old-fashioned Democrats.

I salute you for your faithful adherence to the ideals and heritage of the Party of Jefferson and Jackson and I am pleased to tell you that your Georgia brethren stand with you shoulder-to-shoulder in mutual determination to implement those ideals and to perpetuate that heritage.

We in Georgia feel a close kinship with the people of South Carolina. In many cases—as in my own family—there is a common bond of blood and family ties.

Our States have developed economically and politically along parallel lines.

Our States have shared many common causes.

Our States have stood together in victory and defeat.

And it is my earnest hope that, regardless of what the future may bring, events always will find the people of our States united as one in all matters involving their lives, fortunes, and sacred honor.

South Carolina is blessed with capable, courageous, and stalwart leaders.

Your brilliant young Governor has established himself in the eyes of the South and the Nation as a man of ability, dedication, and integrity from whom much will be heard in the future.

No State has Senators and Congressmen who are more highly respected or who are more consistently effective in serving the interests of their constituents, State, and Nation than South Carolina.

It is an honor to serve in the U.S. Senate with patriots of the stature of OLIN JOHNSTON and STROM THURMOND. Their constant and vigorous efforts in defense of constitutional government and individual liberty are unmatched examples of statesmanship of the highest order.

Both men have proved themselves worthy successors to the mantle of John C. Calhoun—your State's illustrious and incomparable statesman of the 19th century who recently was selected as one of the five greatest Senators of all times.

If we had 50 more men of the caliber and conviction of OLIN JOHNSTON and STROM THURMOND in the Senate of the United States, this country would not be in the difficulties it is today.

Your presence here tonight bespeaks your abiding faith in the Democratic Party and your intense devotion to the principles upon which it was founded and grew great. It evidences your heartfelt hope that the party can be wrested from the hands of those who would destroy it for personal aggrandizement and restored as an instrument for effecting the will of the masses of the American people.

The Democratic Party was founded as the party of constitutional principle—a party dedicated to the protection and preservation of our great, unique, republican form of government under which government is the servant, not the master, of the people.

The Democratic Party grew strong in its espousal of the right of the individual to manage his own affairs and its insistence upon maintaining at all costs the guarantees of freedom and local self-determination contained in the Bill of Rights of our Constitution.

The Democratic Party has always held the confidence of "grass roots" Americana so long as it adhered to its founding principles. It has been repudiated only when it lost sight of its aims and allowed itself to become the tool of special interests and pressure groups.

It now stands on the threshold of the greatest opportunity ever afforded to any political party in the history of our Nation.

The results of last year's congressional election prove conclusively that the rank and file of Americans of all regions shares our faith in and hope for the Democratic Party.

If the Democratic Party will only capitalize upon that fact by presenting itself to the electorate next year with candidates and a platform which will command the unified support of Democrats in all States and regions, there is no reason why it should not realize in 1960 the greatest victory for the people since 1936.

The very strength of the Democratic Party lies in the fact that it attracts its supporters from all levels of society and segments of the economy—that within its ranks are represented industrialists and workers, farmers and businessmen, housewives and society matrons and persons of every race, color and creed.

The Democratic Party represents a true cross section of the United States and that fact sets it apart from any other political party today. From that composition it derives a potentially universal strength which, if properly mobilized, can make it impregnable at the polls.

A proper mobilization of that strength demands nothing more than that Democrats of all shades of opinion recognize realities and meet one another halfway to put our best foot forward by emphasizing our many areas of agreement instead of our few areas of disagreement.

I see nothing impossible or even extremely difficult about that if all Democrats of good will who are earnestly interested in promoting Democratic unity and victory will work together to give the country a ticket and a program which all voters—southern as well as northern, eastern, and western—can support with enthusiasm and in good conscience.

I, for one, am ready to do my part to achieve that end.

I believe I am correct in stating that the vast majority of southern Democrats feels the same way.

However, we must recognize that there are those who presently occupy places of leadership in our party who are not interested in unity or, for that matter, in winning elections. They would rather feather their own political nests by appeasing pressure groups and catering to social and economic extremists than to serve present and future generations by putting a responsible Democratic administration in office in 1961.

Those individuals would like nothing better than to nominate candidates and write a platform so completely obnoxious as to drive southern Democrats from the Democratic Party next year.

Let me state for the benefit of those who may be considering such a course that they will have to drive us out because we Democrats of the South will never leave the Party of our fathers voluntarily.

Let me further state for their benefit that, if they do drive us out of the party, they will do so at their own peril.

The Democratic Party cannot win in 1960 without the South.

The Democratic Party cannot win in 1960 without the South because it will have to have every electoral vote the South can give it to offset the electoral votes of the two most populous States from which the Republican Party likely will draw its candidates.

The Democratic Party cannot win in 1960 without the South because, if the Democratic Convention drives the South from the party, there will not be just two, three, or four States which will leave—the entire South will go.

Therefore, to those who sit in seats of responsibility in Democratic National Headquarters in Washington, let me make these points clear beyond misunderstanding:

Southern Democrats will go to the Democratic convention to stay in the party.

Southern Democrats will meet their brethren from other regions halfway in any honest effort to resolve the areas of disagreement between us and to present a united front before the Nation.

Southern Democrats will give their support to any candidates nominated and to any platform approved which are not obnoxious or a calculated insult to our States and our people.

Whether southern Democrats stay in the party is up to the convention.

The convention can take one of two courses—it can keep the South in the party and win or it can drive the South from the party and assure another Republican victory.

Southern Democrats fervently hope for the former but they will not be unprepared for the latter.

The Democrats of the South are sick and tired of being rewarded for their consistent support of the party by being cast in the role of party whipping boy.

The Democrats of the South are fed up with being tied to the national stake every 4 years by fellow Democrats to be ridiculed, castigated and punished as the price for the support of those whose stock in trade is racial demagogy, agitation, and exploitation.

The Democrats of the South have learned the hard lesson of not allowing themselves to be taken for granted and are determined that in the future they shall be as vigorous and as vociferous in seeking their due recognition as are the NAACP, the ADA and the other organized pressure groups which are bent upon turning the Democratic Party into their own private shooting preserve.

If we southern Democrats have anything for which to blame ourselves, it is that we have for too long allowed extremists within and without the party to distort and discredit our motives and to misinterpret and malign our since efforts to solve our problems.

We have allowed ourselves to be libeled by the self-serving propaganda of radical political elements.

We have allowed our insistence upon adherence to the Democratic principle of local self-government to be characterized falsely as reaction and inhumanity.

In short, we have allowed ourselves to be placed on the defensive.

It is time that we put the shoe on the other foot.

We of the South do not have to yield to anyone in the sincerity and intensity of our dedication to the Democratic precepts of justice, decency and fair play for all.

We need make apologies to no one for what we profess or practice.

To be sure we have our problems and our shortcomings, but we are trying to do something about them.

We make no pretense at being perfect.

Neither do we presume to sit in judgment on the imperfections of others.

And we do not consider it unreasonable to expect that Democrats of other regions—whose imperfections are no less pronounced than ours—should accord us the same tolerance.

The greatest need of the Democratic Party is a recognition of the fundamental fact that in a nation as large and diverse as ours there can be no single or pat solution to problems involving human relations.

Such problems are so varied and complex that they can be satisfactorily and amicably resolved only by the individuals who are confronted with them.

It would be wonderful indeed if solutions could be realized by the passage of laws.

Were that the case there would be no human problem which could not be solved by the enactment of a new law.

Were that the case everyone could be made healthy, happy, wealthy, wise, and equal by statute.

Were that the case churches, armies, courts, schools, political parties, and all the other institutions and instruments of our imperfect society could be superseded by an omnipotent superlegislature dedicated to the achievement of absolute human perfection.

Unfortunately, complex social problems are not succeptible to so simple a solution.

To the contrary the sum total of the experience of mankind stands as irrefutable proof that human motives and attitudes are not readily amenable to the legislative process.

It is true that change can be accomplished by force so long as that force is applied continuously.

But it is equally true that lasting change for the better comes from the inside of man out—not from the outside in.

True progress in the area of human relations can be achieved only to the degree that the inherent individuality of human personality is voluntarily sublimated to the common good.

To ignore that factor as some leaders of the Democratic Party would have us do is to invite chaos.

Thomas Jefferson recognized that fact when he wrote in the Declaration of Independence that government should derive its just powers from the consent of the governed.

George Mason recognized that fact by providing in the 9th and 10th amendments that all powers not specifically delegated to the National Government would be reserved to the States and the people.

Andrew Jackson recognized that fact in declaring in his farewell address that "the Constitution cannot be maintained, nor the Union preserved, in opposition to public feeling, by the mere extension of the coercive powers confided to the Federal Government."

That rugged warrior and dedicated man of the people who brought to the Democratic Party a fuller realization of Jeffersonian principles so eloquently and forcefully stated the point I would make that I would like to borrow from his words to do so.

Declared he:

"In a country so extensive as the United States, and with pursuits so varied, the internal regulations of the several States must frequently differ from one another in important particulars; and this difference is unavoidably increased by the varying principles upon which the American Colonies were originally planted; principles which had taken deep root in their social relations before the Revolution, and, therefore, of necessity, influencing their policy since they became free and independent States. But each State has the unquestionable right to regulate its own internal concerns according to its own pleasure; and while it does not interfere with the rights of the people of other States, or the rights of the Union, every State must be the sole judge of the measures proper to secure the safety of its citizens and promote their happiness and all efforts on the part of the people of other States to cast odium upon their institutions, and all measures calculated to disturb their rights of property, or put in jeopardy their peace and internal tranquillity, are in direct opposition to the spirit in which the Union was formed and may endanger its safety.

"Motives of philanthropy may be assigned for this unwarrantable interference; and weak men may persuade themselves for a moment that they are laboring in the cause of humanity, and asserting the rights of the human race; but everyone, upon sober reflection, will see that nothing but mischief can come from these improper assaults upon the feelings and rights of others. Rest assured that the men found busy in this work of discord are not worthy of your confidence and deserve your strongest reprobation."

Andrew Jackson's Farewell Address constitutes perhaps the most masterful statement of Democratic philosophy ever written and the Democratic Party in preparing to meet the electorate next year would do well to heed its admonitions.

If I were delivering the keynote address at the Democratic National Convention next July, I would be sorely tempted to read it to the delegates in full.

I can think of no more effective way to emphasize the inconsistency of those who would claim the name of the party of Jackson on the one hand while on the other hand espousing programs and policies which profane everything for which that great and noble Democrat stood.

The American people are looking hopefully and prayerfully to the Democratic Party to offer them a way out of the disaster of the present Republican Administration.

They demonstrated at the polls last year that they are ready to give their ballots to the Democratic Party if it will but offer them something better and respond realistically and vigorously to the challenge to lead the country to restored opportunity and freedom for the individual.

The present administration has failed the American people on every front.

It has failed to maintain our national defense posture and has left us unprepared to meet either the threat of war or the challenge of peace.

It has failed to stabilize the Nation's economy and to restore reason to Federal spending and taxing policies.

It not only has failed the farmers of the Nation but also has been callously indifferent to their worsening plight.

It has failed to uphold constitutional government and has instead embraced the philosophy of judicial and executive usurpation of the constitutional rights of the States and their citizens.

This administration has been one of waste, extravagance, special privilege, high interest rates, high taxes, runaway inflation, tight money and mounting debt.

What it has given the American people has been a far cry from the high-sounding promises which its candidates made to them during the so-called crusade of 1952.

The American people are no longer fooled by an administration and a party which come to them with the voice of Jacob and the hands of Esau.

Americans are weary of bearing the burdens of a national government which has ceased to be their servant.

Americans are weary of tolerating the regimentation of a sprawling bureaucracy which has ceased to be responsive to their will.

Americans are weary of countenancing the extravagances of global planners who have no concern for the welfare of the people here at home.

Americans are weary of listening to the empty promises of false prophets who cry peace when there is no peace and plenty when there is no plenty.

Americans are restive under the yoke of oppressive taxes and irresponsible Government spending which are destroying the economy of this country.

Americans are frustrated by judicial and executive dictation which is robbing them and their children of their heritage of freedom.

From the mail which I receive from all sections of the Nation I am convinced that the average citizen is gravely concerned about the present course being followed by our National Government and the consequences of following it to its ultimate conclusion.

I am convinced that the overwhelming majority of the American people wants to see the Federal budget balanced and the Nation's economy stabilized.

I am convinced that the overwhelming majority of the American people wants the United States to cease doing for people in other countries what it either is unable or unwilling to do for our own citizens here at home.

I am convinced that the overwhelming majority of the American people wants the Federal Government to confine its activities to those areas reserved to it by the Constitution and leave the management of all other matters to local people on the local level.

I am convinced that the overwhelming majority of the American people wants above all else for the United States to be made militarily and economically secure and for themselves to be left alone to run their own affairs and enjoy the fruits of their own labor.

The future of the Democratic Party will depend directly upon its ability to translate those desires into positive action and that action in turn into concrete deeds.

The future of the United States may well depend upon how the Democratic Party responds to that challenge.

The kind of program which the American people want and expect of the Democratic Party was outlined by the father of the Party, the revered Thomas Jefferson, in his first inaugural address.

He called for:

"Equal and exact justice to all men, of whatever state or persuasion, religious or political; peace, commerce and honest friendship with all nations—entangling alliances with none; the support of the State governments in all their rights, as the most competent administrations for our domestic concerns, and the surest bulwarks against antirepublican tendencies; and the preservation of the General Government in its whole constitutional vigour, as the sheet anchor of our peace at home and safety abroad."

Such a program is one on which all Americans of all States and regions could agree and which all Americans regardless of their place of residence could wholeheartedly support.

Such a program is one which could unify the Democratic Party and make it an invincible instrument of the people's will unparalleled in our history.

Such a program is one which would guarantee a Democratic administration in the White House not only in 1961 but also for as long as the party adhered to it.

I would like to hope, my fellow Democrats, that the party of Jefferson will adopt the program of Jefferson as its 1960 platform.

I am sure I speak your sentiments when I say that we Democrats of the South shall spare no effort in seeking that end.

Stagecoach Mary

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, January 7, 1960

Mr. MANSFIELD. Mr. President, there recently came to my attention a condensation of a story related by Gary Cooper which originally appeared in the magazine Ebony. The condensation was carried in the Catholic Digest for December 1959.

Mr. Cooper, a fellow Montanan, tells the story of "Stagecoach Mary," who is a part of that rich legend and the grim reality of frontier days from which the history of my State has evolved. Born in slavery, Stagecoach Mary moved with the early settlers in the westward trend of the 19th century. In Montana she worked with the missionaries and, later, became the second woman in the Nation's history to carry the mails as a stagecoach driver. The story of "Stagecoach Mary" is one of a courageous and compassionate woman. It is as unique and fascinating as is the State of Montana. I ask unanimous consent that the condensation previously referred to be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STAGECOACH MARY

(By Gary Cooper, as told to Marc Crawford)

Black Mary could whip any two men in the territory. She wore a .38 Smith & Wesson strapped under her apron, and people who knew her swear she couldn't miss a thing within 50 paces. She was tall, weighing well over 200 pounds, and, except for an apron and skirt, wore men's clothes.

Her real name was Mary Fields. Mary was one of the most picturesque characters in the history of Montana. She was a stagecoach driver, the second woman ever to drive a U.S. mail route. Maybe because she was a Negro, she was never bothered by Indians. I remember seeing her in Cascade when I was just a little shaver not yet 10. She smoked cigars until the day she died in 1914; she was about 81, as near as anyone could figure. She celebrated two birthdays a year because she didn't know the exact date of her birth, but Cascade schools closed in her honor whenever she felt like having one.

Mary was said to have had a fondness for hard liquor that was matched only by her capacity to put it away. It is historical fact

that one of Cascade's early mayors, D. W. Monroe, gave special permission for Mary to drink in the saloons with men, a privilege, if you care to call it one, given to no other woman.

Mary was born a slave somewhere in Tennessee, some say in 1832. She lived to become one of the freest souls ever to draw a breath or a .38 and she was celebrated in a pen-and-ink drawing that hangs in the Cascade bank even now. It was done by the late Charlie Russell, a cowboy artist and the greatest one to come out of the West. Mary lived in Mississippi for a time and was a passenger on board the *Robert E. Lee* when it raced on the Mississippi with Steamboat Bill's *Natchez*; she took great pride in telling how hams and bacon were fed into the firebox to keep up steam that June 30, 1870.

Mary later moved to Ohio, where she worked at the Ursuline convent in Toledo. There she met Mother Amadeus, whom she revered and loved, though one account has it that Mary was a slave and confidential servant in the household of Judge Dunne, the nun's oldest brother. Others say Mary had been the nun's personal maid before her mistress took the veil.

In any event, it was because of Mother Amadeus that Mary went to Montana. The nun went to open a school for Indian girls in 1884 at St. Peter's Mission, where Jesuits had worked among the Blackfeet since 1866. Because of the hard living and intense cold—I've seen it get 45° below zero myself—Mother Amadeus fell victim of pneumonia and lay dying in a crude log cabin. Mary Fields heard about it back in Ohio, and rushed to the bedside. She nursed the nun back to health and remained in Montana to help the missioners.

After 8 years, the Ursulines' stone convent was completed, and they and Mary moved from their log cabins. Bishop Brondel came, supervised, and helped with the work. But none dared move anything belonging to Mother Amadeus; it was a job Mary had cut out for herself.

Mary also did the freighting for the mission and often had to fight her way through. One night a pack of wolves frightened her team. The horses upset the load, and she stayed guard all night over the precious cargo the nuns needed to exist. A blizzard overtook her on one trip, obscuring the road. Mary walked back and forth all night to keep alive.

Mary might have lived all of her days working at the mission had it not been for her terrible temper and her lack of fear of man or beast. She was forever fighting with the hired men, and at least once the fight was with guns. No one remembers how it turned out, but Mary was still around when it was over.

The bishop was bombarded with complaints about her, and at last ordered the Sisters to send Mary away. For all the work she had done in her 10 years in the nuns' service, she hadn't received a dime. The nuns all felt that Mary had a lifetime home with them, but the bishop's order had to be obeyed.

Mary went to see the bishop in Helena to "make him bring witnesses to swear what they had said against me." But apparently Mary lost; crushed, she left the mission.

But Mary wasn't brokenhearted long, nor did she go far. Mother Amadeus set her up in the restaurant business in Cascade. For all her toughness, Mary gave too much credit. She would feed sheepherders during the winter and they would promise to pay her when they worked in the summer. Mary went broke twice and Mother Amadeus gave her a new start each time. Still Mary was unhappy because she was concerned about her Sisters at the mission.

Then Mother Amadeus went to the Federal authorities and asked that Mary be given the mail route. They gave Mary the route between Cascade and the mission itself. Each day, never missing one, she made her triumphant entry into the mission seated on top of the mail coach, dressed in a man's hat and coat and smoking a huge cigar.

Upon one occasion a priest coming to the mission had been told he would be met in Cascade. When he arrived at the mission earlier than expected, the nuns asked how he came. He replied, "Oh, that big colored man met me at Cascade and drove me out." He was shocked to learn that the "man" was Mary Fields.

Mary met every train, and often slept in the depot. In bad weather, if Mary's coach could not get through she would shoulder the baggage and walk. She drove the route for 8 years. One day, after being thrown from the mail coach, she arrived at the mission in pitiful condition. The Sisters urged her to return to the faith. She had not been a fervent Christian since the bishop had expelled her from the convent.

Mary went to confession. The next morning the penitent appeared in the front pew at high mass. She was not wearing her usual men's clothes but a beautiful dress and long white veil the nuns had made for her during the night.

In 1903, Mary made her home in Cascade. Her stagecoach days were over, and her lifelong friend Mother Amadeus had been sent to Alaska to start new missions. Her successor, Mother Angela, tried to mother Mary as best she could, but there never could have been another Mother Amadeus. Mary began taking in washing, and soon turned her home into a laundry.

In 1912, Mary's laundry burned down, and the townspeople contributed the lumber and their time and labor in rebuilding her home. In fact, so esteemed was she that in 1910, when the late R. B. Glover leased the New Cascade Hotel to Kirk Huntley, it was with the understanding that Mary would receive her meals free.

Mary acted as mascot for the Cascade baseball team for several years. For every game she would fix a boutonniere for the members of both teams and five large bouquets for each man who made a home run. The flowers were from her own garden.

For all her roughness, drinking, profanity, and other bad habits, Mary detested loose girls, and her honor was never questioned. She always took care of the altar at Wedsworth Hall for the Catholic society, but she did not live to see the Catholic church finished. In her later years, she would work as a baby sitter for $1.50 a day, and then spend the money buying goodies for her charges. She never married.

Mary was one of the pioneers, colored, white, and yellow, who came from Tennessee and places beyond the seas to help conquer the old wild West. When she died, the town mourned her passing and buried her at the foot of the mountains, by the road that leads to the old mission.

Self-Employed Retirement Act

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Cecil P. Bronston, vice president of the Continental Illinois National Bank & Trust Co., of Chicago, Ill., which appeared in the December 1959 issue of Trusts and Estates:

PROGRESS REPORT ON SELF-EMPLOYED RETIREMENT ACT

(By Cecil P. Bronston, vice president, Continental Illinois National Bank & Trust Co., Chicago)

Whether the current efforts for passage of the Self-Employed Individuals' Retirement Act succeed or fail, it does seem probable that, except for the unlikely event of a general reduction in the tax impact on individuals, the pressure for legislation of this nature will finally force favorable action. If this be true, what we trustmen do now to obtain technically correct trust provisions will benefit our institutions in administration of the restricted retirement trust funds.

Although passage of the bill will open new opportunities for our services, we will have to work diligently, efficiently, and against some odds, for any real gain for our shareholders from this business. One qualified and informed trust official has estimated that the pooled type of restricted retirement trust, to be profitable of itself, will require the participation of some 10,000 members. If this be so, in the ordinary trust department the operation of restricted retirement trusts—even though permissibly invested in an existing common trust fund—may become a questionable luxury. So our concern with the terms of the bill is understandable.

COMMITTEE SUGGESTIONS

In May 1959, the employees trust committee of the ABA Trust Division made four suggestions to the Senate Finance Committee, which were supported by our testimony at the hearings that took place in June. These suggestions were that:

(1) The section dealing with permissible investments be revised to provide that restricted retirement funds may be invested as national banks may invest trust funds (that is, in any investments in which fiduciaries in the State in which the trustee is acting may lawfully invest) subject to the limitation that no investment shall be made in the obligations of any one entity to exceed the greater of $10,000 or 10 percent of the fair market value of the trust, unless that investment be in U.S. Government obligations, stock in a regulated investment company, or participations in any common trust fund or other collective investment fund established and administered under rules and regulations of the Federal Reserve Board.

(2) Interests in restricted retirement trusts be exempt from documentary issuance taxes, just as with interests in common trust funds and collective investment trusts for employee retirement funds.

(3) The sections dealing with prohibited transactions be revised so that:

(a) The definition of prohibited transactions be made uniform in effect with the existing definition in the code, except that in restricted retirement funds the trustee shall be prohibited from lending principal or income of the trust to a member; and

(b) A restricted retirement fund shall not lose its tax exemption as the result of a prohibited transaction, if adjustment satisfactory to the Secretary of the Treasury is made within such reasonable time as the Secretary determines.

(4) The section relating to restricted retirement policies be revised to permit a participant to direct the transfer of the cash surrender value of a restricted retirement policy to a restricted trust fund as a companion provision to one which permits purchase for a participant of a restricted retirement policy from funds in a restricted retirement trust.

OTHER PROPOSALS AFFECTING TRUSTS

Other suggestions for changes were offered before the Senate Finance Commit-

tee by other interested individuals and organizations:

Congressman KEOGH expressed his support of an extension of the investments which banks, as trustees of restricted retirement funds, may make to include "saving accounts in institutions in which accounts are insured by the Federal Savings and Loan Insurance Corporation or by the Federal Deposit Insurance Corporation." Congressman KEOGH also indicated that he would favor permitting insured thrift institutions, mutual savings banks, and savings and loan institutions to qualify as authorized depositories of restricted retirement funds.

The National Association of Investment Companies proposed that "where the trust agreement by its terms restricts the investments which may be made by the [restricted retirement] trust to obligations of the U.S. Government and shares of publicly held investment companies registered with the Securities and Exchange Commission, the bill should not require that the trustee be a bank, but should require only that a bank be custodian of the securities in the trust under appropriate regulations of the Secretary of the Treasury."

In a similar vein, the Investment Counsel Association of America, Inc., recommend that the Keogh bill be amended to provide that banks, as trustees of restricted retirement funds, may share or delegate the power to control the investment and reinvestment of funds held in such trusts.

SEC AND STATE REGULATION

Staff members of the Securities and Exchange Commission have informally expressed the view that the Securities Act of 1933 and the Investment Company Act of 1940 require that banks will have to register with the SEC any pooled or collectively invested trusts created under the Keogh bill. These staff members recognize that the rationale which has exempted individual inter vivos trusts from regulation is probably applicable to Keogh trusts created by individuals and not invested collectively with other Keogh trusts. But they indicated their belief that such trusts, when invested collectively in a section 17 common trust fund, may be subject to SEC jurisdiction, and that group or association Keogh trusts, funds of which are invested collectively pursuant to section 10(c) of regulation F, will be subject to SEC jurisdiction.

Our committee's position is that there are reasons to consider all trusts exempt from registration but that, if necessary to clarify the subject, amendments to the bill should be made. The SEC staff members have expressed the hope that an amendment can and will relieve the SEC of responsibility in the Keogh trust field. Through the legal staff of the American Bankers Association, we are currently trying to work out an understanding or form of mutually acceptable amendment. Detailed preparations for implementing the Keogh legislation within our banks should take into account the SEC questions.

With our attorneys, we must also consider whether our respective States have securities acts that will affect our plans. Further, it is timely that we review our State laws on these three points: first, whether Keogh trusts will be free of the rule against perpetuities; second, whether Keogh trusts will be subject to statutes against accumulations; and third, whether the requirement in the Keogh bill that a member's interest in a trust be nonassignable is in conflict with the State's law regarding spendthrift trusts. Our Committee on Employees Trusts has taken a view similar to that of our counterpart committee of the American Bar Association's real property, probate, and trust law section—that problems such as this can best be resolved locally.

ANTICIPATED GROWTH OF KEOGH TRUSTS

The interest of each of our banks in offering Keogh trust facilities is directly related to the probable degree of acceptance by the self-employed of Keogh tax deferral opportunities. Dr. Roger F. Murray, in his Senate Finance Committee testimony, stated that the Treasury Department's estimate of $1 billion a year in payments to restricted retirement plans "is not likely to be reached for 5 years or more. * * * A billion dollars in average deposits of, say, $1,000 means that a million of self-employed will have to be educated and sold on this new savings plan."

Dr. Murray's analysis finds support in the experience of our Canadian trust company counterparts. After enactment of the Canadian bill in April 1957, 3,750 persons became participants in plans administered by trust companies during the remainder of that year. In 1958, 2,935 additional persons initiated participation in trust plans, for a 2-year total of 6,685 persons. Our Canadian friends have found this response rather discouraging.

Recalling, however, the modest origins of other now flourishing areas of trust business, and taking into account what all of us recognize to be the very substantial latent market for Keogh-type business, perhaps these comments should not arouse pessism over the long-term prospects for development of Keogh business but, rather, realism as to the magnitude of the solicitation effort which will be necessary and the slowness with which we may expect to see our efforts produce results in the form of profitable business.

EFFICIENCY AND COMPENSATION

A committee of the American Bar Association is working on model trust forms to which our committee is contributing. The problems of operations are considered in several of the source materials listed in the appended bibliography.

In an article in the August 14, 1959, issue of American Banker, Earl R. Hudson, president, Kennedy Sinclaire, Inc., offered the following observations:

"(a) * * * certain factors must be present before a bank makes its decision to go 'whole hog' after the available billions, for there is no virtue to establishing the service unless it can be sold at a profit.

"(b) * * * Realistic fees should be set. Is one-half of 1 percent realistic? I don't think so.

"(c) Activity charges should be imposed on unusual requests by participants.

"(d) Heavy withdrawal fees should be charged.

"(e) In determining charges the same concept should be applied to handling a self-employed retirement account as is applied to handling checking accounts (complete analysis), small loans, and other profitable bank business.

"(f) * * * the trust business can be destroyed through cutthroat competition (as has to an extent happened in the pension field), and playing with 'loss leaders' can be dangerous."

A pattern of fees has developed among Canadian trust companies at an annual rate of three-quarters of 1 percent of the market value of the trust. In our own country, an eastern trust company has indicated publicly that its fees might in some cases be as low as one-half of 1 percent. Another has stated its studies indicate that to an absolute minimum management charge of one-half of 1 percent there must be added a flat dollar charge for each contribution.

Let's be certain that we operate in this new field in the dignity and wisdom of the premise that our services deserve, and we shall receive adequate compensation.

RELATED TRUST BUSINESS

Another factor, which may well motivate many banks to offer Keogh services in spite of their reservations as to immediate profitability, relates to the generation of other trust and banking business among customers whose contact with the bank may have first come through the retirement fund or be strengthened by reason of it. Hudson suggests that the member of substance will tie his accumulated deposits into an estate plan under which the bank will be appointed executor and trustee under either a life insurance or a testamentary trust.

The great growth of the trust business is proof that we do not hesitate to depart from the traditional, once we see that such departure will extend our services in harmony with the great responsibilities we bear in existing relationships. No doubt exists that Keogh trusts will require pioneering work and the development of some techniques differing from those of more traditional trust administration. However, someone has said the storm seems worst when viewed from behind a window. If the Congress will open the door, many trustmen are eager to venture forth—to dare to see what can be made of their opportunities.

Prevention of Tolls on Interstate Bridge Across Columbia River on U.S. Highway 99, Between Portland, Oreg., and Vancouver, Wash.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, January 7, 1960

Mr. NEUBERGER. Mr. President, tolls on the Interstate Bridge across the Columbia River connecting Portland, Oreg., with Vancouver, Wash., were reinstituted on January 4, 1960, on the Federal Interstate Pacific Coast Highway.

Along the entire length of U.S. Highway 99 from the Canadian border to the Mexican border the Vancouver-Portland Bridge is the only toll bridge. Initially, the Portland-Vancouver Columbia River Bridge was constructed and opened on February 15, 1917, and welded Portland and Vancouver into one metropolitan trading area. Tolls were originally charged, but the bridge has been toll free for many years. A new bridge alongside the old one has been opened and tolls are now being charged.

This, I think, is a serious mistake and as a member of the Senate Public Works Committee and the Subcommittee on Roads and Highways, I have introduced legislation, S. 2404, to provide for a toll-free bridge connecting Portland and Vancouver. This legislation is sponsored by the two distinguished Senators from Washington State, along with my colleague, Senator MORSE.

The basic mistake that has been made was by the Oregon Legislature in 1953, which provided for a new bridge with tolls. If the new bridge had been delayed just several months, it could have been incorporated into the Interstate Federal Highway System and would have qualified for 90 percent Federal aid. Both Mrs. Neuberger and I, as members of the Oregon Legislature at that time, voted against this 1953 bill which has turned out to be such a serious mistake.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Oregonian of December 22 dealing with the tolls on the new Interstate Bridge, together with a copy of a letter which I have written to the editor of the newspaper dated January 7, providing my views on this important subject.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

ARTIFICIAL BARRIER

Thirty-one years ago this coming New Year's Day the tolls were removed from the Interstate Bridge between Portland and Vancouver. This span, built as a joint effort by the people of Multnomah and Clark Counties, had been turned over to the State of Oregon with the firm understanding that when enough tolls had been collected to retire the bonds, the bridge forever after would be free.

Now a new bridge has been built alongside the old one. To help pay for the new bridge, tolls after January 4, 1960, will be collected from the users of both bridges. This arrangement was ordered by the 1953 Oregon Legislature despite the protests of Portland area lawmakers that this was not only of doubtful legality but also was morally indefensible.

Toll bridges are contrary to the policy of the State highway department. All of the bridges built across the wide bays crossed by Highway 101 along the Oregon coast are free. Every State-owned bridge crossing every other river in the State has been financed out of the State highway fund derived from fuel taxes, weight-mile fees on trucks, and vehicle licenses. In the entire length of U.S. Highway 99 from the Canadian to the Mexican border this will be the only toll barrier to free travel.

The people of Portland and Vancouver were farsighted enough to build the Interstate Bridge long before either Oregon or Washington had their present extensive highway networks. Its opening on February 15, 1917, made possible our present Interstate Highway System and the coastwise truck freight carriers that have built up Oregon. It welded the two cities on opposite sides of the Columbia River into one metropolitan trading area, to their mutual advantage.

Since the toll is a modest 20 cents, and heavy traffic on the bridge probably will bring in enough money to retire the bonds and lift the toll by 1970, there is a temptation to shrug off the whole issue. But Portlanders and Vancouverites should not accept this injustice with docility. Any way you look at it, the collection of tolls on the twin interstate bridges is wrong.

There are three possible ways to right this wrong: (1) Challenge in court the right of the State of Oregon to break its promise to the taxpayers of Multnomah and Clark Counties; (2) press in the 1961 Oregon and Washington Legislatures for bills to make the new bridge an obligation of the respective State highway funds; and (3) continue the efforts to make the bridge part of the Federal interstate highway program and thus eligible for 90-percent Federal financing. If those who use the interstate bridges will protest loud enough and long enough, this artificial barrier can be breached.

U.S. SENATE,
Washington, D.C., January 7, 1960.

To the EDITOR of the OREGONIAN:

Your editorial of December 22, 1959, mentioned that one of the solutions to the levying of tolls on the interstate bridges was to continue the efforts to make the bridge part of the Federal interstate highway program and thus eligible for 90 per cent Federal financing.

On July 21, 1959, as a member of the Roads and Highways Subcommittee, I introduced a bill in the U.S. Senate to accomplish this purpose. It is S. 2404. Cosponsors with me are Senator MORSE of Oregon and Senators MAGNUSON and JACKSON of Washington State.

The chief obstacle to passage of the bill is the opposition voiced by the Eisenhower administration. With a considerable degree of logic, spokesmen for the administration have argued that, if the interstate toll bridges are put on the Federal system, then what about the $2.5 billion worth of toll roads, bridges and tunnels in other States? The administration has argued that payment of such a colossal sum would retard interstate highway construction in every part of the Nation for many years.

In my opinion, the real blunder was made by the 1953 Oregon Legislature and Governor who, with too much haste, imposed tolls to underwrite the Interstate Bridge construction. By waiting a short time, the bridges would have been on the Federal system and thus would have qualified for 90 percent Federal aid. This was the error responsible for the present situation.

RICHARD L. NEUBERGER,
U.S. Senator.

New York's Billion Dollar Racket

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Journal-American of January 3, 1960:

NEW YORK'S BILLION DOLLAR RACKET: GAMBLING UNLIMITED

(By James D. Horan, Dom Frasca, and John Mitchell)

New York's biggest industry is illegal, open 24 hours a delay, and sometimes police protected.

Its yearly gross is estimated in the billions, yet it does not pay a penny in either State or city taxes.

It is an industry which thrives on official corruption, murder and usury. It maintains holding companies dealing in narcotics, prostitution, industrial racketeering and the jukebox racket.

It is old as man and wicked as Cain. This industry is gambling.

So lucrative is this gambling treadmill, so great the desire to ride on it, that New York City would have gained more than $100 million in additional revenues last year alone had off-track betting been legalized.

But instead of reaping this dollar harvest to eliminate nuisance taxes and to bolster overburdened municipal services, New York City was forced by the State legislature to stand by while off-track profits financed fast cars, fine cuisine and fancy clothes for the bookmakers.

Last fall, Mayor Wagner's Off-Track Betting Committee met at City Hall to launch anew an aggressive campaign to legalize off-track wagering. A new city administration bill is already in the hands of the legislature.

The committee has also found additional support for its bet plan in a poll of 300 police chiefs throughout the State. Of the 300, 67.9 percent are reportedly in favor of legalized off-track betting.

Police brass, particularly in bookie-ridden New York City, are first to admit they are powerless to stamp out gambling. It is just too big, too popular. It has too many customers.

It is so widespread in our five boroughs that at any hour of the day or night, 7 days a week, a player can make a bet on a horse, on a number, on the outcome of a sport or—before the current TV scandal—on the skill of a contestant in a quiz show.

If the player has the right connections he can try to make his point in the muted respectability of a Park Avenue apartment where the champagne and canapes are on the house. But connection or not, he can still find his action in a Brooklyn candy store, a Queens tavern, or on sedate Staten Island.

Public apathy toward gambling laws is reflected in the token enforcement by the police and the courts. Light sentences and assembly line justice have virtually given the city's off-track bookmakers gamblers' licenses.

And, according to a survey quoted by Louis A. Lawrence in "The Manual for Prosecuting Attorneys," there are 30,000 books operating in and around the metropolitan area.

A study of the disposition of 22,600 gambling cases processed through magistrates court and special sessions in 1958 underscores the magnitude of this judicial apathy—only a little more than one-third of the defendants were convicted.

And of those 8,300 convicted, only two were sentenced to a penal institution for more than 4 months.

The vast majority were turned loose with a light slap on the wrist consisting of a low fine.

Police corruption has fed on this public and official apathy to such an extent that one of the biggest scandals in the department's history can erupt any day.

The latest scandal revolves around the figure of former police sergeant Joseph G. Luberda, who was sentenced to 2 years in jail at Rikers Island for evading grand jury questions.

Luberda was interrogated last April about a $19,495 bankroll and lists of cops and gamblers found in his car when he was arrested for drunk driving near Suffern.

PUBLIC APATHY A FACTOR

In a statement delivered in general sessions the morning of Luberda's sentencing, Assistant District Attorney Peter Andreoli labeled the documents found in the defendant's car as records of payoff.

Judge John Mullen, who passed sentence, said to Luberda:

"You have, for a number of years, been a bag man for somebody higher up in the police department now—or somebody higher up in the department formerly."

It is no secret that District Attorney Hogan's office is hopeful Luberda may yet unseal his lips to reveal the key figures in "a conspiracy to violate the gambling laws of the State."

Police Commissioner Stephen Kennedy, in reorganizing the Brooklyn Morals Squad last November, scored the evil influence of gambling on the members of his department. He said:

"The possibility of corruption of police personnel is always a danger to law enforcement. We cannot brush aside the ugly fact that gambling too often provides a potent source of such corruption."

It was the Kings County 1958 grand jury that bared gambling in the city as both the pulsing heart of organized crime and a deadly corrosive eating away at the moral fiber of the police department.

In the presentment, each page bristling with indignation, the jurors denounced public apathy and police corruption which have allowed gambling to become the slimy pocketbook for the organized underworld.

LINKED TO CRIME ENTERPRISES

The 16-page report linked gambling to narcotics, loan sharks, industrial racketeering, and numerous unsolved murders in Kings County.

"The public," the jury said, "must begin to realize the crucial difference between criminals engaged in gambling and the indulgence of decent citizens in various types of betting. * * *

"From the evidence presented to us, we state categorically that gambling crimes are linked on innumerable occasions with the most obnoxious criminal enterprises known to man."

The panel pointed out that the public image of a candy store bookmaker as an innocent betting commissioner is a dangerous fallacy.

Gambling revenue, it said, is frequently used to finance other illegal interests.

"If you scratch the professional operator of gambling," the panel noted, "you find the narcotics peddler, the loan shark, the white slaver—the murderer."

In a borough-by-borough survey, these reporters witnessed rampant gambling in every form; policy, off-track betting and high stake card games. Most of the betting was done openly, sometimes under the eyes of the police.

The reporters found policy so well organized that the numbers syndicates have established a "night shift" to take bets placed by night workers. Like any legitimate business, the day-time runners and comptrollers leave their posts at 6 p.m. after the day's "play." The night shift promptly take their places in empty stores, hallways and on street corners.

Bookmaking is no less organized than policy in the city. That is why Mayor Wagner and his aides are eager to turn the illegitimate off-track "take" in legitimate revenue.

The more than $100 million in additional taxes the city could reap through its off-track betting plan is no pipe dream.

Budget Director Abraham D. Beame calls this figure "about as conservative as you can get." He adds:

"Actually, there are a lot of people who believe we can go as high as $200 million."

A formula devised by the mayor's committee and applied to the projected betting handle at New York's flat and harness tracks during 1959 indicates the city lost at least $110 million last year for lack of legalized off-track betting.

Income of Social Security Beneficiaries

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Thursday, January 7, 1960

Mr. HARTKE. Mr. President, one of the great defects and inequities in our social security system is the income limitation provision which permits a social security recipient to receive unlimited amounts of money from investments or insurance, but only $1,200 in wages. An excellent editorial pointing up this inequity appeared in the Los Angeles Times last month, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

I also ask unanimous consent to have printed in the Appendix of the RECORD editorials on this same matter from the Detroit Free Press and the Springfield (Ohio) Daily News.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Los Angeles Times, Dec. 17, 1959]

LET THEM EARN WHAT THEY CAN

Congresses have from time to time increased the maximum amounts available to social security beneficiaries, raised the payroll tax rates, and spread the coverage ever wider in response to the shifting patterns of economic life and thought since the first law was passed in 1935.

OBSOLETE DOCTRINE

But with all these realistic responses to the changing times, the Congresses have clung to one obsolete doctrine in respect to the old-age pensions: they still act as if these pensions are enough to justify driving 65-year-old men and 62-year-old women out of the labor market.

In 1935 this was indeed one of the intentions of the social security legislators, backed by labor leaders. The defeatist thinking of the time was that the United States had completed its industrial growth, and employment opportunities consequently were limited. Therefore, it was thought, old men should be retired from job competition, leaving the permanently bounded labor field to younger men. It was the modern welfare state adaptation of the ancient tribal practice of killing, and sometimes eating, the old folks, or pushing them outside the igloo to die of exposure.

A CRUEL ABSURDITY

The law accomplished its end by limiting the amount of money a social security pensioner could earn in a year. If he broke the limit, his social security pension was reduced. Incidentally, this limitation exposed a strange contradiction in the arguments of the proponents of the law. They acknowledged that the pension payments were

merely subsistence, yet they were willing to doom to subsistence all old people who had not been able to save and invest, or who had lost their savings in the depression in which the law was enacted.

The cruel absurdity of this position has become clearer as inflation has spiraled, and now another legislator is going to try to make the simple, obvious correction. Senator VANCE HARTKE, Democrat, of Indiana, announced last Sunday that he is drafting a bill for the next session to remove the limit on social security pensioners' earnings.

Although benefits have several times been increased, social security pensions are still only subsistence, even when the pensioners receive the largest possible benefits. The top retirement payment now is $174 a month for a man and his wife if both are 65. (If the wife is between 62 and 65 the joint pension is reduced to $156.60.)

With his joint pension, the beneficiary may earn $1,200 a year but not a nickel more. If his pension were the highest—$174 a month, $2,088 a year—which would be unlikely, his annual income, with the permissible $1,200 earnings, would be $3,288 for him and his wife. That's not very much for two people in a time when consumer prices have gone up 77 percent in 15 years—in a time when a young female typist or clerk is paid a minimum of around $3,500 a year on the general assumption that she has about enough to take care of herself.

PENALTIES TOO GREAT

Many of the pensioners could earn more than the allowable $1,200, but the penalties against their pensions are so great they are discouraged. For every $80 or fraction thereof they earn above $1,200 a year, they lose 1 month's pension. If one of them earned $2,080 a year, plus 1 cent, a fraction of the 12th $80, he would wipe out his year's social security pension.

The nonsense of this is self-evident. Senator HARTKE is right: there should be no limit on a pensioner's earnings. In rare cases, of course, a 65-year-old pensioner might then be able to have an earned income in five or six figures and collect his social security benefits too. But his case would be far more unusual than those of some present pensioners who have very large incomes from investment, the kind of income which has no limit set by the social security law.

Moreover, we are learning that it is socially and economically wrong to try to push all 65-year-olds out of the labor market. Disemploying them by law or rule not only injures many of them; it often subtracts irreplaceable skill and experience from the expanding economy.

We are slowly recovering from the welfare barbarism of the 1930's when, for the benefit of the majority, it seemed good to declare a man economically dead at 65. Senator HARTKE's bill may accelerate the retreat from the dreadful era when it was held that men had no faces but only ages and serial numbers.

[From the Springfield (Ohio) Daily News, Dec. 17, 1959]

LET THEM WORK

Senator VANCE HARTKE, of Indiana, has the right idea about that limit on earned income by social security beneficiaries who have passed the age of 65. At present, the limit is $1,200 a year. Senator HARTKE would increase that materially.

But why have any limit at all? Why not grant the social security benefits to everyone when they reach the age of 65? If they persist in staying on the job and earning the same wage or salary as theretofore, let the amount of the social security payment be added to their gross income for Federal income tax purposes. That should make an equitable deal all the way around.

[From the Detroit Free Press]

The inequities of the Federal social security program are widely known to those approaching or past 65 years of age. Free Press columnist Sylvia Porter pointed out some of the unfairness when she discussed the limits placed on income.

The absolute cutoff mark on earned income for those otherwise eligible for social security is $2,080. Obviously that is not enough to live on. Full social security benefits are available only to those whose earned income does not exceed $1,200.

One of the most glaring faults is that the income barriers apply only to earned income. There is no limit on what can be collected from stock dividends, interest, rents and other investments. The provision makes it possible for a wealthy man to draw full benefits but for a man who earns more than $2,080 by working to get nothing.

The provisions force older citizens into a calculating existence, in which, for the majority, the objective is to get a bare minimum on which to live.

The minimums are, of course, completely unrealistic in terms of the value of today's dollar. It illustrates most pointedly the damage that inflation can do. Social security benefits collected by the Government in years past now have less than half of their original value when doled out to those who made what they considered a sound investment in their old age.

The same inflation damage has been done to private annuity programs, but in these an individual had a free choice.

Civil Rights: Congress and the Supreme Court

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following speech of Senator WAYNE MORSE before the Suffolk University Law School Alumni Association in Boston, Mass., on October 29, 1959:

SPEECH BY SENATOR WAYNE MORSE BEFORE THE SUFFOLK UNIVERSITY LAW SCHOOL ALUMNI ASSOCIATION, BOSTON, MASS., OCTOBER 29, 1959

Mr. Chairman, members of this association, I have chosen as the title for my remarks in response to your kind invitation the subject, "Civil Rights: Congress and the Supreme Court."

Realistic consideration of emphasis and time caused me to omit direct reference to the third constitutional branch of the Federal Government—the Chief Executive and the executive departments—or for the fourth-developed group: administrative agencies, separate administrations, independent boards and commissions, and the like. Consequently, emphasis is placed upon legislative and judicial duties under our National Constitution in protecting fundamental rights and liberties.

Before I turn to the subject of my lecture, I wish to make an observation concerning our legal profession. My remarks in some respects will not be particularly complimentary of some of the policies and attitudes of the legal profession. There was a time in our history when lawyers as individuals acting through their local bar associations could be counted upon to present a militant front against any invasion or undermining of individual, human, or constitutional rights. This is no longer true to the degree that I think it should be. When I ask myself the question "Why?" I find it difficult to escape from the lurking fear that it may be true that too many lawyers consider themselves private practitioners of the law. I would leave with you the thought that there is in fact no such person as a private practitioner of the law.

If you remember until breakfast time tomorrow nothing that I say today except this point, I will have served a worthwhile purpose in talking to you. The point is this: remember that when you take the oath upon admission to the bar you become forevermore throughout your life in the practice of the law a public officer of the courts. You become a public official in the sense that you are charged with the public responsibility of maintaining a system of government by law. This phrase "government by law" is no empty platitude. It is both the rudder and the propeller of our Ship of State called the Constitution.

As you read the history of the American legal profession, and in reading it you also will be reading important chapters in the evolution of constitutional government in the United States as we have come to know it today, you will take note of the fact that high-principled lawyers of our profession have never considered themselves as the hired men of their clients. They have always recognized their obligations as public officers of the courts. I leave with you the question, "Is the intellectual integrity of our profession threatened today with a tendency on the part of too many lawyers to become the hirelings of their clients? Is it threatened with a tendency to be more concerned with prosecutions that are overturned than with fundamental principles that are upheld?"

It is with that background thought that I move into my subject—"Civil Rights: Congress and the Supreme Court."

When Carl Sandburg wrote about Lincoln's visit to Gettysburg to deliver his epic dedication, he concluded his chapter with the following words:

"[Lincoln] had stood that day, the world's foremost spokesman of popular government, saying that democracy was yet worth fighting for. He had spoken as one in mist who might head on deeper yet into mist. He incarnated the assurances and pretenses of popular government, implied that it could and might perish from the earth. What he meant by a 'new birth of freedom' for the Nation could have a thousand interpretations. The taller riddles of democracy stood up out of the address. It had the dream touch of vast and furious events epitomized for any foreteller to read what was to come. * * *

"For the first time since he had become President he had on a dramatic occasion declaimed, howsoever it might be read, Jefferson's proposition which had been a slogan of the Revolutionary War—'All men are created equal'—leaving no other inference than that he regarded the Negro slave as a man. His outwardly smooth sentences were inside of them gnarled and tough with the enigmas of the American experiment."

Our struggle with those "enigmas of the American experiment" continues today in the courts, in the Congress, in the State legislatures, sometimes even on the streets and in the homes of America. If it is now in a less violent form, it is still as profound and divisive an issue as any of us care to have to deal with in our lifetime.

Out of the conflict of the Civil War came a great turning point in American history and in the history of the human race. The passage of the 13th, the 14th, and the 15th amendments made Jefferson's doctrine a part of our organic law.

I suppose it is not too much to say that in our time we are faced with the problem of making realities of the 14th and 15th amendments. The application of a principle to the realities of daily life, here and now; that is what we are struggling with in the whole debate over civil rights.

Bit by bit and case by case, the Supreme Court has applied those amendments. The cases striking down State-enforced segregation in the public schools should not have been any surprise to anyone familiar with earlier cases striking down federally enforced segregation.

As a lawyer, I am deeply convinced that the preservation of human liberties and civil rights is more dependent upon the courts functioning under the Constitution, including the checks upon the courts to be found within the Constitution, than upon any other branch of our Government.

The great guardian of the Constitution, the legal interpreter of the Constitution, is the Supreme Court of the United States. It is easy for us in the Congress, in the legislative branch of the Federal Government, to assume sometimes that civil rights are for legislative determination. The fact is that Congress does not and cannot create civil rights through legislation; and neither can the courts, for that matter.

Those rights as now existing can change only by constitutional amendment. But it is for the courts to determine the application of the Constitution to particular events and circumstances.

Some in this country would have us think that the Supreme Court has usurped lawmaking powers in striking down State-supported segregation; they would have us think that the Supreme Court has gone amok, has embraced a radical and alien philosophy under which it has exercised a power not rightfully belonging to it.

What is the truth about that allegation? The fact is that the power exercised by the Supreme Court on that occasion dates back to 1803, when a Supreme Court headed by Chief Justice John Marshall handed down its decision in the case of *Marbury* v. *Madison*, 1 Cranch 137 (1803).

Under the doctrine of *Marbury* v. *Madison*, that the Supreme Court shall be the final arbiter of the meaning of the Constitution until such time as the people amend the Constitution, the Court has recently struck down a State prosecution by Pennsylvania for subverison against the United States; it has struck down actions by Federal executive officers in denying passports, and executive orders relating to the rights of Federal employees; and it has struck down a contempt of Congress citation against a witness who had refused to answer questions put to him by a congresional investgating committee on the ground the questions were irrelevant to the inquiry.

These decisions caused a great hue and cry in many quarters. They gave rise to the whole bevy of bills that crowded onto the House and Senate Calendars in the closing days of the last session of Congress to punish the U.S. Supreme Court.

Not all of these situations are identical to those under which Chief Justice Marshall and his colleagues acted in 1803. Their case of 1803 concerned an act of Congress only; but the language of their opinion applies equally to the basis for the Court's action overturning State legislatures, and the Federal executive, as well as the Federal legislature.

This is what the Court of 1803 had to say on the question of judicial reviews, and I quote the pertinent sections of *Marbury* v. *Madison:*

"The question whether an act repugnant to the Constitution can become the law of the land is a question deeply interesting to the United States. * * *

"That the people have an original right to establish for their future government such principles as, in their opinion, shall most conduce to their own happiness, is the basis on which the whole American fabric has been erected. * * *

"This original and supreme will organizes the government, and assigns to different departments their respective power. It may either stop here or establish certain limits not to be transcended by those departments.

"The Government of the United States is of the latter description. The powers of the legislature are defined and limited; and that those limits may not be mistaken or forgotten, the Constitution is written. To what purpose are powers limited, and to what purpose is that limitation committed to writing, if these limits may, at any time, be passed by those intended to be restrained? * * *

"Certainly all those who have framed written constitutions contemplate them as forming the fundamental and paramount law of the Nation, and consequently the theory of every such government must be that an act of the legislature repugnant to the Constitution is void. * * *

"It is emphatically the province and duty of the judicial department to say what the law is. Those who apply the rule to particular cases must of necessity expound and interpret that rule. If two laws conflict with each other, the courts must decide on the operation of each.

"So if a law be in opposition to the Constitution; if both the law and the Constitution must apply to a particular case, so that the court must either decide that case conformably to the law, disregarding the Constitution, or conformably to the Constitution, disregarding the law, the court must determine which of these conflicting rules governs the case. This is of the very essence of judicial duty."

That is the duty the Supreme Court followed in 1954 when it ruled that State segregation laws must fall before the 14th amendment, for Justice Marshall continued:

"If then, the courts are to regard the Constitution, and the Constitution is superior to any ordinary act of the legislature, the Constitution, and not such ordinary act, must govern the case to which they both apply."

I think many of us are being pretty conservative when we defend and commend the Supreme Court and the lower Federal courts for "holding the fort" of constitutional rights against the assaults of Congress, the State legislatures, and the executive branch. We are upholding the same kind of judicial review that was laid down by Chief Justice Marshall a century and a half ago.

At the same time, there is nothing immutable about what the Federal courts have done. Any time the American people want to withdraw the equal protection of the State laws to all citizens, they can do so by repealing the 14th amendment. By the procedures outlined in it they can change their Constitution and with it, the displeasing rulings of the Supreme Court. Several Senators from the South, led by Senator Talmadge of Georgia, have offered a constitutional amendment to exempt education from the 14th amendment. Of course, I am against that proposal.

Of the thousands of statutes enacted by Congress since its first session in 1789, surprisingly few (less than 80) have been found unconstitutional by the Court. This simple statistical fact can mean several things. One thing it may mean is that Members of Congress do positively consider the constitutional aspects of legislation during the legislative process—when a proposal is first discussed as to aims and objectives, when the bill is drafted, when it is before subcommittee and congressional committee, reported, and debated in both the Senate and the House of Representatives. I think this is a very good thing. I think this is something for which we can all be proud.

But I suggest that the procedure just summarized has not been followed often enough in Congress. Bad legislation, both of unsound public policy and of grave unconstitutionality, has been passed from time to time which a wiser Congress would have rejected. Then, where constitutionality has been an issue, the courts have been the protectors of constitutional rights and liberties. In such cases, the Court has had no choice but to correct errors committed by Congress.

In many instances, the Court is faced with an application of constitutional principles rather than a clear-cut test of constitutionality. In construing statutes, susceptible to various interpretations, the Court must try to apply its understanding of Congress purpose to the factual and legal situation before it. Then, if Members of Congress disagree—if a majority feels strongly that the Court's interpretation of what Congress meant in the particular legislation is incorrect—Congress may enact new legislation along the lines of this other purpose. This we are called upon to do, from time to time, and I, for one, generally resist such efforts to the utmost, preferring to keep my faith in the Court as the careful guardian of our liberties, particularly when Congress has erred in the first place or the Executive has usurped power never delegated by Congress.

Let us look at a few examples.

Congress, a few years ago, enacted a law to authorize the head of a Government agency to suspend summarily an employee when there was serious question that he might be a security risk. The Court, in *Cole* v. *Young*, 351 U.S. 536 (1956), held that this provision applies only to personnel in sensitive positions, not generally to the millions of Government workers in nonsensitive jobs. I think this is a wise and correct interpretation. A hue and cry arose that this decision would lay the Government wide open to mass Communist infiltrations, that Congress meant—or if it didn't so mean when it first passed the Summary Suspension Act, it should now say it meant—to cover all Federal employees, nonsensitive as well as sensitive, park guides and gardeners as well as Defense Department scientists.

In one way, it is encouraging to know that there is substantial opposition to "*Cole* v. *Young* repealer" legislation in at least the Senate of the United States. But we should not relax our vigilance; we must continue to be alert and prevent any wholesale, unwarranted extension of Government power, in this and other fields.

The plain truth of the matter is that the *Cole* v. *Young* decision has not made the Government vulnerable to Communist subversion. Nothing of the sort is involved. Because, under provision of the 1939 Hatch Act concerning Federal employment, a disloyal person may not be hired nor retained on Federal payrolls. *Cole* v. *Young* stands solely for the proposition that Congress did not grant agency or executive department heads the arbitrary power to summarily suspend suspected employees; the power is granted with appropriate restrictness only over personnel occupying sensitive positions with access to properly classified information. Rightly, such arbitrary power must be restricted to apply only where there may be valid grounds for taking such unusual action. Other employees in nonsensitive positions can be dealt with under regular civil service procedures. However, I still think considerable improvement could be made in permitting personnel to be reassigned to nonsensitive positions, awaiting the outcome of determinations concerning their fitness to occupy sensitive jobs. And the Government

should always provide adequate appellate review procedures; it seems to me that the holding in the case of *Wong Yang Sung* v. *McGrath*, 339 U.S. 33 (1950), is sound legal doctrine for the protection of individual liberties—where there is a hearing, it should be a fair hearing in fact and not merely in name. So, to those who seek to destroy *Cole* v. *Young* and make the reasonable distinction between sensitive and nonsensitive positions meaningless, I say: there has been no showing of necessity for such a total expansion of summary-dismissal power.

This brings me to what I think is an extremely important standard to apply to all legislation and particularly proposals affecting the liberties and freedoms of persons in the United States. The yardstick for measuring these suggestions is quite simple, clear and reasonable—namely, "Is this legislation really necessary? What is the purpose? Can this purpose be accomplished in compliance with the basic requirements of the Constitution?" These questions must be answered affirmatively before I shall agree to the proposals. To date, I have not found any of the anti-Supreme Court or anti-Supreme Court-decisions bills can meet these tests satisfactorily. Therefore, I feel Congress has the constitutional duty and responsibility to refuse enactment of unsound, unwise and unconstitutional laws.

Principles of good government and mature legislative responsibilities require, also, that Congress resist hysterical demands made by the executive branch for reversal of Supreme Court decisions. The outstanding example in this category occurred soon after the Supreme Court decisions holding the State Department exceeded its authority in refusing to issue passports to the world-known artist, Rockwell Kent; the California psychiatrist, Walter Briehl; and the cosmic-ray scientist, Weldon Bruce Dayton. The State Department argued the constitutional power of the President to conduct foreign relations carried with it the subordinate power to regulate the travel of U.S. citizens out of, or back into, the United States, in peacetime as well as during war, and that this point of view was accepted by Congress in numerous laws authorizing the Secretary of State to issue passports, and in a provision of the Immigration and Nationality Act of 1952, dealing with movement of persons—citizens as well as aliens—during an emergency declared by the President. (Such an emergency has been declared by both Presidents Truman and Eisenhower.) The Court refused to accept the asserted powers of the State Department. The Court said Congress had not intended to grant blanket authority to the Secretary of State. The Court held that the Secretary was not justified in claiming power to decide who should receive a passport, under what circumstances, and without adequate opportunity to examine adverse evidence and cross-examine adverse witnesses—particularly since all Americans must have a passport to travel anywhere in the world outside the Western Hemisphere today, by our own laws and by requirements of most of the countries to be visited.

Following these decisions, the State Department promptly issued passports to the three litigants: Kent, Briehl, and Dayton—properly so, I think; State Department compliance with the law in this instance is to be commended. The Department also issued passports to several other U.S. citizens whose applications had been denied, or not acted upon pending the outcome of the Kent, Briehl, and Dayton cases. But shortly thereafter the President of the United States sent a special message to Congress urging that the Secretary of State be granted broad powers to restrict the use of, and to deny, passports to Americans in several different categories. A special message from the White House, urging enactment of specific legislation, is itself an unusual occurrence. In any year, there are only a few special messages, and they are nearly always on subjects of great magnitude. So it is to be assumed that some officials in the Executive Branch intended to make Members of Congress believe that President Eisenhower himself attached great significance to the request to overturn the Court's passport decisions. Then the language of the message was further designed to emphasize this impression. The message hammered away at the "urgent" need for legislation and spoke frighteningly of the powerlessness of the Government to deny passports to members of the Communist Party "or to those who have had a long and proven record of Communist activities"—whatever that means.

Well, what are the facts?

The Senate Committee on Foreign Relations, of which I am happy to be a member, refused to be stampeded into recommendation of hastily and ill-conceived legislation to impose travel controls on Americans. By now, everyone who had given serious thought to the issues involved was recognizing a constitutional right to travel which was not to be circumscribed by the Federal Government other than in accordance with constitutional requirements of due process of law, necessarily containing the elements of fair-hearing procedures.

The Foreign Relations Committee held public hearings last year and again this year—and, to date, the State Department witnesses have failed to produce evidence of due consequences predicated unless Congress granted the unprecedented power to the Secretary of State. The House of Representatives, in the closing hours of the last Congress, yielded to administration pressures and voted approval of a restrictive bill. But the Senate, respecting the consideration of all legislation on the subject by the Foreign Relations Committee, declined to approve the House bill.

This year, the Foreign Relations Committee has decided there has been no convincing evidence of a need for restrictive passport legislation. And so the matter rests—for the time being. The Senate did not succumb to hysteria, regardless of the powerful position of the Chief Executive invoked by State Department officials.

Does this mean Congress has acquiesced in leaving the country powerless to deal with the Communist conspiracy? Not at all. Nothing of the sort. What is meant is that Congress—at least the Senate of the United States—demands proof of facts of the Communist menace specifically related to travel abroad today by U.S. citizens and a clear demonstration of how governmental controls on that travel are requirements of intelligent national security. The State Department has been given abundant opportunity to prove its case and it has failed to present convincing evidence.

On two other subjects, Federal legislation has been sought in recent years to overcome the effects of Supreme Court decisions in the cases of *Mallory* v. *United States*, 354 U.S. 449 (1957) and *Pennsylvania* v. *Nelson*, 350 U.S. 497 (1956).

Rule 5(a) of the Federal Rules of Criminal Procedure requires that an arrested person shall be taken "without unnecessary delay" before the nearest available U.S. Commissioner or other officer empowered to commit persons charged with offenses against the laws of the United States. At that time, the Commissioner is required to inform the arrested person of the complaint against him, of his right to retain counsel and of his right to have a preliminary examination. He shall also inform the defendant that he is not required to make a statement and that any statement made by him may be used against him. Obviously, then, if there is an unreasonable delay in taking the arrested person before the committing magistrate, he may have lost meaningful use of his constitutional rights. The Court years ago in *McNabb* v. *United States*, 318 U.S. 332 (1943) and recently in the *Mallory* case, held that a confession is inadmissible if obtained during a period of unnecessary delay. This is a most pointed way for the Court to implement the clear statement of rule 5(a); the Court says to arresting officers, in effect: "You are arresting, not judicial, officers. If you delay unnecessarily in taking an arrested person before a committing official as required specifically by rule 5(a), you will not be permitted to use a confession taken from the person during that time. This is good law. This is in keeping with constitutional principles regarding due process and individual liberties. As most lawyers—prosecutors and defense counsel and judges—are painfully aware, all confessions are suspect, more or less. Yes, our system of jurisprudence permits voluntary confessions to be used against accused persons, but the key qualifier is "voluntary." How many confessions are genuinely voluntary? Police brutality, torture, the third degree, to extract confessions, are condemned in all our State courts and in the Federal system, but subtle means of torture, threats of physical violence, intimidation and coercion, though harder to prove, are just as thoroughly rejected by our courts. I suggest we all realize in our hearts that time alone may be a most insidious means of forcing action which is not a person's actual free choice. For all these reasons, the Court interpretation of rule 5(a) amounts to sound law and good commonsense in modern society. The burden is where it should be: on the police and prosecuting officers to prove their case by other means than forcing the conviction out of the mouth of the accused.

We should all be sorry to note that bills have been introduced in both Houses of Congress to overcome the effect of the Court's Mallory decision. It is even sadder to note that some of the sponsors are Members of Congress who should know better, especially since a few of them are pleased to be identified as liberals or advocates of civil rights. Their uneasiness becomes apparent, though, when we examine their accompanying statements, in which they speak of clarifying the Mallory decision and wherein they disclaim any intention of interfering with constitutional rights of accused persons. Well, then, I say: Leave the decisions alone. Leave it up to the police to prove that any delay which occurred was really necessary. Stop trying to encourage the police to relax their respect for constitutional rights; stop trying to make it easier to convict by testimony of a person against himself in place of regular, solid, evidence against him.

I return now to the Steve Nelson case. This case is such simpler than its repealer advocates would have you believe. Simply, the Supreme Court of the United States agreed with the Supreme Court of the Commonwealth of Pennsylvania that Pennsylvania is not authorized to prosecute a person for subversive activities against the United States. This, again, is good law and commonsense. Why, in the name of anything that is logical, should a State ever be permitted to bring prosecutions for Federal offenses under State procedures, in State courts, under State rules? Do the proponents of such a method really lack faith in the Federal Bureau of Investigation, Federal crime detection, Federal laboratories, Federal prosecutors, Federal judges, Federal courts? Because that is the inevitable conclusion to be drawn from their approach. Many of us are inclined to believe that twisted logic has been at work in connection with the hoary old catch phrase "States rights." Some of the States rights advocates appear to be

misleading themselves into feeling that, somehow, if they can succeed in having anti-Federal-preemption laws passed, they will be able to nullify the effect of *Brown* v. *Board of Education*, 347 U.S. 483 (1954), and other Supreme Court school desegregation decisions which held racially segregated schools to be in violation of the equal protection of the laws provision of the 14th amendment and therefore unconstitutional. To you in this audience, this may sound farfetched—but I suggest this is involved in the misreading of the Steve Nelson decision.

Incidentally, I would not like to have the impression left that I am blindly an admirer of the Court nor an unreserved critic of several of my colleagues in Congress. I try not to be blind in either my devotion or my criticism. So perhaps this is a good place in my remarks to interject comment that I feel the majority—5 to 4—reached different conclusions than I would have in two cases this year. I think the better constitutional grasp of the issues is expressed by the dissenters in *Barenblatt* v. *United States*, 360 U.S. 109 (1959) and in *Uphaus* v. *Wyman*, 360 U.S. 72 (1959). The two cases involve legislative investigations—Federal and State—of subversive activities. In each case, the defendant is a private individual, not a public official nor the recipient of public funds. The investigators in each case seek to inquire into the defendant's beliefs and associations. Let me quote from the dissenting opinions.

In dissenting in *Barenblatt* v. *United States*, Mr. Justice Black, joined by Chief Justice Warren and Mr. Justice Douglas, summarizes the facts and makes abundantly clear the constitutional issues:

"On May 28, 1954, petitioner Lloyd Barenblatt, then 31 years old, and a teacher of psychology at Vassar College, was summoned to appear before a subcommittee of the House Committee on Un-American Activities. After service of the summons, but before Barenblatt appeared on June 28, his 4-year contract with Vassar expired and was not renewed. He, therefore, came to the committee as a private citizen without a job. Earlier that day the committee's interest in Barenblatt had been aroused by the testimony of an ex-Communist named Crowley. When Crowley had first appeared before the Un-American Activities Committee, he had steadfastly refused to admit or deny Communist affiliations or to identify others as Communists. After the House reported this refusal to the U.S. attorney for prosecution, Crowley voluntarily returned and asked to testify. He was sworn in and interrogated, but not before he was made aware by various committee members of committee policy to make an appropriate recommendation to protect any witness who fully cooperates with the committee. He then talked at length, identifying by name, address, and occupation, whenever possible, people he claimed had been Communists. One of these was Barenblatt, who, according to Crowley, had been a Communist during 1947–59 while a graduate student and teaching fellow at the University of Michigan. Though Crowley testified in great detail about the small group of Communists who had been at Michigan at that time and though the committee was very satisfied with his testimony, it sought repetition of much of the information from Barenblatt. Barenblatt, however, refused to answer their questions and filed a long statement outlining his constitutional objections. He asserted that the committee was violating the Constitution by abridging freedom of speech, thought, press, and association, and by conducting legislative trials of known or suspected Communists which trespassed on the exclusive power of the judiciary. He argued that however he answered questions relating to membership in the Communist Party his position in society and his ability to earn a living would be seriously jeopardized; that he would, in effect, be subjected to a bill of attainder despite the twice-expressed constitutional mandate against such legislative punishments. This would occur, he pointed out, even if he did no more than invoke the protection of clearly applicable provisions of the Bill of Rights as a reason for refusing to answer.

"He repeated these, and other objections, in the district court as a reason for dismissing an indictment for contempt of Congress. His position, however, was rejected at the trial and in the Court of Appeals for the District of Columbia Circuit over the strong dissents of Chief Judge Edgerton and Judges Bazelon, Fahy, and Washington. The Court today affirms, and thereby sanctions, the use of the contempt power to enforce questioning by congressional committees in the realm of speech and association. I cannot agree with this disposition of the case, for I believe that the resolution establishing the House Un-American Activities Committee and the questions that committee asked Barenblatt violate the Constitution in several respects. (1) Rule XI creating the committee authorizes such a sweeping, unlimited, all-inclusive, and undiscriminating compulsory examination of witnesses in the fields of speech, press, petition, and assembly that it violates the procedural requirements of the due process clause of the fifth amendment. (2) Compelling an answer to the questions asked Barenblatt abridges freedom of speech and association in contravention of the first amendment. (3) The committee proceedings were part of a legislative program to stigmatize and punish by public identification and exposure all witnesses considered by the committee to be guilty of Communist affiliations, as well as all witnesses who refused to answer committee questions on constitutional grounds; the committee was thus improperly seeking to try, convict, and punish suspects, a task which the Constitution expressly denies to Congress and grants exclusively to the courts, to be exercised by them only after indictment and in full compliance with all the safeguards provided by the Bill of Rights."

Mr. Justice Brennan, dissenting, stated:

"I would reverse this conviction. It is sufficient that I state my complete agreement with my Brother Black that no purpose for the investigation of Barenblatt is revealed by the record except exposure purely for the sake of exposure. This is not a purpose to which Barenblatt's rights under the first amendment can validly be subordinated. An investigation in which the process of lawmaking and law-evaluating are submerged entirely in exposure of individual behavior—in adjudication, of a sort, through the exposure process—is outside the constitutional pale of congressional inquiry." *Watkins* v. *United States*, 354 U.S. 178, 187, 200; see also *Sweezy* v. *New Hampshire*, 354 U.S. 234; *NAACP* v. *Alabama*, 357 U.S. 449; *Uphaus* v. *Wyman*, 360 U.S. 72 (dissenting opinion).

In dissenting in *Uphaus* v. *Wyman*, Mr. Justice Brennan—speaking for the same strong four—examines the State investigation in this language:

"The Court holds today that the constitutionally protected rights of speech and assembly of appellant and those whom he may represent are to be subordinated to New Hampshire's legislative investigation because, as applied in the demands made on him, the investigation is rationally connected with a discernible legislative purpose. With due respect by my brothers' views, I do not agree that a showing of any requisite legislative purpose or other State interest that constitutionally can subordinate appellant's rights is to be found in this record. Exposure purely for the sake of exposure is not such a valid subordinating purpose. *Watkins* v. *United States*, 354 U.S. 178, 187, 200; *Sweezy* v. *New Hampshire*, 354 U.S. 234; *NAACP* v. *Alabama*, 357 U.S. 449. This record, I think, not only fails to reveal any interest of the State sufficient to subordinate appellant's constitutionally protected rights, but affirmatively shows that the investigatory objective was the impermissible one of exposure for exposure's sake. I therefore dissent from the judgment of the Court."

I have devoted an appreciable amount of time in these remarks to issues of civil liberties—free speech and association, and due process of law—because I have a deep conviction that procedures are of paramount importance in protecting substantive rights. What of "equal protection of the laws," popularly called "civil rights" in this country ever since the Reconstruction Period which saw adoption of the 13th, 14th, and 15th amendments, and enactment of several far-reaching Civil Rights Acts?

The civil rights picture, in my opinion, is not a pretty one. The Court handed down—unanimously—historic decisions in 1954 and 1955, outlawing racial segregation in public education and has since stood fast on this subject, but Congress has been silent. Oh, I know, the Civil Rights Act of 1957 has been hailed as a great achievement: "the first substantial civil rights statute since the days of Reconstruction." But how substantial, really? The record does not disclose that a single American citizen has voted as a direct consequence of the voting provisions of the act of 1957.

The Civil Rights Commission—established by the act—is at best only a study group, however important its suggestions and recommendations may be. Its life was extended, in an offhand way this year, by a nongermane amendment to the foreign aid appropriations bill. I look forward with interest to its further studies and recommendations.

Where does this leave us?

With regard to civil liberties, I think we must continue to oppose restrictive and anti-Supreme Court legislation. This is a resistance action.

With regard to civil rights, I think Congress has a long way to go and must soon enact substantial, meaningful statutes to give effective protection to the constitutional right to vote in Federal elections, and for the constitutional right—for all persons in our great country—to the "equal protection of the laws." This is a noble, positive action, and we should not delay. Our consciences should be pricking us, while the eyes of the world, especially of peoples in Asia and Africa, are upon us. We should get on with the unfinished business of democracy.

The Beat of Time

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, January 7, 1960

Mr. RANDOLPH. Mr. President, there is beauty and strength in an editorial I find in the New York Times of December 20, 1959. My colleagues and other readers of the RECORD will possess, as have I, a feeling of humility and a

sense of patience when reflecting on the sentences which have been set down in this editorial with skill and substance.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the editorial to which I have made reference.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE BEAT OF TIME

Another solstice is at hand, another season's turn by the stars and the calendar. Tuesday morning brings winter by those calculations which would harness the rhythms of our earth to the order among the stars. Traditionally, then, Tuesday should be the year's shortest day, as we say, the day with the briefest span of daylight. But the year's earliest sunset of the year occurred 2 weeks ago, and the latest sunrise will not come for another week or so. Reckoned in round minutes, we are now in the midst of almost a week of shortest days; and let who will pick out one among them.

It isn't the hour or the minute that really matters, but the enduring rhythm that makes the pattern of our days, our seasons, and our years complete. Neither solstice nor equinox is more, or less, than another beat in the vast, incomprehensible rhythm of time. The clock is set there among the stars, and we read it as we wish, to our brief convenience. But it is the clock by which all life is lived, all life we know; and the hemlock on the hilltop, the torpid woodchuck in his den, man walking the earth, all are participants in the unchanging rhythm.

A solstice, another winter, another anniversary of the Nativity, the coming of another year by the calendar—these events we note, respect and celebrate. Man must have markers, beads on the master abacus. Forever it too long a time to comprehend without them, and life is too brief.

Harbors and Channels—A Railroad's Viewpoint

EXTENSION OF REMARKS

OF

HON. GEORGE H. FALLON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr FALLON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. W. Arthur Grotz, president, Western Maryland Railway Co. The address was delivered by him before the 46th national convention of the National Rivers and Harbors Congress, and deals on the importance of harbors and channels from the railroads' viewpoint.

Mr. Grotz is highly regarded in railroad circles. I think his address concisely summarizes the necessity of adequate harbors and channels. As the author of enacted legislation providing for the widening and deeping of the main and subsidiary channels of Baltimore Harbor, I was particularly pleased to note his remarks calling for the support of the application pending before the Appropriations Committee for adequate funds for this purpose.

Mr. Grotz is a man for whom I have respect and admiration. As a friend and neighbor, I wish to take this opportunity to extend my warmest greetings to him and wish him every good wish for continued success.

HARBORS AND CHANNELS—A RAILROAD'S VIEWPOINT

(An address by W. Arthur Grotz, president, Western Maryland Railway Co., before National Rivers and Harbors Congress at Mayflower Hotel, Washington, D.C., May 15, 1959)

I have been asked to address you today on the importance of harbors and channels from the railroad's viewpoint. I am not sure that there is any special railroad viewpoint. The interests of the railroads, insofar as development of the Nation's harbors is concerned seem rather generally to coincide with those of any industry concerned with the growth of commerce.

I take it, however, that this was not always thought to be true. Because many years ago a fiery southern Senator had these ringing words to say:

"Canals, suh, are God's own highway, operating on the soft bosom of the fluid that comes straight from Heaven. The railroad stems direct from Hell. It is the Devil's own invention, compounded of fire, smoke, soot, and dirt, spreading its infernal poison throughout the fair countryside. It will set fire to houses along its slimy tracks. It will throw burning brands into the ripe fields of the honest husbandman and destroy his crops. It will leave the land despoiled, ruined, a desert where only sable buzzards shall wing their loathesome way to feed upon the carrion accomplished by the iron monster of the locomotive engine. No, suh, let us hear no more of the railroad."

Happily this dark prediction did not come to pass. Indeed the fire-breathing iron monster itself lived out its time and vanished. After more than a century as the sole railroad motive power, it has given way to the sleek and efficient diesel engine. The billions of dollars spent for diesels in a few years, gentlemen, are of the response of the railroads to technology—an indication of their alertness to the problems of commerce, such as the improvement of harbors, with which my remarks are today concerned.

I sometimes fear that the attention of those concerned with water transportation is too strongly attracted by the apparently interesting problems of developing inland commerce, and too little with the adequacy of the seaports upon which much of our national prosperity and security depend.

Let me expand this thought.

In Baltimore, in common with other east coast seaport cities, we have been understandably apprehensive over the development of the St. Lawrence Seaway. There is no point now in restating our feelings. It finally exists. But I want to emphasize that, despite the opening of navigation of this waterway into the interior of our country, it is still imperative to our national welfare that our eastern harbors and channels be wide and deep, well charted, and equipped with complete navigational aids.

I need not remind you, I am sure, that long before there were port authorities investing public funds in harbor facilities, the railroads of this country had provided piers, docks, wharves, cranes, and other facilities necessary to interchange freight at our harbors between the carriers by land and the carriers on the seas. In many ports such as Baltimore, from which I come, the principal marine terminals for ocean-borne commerce are still provided and maintained by the railroad industry. Parenthetically, I might here remark that in Baltimore, since we now have a port authority, some of our critics think it has become unseemly for the railroads to own and operate wharves and piers. I commend to them the prayer attributed to the British economist; Lord Keynes: "Lord, give me this day my daily opinion, and forgive me my opinion of yesterday." Perhaps tomorrow they may again find virtue in the railroad contributions to harbor improvement and development.

For there is an obviously essential relationship at the seaports of the Nation between the railroads and the carriers by sea. In the early years of this country the waterways were the main highways of commerce. Civilization seeking entrance through the natural harbors made first settlements there and from them penetrated the land along the navigable streams. But even after two centuries, the development of this great continent via natural waterways had proceeded no further than the fringes. Early in the 19th century a few canals pushed inland—in fact the Erie Canal, by providing a waterway into the heart of the continent, gave major impetus to making New York the great city and great seaport which it rapidly became, and still is. Roads there were, of course, but until well into the present century, commercial and industrial transportation along them, except for very short distances, was practically nonexistent. It was not until the locomotive had become a practical workhorse of commerce that the real growth of the United States took place. It was the steel rails which provided the essential bridge between the farms and industries of America and their suppliers and customers overseas. It was a natural consequence, therefore, that the railroads became early leaders in the development of harbor facilities. Their concern for harbor improvements is still extremely lively, similar to the interest of any industry dependent upon the commerce of the country.

Let me illustrate my train of thought by talking for a moment about ore—ore in immense quantities. We are all familiar with the apprehension about the exhaustion of our domestic iron ore and with the discoveries of vast new sources in Canada, South America, Africa, and elsewhere. We are all familiar, too, with our Nation's needs for foreign manganese, chrome, bauxite, and other basic bulk materials. Whatever may be the true implications of these conditions, ore is moving into this country in ever-increasing quantities—some 50 million tons this year—and must be handled efficiently. Typical American energy and ability has already determined that the most efficient means of moving this ore to our shores is abroad huge supercarriers—some capable of transporting more than 60,000 tons at one time, if channels permit. That means more than 1,000 railroad freight car loads, a dozen mighty train loads.

To accommodate these giant vessels at their full loads, harbor channels must be made deep enough and wide enough to admit them, and to enable them to pass and repass on their journeys. Of course, docking facilities must be adequate to accommodate them and to discharge their cargoes quickly.

The docks are ready—provided by private industry, in most cases by the railroads, who, having long foreseen this trend in commerce, enlarged and modernized their piers and handling facilities, beginning a decade ago. They are prepared at this moment to receive, promptly discharge, and roll to industry or stockpiles all of the ore expected.

But at Baltimore, and doubtless elsewhere, the present channel depth limits the load of these great ore carriers and thus compels operation at less that the top efficiency for which their owners designed them.

So you see, we railroad men do have a community of interest with this Congress, in the adequacy of the harbors of our country and their channels.

I have referred to the part played by the railroads in the development of our seaports, by providing facilities for the transfer of goods to and from ships and by providing connections with the vast interior of this country for efficient transportation. For certainly without these there would be no occasion for the dredging of deep channels. I have discussed the importation of ores, as an example of great national importance. Perhaps I should now turn over the coin and point out some of the things which appear on the export side of our national interest.

From the farms of the Middle West great tides of grain flow to the eastern seaboard, en route to feed hungry people all over the world. From the steel mills and the factories of mid-America, come the manufactured goods of these United States for markets in other lands. These goods travel to the eastern seaports, not merely because there are rails to take them, and piers over which to cheaply transfer them, but because there are frequent sailings of ships for the sea voyages. And there are ships because there are harbors to shelter them, channels to travel through, and the navigational aids which these days are so necessary.

Much has been said over the years about inadequacy of the scale on which the Congress has provided for maintenance and improvement of the harbors of the country. The railroads, at least those which serve the seaports, can join you in regretting that this aspect of our public works has not received the attention which it should have. Had it been possible to enlist the public interest in harbor improvement to the same extent that airways, for example, have benefited from the public purse, we would not now find that many of our harbors are unprepared to receive the greatly enlarged vessels already at sea.

As a railroad man, and as a representative of that industry, which, more than any other so directly concerned with the public interest, has eschewed subsidies, and relied on its own resources, I do not wish to be understood as joining the clamor for public aid. However, the maintenance of adequate seaports, since they benefit all of our people, albeit in different ways and more or less directly, is peculiarly one for public funds. It is a source of dismay to find that it is necessary for citizens like myself personally to appeal to the Congress to meet its responsibility, at least to the extent of bringing our channels to the dimensions for accommodating the shipping which private enterprise has already put to sea.

In this connection, I hope we may have your support in the application which is now pending before the Appropriations Committee of the House of Representatives for $7 million to provide the first stages of a 42-foot deep, widened channel into Baltimore Harbor. If this channel is provided the railroads are prepared to do their part of the job by bringing the supplementary channels, at their expense, alongside of their own piers.

We are all part of a great industrial and commercial society—you of the waterways and we of the railways. We have each made and we are each still making our separate contributions to the growth of America. I know you will permit me to say that the railroads' part in bringing together various parts of this vast country has been no inconsiderable part.

Competition sets us apart from you waterway men in most of our daily affairs, although there are welcome signs that areas of a more cooperative atmosphere are developing.

But whatever the extent of our differences inland, at the seacoast we see eye to eye. Harbors and adequate channels are a common necessity.

In this, our mutual interest in harbors, we cordially join you in that supreme test of private enterprise—the evolution here in America of the best transportation system in the world.

Conduct of Hunters Relating to Safety and Courtesy in the Outdoors

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, January 7, 1960

Mr. NEUBERGER. Mr. President, a most excellent and informative article entitled "Hunter Conduct Afield" was printed in the Oregon State Game Commission Bulletin for November 1959 under the byline of Hon. Rollin E. Bowles, chairman of that commission.

Mr. Bowles is one of our State's outstanding sportsmen and conservationists. Inasmuch as a great deal of hunting in the Pacific Northwest takes place on the vast lands owned by the Federal Government, I regard the pertinent suggestions presented by Mr. Bowles as information of value and importance to all of us in the Senate.

Therefore, Mr. President, I ask unanimous consent that his article from the Bulletin of the Oregon Game Commission be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HUNTER CONDUCT AFIELD

(By Rollin E. Bowles, chairman, Oregon State Game Commission)

As this is being written, preparations are being made in many of the homes of Oregon for the great trek to the woodland areas for the opening of deer season. The hunters of Oregon have already enjoyed a substantial amount of hunting—first for antelope, then doves and pigeons, sage grouse, blue and ruffled grouse. Probably the greatest number of people to participate in the taking of wild game in Oregon occurs at the opening weekend of deer season when a majority of Oregon's 250,000 deer hunters are out to pursue their favorite pastime.

Oregon is particularly fortunate in the length of seasons that it enjoys in the big game field, together with the variety available. Antelope, blacktail and mule deer, Rocky Mountain elk and Roosevelt elk are all avidly sought after by an ever-increasing number of gunners. However, the continued participation in this great recreational outlet is more likely to be curtailed from other causes than the lack of adequate game to justify a person going afield. Over 50 percent of the land area in the State of Oregon is in Federal ownership and practically all of this land, with the exception of a few widely scattered parcels, is supposed to be open to the use by the public for hunting and fishing. We know there are many acres of this area that have been closed by persons who have purchased land that lies across the only point of entry to the public land. They have closed their property to all except a few chosen persons whom they allow on their land and who through this have access to the public lands lying behind. It must be remembered by Oregon's army of hunters that some of the best big-game hunting, as well as the majority of upland bird hunting, still is to be found on lands in private ownership. The cooperation of those landowners is of vital necessity to the continuation of the sport of hunting as our forefathers have known it.

With the great influx of population into the western part of the United States and particularly into Oregon the last few years, more and more land has come to be posted. This was occasioned by irresponsible people, some of whom felt that a hunting license gave them the right to enter on land in pursuit of wild game which happened to be public property and entered without permission. Such is not the case at all. The game may be public property, but pursuing it on privately owned land is a privilege to be granted or withdrawn as the owner of that land may see fit. Of late years we have seen a number of previously closed areas, particularly those owned by large timber companies in the western part of the State, opened to public hunting on a rather open basis. The deer and elk population had become so large that they caused severe damage to the new tree plantings so carefully and expensively set out by the landowners. How long these timber companies will be willing to permit the public to utilize these lands to exercise their sport is dependent almost entirely upon the conduct of those people who go upon the lands.

Instances have been cited to the game commission where people had gone in as the guests of the landowner and had shot up the equipment, damaged buildings, storage tanks and carelessly left a fire burning that could have destroyed the entire area for the landowner as well as the deer hunter. It is quite obvious to anyone that a situation can conceivably arise where the tree farmer can better tolerate an over population of big game animals than he can a handful of careless and irresponsible hunters or fishermen.

As the result of the diligent and tireless efforts of a number of people in the sportsmen's clubs and State agencies, coupled with the need for proper harvest, many of these land areas are still remaining open in spite of the human problems that the irresponsible few bring about. One large timber company has reported quite recently that the conduct of the hunters in 1958 was so good that it is even opening up the areas where active logging is going on and some areas that have been previously closed for fear of both fire and injuries to their own people. It is hoped by the Oregon State Game Commission that this conduct on the part of the hunters will point the way to additional acres being opened so that a proper and balanced harvest of the wildlife populations can be carried out. Whether or not such is to be the case is largely dependent upon the individual hunter, for only he can be the guardian of his own conduct in the field. If he sees someone else who is not playing the game according to the rules, he can indicate to that individual the nature of the misconduct he observes and what may be the result to all concerned if this type of conduct continues.

Having traveled over a good part of the State in the past several years, hunting both big game and upland birds, it has been my privilege to talk to a great number of landowners who did not know who I was, whether I had any connection with the sportsmen's clubs or game commission, or whether I was just another hunter. I found that the biggest complaint and the most frequent charge of misconduct came as the result of people who went upon the land of another without asking permission to do so. Let us for just a moment put the shoe on the other foot. Let us say that some stranger would come to your property in the city. You may only have just a small lot or a large one,

for that matter, that you had cared for carefully. Then this stranger went marching across the lawn through the petunia beds, picking the roses, and such other flowers that he might desire. You can readily visualize the uproar that would result. You would be angry, and justly so. But the corn, beets, alfalfa, and other crops that the farmer may be growing are just as dear to him as are your petunias and rosebushes, for it is out of them that he makes his livelihood. After all, for you to go upon his land is a privilege and not a right. Obviously he is interested in knowing who is upon his land and why; and it is no more than fair that you have the courtesy to ask him for that privilege.

Most generally the landowner is quite reasonable in granting permission unless there are definite reasons why he does not want people upon his property, and these reasons are perfectly valid in most instances. Crops that are ready for harvesting are not going to stand a man and his dog walking over them. Fields that contain a number of cattle are not hunting spots in the farmer's eye because the cattle can be disturbed very easily, lose flesh or drop in their milk production. Other very good and real reasons are generally the basis upon which the landowner refuses permission. However, he may have other lands that are not in this condition but are open by permission. There is, of course, the isolated instances where the landowner does not permit any hunting by anybody for reasons that are peculiar to himself, and that is his right.

Another fact that is in some degree a real problem is that of camp grounds. There is the ever present complaint concerning people who camp in our beautiful forests while on a hunting or fishing expedition and leave their debris scattered all over the place. Surely, it is not asking too much to burn up the refuse that is burnable and bury the rest. Cans, bottles and so forth are certainly an eyesore and oftentimes they are a danger. Cans often have sharp edges that could cut when partially buried in the grass and broken bottles are an ever present danger to everyone, particularly to youngsters. Other refuse that can't be burned should be buried well so that it does not attract flies and cause the camp grounds to be an unpleasant, ill-smelling place for those who may come later. And while on the subject of camp grounds, be careful with fire. It can not only destroy the camp ground and the home in which the deer, elk, and other wild animals, birds, and fish live; it can also cost the jobs of a lot of workmen. Fire has been known to often trap those who negligently started it in the first place. Lives are lost every year in forest fires, and I am sure that no one would want to feel that he was guilty of the negligence that cost the life of another person by not taking proper care of his fire and putting out every match or cigarette while in the field or in the forest.

We have been fortunate in Oregon in the past few years in that no hunter-caused fire of significant proportions has been reported, but unless every one of us exercises continuing caution, that fire may engulf our favorite area.

Those of us who have been close to the outdoor recreational picture for the past few years have seen introduced at each session of the Oregon Legislative Assembly an increasing number of bills seeking to curb or restrict the sport of hunting and fishing. These bills were submitted oftimes by people who were not well informed but certainly sincere. Most of them have failed of passage but it is not wholly impossible that in the future, as the result of some tragic incident caused by a hunter or fisherman who has failed to fulfill his responsibilities while afield, some of these bills may become law, thereby possibly seriously restricting the sport as those of us to whom it is so dear have known in the past. It is hoped that these incidents do not occur but, from experiences of the past, they are an ever-present danger.

The Oregon State Game Commission has been extremely vigilant in legislative matters of this type, doing all within its power to protect the privileges and recreation for which Oregon is famous. We are sincerely hopeful that we have the cooperation of everyone who purchases a license to fish or hunt. Whether we are able to maintain this possession is dependent upon how well the licenseholding public guards its own conduct while afield.

In conclusion, I repeat what all of you have heard on many occasions. Be careful with fire and firearms. Respect the rights and property of others. Conduct yourself in such a way at all times as you would expect a guest to conduct himself in your home. Be a good sportsman.

Extraordinary Distinction

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include two very interesting articles about our majority leader, JOHN W. MCCORMACK, which appeared in the Lynn Telegram-News, Lynn, Mass., on December 13, 1959, and the Boston Sunday Globe on December 20, 1959:

[From the Lynn Telegram-News, Dec. 13, 1959]

EXTRAORDINARY DISTINCTION

(By Frank Daley)

"No man has done more for the Democratic Party in the past quarter century or was more responsible for the party's landslide victories in 1958 than National House Majority Leader JOHN W. MCCORMACK," was the opinion expressed by former President Harry S. Truman to top party leaders in attendance at the New York dinner to honor Mrs. Eleanor Roosevelt on her 75th birthday, Monday night, December 7.

"JOHN MCCORMACK," asserted Mr. Truman, "deserves a very special honor among men who are serving the Democratic Party with extraordinary distinction.

"He envisions government as an instrument to provide equality of opportunity.

"Mr. MCCORMACK has long been zealous for the strength and safety of America. He has accomplished countless things and, above all, has helped center nationwide attention upon our need to keep ahead of Russia in missiles, atomic power, air defense, etc.

"We'll have great Democratic victories in 1960 due in major part to the impressive legislative record of the Democratic Congress under the leadership of JOHN W. MCCORMACK," Truman concluded.

[From the Boston Sunday Globe, Dec. 20, 1959]

ROUND ABOUT WITH DANIEL J. O'BRIEN

An example of National House Majority Leader JOHN W. MCCORMACK's popularity and great prestige on the national level was evidenced at the New York dinner to honor Mrs. Eleanor Roosevelt on her 75th birthday by a remark from James Patton of Denver, president of the National Farmers' Union, which has a membership of 750,000. Mr. Patton said, "Congressman MCCORMACK's legislative record is a sequence of constructive activity designed to make democracy work as an instrument to promote human happiness. He is most deserving of commendation from every working man and woman in the Nation as his public career has been dedicated to the advancement of legislation aimed to make working and living conditions better for the Nation's workers."

A Pioneer Among Pioneers in Aviation

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. BECKER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article from the Tri-Town Leader as well as copy of my letter to Dr. Walden on December 3, 1959, elaborating somewhat on his accomplishments. Dr. Henry W. Walden is a pioneer in the field of aviation and, last month, the New York Chapter of the Silver Wings Fraternity honored him on the occasion of the 50th anniversary of the first successful flight of the first American monoplane. It is fitting that we should pay tribute to this fine American.

The article follows:

[From the Tri-Town Leader, Dec. 17, 1959]

PIONEER AVIATOR IS HONORED ON ANNIVERSARY OF FLIGHT

The 50th anniversary of the first successful flight of the first American monoplane, which was made at Mineola, L.I., on December 9, 1909, was fittingly observed by the New York Chapter of Silver Wings Fraternity, at Mitchel Air Force Base. Maj. Louis W. Bleser, of Lynbrook, president of the New York chapter, was official host and toastmaster.

The guest of honor on this auspicious occasion was Dr. Henry W. Walden, famous aviation pioneer, who not only designed, built, and flew the first successful monoplanes in America, but who also designed and built the first radio-controlled, air-to-ground missile, in November 1915.

The original model of this missile, together with scale models of the Walden III and the Walden IX monoplanes are on permanent exhibition for historical record, at the National Air Museum of the Smithsonian Institution in Washington, D.C.

To bring the younger generation of airmen up to date on the country, Dr. Walden gave an illustrated talk on his dedicated work in aviation, beginning in 1908 and in continuing until 1942, in the Brick Theater at Mitchel Air Force Base. His talk was enthusiastically received by a large, attentive audience, who were continually amazed at the daring of the early pioneers of aviation.

Flying personnel of Mitchel Air Force Base; the Civil Air Patrol; Reserve air squadrons in the Long Island area, together with members of the Early Birds; Quiet Birdmen; Long Island Early Fliers and the 0X05 Club joined with the New York Chapter of Silver Wings Fraternity in honoring Dr. Walden on this happy, historical occasion.

Col. Andrew Slough, commanding the 2,500th Maintenance Squadron, extended

greeting on behalf of Col. John O. Hall, air base commander, who was unexpectedly called away. Following the colonel's remarks, the following resolution was unanimously passed and sent to the Honorable James H. Douglas, Secretary of the Air Force:

"*Resolved*, That the members of the New York Chapter of Silver Wings Fraternity; the Early Birds; Quiet Birdmen; Long Island Early Fliers; CX–5 Club; the Civil Air Patrol, and Reserve air squadrons based in the Long Island area, here assembled, go on record as unanimously favoring the retention of Mitchel Field as a U.S. Air Force base."

At the conclusion of Dr. Walden's talk, Elmo N. Pickerill, of Mineola, vice president of the Early Birds, presented him with a handsome bronze plaque, commemorating the 50th anniversary of his signal achievement. This was followed by a presentation of a framed engrossed scroll by the Air Force Association.

DEAR DR. WALDEN: I am sorry that I cannot be present today to honor you personally on important occasion. However, let me take this opportunity to join with the New York Chapter of the Silver Wings Fraternity in congratulating you on your contributions to the development of aviation.

On this day, 50 years after your flight at Mineola, we have gained the perspective to appreciate more fully the significance of that pioneering event. The frontiers of aviation which you explore have now been crossed by a great proportion of the American people, and one of our most important industries has been established there. The early monoplanes you designed and built have since been succeeded by a whole series of monoplanes, including the DC–2, the DC–3, the Atlantic Clipper, the Flying Fortress, the P–51 Mustang, and more recently the Boeing 707 and the DC–8. America has become a nation which flies and which depends on flight for its defense. How much it owes to you, the designer and pilot of the first successful American powered monoplane.

And now in this decade when the air age is being transformed into the space age and our thoughts are suddenly turned to a new world of missiles and satellites, we again discover that you have preceded us. For in November 1915 you achieved another first: the design and construction of the first radio-guided, air-to-land missile.

These first are but two of your accomplishments during a distinguished career in aviation. Therefore, it is altogether fitting that today we should commemorate your Mineola flight and pay tribute to your dedicated and innovating spirt. I send you my warmest congratulations.

The Late Charles A. Boyle

SPEECH
OF
HON. FRANK CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 6, 1960

Mr. CHELF. Mr. Speaker, I was shocked and grieved to learn of the untimely passing of our beloved colleague CHARLES BOYLE, of Chicago.

CHARLIE was a lovable, capable sincere, intelligent, fearless, God-fearing, God-loving Member of this great body. He served his constituents with a devotion that truly inspired all of us. His ready wit—grin, and pleasant disposition will be greatly missed. The Nation and Illinois have lost a noble son—a real Christian—a splendid gentleman and a fine legislator. May God rest his sweet soul in peace and bless his family always.

Wheat Farmers Are Trying

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. HORAN. Mr. Speaker, last November, I had the pleasure of participating in the fifth annual convention of the Washington State Wheat Association held in Spokane, Wash. Delegates to the convention consisted of wheatgrowers, for the most part, and people in related industries. During this convention they were primarily interested in formulating a program that would not only benefit them as wheat producers but also, the Nation in general. They were aware that one cannot analyze the farm problem without giving reference to the economics involved.

I am confident that my colleagues will benefit from reading a few of the more important resolutions, agreed to by the convention delegates, which are designed to help solve the farm problem, particularly that of the ever increasing wheat surplus. One resolution was endorsed by a 2-to-1 vote supporting the domestic parity plan for wheat as embodied in the wheat stabilization plan.

I am proud that I was one of the original sponsors of this program in the House of Representatives, because I feel that it is one solution to the acreage restriction program. Also, I believe it is founded on constructive economic principles. Briefly, the wheat stabilization program is designed to accomplish the following:

1. Reduce Government annual expense by approximately $545 million.
2. Reduce surplus wheat stocks by 75 million bushels annually.
3. Maintain the farmer's present net income.
4. Provide 100 percent of parity for the farmer on domestic wheat.
5. Give farmers freedom of decisions for planting.
6. Provide loans at 65 percent of parity.
7. Build up the soil with 20 percent in the soil bank.

This program, Mr. Speaker, is based on a bushelage control instead of the present acreage control, which would definitely stop further buildup of the Commodity Credit Corporation's stocks, as well as reduce their present holdings. Washington's wheatgrowers hope this stabilization program will be given a chance because they feel that it would be the answer to the hopes of the farmer and the answer to the complaints of the critics of farm programs.

In the field of marketing and market research, the delegates also recommended and endorsed programs of increased research in the areas of industrial utilization of farm products—agribusiness—alternate crops for diverted or alloted acreage, air classification, and expansion of research involving methods of producing higher quality grains. Legislatively, besides endorsing the wheat stabilization program, the delegates endorsed the action taken in the last session of Congress extending Public Law 480, the Agriculture Trade Development and Assistance Act. They also recommended that wheat foods be made available in greater variety under the food for peace plan initiated by the President in his agriculture message of last year. They particularly recommended a greater variety in the form of bulgour type wheat.

Mr. Speaker, let me say again that I am particularly pleased with the results of this convention for they prove that if anyone is sincerely interested in solving the farm problems, it is the farmers themselves. I believe that we should follow their example. It is necessary that we divest partisan politics from the farm problem and strive to enact a constructive farm program. Congress must not shirk its legislative responsibility in this instance, nor must the executive branch fail to carry out its administrative responsibility. Very few defend the farm legislation now on the books, but the fact remains that this legislation was put there by the Congress. And if it is to be changed, it must be changed by the Congress.

The "Old Guard" Fiction

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks I would like to insert an editorial from the Chicago Sun Times of December 31, 1959:

THE "OLD GUARD" FICTION

Now that Governor Rockefeller has decided not to compete for the Republican presidential nomination, the Democrats have stepped up their campaign to label Vice President NIXON as the darling of that reactionary fringe of the GOP known as the old guard.

This is political hocum.

The old guard—or what little is left of it—notoriously stands for isolationism and against social reform.

NIXON is an internationalist in the tradition of Wendell Willkie, for whom he campaigned in 1940. He is an outspoken champion of the United Nations, of a stronger World Court even at the cost of modifying U.S. sovereignty, of generous foreign aid in those forms, such as technical assistance, that will bring the greatest good to the recipients. He has publicly declared: "Let us expand the idea of peaceful competition which Mr. Khrushchev has often enunciated. Above all, let us find more and more areas where we can substitute cooperation for competition in achieving our goal of a fuller, freer, richer life for every man, woman and child on this earth."

NIXON has been one of the most vigorous exponents of stepping up the pace and the quality of American education—using Fed-

eral aid wherever it can be used with good effect.

He was instrumental in producing the first civil rights legislation since the Reconstruction days. "This Nation," he has said, "cannot afford the luxury of people who might be as capable as George Washington Carver, for example, and other Negro scientists that I could name, not having the opportunity to get the education which those who happen to be different in color do have the opportunity to get."

Labor leaders have attacked NIXON, from time to time, for his advocacy of measures to check abuses and demagogery within labor unions. It would be hard to make an antilabor label stick on the man who said: "Management is always quick to point out faults of labor. It should be as quick to recognize its own faults and to take remedial action. Management should give labor a stake in business and industry through profit-sharing plans and similar devices." He also stands on the record for broad extension of unemployment insurance protections, and for establishing higher minimum standards for the level of benefits, their duration, and their coverage. These are not by a very long shot the earmarks of a darling of the Old Guard.

In one respect NIXON is a conservative. In fiscal matters, he believes in holding both taxes and public spending down to the lowest practicable level, believing these policies are essential to sound economic growth. But even here, his position is liberal enough to bring some of the reactionary diehards snorting out of their seats. "We must not allow the fear of a temporary budget deficit to put us in a straitjacket which will keep us from doing what we ought to do to insure economic growth," he has declared. "Our goal should be to fashion a tax structure which will create more jobs, more income, and more genuine security."

We hope the Democratic leadership will wage the campaign on the issues, and not waste the voters' time on fiction.

Batten Down the Hatches

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. BRAY. Mr. Speaker, upon the convening of this 2d session of the 86th Congress, we are sure to be beseiged with propaganda of salesmen who insist that unless the Government buys its gadgets or adopts its developmental approaches we will face military or economic ruin in the race with Russia. We are given an impression of that totalitarian nation as being the most progressive, forward-moving nation on earth; and many of the facts and statistics are distorted in the comparisons which are made.

In such circumstances, the following editorial from the Indianapolis Star of January 2, 1960, is interesting and refreshing:

BATTEN DOWN THE HATCHES

A senatorial delegation has made a month-long inspection of hydroelectric facilities in the Soviet Union. If we may rely on what has been written by one member of the delegation, it has returned impressed by the size and pace of Russian development. The magazine Public Power summed it up with this headline: "Soviets Seize Hydro Leadership."

The author of the magazine's report was Alex Radin, general manager of the American Public Power Association and editor of the magazine, who went along on the trip as a consultant to the Senate Interior Committee. He indicated that the delegation came back persuaded that the United States ought to accelerate the momentum of its hydroelectric power program in order to maintain a competitive position.

The facts of the situation, as reported by Radin, deserve some examination. Radin himself carefully pointed out that, "despite the leadership which Russia has achieved in the building of individual dams and generating units," total electric power generating capacity in the United States is still almost three times that in the Soviet Union. If the Russians reach their goal of doubled capacity by 1965, they will still have only half the capacity the Federal Power Commission estimates the United States will then have in the normal course of development.

Radin reports that the Russians are building the biggest power dams in the world. They are also building the biggest generating units. In the United States, both dams and generators are built big enough to do the jobs required of them. Efficiency and effectiveness are more important than size.

He reports that the Russians are transmitting power twice as far as is done in the United States. This is just another way of saying that areas needing power in Russia are twice as far from the sources of power as in America. Nowhere in the United States is any appreciable potential market for power beyond the reach of transmission lines. Radin also reports that the Russians are transmitting power at higher voltages. We have no doubt that if it were economically desirable, to transmit power at higher voltages in the United States, it would be done.

Radin reports new techniques for faster construction of dams by partial prefabrication. This is interesting. But we have no doubts about American engineering ability to do the same if it is useful.

We find therefore no reason to conclude that Russia has seized leadership in hydroelectric power.

Some of Radin's reasons for being impressed by Russia's power developments do, however, merit attention. He points out that comparative capacity figures have more industrial meaning in Russia because the Russians devote a larger share of power to industrial uses, 79 percent compared with 49 percent in the United States. He also reports that new power dams are being used as the bases for developing new industrial complexes. In this respect the rate of power development in Russia does have a special significance. It is an indication of continuing stress on heavy industrial development.

This does not, however, provide any reason for going off into a new flurry of public power development in the United States, whether of water or steam power. Comparison on hydroelectric power is hardly pertinent, for two reasons. One is that waterpower potential in locations within economic reach of markets has been pretty well developed, and will undoubtedly continue to be developed as new markets appear. The other is that waterpower for its own sake is of less importance here because in most areas, particularly the areas of concentrated industry, coal is abundantly available to fuel steamplants.

The officially sponsored trip to study Russian waterpower development, however, is warning enough that a new push for public power projects can be expected in Congress. The argument of catching up with Russia is easily predictable. It should get short shrift.

Equalized Pay for Retired Members of the Uniformed Services

EXTENSION OF REMARKS
OF
HON. JOHN F. BALDWIN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. BALDWIN. Mr. Speaker, on the opening day of the 1st session of the 86th Congress, I introduced H.R. 703, designed to equalize the pay of retired member of the uniformed services. Similar bills have been introduced in the House of Representatives by 45 other Members.

President Eisenhower has now taken a stand in favor of this legislation. The Secretary of Defense, Mr. Thomas S. Gates, on December 11, 1959, also filed the following report addressed to the chairman of the Armed Services Committee, House of Representatives, endorsing the bill, with the suggestion that a substitute draft bill be adopted to eliminate certain technical deficiencies in the bill without making any substantive changes:

THE SECRETARY OF DEFENSE,
Washington, December 11, 1959.

Honorable CARL VINSON,
Chairman, Committee on Armed Services, House of Representatives.

DEAR MR. CHAIRMAN: Reference is made to your request for the views of the Department of Defense with respect to H.R. 703, H.R. 2912, H.R. 2973, and H.R. 5113.

The apparent purpose of the bills is to authorize those members and former members of the uniformed services who became entitled to the receipt of retired or retainer pay prior to June 1, 1958, and whose retired or retainer pay was based on rates of pay contained in section 201(a) of the Career Compansation Act of 1949, as amended, to recompute their entitlement to such pay on the basis of the new and higher rates of pay provided by the act of May 20, 1958, (Public Law 85–422). Although the language of the bills is somewhat ambiguous, it appears that the resultant increase in retired or retainer pay entitlement would accrue from the first day of the month following the date of enactment.

An examination of the bills reveals certain technical deficiencies which would prevent them from completely achieving their apparent purpose. Therefore, there is attached for consideration a substitute draft bill which will eliminate these deficiencies without making any substitute changes.

Public Law 85–422 specifically excluded personnel retired prior to June 1, 1958, from the benefits of the new pay rates and in lieu thereof authorized such personnel, except those with less than 2 years' service, a 6-percent increase in their retired or retainer pay. This treatment of retired personnel was a departure from the traditional concept of relating retired pay increases to active duty compensation and operated to nullify certain provisions of title 10, United States Code, which provide in essence that whenever the rates of pay for personnel on the active list are changed, the retired pay to which personnel are entitled shall be recomputed on the basis of the new rates. Also the inevitable result of a cutoff date, such as the effective date of Public Law 85–422, is to produce some disparities in rates of retired pay among personnel of the same grade and length of service, depending on date of retirement.

It should be noted that the proposed pay bill submitted to the Congress last year by the Department of Defense had as its objective a fundamental, sweeping change in the active duty military pay system rather than a pay raise as such. Under that bill some 38 percent of the personnel on active duty would have received no increase in basic pay except for a temporary 6-percent cost-of-living adjustment. Subsequently the House of Representatives passed a new bill which was prepared by the House Committee on Armed Services, concurred in by the Senate with minor amendments and enacted with the support of the Department of Defense to become Public Law 85–422. This law, as enacted, provided in effect a general pay increase of at least 6 percent for all active duty personnel with more than 2 years' service, and, as already noted, extended this 6 percent increase to all but the one category of personnel retired prior to June 1, 1958. Public Law 85–855, August 28, 1958, amended the Military Pay Act of June 1, 1958, and extended the 6-percent increase to those retired with less than 2 years' service.

The Department of Defense has restudied its earlier position on the recomputation of retired pay and after further consideration now believes it only equitable and fair to reestablish the traditional relationship between active duty pay and retired pay. The Department of Defense, therefore, recommends enactment of legislation to achieve these objectives as expressed in the attached substitute draft bill and believes the net result would be of significant value by increasing the morale, efficiency, and effectiveness of our active duty career personnel as well as avoiding discrimination against retired personnel who served their country faithfully and well.

If this legislation were enacted in time to become effective February 1, 1960, the increased cost for the last 5 months of fiscal year 1960 is estimated at $10,500,000. Funds to cover this increased cost were not included in the budget for fiscal year 1960 but it is believed that such cost could be absorbed within funds heretofore made available by the Congress.

Estimated increased costs for succeeding years are: fiscal year 1961, $24,470,000; fiscal year 1962, $23,980,000; fiscal year 1963, $23,500,000.

The Bureau of the Budget has advised that there is no objction to the submission of this report to the Congress and further that enactment of legislation along the lines of the proposed substitute draft bill is in accord with the President's program.

Sincerely yours,

THOMAS S. GATES.

Mr. Speaker, in accordance with the recommendation of the Secretary of Defense, I yesterday introduced the substitute bill proposed by the Defense Department. This bill is H.R. 9304. Since this bill has the approval of both President Eisenhower and the Defense Department, I very much hope that the Armed Services Committee will schedule early hearings upon this and other similar bills so that this legislation can be brought before the House of Representatives as soon as possible. This bill will restore the almost undeviating principle in the military pay and retirement system that the pay of a retired member of the uniform services should be directly geared to active duty pay of a member of the same rank and length of service. The purpose of this legislation is to reestablish this traditional principle which has come to be considered almost inviolate.

The Death of Lawrence Richey

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. MARTIN. Mr. Speaker, the unexpected death of "Larry" Richey, for many years the faithful secretary of former President Herbert Hoover, will be mourned by many thousands who knew him for his genuine, attractive, and warmhearted personality. "Larry" Richey was a great guy and those of us who were privileged to enjoy his friendship mourn his death.

How most of us feel about "Larry" Richey was well described by George E. Sokolsky in his column, which I insert under leave to extend my remarks:

LARRY RICHEY

(By George E. Sokolsky)

The longer one lives, the more often he goes to funerals, but I did not expect to know on a Monday morning that Larry Richey, with whom I spent some hours in Herbert Hoover's apartment on Christmas Day, died gently in an airplane on his way home to Washington on Sunday. The transition was too swift; the surprise too shocking.

Larry Richey was an unusual character. He was of Italian origin and as a boy was employed by the secret service to help track down counterfeiters and smugglers. He was small and could be put in places where his size and quickness were of value. I shall always treasure the many tales he told me of the Black Hand and of the efforts of the New York police to put down this criminal group of kidnapers and murderers. Larry undoubtedly had already learned how to keep his mouth shut when he worked for the secret service, but his sense of doglike loyalty, his profound devotion to Herbert Hoover could not be taught or learned. It was as innate as the nose on his face.

Herbert Hoover has often been accused of not being a keen psychologist in the selection of his associates. But this can be said that those who came close to Herbert Hoover have remained everlastingly loyal to him and that they have remained loyal to each other as well. This quality of loyalty is, like so many old-fashioned virtues, regarded as corny in an era when it is each man for himself and only too often for his own advancement rather than for the benefit of the country. But in the entourage of Herbert Hoover it has continued to be basic.

Larry Richey came into Hoover's service in 1917 when Hoover was Food Administrator and remained with him until his death. An intimate friendship developed between these two men, a decade apart in years. Both found their recreation in the outdoors, Mr. Hoover being a devotee of fishing and Larry generally going along with him. The association grew increasingly intimate as the years moved on, changing from secretary to close friend and confidant.

Larry Richey became Herbert Hoover's personal secretary after the latter entered the Cabinet as Secretary of Commerce. Richey's predecessor in that position was Christian Herter, now Secretary of State, who had been one of Hoover's staff. Richey continued with Hoover to the White House. It is interesting to note how many men who were early associated with Hoover advanced to great careers.

It was in the sad days immediately after Herbert Hoover's defeat by Franklin D. Roosevelt that I came to know Larry Richey intimately. After a sojourn in Palo Alto, Herbert Hoover settled in the Waldorf Astoria in New York. It was a difficult period in Mr. Hoover's life. He was very unpopular. A younger generation that had not known of his achievements regarded him as the author of the depression. Charley Michelson, Roosevelt's press agent, for no sound reason devoted himself to smearing ex-President Hoover as though it were still a presidential election campaign.

A deeply emotional man, Herbert Hoover felt every shock and every barb of injustice, but as a Quaker he took the shafts of life as they came without vindictiveness or hatred. It was during those dreary months that Larry Richey showed his character, his loyalty, his steadfastness. He was an enormous comfort to Mr. Hoover, whose office he managed and whose nature he so completely understood.

On Christmas Day, this year, Herbert Hoover invited a number of old friends to call on him. Larry had come up from Washington where he lived. He was gay and full of stories. He saw many of his old friends. He talked about fishing and hunting, and he was as cheerful as anyone there. I had perhaps 30 years ago planned to grow horseradish on my farm in the Berkshires, and Larry recalled that and he had all sorts of quips and jests about horse-radish. He and the Chief, as Herbert Hoover is generally referred to, were planning some fishing trips together.

He stayed at the Hoover apartment over Sunday, had his lunch with his Chief, took a plane to Washington, fell asleep on the plane, and gently died.

He had spent his last Christmas with those whom he loved most. Can any man ask for more?

Peace and Jobs for 1960

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. STRATTON. Mr. Speaker, as the 86th Congress moves into the second session the thoughts and attention of all of us are focused, of course, on the underlying goals and objectives of this legislative period.

In that connection, just before leaving to come to Washington, I released to the people of my district a statement of my own views on the major goals and objectives of this session, and under leave to extend my remarks, I include this statement:

At the start of this second session of the 86th Congress I want to express again to all the people of our district my sincere thanks for the honor of serving as your representative in Washington during the past year.

Many complex and controversial items of legislation confront us in 1960. But two tasks stand out as particularly urgent and important.

First and foremost is the need for more jobs. Congress must pass pending legislation to deal with localized, chronic unemployment such as we have been having in so many parts of our district—especially unemployment directly caused by unfair, low-wage competition from abroad. Besides that we need to make sure that New York, as an established industrial State, is not placed

at any disadvantage in attracting new productive facilities or in obtaining our fair share of Government and defense contracts.

Second, we must leave no stone unturned in trying to translate into hard reality the new hopes for some easing of world tensions stimulated by President Eisenhower's recent 11-nation tour. Since in today's world a secure and lasting peace must rest on effective deterrent military power, Congress must also insist that America refuse to accept any second-best consolation prize in the vital race for missile development and the control of space.

Actually jobs and a sound peace go hand in hand. For only by insuring that American productive machinery calls on the full energies of all our citizens can we really make our best contribution to a better, more prosperous, and more peaceful world.

In working in the coming year for these two major goals I sincerely believe that I will be serving not only the best interests of our district but of our Nation.

May I wish all of you a peaceful and prosperous New Year.

Senator Lyndon Johnson Shows the Way to Responsible Leadership

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. ANFUSO. Mr. Speaker, as we stand on the threshold of a new session, a new year and an uncertain new decade, we search the political horizon for a strong ship of state to guide us through this decisive period.

It is, therefore, a very happy privilege for me to be able to introduce for the permanent record of the Congress, a historymaking speech by Senate majority leader, LYNDON B. JOHNSON, made at the annual citizens awards dinner of the nationalities division of the Democratic National Committee in Philadelphia on November 29, 1959.

Every American should read this speech because it charts the course which this country must follow if it is to retain the leadership of the world.

The ovation which followed Senator JOHNSON's address, made to representatives of every minority group in the land, was thunderous and the words he uttered will never be forgotten by those who were privileged to hear him.

Senator JOHNSON should not be stigmatized as carrying the banner of any particular State or territory. When he speaks, he speaks for and on behalf of our great Nation and for that reason he enjoys, as majority leader of the highest legislative body in the entire world, the confidence of Senators who represent every segment of our population. Both Democrats and Republicans recognize his leadership ability, respect his judgment and admire his courage. All the people have benefited from his warm and generous heart.

I recall one vivid example of his humanity for all men. In a segregated hotel in Houston, Tex., Senator JOHNSON threatened to stay away from a dinner in his own honor if Negro ticketholders were refused admission. His firm insistence was responsible for the breaking of precedent in that city. This and many other incidents have caused him to be labeled in the South as a Roosevelt liberal. I know Senator JOHNSON is proud of that label because he was instrumental in placing on the statute books most of the great liberal legislation sponsored by the Roosevelt administration.

In fact, the record will show that without his drive, without his leadership, none of the legislation so vigorously supported by northern Congressmen could ever have become law.

Senator JOHNSON is a genuine and not a fair-weather friend of labor, with a real sense of the national interest. It was he who masterminded the original Kennedy-Ervin labor bill through the Senate by a vote of 89 to 1. Had that bill been accepted by the House, it is now conceded by all labor leaders, it would have been much more beneficial to labor.

Senator JOHNSON has also assured me that he will lead in the passage of improved minimum wage and civil-rights legislation during this session of Congress.

The question has often been asked, "Why doesn't Senator JOHNSON travel around the country, or the world for that matter, as other Senators do?" The answer is simple—as majority leader he has to be in Washington to guide legislation. This is his job and the reason he was elected majority leader.

Mr. Speaker, it would indeed be unfortunate for the American people if the full dynamic ability of this great statesman should be restrained merely because of his place of birth. It is my hope that during the volatile sixties before us, the unchallenged leader of the Congress of the United States will be drafted to greater service on behalf of our Nation.

The text of Senator JOHNSON's address is as follows:

ADDRESS BY SENATE MAJORITY LEADER LYNDON B. JOHNSON, CITIZENS AWARDS DINNER, NATIONALITIES DIVISION, DEMOCRATIC NATIONAL COMMITTEE, PHILADELPHIA, PA., NOVEMBER 29, 1959

THE ISSUE IS RESPONSIBILITY

I am proud—as I know you are—that we live in a land where we can hold to our own origins without our origins being held against us. I am proud to be a member of a party that opens its doors to all men—and closes its heart to none.

Tonight we meet in the name of that party.

We are drawn together—not by special interests in where we came from but by overriding interests in where we are going—as free men, as Americans, and as Democrats.

THE MOST DECISIVE DECADE

Tonight we are 32 days away from the 1960's.

In history's most decisive century, the 1960's will be the most decisive decade. The world will make its choice. Either we shall—together—turn up the road toward universal freedom. Or we shall—together—turn down the road toward universal slavery.

In the 1950's the world has stood at a stalemate.

In the 1960's the world will stand no longer.

The world will choose.

The world will move.

Free men will be the movers—or they will be moved aside. That is the choice: clear, simple, final. The decision the world reaches in this next decade will decide the century. That decision must be won by free men.

THE LEADERSHIP WE OFFER

The decision will turn on one thing: leadership.

Either the world will choose the leadership we offer.

Or the world will choose the leadership communism provides.

In this next decade, our capacity for leadership will be as vital as our capacity for arms. The strategies of leadership will be more important than the strategies of the battlefield. This is precisely the area where we are challenged today—by Mr. Khrushchev personally and by all the energy of the Communist world.

OUR RESPONSE

What is to be our response?

How is America to lead as America must lead?

We cannot lead by waggling our finger under the nose of the world and arguing our cause with angry words. We cannot lead by wringing our hands and biting our nails and agonizing over the decline of America's character. We cannot lead by busying ourselves with division's of race or religion or birth or occupation.

America has the strength to keep its composure.

America has the character to justify its confidence.

And America has the capacity and commonsense to perfect the unity of its people.

If America is to lead, America must speak from the bottom of its heart and not from the top of its head.

The language of world leadership is the language of the heart. This is what moves men. This is what leads.

THE ROAD TO AMERICA

Let us look back for a moment—back along the road that has brought us together in this assembly tonight. Up that road to America—over the past 140 years—have come 40 million men and women.

Forty million men and women have surrendered what the human spirit surrenders most reluctantly to come here. Forty million gave up birthplace, homeland, family to cross the seas to America.

What moved these millions?

What led them to America?

They were moved by their dreams.

And they were led to America by faith that here those dreams had promise of fulfillment.

Those two facts should be fixed in our minds and in our policies.

THE DREAMS OF THE WORLD

No force is as powerful in moving men as their dreams, their hopes, their yearnings. No appeal America offers has ever been so strong in leading other men as the promise of fulfillment for those dreams and hopes and yearnings.

If America is to lead now, Americans must understand the dreams of the world—and America's policies and purposes must be understandable and understood by the peoples of the earth.

Those policies and purposes are not understandable now.

Here—in the Western Hemisphere—we have half the world's annual income. Here—in America—we have lived during the postwar years 4 times better than the Europeans, 5 times better than the Russians, 9 times better than the peoples of

Latin America, 20 times better than the African, 30 times better than the Asian.

Half the workingmen of the world take home less in a year than our workers—in many instances—may take home in 2 weeks.

CAN WE AFFORD OUR DREAMS?

Yet with all this wealth—all this advantage—our national leadership today tells the world that Americans cannot afford their dreams.

That leadership pleads impoverishment amid plenty.

That leadership signals stop to America just as the world aspires to go.

That leadership argues that we cannot meet the needs of our people for houses, the needs of our young for education, the needs of our aged for dignity and decency.

America may be understood by the readers of the financial pages—but America is not understood by the world.

THE STATIC AMERICA?

The party which holds the Executive position has cut the people's dreams out of the budget of its concerns. On the edge of the century's most dynamic decade, they have embarked upon a course which can only lead to a static America—a static economy—a static Nation.

Some men say there is no issue.

I say there has never been a greater issue.

Freedom is a road to travel—not a parking lot. America must not stop just as the world is beginning to move. If America is to move the world, America itself must move. Or else America will be moved aside.

MOVING AMERICA FORWARD

Throughout the history of the national parties, the Democratic Party has been the party that has moved America forward. This is the role to which we shall continue to dedicate our efforts.

Twenty-five years ago the people of this Nation began the most dramatic movement forward that history has yet to see.

At the helm of the Nation stood a great American who had the heart to be responsive and the courage to be responsible—Franklin D. Roosevelt.

Fifteen years ago—at the end of a great war——that forward momentum of the American people was sustained and carried upward to new heights.

Once again, at the helm of the Nation, stood a great American who had the courage to be responsible—Harry S. Truman.

A BETTER DEAL

Today, once more, we stand at a moment when America can move forward to heights we have never attained before or sink back to depths we have never known.

The opportunity is ours.

The moment has come for the Democratic Party to offer the people of America and the people of the world a better deal.

The people of America and the world want peace. We shall work for the strength to secure that peace with honor and without fear.

The people of America live under a Constitution. We shall work without hesitation, without compromise to secure for every American his constitutional rights in full measure.

The people of America want homes for their families, food for their babies, employment for their abilities, health for their bodies, and education for their minds. We shall work to fashion a society and an economy and a Government from which these things will flow in more generous measure.

FREEDOM MUST HAVE A FLOOR

The peoples of the world yearn in their hearts as we have yearned. We shall heed those yearnings. We shall commit ourselves—in this decade of commitment—to the leadership of an effective world order in which there is a parity of dignity and opportunity for all men who would be free.

Freedom must have a floor on which free men can stand together as they reach for the heavens in this age of space.

We speak simply because this is the language the hearts of the world understand.

I want to read to you a report I have received from one of the most outstanding young Senators and outstanding young Americans I know—ED MUSKIE of Maine. Senator MUSKIE's father came to this country from Poland. This fall Senator MUSKIE went behind the Iron Curtain to seek out the village of his father's boyhood.

This is what he wrote of the people he found there in that land which has so long burned with flames of liberty:

"It is difficult to comprehend the economic circumstances of the people in that little village—the bareness of their lives. They have no meat; they stand in line for bread. Their diet appears to consist of potatoes and cabbages. The monthly wage is roughly equivalent to $10 to $20; their personal possessions almost unbelievably meager. This is indeed the saddest part of Poland. But for my father's dream of freedom and opportunity, this would be my life—the life of my children."

This is the world we live in.

This is the world we must lead toward freedom.

The issue for 1960—the issue for our times—is responsibility. The American people are responsible people. They know responsibility when they see it. They will choose responsibility when it is offered. That is what the Democratic Party has offered. That is what the Democratic Party must continue to offer.

Some say that responsibility will not win.

I say to you that in these times nothing but responsibility will win—for nothing less is worthy of us as freemen, as Americans, and as Democrats.

Presidential Candidates

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, January 7, 1960

Mr. PROXMIRE. Mr. President, it is so rare that a political commentator can find accurate and complimentary things to say about all presidential candidates that I am calling to the attention of the Senate a recent article by Ernest K. Lindley in Newsweek which finds excellent qualifications this year in all of the leading candidates.

The point I make with this article is that America is blessed in having a rare abundance of qualified, able, experienced men available at a time when presidential leadership is so vital for the future welfare of our country.

I ask unanimous consent, Mr. President, that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD as follows:

LOOK-ALIKES?

(By Ernest K. Lindley)

The leading presidential candidates of 1960, avowed and unavowed, are, like their predecessors, a diverse lot. But they are also strikingly similar in certain important respects. Generally, with a little qualification here and there, it may be said of them that they are:

1. Brainy: The minds of NIXON, KENNEDY, HUMPHREY, and LYNDON JOHNSON are among the keenest in high office in Washington. Stevenson's mental credentials are well established. Important presidential candidates usually are above average in intelligence, but there have been notable exceptions and occasionally one of them has managed to go all the way to the White House. In brains, this year's crop strikes an unusually high average.

2. Serious students of public affairs, both national and international: Each has his specialties but none is limited by them. Every one of them knows enough about our principal problems to discuss them in an informed way. Several are authorities in complex fields: HUMPHREY on disarmament for example. Several, if not all, have the capacity and habit for which the late Senator Taft was noted: Intensive homework. But unlike Taft they are students of world as well as domestic problems.

3. Experienced in national and international affairs: Willkie and Dewey, when nominated, were students of both but, never having held office in Washington, without experience in either. Mr. Truman, although an expert on defense production, was without experience in international affairs when he became President. Mr. Eisenhower was without experience in internal affairs, excepting the military sphere, prior to his first election. By contrast, all of the leading candidates this year have had direct contact with both national and international affairs. NIXON has had extensive grounding in both through his years in the Cabinet and on the National Security Council and his trips abroad, on top of his brief service in the House and Senate. JOHNSON has been in Washington for more than 22 years, SYMINGTON for more than 14, KENNEDY for 13, and HUMPHREY for 11. The first two are veterans of the Armed Services Committee, the latter two active and forceful members of the Foreign Relations Committee. Stevenson's experience as a public servant at the Federal level is more limited, although it embraces wartime service in the Navy Department and his work on the Preparatory Commission of the United Nations. But national and world affairs have been his main interest since he was drafted for the presidential nomination in 1952. And, in the rest of the world, he is one of the four or five most widely known and respected Americans.

4. Experienced in politics: All have won elective office. NIXON, HUMPHREY, JOHNSON, and KENNEDY have fought their way up, although only HUMPHREY held local elective office before coming to Washington. SYMINGTON entered elective office at the senatorial level, Stevenson at the gubernatorial. All know at first hand the problems of practical politics and party management.

ESSENTIAL QUALITIES

These endowments of ability and experience may seem no more than normal qualifications for aspirations to the highest office. Yet in the last 50 years, to go back no farther, many presidential candidates, several major party nominees, and even some presidents have lacked one or more of them. Practical political experience has been more usual than prior experience in national and international affairs. The latter qualification has been missing among most of the multitude of State governors who have sought the presidency. In the present state of the world, this lack—especially in the international field—may be a more serious handicap than in the past. Significantly, since the withdrawal of Rockefeller (who did not suffer this handicap), none of the major presidential possibilities is a governor.

There are other good governors, and among the many who are Democrats are several who aspire to the national tickets. But none has been able to project himself into the front rank of contenders. All are overshadowed by the men extensively experienced in national affairs and having some familiarity with the overriding problems in the international arena.

Parity in Politics

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. RAY. Mr. Speaker, I am glad to present to the readers of the RECORD a thoughtful and constructive address delivered by the Honorable JOHN W. BYRNES, Republican of Wisconsin, before the American Farm Bureau Federation at its meeting in Chicago, Ill., on December 16, 1959:

PARITY IN POLITICS

(Address of Representative JOHN W. BYRNES, Republican of Wisconsin, before the American Farm Bureau Federation, Chicago, Ill., December 16, 1959)

I'd like to point out this morning what I believe are some alarming developments in our national internal life and to suggest the role that you can play in helping our Nation to meet these challenges.

As I do so, I hope I can avoid either the undue optimism of a Pollyanna or the unwarranted pessimism of a modern Cassandra. Rather, I hope to approach my theme with the attitude a modern farmer goes about his business, bringing to my task the same practical outlook, the same careful weighing of assets and liabilities and the same refusal to be governed by either false hope or fearful gloom.

At the start, I should make clear that I am basically an optimist. In the past few months, I have had the opportunity to travel the length and breadth of our land and, once again, I was reassured by what I saw. We live in a marvelous country. As one leaves the hothouse atmosphere of Washington and goes out among the people, one cannot help but be deeply impressed by the basic strength of our country. That strength is reflected in our abundant resources, in their dynamic development, and, above all, in our energetic, freedom-loving and God-fearing people.

I have no fear for the future of such a nation and such a people. I believe they can meet and conquer any problem once they understand the nature of the problem and its significance.

It is in this area, the area of recognizing our problems, of understanding them and of choosing the right solutions, that we face our greatest challenge, and it is here where my basic feeling of optimism is tempered by a few nagging doubts. They are brought on by a number of warning signals in our economic and political life which we cannot afford to ignore any more than can the farmer when he finds the first evidence of disease in his livestock.

As a prospering, highly developed nation, we face the same danger which has confronted every successful nation or civilization since history began. Our danger is that, as we enjoy our strength and prosperity, we neglect, and thus weaken, those very institutions and principles which made us strong and prosperous and free. Our danger lies in complacency, selfishness, ignorance, and irresponsibility.

And, while my message today is that it need not happen here, let us not delude ourselves. It can happen here. Just because in our lifetime we have seen our Nation move from one plateau to the other, each higher than the last, until we now stand the greatest Nation in the world, let us not think that we cannot fall.

I have often thought that perhaps the first thing which should be taught in the civics and political science courses in our schools is the story of the decline and fall of the Roman Empire. The story of a nation which became the undisputed ruler of the world and then collapsed so utterly and so completely that it plunged the civilized world into darkness for centuries, should be studied by every American.

We would learn that just because an economy and a civilization rises to spectacular heights is no reason it is going to stay there.

We would learn that stupidity, selfishness, and ignorance on the part of the population and its rulers can bring on not just a temporary reversal but a collapse so complete as to wipe out the whole structure with all of its accomplishments. The Roman Empire collapsed because it became rotten within. It became rotten because the people and the government failed to preserve those virtues which had led to its strength and because its citizens refused to apply any restraint to their demands upon the government. Literally, the Roman Empire tore itself to pieces through the weakness and demagoguery of its rulers and the enormous burden of expenses they incurred in meeting the demands of a citizenry which forget the public interest in its selfish fight for the fruits of national prosperity.

The comparison between our Nation and the Roman Empire is not a perfect one, but we cannot ignore the warning signals which are flying today.

As a nation, in spite of the heaviest tax burden in its history, we appear to be constitutionally unable to restrain our expenditures below the level of our income. We have balanced our budget (lived within our income as a government) in only 5 out of the last 29 years. We appear unable to reduce our tremendous national debt which now stands at $290 billion. Interest on that debt alone amounts to $9 billion dollars each year which is more than our total annual expenditures for every purpose only 20 years ago. As a result of this profligacy with our national wealth, coupled with the selfish demands of the more highly organized segments of our economy, we are fighting a losing battle against inflation. The cost of goods and services is going up. The value of our money is going down. In that struggle the victims are those who are least able to protect themselves, including the farmers of our Nation. We are witnessing, as one result of inflation, a flow of gold from our country which has not yet become a flood but which carries grave implications for the future stability of our currency and confidence in it.

These results, however, grave though they may be, are but the symptoms of what I believe to be a far more serious defect in our national life. I refer to the growing tendency of our people, encouraged by demagogues whose only principle is a lust for power, to take the easy way out. We know, each of us in our own hearts and minds, that the right way is not always the easy way and that no nation which has consistently taken the path of least resistance, including the Roman Empire, has ever survived. The easy way, if it is the wrong way, leads only to the misery of retraced steps or the finality of disaster. Yet, what are our constantly recurring deficits, which is our huge debt, what is our inflated currency—if they are not the symptoms of a people and a nation which have fallen into the habit of taking the easy way out?

The hard way, we know, is to rely on our own individual initiative and self-reliance for the solution of our problems. The easy way is to pass these problems on to government. The easy way is for the local units to pass them on to the State government and for the State government, in turn, to pass them on to the Federal Government.

Too many of our politicians and self-appointed leaders seem to find it politically expedient to suggest that the solution to any problem should rest on government. And no politician has found it difficult, or has lost any votes, by suggesting that the solution for any State or local problem was the responsibility of the National Government. How simple and easy it is to shift responsibility to government. It is also much less risky, from the politicians' point of view, to remove a problem from the careful scrutiny of the folks back home and dump it in the legislative pit of the National Congress where its costs, complexities and waste are hidden in a multitude of other Federal activities.

This is the easy way to avoid responsibility. This is the path which our people are being encouraged to take by those who think more of the next election than they do of the next generation.

If you think I overstate the case, examine the proposals that are being advocated daily for the solution of most of our problems. Pass a Federal law, create a new agency, appropriate billions. That ends the problem. Let me give you one concrete example.

In my book, and I confess I may be old fashioned, it is the responsibility of each citizen, either as an individual or banded together with others in a local community, to take care of his personal refuse in a manner which will not endanger the welfare of his neighbors. At one time, in this Nation of ours, we felt it was the responsibility of local units of government to dispose of sewage created by their own citizens. This was a basic, essential function of the local government. That is no longer true. Those who prefer the easy way have won out and the National Government, along with the multitude of other problems confronting it, including the very survival of the Nation, now has been given the job of helping to build local sewage plants. It will shortly be costing the Federal Government over $100 million a year.

It is not a question of the need for the program or project. We all recognize, for example, the necesity for treatment of sewage and the need for preserving our water resources and protecting their cleanliness. The tragedy is that we have succumbed to what we have been led to think is the easy way of meeting a recognized need. The demagog has no difficulty in selling us on the idea of using Federal funds, which incidentally must be borrowed by a bankrupt government, in preference to raising the funds locally, probably through increased taxes. There has been spread across our land the idea that there is some magic in Federal money and that its supply is somehow unlimited. The demagogue is not concerned with the true facts of our precarious fiscal position. He is interested only in providing painless benefits for his greater glory.

The demagogue, and those like him, have also discovered that it is easier to influence one legislative body, the Federal Congress, than it is 50 State legislatures or thousands of local governing bodies. He knows the National Government is further away from the close scrutiny of the people. He knows he can bring to bear on the National Legislature the heavy influence of powerful pres-

sure groups. It is no coincidence that one of the reasons which the so-called liberal advances (but generally on the quiet) for Federal intervention is the rural influence in the State legislatures which tend to look upon his grandiose schemes with healthy skepticism.

The net result of deluding ourselves into believing that the easy way can safely be traveled is not alone the financial and fiscal difficulties it inevitably creates. In the process, we not only weaken our basic economic strength through lavish and uncontrollable expenditures, but we weaken ourselves as individuals and we weaken our local and State governments. Weakness and lack of power is the invariable consequence of the constant sloughing off of responsibility to someone else. If we choose to lose those attributes of self-reliance which made our Nation great, and if we choose to make figureheads of our local governments whose function, under our constitutional form of government is to help preserve our individual liberties, then we have laid the basis for the complete concentration of power in the Federal Government and its inevitable corruption into absolute tyranny.

We observe the same trend—the trend toward the easy way out—in other fields. It is perhaps most apparent in the one in which you are primarily interested—agriculture. It takes the form of seeking easy political solutions for tough economic problems. It is embodied in the successful effort of the demagogues to convince us that we can safely substitute for the rigors of the marketplace the rockingchair complacency of governmental guarantees.

In agriculture, we have so entangled in politics the economic problems which confront our farmers that I often despair that we will ever unravel the mess which has been created. We have gone so far in the direction of political intervention that the main political effort is no longer directed toward the solution of the agricultural problem. It is aimed at achieving the maximum political benefit in partisan politics.

We have, for example, urgent and critical problems in the field of agriculture which should be acted upon during the next session of Congress. Yet, it would be a brave man who would predict to you today that any concrete legislation will be written into law in the election year of 1960. When the people of this Nation embarked upon political solutions for the problems of agriculture, it was truly a sorry day for the American farmer. No longer is the farmer his own master. He is instead either the beneficiary or the victim of political decisions over which he has less and less control.

I do not mean to give the impression that I believe government should play no role in the development and maintenance of a sound agricultural economy. The power of government, if wisely used, can assist and should assist in the orderly marketing of agricultural products by providing protection against radical changes in the market place. This, I believe, was the original conception of the price support program. We have moved far from that concept and we have been led by those who maintained that there was an easy way to agricultural prosperity. If support at orderly marketing levels can be justified, they told us, why not move on to ever higher levels? Let us disregard any self-restraint. Let us substitute government guarantees for the working of the cruel market place, they said, and their plea was again successful. The test of the successful farm politician then became which could offer the higher price supports and the test of the successful political party was its ability to fasten the blame for the inevitable cycle of rigid supports, price-depressing surpluses and price collapse upon its political opponents.

With the bankruptcy of the high price support program, the demagogs are now seeking another easy way out. The latest solution proposed by the Governor of one of our greatest agricultural States, is simplicity itself. He suggests that we simply ignore the market place entirely and guarantee each farmer a minimum income. Let me warn you that all the demagogs are not holding political office. There are some who have found their way into leadership in a certain farm organization with which you are acquainted. They are urging the same thing but camouflaged under such high-sounding names as "compensation payments," "deficiency payments," "stabilization payments," "equalization payments," etc. If some kind of income guarantee program should be adopted, and it is being seriously considered by important forces within the party which controls our National Legislature, then I can easily predict the next political contest. It will take the form of seeing which candidate in the farm areas can promise the highest minimum income. The other side of the coin is, of course, that it may also take the form of candidates from the urban areas engaged in a contest as to who can promise the lowest minimum farm income. In a nation where a vast majority of the population lives in urban areas, you can guess where this will leave the American farmer.

I wish I could stand here today and tell you I had an easy answer to the problems which confront American agriculture. Instead I must say I believe there is no easy answer. Before we get out of the mess we are now in, we have a long, hard road to travel and, before we can even begin to travel that road, we must come to the realization that the adjustment will be difficult and that it cannot be made if political rather than economic considerations are going to continue to dominate and dictate our decisions.

I have spoken pessimistically of the various aspects of what I have described as the tendency of a prosperous and successful people to rest on their oars, to avoid difficult decisions, and to take the easy way out of their difficulties. I have spoken of it in terms of our fiscal difficulties, in terms of its dangers to our liberties and, specifically, in terms of its relationship to the problem in which you are primarily interested. I have suggested that a continuation of this trend to its logical conclusion can only lead to the collapse of our Nation. I have said this collapse is possible, and I call to your attention, as another reminder, the work of the British historian, Toynbee, whose study led him to the conclusion that of the 26 major civilizations in world history, 16 are now dead and buried and the remaining 10 are rapidly losing their character.

But early in my remarks, I said I was an optimist, that I had great faith in the basic strength of our Nation and that, while it can happen here, it need not happen here. Whether it does or doesn't depends on you and me and every citizen in this land. It is up to us to determine whether we will continue to forever adopt the easy solution, the expedient answer and the least distasteful course of action, or whether we will pursue the right course, the sound solution and the intelligent program regardless of how difficult they may first appear to be.

Several centuries ago, the Italian poet, Dante, put it this way: "The hottest places in hell are reserved for those who, in a period of moral crisis, maintain their neutrality." My plea to you today, as leaders in a great national farm organization, is to discard your neutrality in this period of moral crisis and to enlist in the fight to preserve our Nation and its institutions.

But I would be derelict in my duty if I merely summoned you to battle and left it at that. Certainly, you are entitled to a knowledge of the nature of the struggle and to my ideas as to the kind of strategy and tactics which must be employed by those who choose to fight for the right rather than the easy way.

When I speak of a summons to battle, let me make clear what I mean. I call upon you, as individual leaders in your communities and in agriculture, and call upon your great organization to take part, with enthusiasm, with courage, and with determination, in the political life of our Nation. I do not refer to political theorizing or polite discussions on a high plane amongst yourselves; I refer to the down-to-earth, backbreaking job of nominating and electing candidates to political office. I refer to the only kind of political action which has any meaning if we are to reverse the trend I have described today. I refer to the defeat of those who oppose everything for which you stand through the victory of those who will work shoulder to shoulder with you on behalf of the principles which brought greatness to America.

I can give you one word of encouragement at the outset. It is my considered opinion, as one who has spent most of his life in American politics, that the principles of government in which you believe are held by a majority of the American people. If the cause of commonsense conservatism, with its dynamic urge to preserve the best American institutions, has suffered in recent years, it has not been because of any change in the basic philosophy of the majority of Americans. It has come about instead because radicalism and the proponents of the easy way have done a vastly better job of mobilizing their strength and in hammering home their something-for-nothing philosophy. You know that is so without my telling you. The really effective political action groups in this Nation are in radical hands. They are working the soil which produces the most abundant harvest. They are developing and electing candidates who will promote their viewpoint. The radical farm leader, the union boss, the leftwing political leader, have all developed highly effective political organizations which are producing results when the votes are counted. While I violently disagree with their philosophy and with many of their ruthless methods, I am not one to stand on the sidelines and criticize their activities. Fundamentally, they are doing what every citizen should do in a representative republic. They are taking part in the basic process of representative government. They are electing officeholders who will advance their views and the answer to this activity is not criticism. The answer to radical political action is conservative counteraction, and the sooner we realize that fact the sooner we can restore the balance of power in our internal political life.

What I am saying, I believe, has particular meaning for you and your splendid organization. I hold you in high regard, but I would be less than a friend if I did not ask you frankly today whether the American Farm Bureau Federation has not, in the crucial struggle for the preservation of our institutions, taken the easy way out by an excessive preoccupation with political neutrality? That is a question which every conservative group in our Nation should now be asking itself.

I have said here today, and I know it is a basic tenet of your beliefs, that we must remove the agriculture problem from politics. Yet, I frankly tell you today that you will never get politics out of agriculture until agriculture gets into politics with both feet.

Let me put it another way—and I believe this most sincerely—the farmer must get into politics to get politics out of farming.

We hear a lot about parity. There is certainly a lot of politics in parity but then there is also such a thing as parity in politics.

Political parity cannot be achieved by well-meaning attempts to influence men who have already been elected to office. That is the easy way, but, unfortunately, like many other expedient methods, it just does not work. The finest feed ever produced will not sprout if it is sown in a bed of concrete. Your efforts to achieve political parity cannot be harvested in the legislature unless you have prepared the soil in the precincts at home.

Frankly those who believe like the Farm Bureau have been less than diligent in assuring that they and their views maintained parity in politics, and the battle is being lost.

Let me be specific. The most important agricultural bill before the Congress was the omnibus farm bill, H.R. 12954.This was opposed by the Farm Bureau. The Secretary of Agriculture labeled the bill an "economic monstrosity." Do you know that 55 of the members of the House who voted in accord with the policy of the Farm Bureau on this legislation were not Members of the House the next year. That's over 12 percent loss. In the Senate last year probably the most important agriculture bill was Senate Joint Resolution 162. The Farm Bureau opposed this measure. Of those supporting the Farm Bureau position, 15 or 15 percent were not around when the new Congress convened last January. Now, I'm not analyzing the reasons these Congressmen and Senators weren't back. Suffice it to say that they weren't.

If you think the vote of a few Congressmen or a couple of Senators isn't important, let me point out that in this last session, the McClellan amendment providing a bill of rights for labor in the labor bill was adopted by a vote of 47 to 46. Only 1 vote difference between legislation that had some meaning as against a gesture, and in the House of Representatives the vote on substituting the Landrum-Griffin bill for the weak committee bill was 201 to 229—only 28 votes difference between an effective bill and a tap on the wrist.

But let me get back to my point. You are losing your parity in politics.

What is called for, I sincerely believe, is a decision on your part, both as individuals and as members of the Farm Bureau, to renounce political neutrality during elections and to bring your entire individual and organizational strength to bear on behalf of candidates who meet your rigid specifications of honor and outlook.

As individuals, you have the responsibility and duty to become actively engaged in partisan politics. I am not here as a recruiter for the Republican Party, although I will be glad to take membership applications at the door. What I am saying is that you cannot, as individuals, expect to achieve concrete political results if you are unwilling to join and work for the party of your choice. It is only within a party that you can help to determine party policy, help select candidates for party nomination and work for their eventual election. It is only within a political party that you can till and fertilize the soil which will produce the kind of legislators who will, for example, get the farm problem out of politics. I can count on the fingers of one hand the number of farm bureau members in my district who are working actively in a political party and the same goes for farm bureau leaders in my State. If this is true across the land, then I say the Farm Bureau Federation has no complaint when it finds the halls of our legislatures slowly filling up with those whose views are diametrically opposed to its own.

I will go even further and say that, beyond your clear call to duty as individuals, your federation, if it hopes to be effective in promoting its program, must take an active interest, as an organization, in the nomination and election of legislative candidates. You can deliberate in this convention and devise the finest program in the world and all of your efforts will go for naught if your organization is willing to stand on the sidelines and permit the election of legislators who are diametrically opposed to your basic philosophies. The day has long since passed when you can confine your political efforts to education after the elections have been held. How, I ask you, can even the most efficient Washington staff sell farm bureau philosophy to a Congressman who owes his allegiance to Walter Reuther or Jim Patton? I think your Washington staff has been doing a splendid job but you give them an impossible job if you do not also play your fullest part in trying to send to the Congress men who will work with your Shumans, Flemings, Lynns, and Triggs, rather than working against them.

I am not suggesting that your organization become the farm branch of one of our political parties. I hope, however, that I have made it crystal clear that I believe your organization cannot afford to be neutral in any political contest where one candidate is for and the other against everything for which you stand. Nor indeed, do I see much hope for America if our best citizens and our most respected groups stand smugly aside while the real struggle is being fought and permit victory by default for those whose policies can lead only to the collapse of our Nation.

The 18th century British statesman, Edmund Burke, said: "All that is necessary for the triumph of evil is that good men do nothing." He also said that "the people never give up their liberties but under some delusion." The gravest danger confronting our Nation today is that the people delude themselves into believing there is an easy way out of all their difficulties. The triumph of such evil can only come about if good men stand idly by. Let it never be said that you and I were among those who, in a period of moral crisis, maintained our neutrality and did nothing.

Steve Carter

SPEECH
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 6, 1960

Mr. HOEVEN. Mr. Speaker, I join my Iowa colleagues in expressing deep regret at the passing of my good friend, STEVE CARTER. Although I did not know him before he came to Congress, I soon learned to admire and respect him. His unfortunate illness brought out the best in him. In spite of his pain and suffering he faced life with a smile. During his short service in the House, STEVE CARTER demonstrated his ability as a good public servant.

I attended the funeral of STEVE CARTER where I saw demonstrated, at the large attendance, the love and respect in which he was held by his friends and neighbors, who knew him best. STEVE CARTER well served his day and generation.

Mrs. Hoeven joins me in extending our deepest sympathy to Mrs. Carter and all members of the family.

Thank the Volunteers

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. DADDARIO. Mr. Speaker, Americans have always shown a willingness to team up for the common good. An expression of this volunteer spirit that has lasted since colonial times is the volunteer firefighting effort which serves communities throughout the country. From New England to the Pacific Northwest, hundreds of thousands of men are pledged to speed to any troublespots to help their neighbors. And, in what is less often known, many of their wives lend aid and comfort to this movement by helping families made temporarily homeless or by providing food for men working at long and troublesome fires.

In Hartford County, it has been a practice in recent years for two of our noted citizens, William M. Savitt and Max Savitt, to honor outstanding firemen from the different towns in the county. This ceremony was marked again in December and it is something that could well be emulated in other parts of the country. Another remarkable tribute was recently paid them by an outstanding weekly newspaper in my district, the Farmington Valley Herald, and I should like to conclude my remarks by offering this editorial for the RECORD:

THANK THE VOLUNTEERS

One of the great traditions in our American heritage, particularly for New England, has been the volunteer spirit. Even though the spirit of voluntary action is being supplanted by a growing dependence on a growing governmental body, the spirit is still evident in some great American institutions. In this case, the notable instance is the volunteer fire company.

Each of our towns, fortunately, has a small corps of dedicated people who have undertaken—voluntarily and without compensation—the task of protecting all of the property in the town against the depredations of fire. Particularly at Christmastime, when the dangers of home fires are increased by the presence of inflammable decorations, we should be thankful for the presence of volunteer fire companies, which are ready around the clock to protect our property—and yes—our lives, too.

If you happen to be inclined to read these lines with only idle interest, recall for a moment the recent fire at the peroleum storage tank area in Rocky Hill. A fire broke out in a 2¼ million-gallon storage tank for high octane gasoline. Though the tank was empty, the gasoline fumes were highly explosive and produced a fire of such intensity that made it well nigh impossible to control. Nearby was a half-million-gallon tank of airplane gas and up the river a huge storage of carbon disulphide.

These explosive potentials combined to poise a threat that could have meant the destruction of the entire Rocky Hill area, as well as the deaths of any who ventured near the roaring inferno. The Rocky Hill Volunteer Fire Department nullified the threat to the town with prompt action, and further limited the damage to a single storage tank, this at the cost of injuries to four volunteers, and with the assistance of four

other departments, three of them volunteer companies.

One of the questions that must have been asked by the wives and families of some of these volunteer firemen is: What happens if a fireman is killed or injured while fighting a fire? To be sure, there is a statutory requirement for insurance coverage by the company on its firemen, but its maximum is low and the protection afforded his wife and family hardly enough to warrant any feelings of confidence. One of the questions that you might ask yourself, as you consider our extreme good fortune in retaining this bit of volunteer spirit in New England, is this: Are volunteer firemen and their families afforded the same degree of protection that the firemen afford us as citizens and property owners; and, if not, why not?

Panama Minimum Wage Crisis

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. FLOOD. Mr. Speaker, much has been read in the press about Panamanian demands for higher pay in the Canal Zone, more privileges for Panamanians, and greater benefits for Panama. Nothing, so far as I know, has been published in the United States about the strong opposition in Panama to extending similar benefits from its own sources to its own people.

This obvious conflict in attitudes was recently explained in an informative article by Mr. Ralph K. Skinner, special correspondent of the Christian Science Monitor in the Canal Zone, which merits recording in the permanent annals of the Congress.

The article follows:

[From the Christian Science Monitor, Dec. 16, 1959]

MINIMUM WAGE ROUSES PANAMA

(By Ralph K. Skinner)

PANAMA CITY, PANAMA.—Labor progress for Panama was recorded December 1 when President de la Guardia signed the first minimum wage law in this country.

The law provided for a minimum general wage of 40 cents an hour in this capital city and in the city of Colon. In the balance of the country, the minimum wage will be 25 cents. The minimum for domestics was set at $15 a month.

The Chamber of Commerce, the Industrialists' Syndicate, and other similar groups bitterly oppose the new legislation and will challenge its constitutionality before the Supreme Court, they say.

Merchants and monopolists comprising the ruling families here have successfully protected their interests against any minimum wage law for 56 years. This group asserts the new minimum wage will bankrupt the country. Some local capitalists threaten wholesale reductions in the number of their employees, and others state they will relocate in rural areas to get the cheaper rate.

EXPLOITATION RESISTED

The ruling families, who virtually control business here, failed to stifle minimum wage action this year because they are under heavy fire for exploitation of the working classes, who have become increasingly vocal and who threaten violence.

The desperate fight of the ruling class of Panama against paying the minimum wage to workers here is said by observers to be inconsistent with demands by the same group for higher wages for Panamanian citizens employed in the Canal Zone.

Despite the substandard wages in Panama, the governing families demand that all Panamanians employed in the Canal Zone be paid at U.S. wage scales, regardless of type of employment or of ability.

Official statistics show that Panamanian citizens employed by the Panama Canal enterprise are receiving an average wage of 80 cents an hour. The Canal Zone minimum wage is 56 cents an hour. Domestic employees in the Canal Zone, almost exclusively Panamanian citizens, receive at least double the minimum salary specified in the Panama law.

JOB SECURITY HAILED

Several years ago, in connection with the 1955 treaty, the Panama Government was asked to appoint representatives to work with U.S. officials from Washington to make a survey of prevailing wages in Panama. The purpose was to determine actual wages paid in Panama as a basis for establishment of wage scales for comparable work in the Canal Zone. The Panama Government would not permit such a survey to be made.

Because nearly all jobs in the Canal Zone are under civil service (open equally to Panama and United States citizens), employees are not subject to dismissal for political reasons. Panamanians welcome this job security which is absent in the service of their own Government.

Gustavo Trius, president of the Panama Chamber of Commerce, considers that the implementation of the minimum wage law will add to the deficit of the Panama Government, though overcommitted budgeting and a refusal to cut expenses before the May 1960 elections has produced a deficit of some $10 million in a $60 million budget.

CANAL TOLL HIKE URGED

Señor Trius' proposed solution to the problem is that the U.S. Government should increase the canal annuity to Panama from $1,930,000 to $10 million a year.

Satisfaction will be reached for Panama on the day when the United States operates the Panama Canal at its own expense with all the income generated by the canal going to the Republic of Panama. This proposal is the national aspiration of Panama today.

To step up the generation of U.S. dollars by the Panama Canal, a 300-percent increase in Panama Canal tolls is proposed by some top political leaders.

Two presidential aspirants, both recent members of the incumbent cabinet, have told this correspondent that a considerable increase in tolls is one of the immediate objectives of the Panama Government.

The Late Alvin R. Bush

SPEECH
OF
HON. JOHN A. LAFORE, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 6, 1960

Mr. LAFORE. Mr. Speaker, it is with a deep sense of personal loss and sadness that I rise to pay tribute to my distinguished colleague from Pennsylvania's 17th District, the late ALVIN R. BUSH.

He was a good man beloved not only by those who shared his political philosophy, but by those who disagreed.

As a new Member, I profited much by his experience, advice, and understanding.

His untimely death was not only a great personal loss but a loss to the State and Nation he served so well.

I would like to express my heartfelt sympathy to his family.

Indian Newspaper, the Birney Arrow, Fast Becoming Institution

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, January 7, 1960

Mr. MANSFIELD. Mr. President, journalistic talents among the Indian residents of Montana seem to be blossoming as never before. A recent Sunday edition of the Great Falls Tribune carries a feature story about a small newspaper which is fast becoming an institution.

The articles of the Blackfeet Indian reporter, John Tatsey, have become widely known throughout the country for their wit and humor. John now has a competitor. Donald Hollowbreast, a Cheyenne Indian, is editor of a home-printed newssheet called the Birney Arrow in his small community of 230 people on the northern Cheyenne Reservation.

The style of the Arrow is unique in style and content and it devotes its columns to reporting the everyday happenings of the colorful people who live at Birney. Since the Bureau of Indian Affairs has had to give up financing this operation things have been rather rough, and until a generous subscriber contributed a typewriter, and a local mimeograph machine turned up, it looked as though the paper would have to fold.

This is an example of rugged journalism at its best.

Mr. President, I ask unanimous consent to have an article from the January 3 issue of the Great Falls Tribune printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARROW MIRRORS INDIAN COMMUNITY LIFE—BIRNEY NEWSPAPER FAST BECOMING INSTITUTION

(By Margot Liberty)

BIRNEY.—Some of Montana's Indians are getting into the news these days, with a bang, through the efforts of on-the-reservation reporters whose releases more than make up in interest for their occasional slips in propriety and punctuation.

Most famous of these, and the one who's been going longest, is John Tatsey of Browning's Glacier Reporter. Tatsey has earned the attention of many notables, and has been the subject of nationally circulated stories. Less known but in the running is Donald Hollowbrest, a Cheyenne Indian from the tiny 230-person community of Birney.

Hollowbrest has been editor of a home-printed newssheet called the Birney Arrow

since February 1958, during which time the Arrow has become something of an institution. It was begun under the Bureau of Indian Affairs adult education program, as one means of inducing the local population to read and write.

Under teacher Margot Liberty, it employed anyone it could find as reporter, and was produced weekly on Bureau duplicating equipment, to be distributed free to residents of the Birney Cheyenne village. Very quickly, though, the chief responsibility was assumed by Hollowbrest, who has seen the paper through more than 50 issues since it got underway.

Hollowbrest, a lifelong resident of Birney, took to journalistic pursuits like a duck to water. A ranch laborer in the Birney area when work is available, he is kept busy when not working by his interest in art, doing many oil and water-color paintings of Cheyenne subjects. He attended reservation schools and for a brief period went to the Chemawa Indian School at Chemawa, Oreg., where he gained a good command of the English language at which may Cheyennes are not very proficient.

But he now is handicapped by partial hearing, so that much news for the Arrow is gathered by a combination of ancient Indian sign language with older citizens, and the exchange of notes with those who prefer and have mastered the modern system of writing things down.

This, however, has not limited the range of topics covered in the paper; far from it. These range from reports on the weather to Government programs involving the Cheyennes, the current employment situation, the conduct of tribal ceremonies, whose dog bit whom in the village, and which unfortunates have been borne off by local officers of the law.

It cannot be said that the Arrow has attained fame or fortune. Its closest approach to the former was an attempt to republish its choicest items by the Hardin Tribune-Herald, which was shortly abandoned.

The paper's circulation has never allowed it to more than break even. Issues are distributed free to Birney Indians, but are sold at the rate of $1.50 per 10 issues for mail subscriptions to nontribal members.

The paper's finances were in far better shape before it was forced to seek commercial duplication by a BIA decision. Use of Government equipment was permitted even after the paper got out from under the wing of the adult education program, until complaints from individuals in the community made it seem best not to give official sanction to the paper by putting it out on Uncle Sam's machinery.

The Arrow nearly had to give up the ghost. However, a loyal subscriber in Chicago produced a typewriter; local mimeographing facilities were lined up, and the Arrow still comes out.

As the mirror of an unusual small community, the Arrow may claim to be unique in both style and content. A random sampling of its pages yields items like the following, in endless variety:

"Alice Hardground almost lost control of her pickup yesterday this side of Lame Deer on a straight section of the road, giving her passengers a scare so we hear."

"Whose unthinking it is to leave the gate open at the Tie Creek fence on the Ashland pasture. Just please shut the gate. Everyone knows that gates are intended to keep stock in the respective pastures."

"Calling the attention of non-Indians in general that Fred Lastbull should first be asked questions regarding Indian curios he may be selling to see if they are his own or belonging to someone else."

A Typical Story of People Helping People Through Encouraging Thrift Is Symbolized in the 35-Year Career of Myron H. Fox

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. COLLIER. Mr. Speaker, in a day and age when sound financial institutions are the key to the economic strength of each community as well as the entire Nation, it seems fitting and proper that tribute be paid to those who have played a vital roll in this field. The Chicago area is certainly one of the most important financial centers in the Nation. Its banks, stock exchange and board of trade, together with the many savings and loan and building and loan associations, have been a tremendous pillar of strength in the well-being of its million residents.

Let me direct your attention today to some very interesting facts in one specific field of finance which symbolizes the story of people helping people, and to a resident of my congressional district who has devoted 35 years to this program with success.

There are today more than 6,000 savings and loan associations located throughout the United States with total assets of over $60 billion as of December 31, 1959. Three of the Nation's eleven largest savings and loan associations are in the Chicago area. These organizations have been a vital part of our economy since 1831.

What is a mutual savings and loan association? It is a home-financing and savings institution managed by a local board of directors, elected by the association's savings and mortgage members. Such an institution is organized primarily to promote thrift, and to finance the building, purchase, repair and remodeling of homes.

These savings and loan associations have their own central reserve system in the Federal home loan bank system, and are controlled by Federal and/or State laws.

Since my remarks are properly a tribute to Myron H. Fox, who is the president of one of these great financial institutions—the Bell Savings & Loan Association of Chicago, it is interesting to mark the history of this association as one which reflects all of the principles and values of a mutual savings and loan system.

It was back in 1925 that Mr. Fox and 12 employees of the Illinois Bell Telephone Co. got together and subscribed their personal savings to five shares each in a newly formed savings and loan group. This particular group of employees was having a difficult time in securing mortgages for the purchase and construction of homes. Because the need of financing in their particular case was a mutual problem, they decided in the characteristic American fashion to help themselves by pooling their savings.

This was the humble beginning of an institution which originated with a subscribed capital of $6,500 and which today has resources in excess of $250 million and more than 100,000 customers. Its total earnings distributed to customers by the association during the past 35 years, during which Mr. Fox has served the association, has been more than $46 million. In this 35-year period the Bell organization has made more than 50,000 mortgages in the fast-growing Chicago metropolitan area.

A man such as Myron Fox deserves more than mere commendation. His warm understanding of his fellow employees and of the problems of the customer and his keen business sense have served as a beacon light through 3½ decades of the association's steady growth. His confidence in the future and his vision to foresee the tremendous potential growth of the association mark him as one of Chicago's outstanding financial executives.

Mr. Fox frequently refers to himself as the "last of the Mohicans" because he is the only one of the original founders still engaged in its day-to-day management. He often recalls that his first word of encouragement to form the savings group in 1924 came from the late Chicago banker, David R. Forgan, who told him: "young man, the things that succeed today are those things that are properly managed. If you can assure yourself of obtaining proper management of such an enterprise, it should prove successful."

Mr. Fox recalled that the late Bernard E. Sunny, the then chairman of Illinois Bell Telephone Co., with whom Fox discussed the question of organizing such an association, remarked to him: "you should remember this, if you and your group decide to proceed with the organization of a savings and loan association and it proves successful, everyone will take credit for it, but, if it should fail, no one will be blamed but Mr. Fox."

He now admits that the full meaning of Mr. Sunny's remark takes on added significance as the years go by. It is Mr. Fox's belief that "* * * his words have had a great part in impressing all of us here of our growing responsibilities to each saver, and borrower, and to the community."

Myron Fox was born in Rockford, Ill., December 16, 1894. While Myron was still a small boy, the family moved to Springfield, Ill., and here he attended public school and high school. In 1918 he joined the U.S. Navy as a seaman first class and served 16 months in the European theater.

This month in Chicago Myron Fox steps down from his daily administrative responsibility as president of Bell Savings to the position as chairman of the board of directors. His successor is Harold P. Halleen, whose more than 30 years in the field of finance insure continued excellent management for the association in the future.

Mr. Fox has been vice chairman of the board of directors of the Federal Home Loan Bank of Chicago, is a member of the Board of Savings and Loan Association Advisors to the Department of Financial Institutions, State of Illinois, and a leading figure in other local and national savings and loan activities. As he now takes his place among the industry's elder statemen, it is encouraging to know that Bell Savings and the entire field of savings and loan management will still have access to his boad practical knowledge and the continuing benefit of his wise counsel.

He and his wife Almah have been residents of Oak Park, Ill., for more than 26 years. They have one married daughter, Mrs. Thomas H. Cloke, Jr., who resides in Glen Ellyn, Ill., with her husband and three children.

Let it be said that Myron Fox is an American in the best and finest sense of the word. He made his own way by virtue of his own abilities and his devotion to high ideals.

He firmly believes that the savings and loan business will continue to grow and he fully expects Bell Savings will grow right along with it. In commenting on this he said: "Our business has made its greatest strides in the past 16 years—the post-World War II period—and as people become more conscious of buying their own homes through savings, the idea of building for the future will become more and more a habit with the American people."

And this, as he himself often remarks, is a clear case of people helping people.

New York's Billion Dollar Racket

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the New York Journal-American, Jan. 4, 1960]

GAMBLERS HOLD OPEN HOUSE FROM PARK AVENUE TO PIERS

(By James D. Horan, Dom Frasca, and John Mitchell)

Care to bet?

Take your pick—ponies, policy, or dice. You won't have to go far in New York to place your bet or try and make your point.

If you have friends or kissing kin in the Social Register you probably can get into a Park Avenue game where croupiers from a Havana casino will rake in your cash with continental charm.

But if your blood isn't blue don't give up hope—there are more than 30,000 bookmakers in the city ready to write you a marker from $2 to $1,000.

If you prefer dice or cards there are any number of "social clubs" that will accommodate you.

In brief, gambling is rampant in the five boroughs. This is what a team of Journal-American reporters discovered after conducting a citywide probe of all types of gambling.

Most of the gambling setups are run openly—sometimes under the eyes of the police.

GIMMICK INVENTED

The reporters also discovered that the gambling underworld has invented a new gimmick to circumvent the law. It is flash paper, a chemically treated 5 by 7 sheet which flares up when touched with the tip end of a lit cigarette.

Off-track bookmakers and lately policy racketeers ignite the paper at the first sound of a police raid. In seconds the list of bets, required by law for a conviction, is a charred ash.

The underworld sells the paper in envelopes with the legend "Fire at Your Fingertips" to members of the syndicate at $1 a sheet.

FLASH PAPER TRACED

Reporters traced the flash paper to "Big Rudy" Atlas, called "King of the Bookmakers." Atlas, arrested several times by the New Jersey State police as an important link in the national gambling syndicate, is now operating on Long Island.

While the gambling underworld invents new tricks to fool the law, it apparently doesn't lose stride even when attacked by such agencies as the New York State Commission of Investigation.

Last October, State police in 18 counties smashed in doors, scooped up books, betting information, and other evidence that will be used in the prosecution of 140 persons arrested.

Despite the dramatic raids some reports claim that the best the statewide action accomplished was a 36-hour interruption of business.

INTERSTATE SETUP

One of the major points proved by the raids was the interstate nature of the vast gambling operation. Oddly, the commission has been unable, thus far, to locate any direct ties between the bookmakers of upstate communities and gambling interests here in the city.

However, these reporters, through an informant, located a gambling setup in a Manhattan store which reportedly "lays off" bets out of the city. Among the members of the syndicate said to operate this setup is a gambler with an international reputation. In 1958 he was ordered out of Windsor, Canada, by the Royal Mounted Police for his gambling activities.

Windsor was also the headquarters of the Canadian-United States gambling operations of Carmine Galenti, top Mafia hood. Galenti was later arrested in a New Jersey farmhouse by State troopers and extradited to New York to face narcotics charges.

LOOKOUTS POSTED

Reporters found lookouts posted at both ends of the street where the gambling setup was located. Despite the early hours the lookouts were on the alert. One followed a reporter three blocks. Later he was observed writing the license plate of the newsman's car on the margin of a newspaper.

"You walk into the store," the informant said, "and you will be faced with a 6-foot wooden partition. Behind it is a man who takes only money. On the corner is a drugstore. Here the bets are phoned all over the State and to New Jersey from a telephone booth. They have the setup so rigged that in case of a raid all that would be found in the store is money—and that's no crime."

The informant said the setup has been in operation "for some time." When he was asked why it never has been raided, he arched his eyebrows.

"Isn't that obvious?" was his reply.

POLICE GET DATA

(The name of the gambler, which is withheld, and the details of his gambling operation have been turned over to police by this newspaper.)

In their survey of the city's gambling operations, the Journal-American team found Brooklyn and Manhattan neck and neck as the boroughs in which gambling is the most widespread. The Bronx was next. Queens and Staten Island were not far behind.

In downtown Brooklyn and in West Harlem policy was booming day and night. Reporters found the racket in these sections to be highly organized with lookouts posted at strategic points ready to give the alarm if suspicious strangers make an appearance.

Manhattan's garment district was found to be swarming with runners for both bookmakers and policy racketeers. The opportunity to gamble was virtually thrust upon one. Every weekend a floating dice game big enough to attract out of State players operates on Staten Island.

HARD TO PIN DOWN

The game is as hard to pin down as quicksilver. In the past few months it has been held in a remote barn, a garage and the basement of a man who is said to be a relative of the operator of the game. Reporters who posed as visiting businessmen looking for "action" were directed to a tavern "where you get the okay."

The reporters' survey of gambling in the city began on a Saturday morning at 10 o'clock when the "numbers action" was beginning.

For part of the tour they were accompanied by a veteran gambler. However in the garment center they simply bought a "scratch sheet" and were directed to bookmakers by cart boys or elevator operators. Off-track betting was seemingly accepted as a part of the life of the bustling area.

"How many places will you visit?" the gambler was asked.

"Five, 10, 15," he said with a shrug. Actually in their tour the newspapermen visited more than 25 gambling centers.

He started at Fulton and Washington Street, where he made a bet on a number combination (277—it didn't win). The policy operator made no pretense at secrecy. He simply wrote the numbers on a small pad, accepted the coins and gloomily discussed his arthritis. Three other players made their bets before the reporter left.

A tavern near Washington Street which takes policy, off-track betting and holds dice games in the rear, was the next stop. The gambler made a bet on a horse and another series of numbers.

A restaurant near Carroll Street, which the gambler identified as one of the largest drops in Brooklyn, apparently had some New Jersey connection. Four New Jersey Cadillacs were parked outside. One had an ILA sticker.

STAND AT BAR

Inside, several hard-looking characters stood at the bar. Off-track betting and policy playing were open. According to the gambler, the New Jersey cars left with the "ribbon"—the adding-machine tape of numbers played—in the afternoon and returned in the evening with the money for the winners.

The drop is reportedly a rendezvous for mobsters. Two of its regular customers are notorious jukebox strongarm men who were named in the 1958 Senate hearings on the underworld's infiltration into the industry.

A high-stake card and dice game is held on an upper floor of the building, the gambler told reporters.

RUN BY "GRANDMA"

In quick succession the reporters and the gambler visited 15 gambling spots on Fifth Avenue, Flatbush Avenue, Third and Fourth Streets, 11th Avenue, and 67th Street. One policy drop was run by a soft-spoken white-

haired grandmother whom the gambler called "the smartest policy operator in Brooklyn."

As he explained: "Her son has the policy setup in the back room. The store is strictly a blind. If you had gone in alone the old 'gal' would have warned the son by hitting the cash register. If someone buys something she takes the change from a small box."

To test the grandmother's alarm system a reporter went back in and bought a pack of cigarettes. The smiling old lady ignored the cash register to carefully count out the change from a cigar box.

In Manhattan the reporters found off-track bookmakers operating in almost every part of the city. In West Harlem, policy was running both day and night. The newsmen who visited more than 30 drops found the syndicates so well organized that the mob has established a night shift to take night numbers.

These are number bets placed by players who hold night jobs. The drops accepting the bets all appeared to be busy. At one store eight men, two with lunch boxes, were openly making bets on a number combination.

BUSY LENOX AVENUE

The busiest policy drops were on Lenox Avenue between 110th and 125th Streets. Ironically, this is the area involved in last year's big police shakeup. Uniformed patrolmen walked their beats but the policy operators ignored them as they accepted the bets.

One of the busiest drops was located in a so-called fish store. The windows were grimy and dirty; there was no fish or ice visible. Inside, the numbers runner was taking down the bets on a spiral-roll notebook.

"This numbers 'guy' gets a new Cadillac every year," was the comment of the gambler.

The reporters found policy drops in restaurants, fruit stores, some obviously used as fronts; taverns, and hallways. All operated openly.

Two high stake dice games were located in Manhattan; one is held every weekend in a shabby hotel near 8th Avenue, the other in a fashionable East Side hotel. Cabdrivers in the Pennsylvania Station area frequently steer out-of-town gamblers to the first game for a $5 tip. Reporters were advised to go direct to the second hotel and make your connection through a bellboy.

Big time gambling is no stranger to Park Avenue's palatial pethouses and duplex apartments. The glittering scene is always the same; beautiful women hover about the tables. They are either friends of the owner of the apartment who is putting on the gambling party or else they are props. Liveried servants offer imported caviar and champagne—both on the house. Havana-imported croupiers, all looking like early Caesar Romeros, rake in the money. The game goes on all night.

In the morning the tax-free thousands are cut up between the owner of the apartment and the croupiers. It was both a profitable and dignified night's work.

An estimated 300 bluebloods lost a small fortune at Park Avenue's most recent dice and roulette party. Eyewitnesses reported it was reminiscent of the famous 1948 charity gambling party in Vivienne Wooley-Hart's penthouse.

The millionaire who threw the party held it in his apartment less than a half mile from the scene of the party which had made headlines more than a decade ago. Guests were openely invited to the roulette party.

"This time there was no pretext about the party being a charity affair," a blueblood reported. "The proceeds went into the pockets of the crew of the professional gamblers who had been imported from Havana."

Maine Canner Sets a World Record With Seven Millionth Case of Sardines—Value $60 Million

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. McINTIRE. Mr. Speaker, in consideration of the emphasis that is presently being placed on frozen, dehydrated, and other forms of processed foods in our grocery centers today, one might be very apt to overlook the highly significant part that canned goods have played and will continue to play in satisfying the consumer's food needs.

The State of Maine is very definitely in the foreground in canning activities, as is evidenced by the following article which appeared in the December 23 issue of the Machias Valley News-Observer:

[Machias Valley News-Observer, Dec. 23, 1959]

MAINE CANNER SETS A WORLD'S RECORD WITH SEVEN MILLIONTH CASE OF SARDINES—VALUE $60 MILLION

BANGOR.—John Toft, vice president and Portland plant manager of the R. J. Peacock Canning Co. this season, chalked up his world record 7 millionth case of Maine sardines, and was honored for the achievement when he received a suitably inscribed silver tray from the American Can Co. and a handsome scroll from a national canning trade magazine, at the annual fall meeting of his fellow canners and associates at the Penobscot Hotel.

The awards were made by Robert Kinne, Canco's Maine sales manager, of Portland, and the Maine Sardine Packers' Association president, Roy Bailey, of North Lubec, who acted for the publisher of the magazine. Each complimented Toft on his accomplishment as a production expert and aggressive leader in developing new techniques, processes, and machines used in the sardine industry.

In a short speech of acceptance, Toft stated that his sardine career has been an eventfull and interesting one and that he would go right back into the business if he had his life to live over again. "Although I am 72 years old I fully expect to be around to see my 10 millionth case roll down the production line," he told the group.

The industry claims a world record for the veteran canner, and does not expect anyone to dispute it.

The 7 millionth case meant 700 million cans, valued at more than $60 million, which have been produced under Toft's management since he got his first executive job in 1905.

Piled on top of each other, these cans would reach 11,500 miles in the air, while placed end to end they would stretch twice around the world. The total would provide every man, woman, and child in the United States with four cans of sardines.

Toft has achieved a lot of other "firsts" during his long career which have helped to improve the efficiency in the fields of fish supply, production techniques, and quality improvement for both his company and the industry in general. He is credited by many as being the originator and developer of the following important phases of the sardine operation:

Radical improvements in the speed and mechanism of retort cooking;

The first can washer which replaced the method of cleaning cans, after processing, in cylinders filled with sawdust;

The present high speed mechanical fish and can conveyor systems;

The first pump for loading and unloading fish from the carrier boats in 1942 and for which he was granted a patent in 1946. This device cut a 6-hour job down to 55 minutes;

The can cook method of processing sardines;

The bar type, self cleaning screens on fish pump hoses;

Refrigeration and brine circulating systems, for preservation and holding of fish in the factory; plus numerous other gimmicks and gadgets that have been widely copied by other sardine and food packers.

In addition to this great record, Toft has been instrumental in helping his company to set up these records:

The first in the United States to wholly equip its fleet of boats with ship to shore telephones;

The first in the Nation to equip fishing boats with radar;

Pioneer fishing by use of fathometers and wrapping machines for sardine cans.

Toft employs 325 people in his company's plant at the height of the season, and, although Toft is a hard-headed, practical businessman, most every one of them calls him by his first name.

"I work closely with each of our employees and try to train them to produce a high quality sardine for us so that we can reward them with a happy shop and steady work at good wages," Toft said.

He believes that the Maine industry has a promising future. A growing public recognition of the health and nutritive values of sardines, quality control and technological research, advertising and promotion and the growth of population are some of the factors that he sees to support this contention.

A Trescott grammar school graduate, Toft first saw the inside of a sardine plant, as a paid worker, at his home town, Lubec, where he operated the first can sealing machine used by the industry in 1904. After a varied experience as foreman and superintendent of sardine plants, he joined his present company as vice president and superintendent of the Portland plant in 1933. This shop is the largest in the State, and has packed as high as 4,000 cases, or 400,000 cans a day, with 2,500 cases about the average.

Mr. Toft lives at South Portland with his wife and daughter, Mary. Their only son, Charles, was lost at sea as a naval lieutenant on a weather ship off Greenland, during World War II.

Toft is active in civic affairs and at the present time is president of the gubernatorial appointed Maine Port Authority. He is a former president of the Maine Chamber of Commerce, and vice president of the National Propeller Club.

Frank McKinney, Man of the Year

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, January 7, 1960

Mr. HARTKE. Mr. President, one of the many great civic responsibilities exercised each year by the Indianapolis Times is the selection by its editors of a "Man of the Year."

This honor for 1959 was given to an Indianapolis citizen, well known throughout the United States, Frank McKinney. When the Times selected Frank McKinney as its 1959 Man of the Year this came as no surprise, I am sure, to his host of friends. He is one of the outstanding businessmen of the country, and although he has achieved nationwide recognition, he has not neglected his State or his home city.

Because of his faith in Indianapolis as a growing city and because of his leadership in endeavors instituted to improve Indianapolis as one of the great cities of the United States, he has been justly recognized by the Times as the 1959 Man of the Year.

I know that most Members of the Senate know Frank McKinney well. And I know that they, as well as his many friends throughout the country, join me in wishing for Frank McKinney continued success and happiness.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the article from the Indianapolis Times announcing Frank McKinney's selection as the 1959 Man of the Year.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

McKINNEY IS NAMED TIMES MAN OF YEAR—BANKER-POLITICIAN HONORED FOR WORK TOWARD CITY GROWTH

(By Ted Knap)

The Indianapolis Times today named banker-politician Frank E. McKinney as its 1959 man of the year.

Times editors voted the honor to Mr. McKinney because he has demonstrated with action his faith in Indianapolis as a growing city.

He demonstrated it with time, money, and energy. Mr. McKinney heads the realty corporation that erected the sparkling $4 million Fidelity Building on the Circle, latest showpiece of a downtown getting its first face-lift after 30 years of wrinkling.

He heads the board of community-owned Indians, Inc., which rescued the Indianapolis baseball team from extinction three years ago and went into the black for the first time in 1959 with paid attendance of 236,000.

He is president of the Indianapolis Civic Progress Association, board chairman of St. Francis Hospital and Memorial Clinic, State chairman of the U.S. Olympic Finance Committee, treasurer of the Indianapolis Athletic Club and board member of United Fund, Hospital Development Corp. and the Boy Scout Council.

The job that takes most of his time these days is board chairman of American Fletcher National Bank & Trust Co., which became Indiana's biggest bank last July when it merged with Mr. McKinney's Fidelity Bank & Trust Co.

Fidelity had assets of $1.5 million in 1935 when upstart McKinney bought controlling interest on a $100,000 borrowed shoestring. It had $150 million in assets when it merged with American Fletcher, making combined assets $525 million.

The rise of Francis Edward McKinney is so Horatio-Alger-like that it tends to be corny, and almost incredible.

He was born 55 years ago on the South Side (20 LaGrande), son of a city fireman (lated fire chief and now, City Councilman Roscoe McKinney). He quit high school in his sophomore year to start work in a bank, but continued in Indiana University night school for 6 years. When he married Margaret Warner in 1932, he was making $45 a week.

"After the honeymoon," he recalls, "a $140 insurance premium came due and Margaret had to pay for it out of her earnings as secretary" at Indiana Bell (of which Mr. McKinney is now a director).

The old South Side home where Frank McKinney was born had no bathtub. His showplace at 300 Willow Spring Road, Williams Creek, has four baths (but not a bowling alley, as one New York paper reported).

At home are three of his children, Robert, a customers' man for Merrill Lynch, Pierce, Fenner & Smith; Frank, Jr., an IU and Olympic swimming star, and Kathy, a pupil at Christ the King Catholic grade school. An older daughter, Claire, is the wife of James Clark, brother of ex-Mayor Alex Clark.

Frank McKinney's business influence is now nationwide. He is on the board of U.S. Corrugated Fibre Box Co., Knox Glass Co., WISH-TV, and American Income Life Insurance Co. He once owned half a dozen radio stations.

He got his first big break through politics, and he capitalized on it, just as he did on many later opportunities. It started one wintry night in March 1933 when his friend, Owen Bush, took him to see County Treasurer Bill Clauer. Ownie was then a big league baseball manager and Frank McKinney was handling his financial affairs.

Mr. Clauer confided he would not seek reelection. He and Mr. Bush persuaded 29-year-old Frank McKinney to give it a whirl. He was nominated and elected to take office January 1, 1936.

In 1935, as county treasurer-elect, Mr. McKinney borrowed $100,000 and bought controlling interest in Fidelity, then the smallest bank in Marion County. As collateral for the $100,000 loan, due to be repaid in 4 years, he offered the expectation that he'd make that much in 4 years as county treasurer.

And make it he did.

In those days, the county treasurer's remuneration consisted of fees for collecting delinquent taxes. The fee was 6 percent during his first term, 3 percent during his second.

The office turned out to be the most "lucrative in Indiana in those years. People started to pay back their delinquent taxes. The depression was over. I worked like heck. It goes without saying that I liquidated my $100,000 obligation in short order and had my bank stock free and clear," Mr. McKinney recalls.

That was the only elective office Frank McKinney ever sought.

He held two Federal posts after World War II—in 1946 as Vice Chairman of the Office of Contracts Settlement and in 1949 as Chairman of the Military Housing Commission. During the war he served 4 years as an Army colonel, in charge of a New York office making loans to war contractors.

His political organization posts have been as treasurer of the Democratic county and State central committees, as vice chairman of his party's national finance committee in 1940 and as Democratic national chairman for 1 year under President Truman.

When Mr. McKinney gave up that post in 1952, he retired from active politics.

But people in politics keep coming back to him. That's why Mr. McKinney is frequently the largest contributor to his party here. That's why he is working for the 1960 nominations of State Senator Mathew Welsh for Governor and U.S. Senator STUART SYMINGTON for President. That's why he has political allies in the Democratic Congress and even the Republican statehouse.

"I guess I'll always be interested in politics," he said. "It behooves every man, especially businessmen, to devote at least 2 years of his life to politics in the party of his choice. If people look down their noses at politicians, our two-party system and government will crumble, because politics is government."

Politics has been Mr. McKinney's sideline by chance rather than by choice. His preference is for baseball and other sports.

The former manager of Sacred Heart High School's Young Men's Society semipro team (he couldn't make it as second baseman) has owned the Louisville Colonels, Indianapolis Indians, and Pittsburgh Pirates.

He now wants to help start what could become his biggest venture—an organization to promote all sports in Indianapolis. It would, under individual ownership, promote professional baseball, football, basketball, hockey, and other sports.

"There'll be a million people here by 1975," he predicts, "and they'll be looking for entertainment. There's a crying need for a new stadium seating at least 25,000. I think Victory Field could be expanded to that if we could provide parking. And I'd flood the field in the winter for ice skating."

Along those lines, Mr. McKinney also sees a crying need for a new, deluxe downtown hotel with about 600 rooms and penthouse supper club.

"That's my next project," he said. "I've had a survey made by three large hotel people (the Zeckendorfs, Hiltons, and Statlers). They're interested in Indianapolis."

Mr. McKinney sees a new downtown hotel as a logical extension of recent renovation of downtown Indianapolis. Just the past 2 years have seen the rise of the Indiana Building on Market, the Indiana Bank Building on Maryland, the ISTA Center on Capitol, the Merchants Bank Building at the point of Virginia Avenue, and the 12-story glass and aluminum Fidelity Building on the Circle. Also rising are new State office buildings and the city-county building.

"These are the first new downtown office buildings since the 1920's," Mr. McKinney reported. "We are in the throes of big redevelopment. I think Indianapolis is just to the point of moving into long pants."

And Frank McKinney, with only wisps of gray showing in his wavy black hair, looks like he'll be around to do some of the tailoring.

TIMES MEN OF THE YEAR

1955: Eugene N. Beesley, president of Eli Lilly & Co., which pioneered mass production of Salk polio vaccine.

1956: Carl R. Dortch, Indianapolis Chamber of Commerce government research director, for pushing legislation that led to the metropolitan plan commission and expansion of Greater Indianapolis.

1957: Frederic M. Hadley, chairman of the first United Fund campaign, which went over the top.

1958: John G. Tinder, Marion County prosecutor, for his investigation and prosecution of the State highway scandals.

A Tax Bill To Aid Commuters

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. PILLION. Mr. Speaker, in reading the New York Herald Tribune of Sunday, January 3, 1960, I read an article by Donald I. Rogers devoted to "A Tax Bill To Aid Commuters." This article dealt with a bill, H.R. 6739, introduced in the 1st session of the 86th

Congress by my colleague from New York, Representative FRANK J. BECKER.

The vast growth of urban population in recent years and the ever-increasing cost of transportation has placed a very heavy burden on a large part of our working population. I, therefore, feel that the arguments put forth in the article by Mr. Rogers on behalf of Mr. BECKER's bill are valid, and I hope that every consideration will be given to this matter just as soon as possible.

A TAX BILL TO AID COMMUTERS

Now that the Congress is giving more than passing consideration to revision of the tax laws and the Joint Committee on Internal Revenue is working out an extensive report, it is possible that a laudable bill (H.R. 6739) introduced by Representative FRANK J. BECKER, Republican, of New York, designed to give relief to the overtaxed commuter, will get more favorable attention than it has in the past. The measure was introduced last April and referred to the Ways and Means Committee where it disappeared into the mysterious labyrinth reserved for bills which have not occasioned great public clamor.

The Becker bill would add a new section to the tax code, section 217 of part VII of subchapter B of chapter 1 which would be entitled "Expenses of Transportation To and From Work." It would read:

"There shall be allowed as a deduction the ordinary and necessary expenses actually paid or incurred by the taxpayer during the taxable year for transportation to and from his place of employment or self-employment.

"The deduction allowed any taxpayer under this section shall not exceed $200 for any taxable year."

In a year when Congress is obliged to find more revenues for the insatiable monetary appetites of Government, such a bill may not attract immediate support. It will, however, if the public gets behind it.

It seems wrong, somehow, to permit the deduction of traveling expenses if a man is selling or pursuing his business duties, but to deny him any allowance whatsoever for the expense of getting to and from his place of business. A relatively high-paid automobile salesman can get a deduction for the gas he burns up in demonstrating a new car, but an underpaid secretary can't deduct the bus fare she has to pay to get from Teaneck, N.J., to Manhattan in order to perform her daily chores.

The Becker bill, in any light, seems to be a legitimate correction of the present system. Why shouldn't the commuter get this tax break when a businessman traveling for a firm is entitled to tax deduction for business expenses?

Representative BECKER cites the example of a woman who drives 45 miles daily to teach in a school which has found it difficult to get teachers residing in the area. Her husband sells for a large concern and gets his traveling orders via telephone. Those orders might cause him to fly to Boston or Philadelphia. His expenses are deductible. Hers are not.

As a toiler amid Manhattan's towers who is the senior parent of a large family of small children, I am obliged to maintain my home on Long Island's north shore and commute daily on the lovable Long Island Railroad, a task I do not find unpleasant until it comes time to pay for my commutation ticket.

It costs me $8.90 a week for 48 weeks a year, or a total of $427.20 each tax year.

If I were selling shoelaces, I would be able to deduct that travel expense from my income taxes, but, alas, all I sell is words, and since it is for a salary, there is no deduction.

It would be fairer if I were allowed to deduct at least $200 out of the $427.20.

What, essentially, is the difference between the commuter and the traveling businessman? Why this glaring inconsistency in the tax laws? Actually, with the changing face of America's metropolitan complex, an increasing number of taxpayers live in the suburbs and commute to the metropolis. It is time the tax code was revised to account for this.

Representative BECKER's bill needs public support. He can use letters as ammunition. His office is room 1727, House Office Building, Washington, D.C.

"Josh" Has Served His Country Well

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by the distinguished writer, George E. Sokolsky, on the occasion of the retirement of the beloved Chaplain Joshua L. Goldberg, chief chaplain of the Third Naval District, together with a press release issued on the occasion of Chaplain Goldberg's receipt of the Legion of Merit:

"JOSH" HAS SERVED HIS COUNTRY WELL

(By George E. Sokolsky)

It is difficult for me to think of the Navy without Chaplain Joshua L. Goldberg, chief chaplain of the Third Naval District. He seemed to be a permanent fixture. He has been in this one post longer than chaplains serve anywhere and he has done so much beyond the call of duty that he is beloved by Catholic and Protestant although he is a rabbi.

Captain Goldberg is a curiosity. He came to the United States during World War I from Russia as an immigrant. He immediately enlisted in the Army and went to war. It was in the Army, during the war, that he learned his English, a language in which he preaches and teaches. After World War I, he continued his rabbinical studies although his knowledge of Hebrew and rabbinics was probably as great as most of his professors. Came World War II and Rabbi Goldberg enlisted for service in the Navy where he has remained ever since.

In the Navy, he is known as "Josh." Everybody knows "Josh" Goldberg because he has served everybody, doing the impossible, creating an esprit de corps which transcended religious differences. It cannot be said and should not be said that there is no difference of view and no bigotry in the chaplain services but as one who has seen the growth of this significant body of men, what can be said is that nowhere else in the world is it possible for Catholic, Protestant and Jewish clergymen to work together in such harmony. In fact, if a boy in our Armed Forces requires the comfort of religion according to the traditions of his church and his ancestors, he can receive the benefits from a clergyman of any faith and it will be done honestly without an attempt to proselytize.

Chaplain Goldberg played an enormous role in the development of this noble attitude and for his services he has gained respect if no other recognition.

NO COMPROMISE OF BELIEFS

His recent activities have been largely devoted to developing the same attitude and the same service in the military services of all the NATO countries and two conferences have already been held, one in Europe and one in the United States, in which clergymen whose denominations have been antagonistic since the 16th century met together and spent weeks together in mutual consultation and association. In this work no one compromises his own beliefs and principles. In fact, the slogan of the American Chaplain Services is "Cooperation without compromise."

The time has come, according to the law, for Captain Goldberg to retire. So he must leave the Navy at the end of this year. Being a man of enormous energy, he will continue to serve as an official of the Hebrew Union College-Jewish Institute of Religion, which is the seminary for training Reformed rabbis in this country. But it seems to me that it is a pity that the Government of the United States should have an arbitrary retirement system so that a man at the height of his career, able, brilliant, imaginative, leaves it and goes elsewhere.

Fortunately, Chaplain Goldberg was quickly co-opted for other work and at a salary which is larger than the Navy pays, but many are not so fortunate and we continue to lose good men because we do not have the sense to keep them. There are men, like Chaplain Goldberg, who stay on as long as the law will permit because they can afford to underwrite their public service or because they are willing to make sacrifices to serve their country. Then, at the peak of maturity they must retire somewhere to think about what they might have done more had they been permitted to continue.

If any man served this country beyond the call of duty, if any man served in a position all the hours of every day, knowing no time off and no private life, that man is Chaplain Joshua Goldberg, who once was called the religious diplomat of our time. And this can be said of him that every admiral who ever served over Chaplain Goldberg, that every man who was his Boss is turning out to honor him on his retirement. It is a rare quality that wins for a sky-pilot the friendship and respect of hard-boiled Navy admirals.

"Josh" deserves the love he has gained.

NAVY CHAPLAIN GOLDBERG TO RECEIVE LEGION OF MERIT

Capt. Joshua L. Goldberg, Chaplain Corps, U.S. Navy, Third Naval District chaplain, who will retire from active naval service as of January 1, will be presented the Legion of Merit by Vice Adm. Thomas S. Combs, U.S. Navy, commander eastern sea frontier, and commandant, Third Naval District, in a ceremony at the headquarters, at 10 a.m. Tuesday, December 29.

The press is invited to attend the ceremony, which will be held in the office of the commandant, room 1520, 90 Church Street.

The Legion of Merit will be presented for service as set forth in the following citation:

"For exceptionally meritorious conduct in the performance of outstanding services as District Chaplain, Third Naval District, from August 1949 to January 1960. Exercising sound judgment, diligence, and leadership, Captain Goldberg has been eminently successful in serving his fellowman through establishing and maintaining religious and human understanding and good will among all people. As the sole military chaplain representative on the Committee on Moral and Spiritual Resources of the International Information Administration, Department of State, he contributed materially to the success of the Committee through his numerous suggestions and recommendations regarding problems of understanding in various parts of the world. In his role as a special representative of the Chief of Naval Operations on a trip to Israel concerning matters of a

delicate nature and important implications in the field of international relations, Chaplain Goldberg succeeded in achieving an understanding whereby a naval attaché was assigned to Tel Aviv, and problems regarding visits by units of the 6th Fleet to Israeli ports were amicably resolved. As a member of the Armed Forces Chaplains Board for 5 years, he was instrumental in establishing the Board's governing policies, and contributed to its success as a liaison group between civic and religious organizations and the Chaplain Corps of the three military departments. Aware of the benefits to be derived from a better human understanding among members of the North Atlantic Treaty Organization, he organized and participated in two NATO Chaplains' Conferences, which have provided a better understanding betwen nations and navies of the NATO member countries regardless of various religious convictions. Chaplain Goldberg's dedicated service and outstanding accomplishments reflect the highest credit upon himself and the U.S. naval service.

THOMAS S. GATES, Jr.,
Secretary of the Navy
(For the President).

The Fulbright Program

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, January 7, 1960

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a report of the operation of the exchange program in Australia. The report was made to the Australian Parliament by the Minister for External Affairs on November 25, 1959, and I believe it should be interesting to all those who have followed the development of our exchange program.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

FULBRIGHT PROGRAM

DEPARTMENT OF EXTERNAL AFFAIRS,
Canberra, November 27, 1959.

The Minister for External Affairs made the following statement, by leave, on the Fulbright program in the House of Representatives on November 25, 1959:

"I lay on the table the following paper:

"REPORT OF THE FULBRIGHT PROGRAM IN AUSTRALIA FOR THE YEARS 1949 TO 1959

"I remind the House that tomorrow, November 26, is the 10th anniversary of the commencement of the Fulbright program. Ten years ago tomorrow, the Fulbright agreement was signed by the present leader of the opposition (Dr. Evatt) in his then capacity as Minister for External Affairs, and the then U.S. Ambassador to Australia.

"I believe that this report will be of value and interest to honorable members generally. It covers a period of very successful implementation of the mutual reciprocal exchange of academic persons, teachers and the like, between Australia and the United States of America. I pay tribute to Senator FULBRIGHT, now the chairman of the Foreign Relations Committee of the U.S. Senate, who was the originator of the legislation which enabled the Fulbright program to be carried out with Australia. The program is worldwide in its operation. I think that over 40 countries enjoy the privilege of exchanging academic and teaching personnel with the United States.

"The program in Australia was commenced by the agreement of the United States that about $5 million of surplus lend-lease funds remaining in Australia at the end of the war should be used for this purpose. In 1949, it was believed that the funds would last about 10 years, but, through prudent management by the council of the Fulbright scheme, the funds are now believed to be sufficient to carry on the scheme for about another 5 years. Without wishing to give precise figures, I would say that over the last 10 years about 500 Australians have been able to visit the United States and continue their studies there for the best part of an academic year, whilst about the same number of Americans have been able to visit Australia for the same period.

"One can say with truth that the Fulbright scheme has been a great success, and that it must have resulted in the diffusion of a good deal of knowledge among individuals of some substantial intellectual capacity in Australia and the United States. I think that I can express, on behalf of all honorable members, the gratitude of the Government and the Australian people for this generous gesture by the U.S. administration."

2. The leader of the opposition spoke, by leave, after Mr. Casey. Dr. Evatt said:

"In supporting the right honorable gentleman's statement, I should like to recall for the benefit of honorable members the basis of the Fulbright agreement and the subsequent arrangements. I think that the Australian Government alone, of all the allied governments which receive substantial lend-lease assistance from the United States, made a comparable contribution in return by way of what was called reverse lend-lease. For instance, we supplied large quantities of equipment, including clothing, to the United States and other allied forces. Australia contributed so much that, when the accounts came to be looked at after the end of fighting, there was almost a complete balance. Many other nations which had received great benefits from the United States of America were not in a position to make such a return, but Australia was. It was suggested by Mr. Chifley, who was then Prime Minister, that we would not ask the United States to forego the amount of the surplus funds held here. I think it was something like $5 million, although I cannot be sure of the exact amount. It was agreed that we would not ask the United States to forgive us that amount, although the contribution by the two countries were almost the same. There were tremendous contributions by Australia and tremendous contributions—greater, of course—by the United States.

"Then came the agreement which Mr. Chifley himself negotiated—I think with Dean Acheson—under which the balance which we owed was to be made available for purposes like this and for other purposes such as the construction in Australia at Australia's expense of buildings for the U.S. Government—as something that would help to confirm the ties of friendship which had been established during the war. Those are the facts. It was an arrangement of that kind. As the Minister for External Affairs (Mr. Casey) correctly says, it was completely negotiated by the Chifley government. Mr. Jarman, who was then United States Ambassador in Australia, and I signed the agreement.

"I want to mention another matter—not by way of complaint, but in order to point out that there has been an oversight. There is a board of directors which allocates these scholarships. On it, Australia and the United States are represented. But throughout the long period of its existence, not one representative of the present Opposition in this Parliament has sat on that board as an Australian representative, although the present Opposition Party, when in office, negotiated the original agreement. I ask the Minister, not to decide immediately, but to look at the matter afresh and see whether it is possible to include a representative of the Opposition. It should be, because this scheme owes so much to the initiative of Mr. Chifley. If this were done, the administration of the scheme would be helped, and I think it would be strengthened in certain respects. I entirely agree that this is a great scheme. Senator FULBRIGHT, Dean Acheson, various U.S. Ambassadors, and others from the United States have done a great deal to make it successful. I just want to add the proposition which I have just put for the Minister to consider at his leisure."

Membership Rally of World War I Vets at Peabody, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. LANE. Mr. Speaker, the John J. Splaine, Jr., Barracks No. 12, of Salem, Mass., is one of the most emergetic units of the Veterans of World War I, of the U.S.A., Inc.

When the national organization announced the beginning of a drive to enroll 1 million members, Barracks No. 12, promptly swung into action. A call was sent out to members of the World War I Veterans of the U.S.A., Inc., in the eight cities and towns near Salem, to join Barracks No. 12 in a membership drive.

On Sunday afternoon, December 6, 1959, a very successful rally was held at the V.F.W. Hall in Peabody, Mass., under the leadership of the John L. Splaine, Jr., Barracks of Salem.

The senior and junior department vice commanders of Massachusetts were present. George Leary, national junior vice commander brought the greetings of the national organization; discussed the various pension bills; and gave helpful advice on ways methods to increase the membership.

It was my privilege to give the following address:

Greetings: All of us hoped, and I supposed most of us believed that World War I would be the last major war in history.

That was responsible for our attitude as veterans.

Many of our comrades didn't join any veterans' organization.

They went their separate ways, failing to understand that they would need the group as much as the group would need them to protect the legitimate interests of all veterans.

In December 1941 we suddenly sensed that a new and much larger group of veterans would come out of World War II. Twenty-three years had gone by, and so many things we should have accomplished had been postponed until another year.

When the very generous GI Bill of Rights was passed by the Congress in 1944 to help the veterans of World War II it made us look old-fashioned and negligent in promoting the unity and protecting the rights of World War I veterans.

Furthermore, we were no longer the last and strongest group of veterans.

And as we looked around at the changing situation it dawned upon us that we had no organization to represent exclusively the men and women who served from 1917 to 1918, and to speak for their special problems.

It was this lack that led to the establishment of the World War I Veterans of the U.S.A., Inc.

Its rapid growth within a few years shows that it is filling a long-felt need. At last we had a group to join that would be entirely our own and where we could share the same memories and the same interests.

Our first objective is to secure a pension for all of our comrades when they reach the age of eligibility.

Our second objective is to bring together all who served in World War I in a fraternity that will promote friendship and sociability.

It takes organizing skill and effort to do this.

We have not reached the thousands who would like to join but who need the helping hand of present members who will welcome them to our ranks and make them feel at home.

We have the incentives and the high morale.

I do not exaggerate when I claim that our group has more get-up-and-go than those groups of younger veterans who are indifferent, as we were at their age.

What we need is a plan of action, and enough volunteers to make it work; checking the records and drawing up lists of potential candidates for membership in our respective communities.

Do you ever stop to think of those classmates who graduated from school with you, who live in the same city or town as you do but whose paths have not crossed yours in years?

The situation is identical with respect to the aging veterans of the First World War.

Our job is to look them up, find them, and invite them to attend a barracks meeting so that they can enjoy a reunion with the buddies of long ago and actually see the programs we are arranging to revive that comradeship and pride of service.

Even a man's family life, with all its fulfillments, does not provide an outlet for this remembered experience which every veteran cherishes in his heart.

Only in the company of other veterans can this fellowship live again.

This rally is the opening of a membership drive by John J. Splaine, Jr. Barracks No. 12 for the benefit of World War I veterans who reside in the nine cities and towns in the vicinity of Salem.

Let us not forget the indispensable role of the ladies in this drive.

Auxiliaries are providing fine cooperation in many other communities throughout the country. When you enlist the idealism, the enthusiasm, and the hard-working support of the women your success will be certain.

We have a goal and we are not going to be detoured from it.

Ever since the Revolutionary War, the Congress has provided pensions for the aging veterans of all wars, and with no income restrictions. These non-service-connected pensions were not based on need, and were not considered as a retirement plan. They expressed in tangible form the Nation's gratitude to those who had risked their lives in its defense.

In the last session of Congress, when Fred Hollenbeck testified before the Committee on Veterans Affairs he said, and I quote: "The files in our national headquarters are filled with appeals from men who have served in World War I pleading with us to do everything we can to secure for them a pension of $100 per month. These letters indicate that the writers do not have social security or other outside income and that they are in dire circumstances but do not want to go on the public dole to eke out an existence. They are bitter in what they feel is the lack of gratitude on the part of this Nation in not long ago having granted them the same consideration as has been granted to the veterans of all other wars prior to World War I." End of quote.

In that same session, a bill was passed that generally increased non-service-connected pensions for the veterans, widows and dependents of all wars.

While this was praiseworthy at first glance, it was not altogether pure and beneficent in motive.

For its hidden purpose was to head off and place a barrier in the way of pensions for all World War I veterans upon reaching the qualifying age.

The architects of this bill really fooled themselves. While sidetracking the drive for a World War I pension bill, they forced through a measure that, by taking in the veterans of all wars, will cost more than twice as much as the bill to provide a pension of $100 a month to all eligible World War I veterans.

There are approximately 2,700,000 living World War I veterans.

About one half are receiving service-connected disability compensation, or non-service-connected pensions.

In both cases, the amount received by the individual veteran is considerably less than $100 per month.

But the other half of this veteran population receive no compensation or pension from the Veterans' Administration.

The total cost of our bill covering the next 40 years will be less than $10 billion, or an average of $250 million a year. But the non-service-connected pension bill for all veterans, providing smaller monthly benefits, and squeezed by income limitations will cost more than twice the total of our bill.

The tactics employed against us have backfired.

Under the guise of economy, they have committed themselves to expenditures far greater than they anticipated in their preoccupation with stopping our pension drive.

Their argument that a pension for World War I vets would cost too much has been contradicted by their own actions.

We intend to go forward with our own bill.

We are determined that the discrimination which has operated against us shall be removed, and that the "forgotten veterans" of 1917–18 shall become the "recognized" veterans of the 1960's and beyond.

Through organizational meetings such as this, we shall increase the strength of our membership and its voice as we make steady progress toward the inevitable goal of a minimum pension of $100 per month for all veterans of the First World War.

The Administration and TV

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, January 7, 1960

Mr. PROXMIRE. Mr. President, in the Washington Post and Times Herald, as well as other papers around the country, there appeared on January 5 a perceptive column by Walter Lippmann, entitled "The Administration and TV." With his customary skill and insight Mr. Lippmann reviews the report made by the Attorney General in response to the questions raised by the President at the time of the recent television scandals. He proceeds to examine the thesis advanced by Mr. John Fischer, editor of Harper's magazine, as a possible solution to the problems of standards and ethics in the television industry.

Mr. Lippmann concludes:

There will be a temptation, I realize, to treat the uproar of the autumn as one of those things which pass and are forgotten. This country cannot afford to do that. For television, which is the most powerful medium of mass communication, is of enormous importance in the life of the Nation. To forget about it because it is not in the headlines would be frivolous, and indeed a sign of a serious national weakness.

Mr. President, I ask unanimous consent that the whole of Mr. Lippmann's article, entitled "The Administration and TV," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered printed in the RECORD, as follows:

THE ADMINISTRATION AND TV

(By Walter Lippmann)

Mr. Rogers, the Attorney General, has replied to questions which the President put to him when the television scandals broke out: "whether there were any laws violated; whether we should propose any new laws."

The answer from the Department of Justice is that the laws as passed by Congress are, on the whole, adequate, that these laws have been violated, and that the Federal regulatory commissions concerned with them—the one for communications and the one for trade—have in fact made no serious attempt to enforce the laws.

While the Attorney General, perhaps, rightly, did not deem it his business to say so, can it be denied that if the officials have failed to enforce the law, the remedy would be to appoint some new officials who will try to enforce the law?

The report itself is, it seems to me, a clear and candid introduction to the TV problem. Mr. Rogers has fixed his main attention on the recent scandals—on the fraud of the quiz programs and the corruption of the payola. But he has opened the door, without going through it, to the much greater question of national policy, which is how to deal with the consequences of what he calls "naked commercial selfishness." This is the search for larger and larger audiences to yield larger and larger advertising revenues. Here the broadcasting companies are debasing and degrading the most powerful of all popular institutions of education and entertainment.

Mr. Rogers believes, and no doubt with good reason, that the laws as passed by Congress, if enforced, are adequate to deal with the "deceptive and corrupt practices" which have shocked the country. Certainly it is true that the problem here is not to write new laws but to find men who have the will and the ability to enforce the laws we have.

But there is more in the laws than that. The rights to use the comparatively few airwaves are valuable properties. These properties belong to the public, and the intent of the existing law is that licensees to use the airwaves are pledged to treat them as a public trust in the public interest.

The question here is whether any regulatory commission, even a good one, can

induce or compel the broadcasting companies to live up to a higher, but less profitable standard of information, education, and entertainment. This is at bottom the question of what can be done by the method of regulation. A commission can police the industry against fraud. But what if anything can it do to raise the intellectual and moral and esthetic standards, and to improve the quality of what is broadcast?

This is the door which Mr. Rogers has opened without passing through it. It is a fair inference, however, from the general tenor of his report that he knows quite well that not much can be done by way of regulation to improve the quality of the programs.

My own view is that it is not possible to define in the laws and regulations standards of quality which can be enforced. Nor do I think it would be desirable or healthy to have the regulating commission, which is essentially a policeman, set up shop to advise and even control the quality of the programs.

What then? How about relying upon voluntary self-improvement by the networks? There appears to be some evidence that they would like to do better than they have been doing, and that they would like to recover the confidence and respect which they lost during the recent exposures and the public outcry. More power to them. But we must not forget that the economic interest of the companies, which requires bigger audiences for bigger revenues, is against any serious and lasting effort to use television for its highest possibilities. The companies will do as much but not much more than the traffic will bear.

That will not be enough. This country needs some television at the best hours which, like schools and universities, like art galleries, like the parks, like research, is not commercial, is produced not because it yields private profits but because it moves toward truth and excellence. I say some television. We could not and should not have the Government run the whole television industry. What we need is a competitor with commercial television, a competitor who has a different motive and can have, therefore, different standards.

The noncommercial competitor would have to be some kind of public corporation or authority, chartered by law, governed like a university by trustees, and operated by professionals. How could it be financed? The best discussion of this question has, I think, come from Mr. John Fischer who has been writing in Harper's magazine. His thesis is that since the air waves are public property, the Government should charge rentals for them. This is quite feasible since the profits are large. Moreover, rentals could be charged not only in money which would finance the noncommercial company but also in the form of time set aside for it on the commercial networks.

There is little doubt that some noncommercial television could be financed. It would be a very good thing if an appropriate committee of Congress would make a report on the economics and the finances of the television industry.

There will be a temptation, I realize, to treat the uproar of the autumn as one of those things which pass and are forgotten. This country cannot afford to do that. For television, which is the most powerful medium of mass communication, is of enormous importance in the life of the Nation. To forget about it because it is not in the headlines would be frivolous, and indeed a sign of a serious national weakness.

Cold New Year

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. LINDSAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, entitled "Cold New Year," by Irwin Isenberg, which I commend to my colleagues. The article is splendidly written and is timely. It is on the subject of the worldwide refugee problem—a problem which we all share and will continue to share until more meaningful solutions are found. One such solution is contained in H.R. 6826, the omnibus immigration bill which I introduced in May of last year.

This article appeared in the December 31 issue of the Villager, one of New York City's leading weekly newspapers.

Mr. Isenberg and the Villager deserve high commendation for reminding their readers in this fashion of an obligation for the new year which we all share:

COLD NEW YEAR

(By Irwin Isenberg)

In Syria, Lebanon, and Jordan there are more than 1 million Arab refugees. Most have been living in refugee camps in these countries since the eruption of the Arab-Israeli war 11 years ago. It's not unusual for families of five and six to be crowded into a mud hut 8 feet square. The bathrooms in Washington Square Village are about that size. But for the Arabs this mud hut made of cow dung and straw is home.

In Austria, Italy, and Germany there are still 120 displaced persons camps left over from World War II. In these bleak surroundings live some 28,000 people, one-quarter of them kids under 16. They have never been able to find a real home because nobody wants them. Either the head of the family is too old or too unskilled to be welcomed by any country as a permanent settler, or else someone in the family is too sick to be admitted to another country. The family doesn't want to leave the sick one behind, so it stays put. Some of these people have been refugees for 20 years.

In Morocco and Tunisia there are 180,000 refugees from the Algerian war, now entering its 6th year. Most of these refugees are women and children. Their men are dead, or imprisoned, or fighting. The women and children live in caves, if they're lucky enough to have caves.

In Hong Kong there are 1 million refugees from communism—Chinese style. Some families live in the streets. Others are fortunate enough to have shacks made from bits of tin, wood, and bamboo. Beds are often rented in shifts. Hong Kong authorities cry in despair: "The refugee problem is overwhelming us."

Girls of 13 are veteran prostitutes. Boys of 10 are old hands at stealing.

In West Germany there are thousands of unsettled refugees from communism—Russian style. (Three million East Germans have fled to the west since 1945; most have been resettled.) And refugees continue to pour into West Germany at the rate of 10,000 a month.

In the Portuguese colony of Macao there are 60,000 refugees from the China mainland. All of them live in conditions of horrid squalor.

In India there are now 14,000 Tibetans who fled their country when the Chinese stamped out a revolution there last spring.

In South Korea there are hundreds of thousands of North Koreans waiting to return to their homes. In South Vietnam there are more hundreds of thousands waiting to trek to their homes in the north when and if their country is unified.

In Pakistan there are millions of Moslems, who formerly lived in India, still technically refugees. In India there are hordes of Hindus, who fled there when the subcontinent was partitioned, who are also refugees.

If there's one thing the world will have plenty of in the coming year it's refugees. Some are supported by U.N. agencies, some by the Red Cross, and some by private agencies. But the sum of these efforts just keeps abreast of this human misery. Greater efforts are needed to permanently settle these homeless millions.

That is why a World Refugee Year was proclaimed last summer by the U.N. "to coordinate 12 months of intensive worldwide effort by governments and private individuals on behalf of refugees." Sixty-seven countries have since set up individual programs to aid the refugees.

The U.S. Committee for Refugees, with headquarters at 11 West 42d Street, has been organized to coordinate all World Refugee Year activity in the United States.

In the 6 months since World Refugee Year was proclaimed, thousands of refugees have been helped. Some in Europe have been settled. Increased quotas of food and supplies have been distributed to other groups. The U.S. has set aside $10 million that may be used for refugee work. The U.S. Committee for Refugees has recommended that the United States let 20,000 refugees above its normal quotas into this country:

But more, much more, money is needed by all the private agencies helping the refugees. That is why Villagers could do no better than donate whatever they can to these groups. Just two pennies is enough to buy 1 day's milk supply for an Algerian child. Just $20 outfits a refugee for the winter. And $100 enables a refugee family living in Italy to emigrate to South America.

In Korea, for instance, many refugee children have no pencils or papers to use in their classroom. The school has no money to buy these supplies. But a $1 gift can outfit a whole class with writing materials. Why should these kids suffer because we have not yet learned how to live in peace?

"More than 40 million men, women, and children have been made homeless since the start of World War II," said U.N. Secretary-General Dag Hammarskjold. "More than 15 million of them are still homeless."

Perhaps 1960 will be the last year some of them will spend without a real home.

The Late Alvin R. Bush

SPEECH
OF
HON. JOHN J. FLYNT, JR.
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 6, 1960

Mr. FLYNT. Mr. Speaker, I join with my colleagues in expressing my sorrow

in the unexpected and untimely death last fall of our admired and respected friend, ALVIN R. BUSH. Congressman BUSH and I had served continuously on the same committee since I first became a Member of Congress.

He was a pleasant and affable associate in the work of our committee and in the work of the House of Representatives. He was an able and respected representative of his State and district and a beloved Member of this body. He was a warm, personal friend.

Those of us who were closely associated with him knew him as a man of high integrity and character. He displayed intense interest on legislative matters which came before us, and he made valuable contributions to the legislative work during the entire period of his service as a Representative in Congress.

I shall always remember AL BUSH as a devoted public servant of ability, strength of character, humility and gentle nature. I shall also remember him as a devoted personal friend.

Mrs. Flynt joins me in extending to Mrs. Bush and their children our deepest sympathy, and we share with them their sorrow.

Indiscriminate Use of Pesticides

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting a resolution adopted by the Detroit Audubon Society at their annual meeting, November 21, 1959, concerning the indiscriminate use of pesticides.

The resolution follows:

RESOLUTION PASSED BY THE DETROIT AUDUBON SOCIETY AT ANNUAL MEETING, NOVEMBER 21, 1959, RE INDISCRIMINATE USE OF PESTICIDES

Whereas it has become increasingly evident that the current widespread and indiscriminate use of pesticides (insecticides, herbicides, etc.), especially those with residual effects, pose a serious threat not only to the wildlife population but to public health; be it

Resolved, That the Detroit Audubon Society join with the Michigan Audubon Society, the National Audubon Society, Michigan United Conservation Clubs, the National Wildlife Federation, and other like-minded natural history and conservation groups in protesting the continuation of such practices; be it further

Resolved, That the Detroit Audubon Society advocates (1) that the use of pesticides be confined to the local treatment of known infestations and that all widespread and indiscriminate spraying or aerial dusting be discontinued, (2) that accelerated research programs be conducted on the long range biological effects of all pesticides, (3) that laws be enacted to insure adequate restrictions on the use of these toxic materials; be it further

Resolved, That the secretary of the society transmit this communication to the Honorable Senators and Representatives of the State of Michigan in the Congress of the United States, the Honorable Senators and Representatives in the Legislature of the State of Michigan, the Secretaries of Agriculture, Interior and Health, Education, and Public Welfare of the United States, the Michigan Conservation Commission, and to such other executive, legislative, or administrative officials of Government and conservation organizations as the president of the society shall designate.

Staffing Freedom

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, January 7, 1960

Mr. PROXMIRE. Mr. President, from time to time one of our colleagues writes an article of such unusual thoughtfulness and understanding that I consider it a shame we do not all have a chance to read it. Such an article appeared in the Atlantic Monthly for November, under the title "Staffing Freedom." It was written by the senior Senator from Pennsylvania [Mr. CLARK]. Eloquently, it discusses a subject long close to his heart, as it should be to all of us, the question of how to steer our most important resource; namely, the best and ablest of our young people, into positions where they can help build the kind of creative country in which we want to live, and which we would like to pass on to our children.

The article is subtitled "An Appeal." To help all of us to hear and heed it I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered printed in the RECORD, as follows:

STAFFING FREEDOM—AN APPEAL BY SENATOR JOSEPH S. CLARK

(Pennsylvania's senior Senator and former mayor of Philadelphia, JOSEPH S. CLARK donated his Bok Award funds, received in 1956, to the American Academy of Political and Social Solence for a study of national personnel needs)

What kind of country do we Americans want? What kind of universe do we wish to live in?

Survival in freedom with a reasonable chance for happiness would be the answer for most of us. I think of a creative country in which there is respect for the brotherhood of man.

It is only when we start discussing policies, programs, and procedures that we get into trouble. My concern is with people, not methods. How can we find, train, and hold in the right jobs people needed to create what Walter Lippmann calls the "good society"?

Today we have no national personnel policy or plan. We do not try to steer our best young people into the careers where their brains are needed. We leave the choice to chance and the marketplace. We hope that a sense of dedication will prove more compelling than the dollar reward.

Not only are we short of teachers; too many of those we have are not really good enough. We have plenty of politicians, but many of them are hardly worth the powder to blow them away.

Does it really make sense to siphon our ability into color television, the manufacture and sale of soft drinks, cigarettes, whisky, and cosmetics, and the advertising of these commodities? Hasn't the time come to start thinking about how to put American capabilities into jobs where they can best advance American national interests?

In 1942, Military Occupation Specialty (MOS) determined where one served "the cause of freedom." The planners in the Pentagon decided the necessary qualifications of each GI and each officer required to man our armed services. That was a hot war, and that one is cold. Compulsion would not work today; but persuasion might.

They plan well in Russia. There someone decides where little Ivan is going to work. If, at the age of eleven, he seems unresponsive, he goes back to the collective farm. If he shows promise, his education is continued at state expense through technical school and the university. Education and incentives for different occupations are adjusted to meet the personnel needs required by the current 5- or 7-year plan.

In continental Europe and Great Britain, educational and occupational planning is far ahead of our chaotic American hit or miss.

Would we lose our sacred freedoms if we tried by persuasion to get what others achieve by compulsion? I think not. Is it so difficult to inventory our personnel requirements? Ewan Clague, the U.S. Commissioner of Labor Statistics, tells us that the job is already well begun. He has published a handbook estimating the prospects in 600 different occupations.

Surely wise men and women can set tentative priorities among these occupations. A White House conference on national personnel requirements would do more than start people thinking; it could determine empirically how many well-trained people we are likely to need in the next 30 years to achieve our national goals.

The next question is, How can we use both the carrot and the stick to get these young people trained and on their way to where they are needed? How can we get more and better teachers, scientists, priests, politicians, rabbis, ministers, musicians, poets, and social workers? To get them we will have to settle for fewer brewers, nightclub proprietors, and lobbyists.

Perhaps our national sense of values needs a little adjusting. Perhaps the wrong people are making too much money and the right people not enough. How about the status seekers? Can we make it as chic to be a graduate nurse working in a hospital as an interior decorator specializing in drapes?

This realization of shortage should generate a lot of talk, which sometimes in America is a prelude to action. Those old rallying points—the home, the church, and the school—might conceivably resound with fresh words and determination about a boy's future. Such talk could spread to newspaper editors, commentators, comic strip artists, and cartoonists. After a time the talk might result in a national purpose to staff freedom with our best and ablest brains instead of leaving matters to chance. The tools are at hand to do the job once the decision is made. All we need is the will to act. And the "good society" which could result might both confound communism and lift Western civilization to new heights.

Breaking the Marina Bottleneck

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. FALLON. Mr. Speaker, a most able writer, Mr. Ernest Conine, Jr., of the McGraw-Hill News Service, and presently manager of their Moscow Bureau, in Russia, has written a fine article relating to pending legislation.

Today I would like to bring Mr. Conine's article, "Breaking the Marina Bottleneck," which was published in Boats magazine, to the attention of the Congress, as well as the Nation, as it deals with a situation in which nearly all of us are interested.

In his article, Mr. Conine emphasizes the tremendous need for the development of suitable marina operations throughout the country. As sponsor of legislation for this purpose—H.R. 89—I was very much impressed with the article. I am pleased that Mr. Conine agrees that if there were some form of Federal assistance available for commercial property development and for area clubs, a great deal could be accomplished for the benefit of our citizens.

The article is one which all Members of Congress should read, particularly, those who represent areas where lack of much-needed marina sites is creating many problems.

BREAKING THE MARINA BOTTLENECK—PROPOSED LEGISLATION WOULD PROVIDE FHA TYPE LOANS FOR THE CONSTRUCTION AND MODERNIZATION OF PRIVATE MARINAS

(By Ernest Conine)

A cabin cruiser noses up the Potomac River, then feels its way into a small creek on the Virginia side. The owner eases the engine to idle, and unceremoniously throws a line around a convenient tree trunk. He can only hope that his pride and joy, representing an investment of almost $3,000, will be safe from thieves, small boys and the elements. Crude though it may be, this wide place in a creek is the only kind of slip that is available for miles around.

In Sandusky, Ohio, an excited family is all set to buy its first boat. Then the marine dealer says they will have to go on a waiting list for berthing facilities, so the purchase is postponed.

As many a boating enthusiast knows, these are not isolated instances. The plain truth is that the shortage of moorings and slips for recreational craft has reached alarming proportions. And leaders in America's most popular family sport fear it will get worse unless more is done—by the Federal Government, if necessary—to facilitate the construction of badly needed marinas. It is true that more than 3 million slips and moorings are not regularly used. But they are located in areas of light population, far from where they are badly needed. And many are in a sad state of repair.

Charles A. Chaney, a consultant to the National Association of Engine and Boat Manufacturers, sums it up this way:

"It's obvious that every boatowner has some place to tie up or store his boat, or he wouldn't have it. But often a fellow has to keep his boat in a totally inadequate or unsafe slip, or tie it up miles away from home. Then many other people just don't find it practical to have a boat at all because there's no decent place to keep it."

The scope of the shortage was underlined recently by a New York marketing research firm which found that 570,000 hopefuls are on waiting lists for berthing facilities. Another 1,250,000 were turned away from marinas last year with a flat, "Sorry, no space."

All in all, the National Association of Engine and Boat Manufacturers estimates that more than 2 million Americans would buy inboards, outboards or sailing craft if they could find an adequate home for them.

WHY THE CRISIS?

First, boating has undergone an explosive growth. The number of pleasure craft has more than tripled in the last ten years. Today, more than 7,500,000 boats ply U.S. waterways. Unfortunately, construction and modernization of marinas has failed to keep pace.

Unfortunately many of the Nation's 10,000-odd marinas were built 20 to 30 years ago. Four out of five need modernization. How often have you visited a facility where rotten timbers sway under your feet, onshore toilet facilities are dubious or nonexistent, or tempers fray as boatmen wait in line to launch their outboards from an outmoded ramp?

The experts estimate it would take more than $3-billion to bring old boat yards up to snuff, and provide the new facilities that are needed for boat servicing, docking and dry storage. Throw in additional millions for hotels, stores, restaurants, clubs and landing strips—all features of the truly up-to-date yacht haven—and it is obvious that a hefty wad of capital must come from somewhere.

And there is where you run headon into problem No. 2—the difficulty in obtaining loans for marina improvement or construction.

It would seem that bankers, who at last are overcoming their original reluctance to finance the purchase of the boats themselves, would cast a calculating eye at the dimensions of the boating boom and rush to get in on a good thing.

But, not so.

As Chaney explains, "A banker may be perfectly willing to lend a fellow a lot of money to build a drugstore, or buy a piece of heavy machinery. But let the same man come in and ask for a loan to build or improve a marina, and the answer is 'No'."

The reluctance of the bankers can be laid partially to ignorance and prejudice—they haven't had the experience to judge the risks properly. But admittedly, a marina doesn't fit the business world's usual patterns.

In the first place, boating is a seasonal sport, with the seasons ranging from 2 or 3 months in New England and the Northwest to almost a full year in such areas as Florida and southern California. This means income may be down in the off-season. Then there are the dangers from wind and floodtide. But perhaps most important of all, the amount of capital required is large and the returns uncertain.

For a simple marina with minimum onshore facilities, costs run from $600 to $700 per slip for the smaller boats. For larger craft, the construction cost per berth may run up to $2,000 or more. On the income side, rental of slips alone will barely pay for operation and maintenance of the installation, with perhaps a profit of 1 percent to the marina operator.

This kind of profit margin is too thin to quicken the pulse of a banker.

However, it is now recognized, that boatowners want more than mooring, fuel and repairs. They buy food, drink, bait and fishing gear. They will use an airplane landing strip. And they will rent overnight or weekly living accommodations. Revenue from these onshore facilities can bring a marina's profit margin up to a respectable 10 or 12 percent.

As a result, a handful of investment firms are willing nowadays to underwrite marina ventures—that is how the Yacht Haven at Stamford, Conn., was built. But the bankers, and other commercial lenders as a whole, just aren't interested. An impressive number of marinas, of course, are being built despite the difficulties. And many are being financed the same way they have for years—with a syndicate or small group of boat-owners putting up the money.

Thus M. J. Styron of Washington, D.C., past president of the National Association of Marine Dealers, and a group of associates are building a $500,000 marina and yacht club on Piscataway Bay, Md., from their own resources.

In bustling Florida, the big land developers often include small marinas as part of their dream communities. Phillips Petroleum Co. built a marina at Fort Lauderdale. But, with thousands of new boats hitting the water for the first time each month, it is obvious that private efforts, unaided, just won't provide the slips that are needed.

The biggest attack on the marina shortage currently is occurring at the local government level, as more and more city fathers recognize that provision of proper facilities for this wholesome sport can pay dividends to the whole community in terms of waterfront beautification, civic pride and generation of new jobs and profits.

Panama City, Fla., sold $7 million in municipal revenue bonds to finance construction of two marinas. The debt will be paid off with revenues from commercial facilities built around the waterfront, as well as slip rentals. The $20 million Bahia Mar installation at Fort Lauderdale is a municipal venture.

At the other end of the cost scale, the town of Carolina Beach, N.C., built a small municipal marina for $30,000. The price tag included dredging, construction of a bulkhead wall and moorings for 30 boats.

In California, 78 municipal marinas are being planned between San Rafael and San Diego. But the real assault there is at the State level, with officials talking in terms of small craft harbors every 30 miles along the 1,100-mile coast. As a first step, the California Legislature in 1957 created a $10 million revolving fund to be used by communities for preliminary planning, engineering and construction of marinas.

A score of localities already have received loans which will facilitate construction worth $33 million. For example, the city of Ventura got a $900,000 loan to acquire land for a $9 million municipally owned facility.

Interest is stirring in other States, too.

Maryland is building a State marina on the Anacostia River at Bladensburg which ultimately will have a 300-boat capacity. The Atlantic City State Marina, when completed in 1960, will provide berths for 350 recreational craft, and expansion room for an additional 150. For several years, the State of Michigan has built harbors of refuge. Some of these have permanent slips, others simply provide piles for emergency tie-ups in case of storms.

Obviously, California has come the nearest to facing the marina problem squarely. And if all other States followed her example, the shortage might be licked. But since that is unlikely, leaders of the boating industry are throwing their weight behind a proposal to bring Washington into the act—in a way that would not cost Federal taxpayers a cent in the long run. And it would have the added advantage of keeping marinas on local tax rolls.

Representative GEORGE FALLON, a Congressman from Baltimore, is sponsoring a bill aimed at breaking the marina bottleneck by

providing FHA-type loan guarantees for construction or modernization of privately financed and operated marinas.

That is, the Federal Government would guarantee up to 90 percent of loans from banks or other commercial lenders for new or improved marina facilities—just as the Federal Housing Administration has long guaranteed loans to prospective homeowners.

"The present demand for marine facilities is forcing local communities to curtail drastically boating and smaller commercial shipping activities in many areas of the country," explains FALLON. "Public municipalities and private operators of marine facilities are finding it increasingly difficult to finance new installations. This is forcing many communities to propose inadequate facilities, resulting in an increasing rate of failure, unsanitary conditions and loss of value."

PRIVATE FINANCING PREFERABLE

The Congressman, convinced that encouragement of privately financed construction is the best long-range answer to the marina shortage, says his program not only would stimulate development of new yacht havens, but would make possible the rehabilitation and expansion of existing ones.

"I would like to emphasize," says FALLON, "that under my bill the Government is authorized to charge a premium for mortgage insurance. Thus the operation and administration of this program will not cost the taxpayers of this country any money. Actually, it will provide much needed additional harbor facilities which will bring new revenue to local communities."

The Fallon bill, experts say, could have its most immediate effect on existing marinas requiring improvement.

Chaney points out that many of today's installations were built haphazardly over the years, with little or no planning. In many cases, sanitary facilities are deficient or nonexistent. The slips may be the wrong size. The fueling station may be too close to the slips, raising the danger that spilled gasoline or fuel oil will become ignited and destroy the boats. Even worse, structures extending into the water too often are verging on failure because of indifferent construction in the first place.

The Maryland marina designer recalls that several years ago, a certain southern resort community decided to build a 60-boat marina. The specifications called for use of pressure-treated materials, but untreated wood was substituted for economy reasons. That marina should have lasted 20 years, but it practically collapsed after only 3.

Chaney believes the Fallon bill would make possible the rehabilitation of many such marianas, and enable other operators to build them right the first time.

The Fallon bill, officially identified as House Resolution 89, was first introduced a year ago. It was reintroduced early this year.

A large portion of America's 30-odd millions of boating enthusiasts stand to gain from its provision, as do their communities. The National Association of Marine Dealers gave the measure its official blessing during the National Motorboat show in New York last January.

This legislation would permit local banks with limited capital to loan the large sums of money necessary for marina construction and still stay within limits of their capital structure and the law, the association notes.

Other boating organizations also support the proposed law.

No organized opposition has raised its head. And the measure's passage would cost the taxpayers little or nothing.

Yet, Congress has given the bill only passing attention up to now. And, unless the outlook changes, its chances of enactment in 1960 or any other year are extremely dim, indeed.

Why?

Simply because boating enthusiasts—whether through lack of information or lack of interest—have not written their Congressmen and Senators to request their vote for the Fallon bill. In the words of a clerk for the House Banking and Currency Committee, to which the proposal was referred, "We've had only a handful of mail."

A veteran of Capitol Hill explains that literally thousands of bills are introduced each year in Congress, covering every conceivable subject matter. The lawmakers have time to give serious study to a comparative few—"so it's natural that they concentrate on bills in which they think the people are really interested."

The amount of mail from the homefolk, either for or against a bill, is the Congressman's main gage of public interest. Thus, until and unless he hears differently from his constituents, he is likely to suspect that the Fallon bill is something that even boatmen do not consider necessary—and that perhaps it's just something to help "wealthy yachtsmen" anyway.

The Congressmen don't know—unless they are reminded—that an estimated 37 million Americans enjoyed the use of more than 7 million boats last year. Skilled workers far outnumber business and professional men among boatowners. Statistics show that the average boat, far from being an oceangoing pleasure palace, is a shade over 14 feet long and cost $620.

With boaters spending more than $2 billion per year, recreational boating has become big business—in fact—it's the Nation's 26th largest. And the benefits spread far beyond the man who makes a weekend cruise with his family, or the dealer from from he bought his craft.

Last year, for example, boatmen accounted—directly or indirectly—for the purchase of 404 million gallons of gasoline, 22 million gallons of diesel fuel, 171 million square feet of sheet plywood, 47 million pounds of aluminum and 37 million pounds of fiberglass.

One champion of the Fallon bill, wise in the ways of government, makes this comment:

"The typical Congressman wants to do what is best for a majority of his people. When you show him how boating not only has brought good, clean pleasure to millions of people, but is an increasingly important part of the economy in his home district and the Nation as a whole, the chances are he will be sympathetic."

Kefauver Drug Price Investigation

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. RHODES of Pennsylvania. Mr. Speaker, we have all followed the most revealing hearings on drug prices conducted by the Senate Antimonopoly Subcommitee under the able chairmanship of the senior Senator from Tennessee, Mr. KEFAUVER.

Examples have been given of shocking profiteering on drugs, with markups of up to 7,000 percent while officers of drug companies receive inflated salaries, stock option benefits, bonuses, and overly generous pensions upon retirement.

Mr. Speaker, I am pleased that the pupils of the problems of American democracy class of Reading Senior High School, Reading, Pa., have informed themselves on the details and importance of the Kefauver investigation and have written to the Senator to express their support for this fight in behalf of the American people.

Under leave to extend my remarks, I include the letter signed by 55 members of the class and congratulate them on their alertness and good citizenship.

The letter follows:

READING SENIOR HIGH SCHOOL,
Reading, Pa., December 18, 1959.

The Honorable Senator ESTES KEFAUVER,
Senate Office Building,
Washington, D.C.

DEAR SENATOR: The pupils of the problems of American democracy class of Reading Senior High School have been reading and hearing about the investigations your committee has been making into the high prices of drugs.

We would like you to know that we are in thorough sympathy with your investigations, and we feel that you are fighting for a worthwhile cause.

It is the older people of this country that have the biggest need for these drugs, but it is also the older people that have to live on smaller incomes. These are the people who are being made to suffer most by the high prices charged by the leading drug companies.

We respectfully suggest that you include the investigation of the high cost of dental plastics as another instance in which older people are being made to suffer from high prices.

We hope sincerely that you will take this matter into careful consideration.

Respectfully,

Carol Aulenbach, Carolyn Janiszewski, Lyte O. Adams, Ronald Alesin, Judy Beam, Brenda Corvaia, Patricia Crammer, Carol Dornes, Geraldine Johnson, Kenneth Hoffman, Sandra Lee Folk, Martha Keller, Beverly Kochel, Carol A. Lee, Margaret Manderbach, Alice Manning, James Reaser, Carol Shipper, Lawrence Moyer, Sandra Lee Miller, Ray McDevitt, Patricia Mazurkiewicz, Nancy Berkley, Joan Bittle, Anthony M. Caccese, Fern Cummings, Judy Henning, Lillian G. Ephart, Sandra George, Linda Cummings, Lucy Hirneisen, Barry Hommas, Joseph Jakubowski, William Jones, Doris Leszczynski, Aram Najarian, Thomas Mull, Anne Moyer, Thomas McNamara, Cynthia Lloyd, Lynn H. Ogden, Ronald D. Showers, Eugene Hildebrand, Patricia Sadowski, Gloria Seyfert, Linda Zink, Lorraine Weller, Robert Wansley, Marine Perugini, Gloria Ruleman, James R. Seyfert, Alex Zeppos, Patricia White, Johanna A. Wallace, Karen Swartz, Gayle Spirelis.

Salutation to Mr. Sam

SPEECH
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 6, 1960

Mr. CELLER. Mr. Speaker, I have served with Mr. SAM for a period of over 37 years and during that period I have come to know the manner of man he is, his integrity, his unfailing leadership, his acute sensitivity to justice.

Mr. SAM has served in this Chamber in war and in peace; he has served in periods of adversity and periods of prosperity. Throughout his service, he has stood as firm as a rock and surmounted all difficulties. He has an enduring faith—in his country, his party, and in his fellow men. We all applaud his loyalty to his friends and his fairness to his foes. He wields the gavel of his office with objectivity and temperance. No one can deny his great influence upon the membership and the impress of his personality and character upon the major issues of our time. Formerly, as chairman of the Interstate and Foreign Commerce Committee, he nurtured bills of major significance that are now law and which bear his honored name, a name which is known and respected through the world.

We are all happier here because of his presence amongst us. It is indeed a privilege to salute Mr. SAM on his birthday.

New York's Billion Dollar Racket

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Journal-American of January 7, 1960:

NEW YORK'S BILLION DOLLAR RACKET—GHOST OF PAYOFFS HAUNT POLICE

(By James D. Horan, Dom Frasca, and John Mitchell)

Like Dickens' celebrated ghost of Jacob Marley, the apparition of scandal approaches the New York City Police Department with the clang of cashboxes.

Twice before the ghost has become a shocking reality. First, the 3½-year Amen investigation that was laid to rest in 1942 shook the department to the marked discomfort of all honest policemen. And 8 years later, its ghost was resurrected with disclosures of wholesale police payoffs by bookie Harry Gross.

Now, for the third time, police brass nervously listen to the far-off tread of scandal-yet-to-come. The new nightmare centers about the stocky figure of former Police Sgt. Joseph G. Luberda, now in Rikers Island Penitentiary serving a 2-year sentence for contempt of a New York County grand jury.

DENOUNCED BY JUDGE

Last November Luberda heard himself denounced by General Sessions Judge John Mullen as the bag man for somebody higherup in the (police) department now * * * or higherups in the Police Department formerly * * *."

It is no secret that if Luberda should decide to talk to District Attorney Frank Hogan in exchange for his freedom, his revelations could ignite a departmental explosion.

The impassive exsergeant was questioned by the grand jury about $19,495 found in his car last spring alone with a cryptic list of police officers and known gamblers.

He was able to explain away only $1,000 of the loot to the satisfaction of investigators, claiming it was his personal money.

Luberda's testimony, released to this newspaper by Judge Mullen and the district attorney's office, gives an indication of the time bomb ticking away in Luberda's conscience.

The often slashing examination of Luberda was conducted by Al Scotti, chief of Mr. Hogan's rackets bureau, and Assistant District Attorney Peter Andreoli.

For more than 6 months, Mr. Andreoli has been handling a grand jury investigation of police corruption. Much of the probe has centered on the East Harlem policy syndicate.

He and Mr. Scotti opened their questioning of Luberda by trying to get the former sergeant to admit how he came by the money. Luberda insisted all of it, except the $1,000 he claimed as his own, belonged to his mother.

He kept it, he said, because his aged mother "lost her ability to sign her name."

(In Jersey City, where she lives, Luberda's mother has denied ownership of the money.)

Trying to determine the source of the money, Mr. Scotti and Mr. Andreoli turned to the address book found on Luberda when he was arrested for drunken driving.

Mr. Scotti read off the names of more than a dozen police officers. When he asked Luberda why he kept the names, the reply was: "We exchanged Christmas cards."

Mr. Scotti also questioned Luberda about his relationship with Benny Smollen, a known gambler, whose name appeared on the list.

Question: "Was he (Smollen) a bookmaker in Harlem?"

Answer: "Not that I know of."

Question: "Do you deny it?"

Answer: "I can't deny it."

Question: "You were on the plainclothes force and you certainly would have a good idea who was a bookmaker and who wasn't a bookmaker. You people know who is and who is not a bookmaker, and if you didn't you weren't entitled to the salary you were getting as a police officer."

Answer: "We hardly knew all the bookmakers."

Question: "Don't give us that. You certainly do."

Answer: "I don't think any patrolman knows 50 percent of them (bookmakers)."

Question: "When you were in the division (plainclothes) you would go out on raids and observations."

Answer: "Sometimes."

Question: "Make arrests on known gamblers."

UP TO BOSS

Answer: "Sometimes the whole squad went out."

Question: "In other words, you would have * * * the name like Louie the Gimp (notorious West Harlem policy controller) and an address that was known to the department * * * and you would keep him under observation."

Answer: "That's right."

He also denied knowing some of the persons whose names appeared on lists described by the district attorney's aides as "collection lists." Referring to these lists, Mr. Scotti asked if those whose names appeared were gamblers.

Answer: "I don't know all the gamblers—about 5 percent."

And later, this interrogation by Mr. Andreoli:

Question: "Did you make your rounds regularly around these places (the gambling locations on the lists) and visit these places?"

Answer: "Only when I had a complaint."

At this point, Mr. Scotti broke in and said:

DENIES PAYOFF

Question: "Complaint? Man to man, didn't you go to these places to pick up money from them?"

Answer: "No, sir."

Question: "You heard the expression 'pickup.' Weren't you the pickup man?"

Answer: "I was not and never was."

Question: "That's why your memory is getting bad, isn't it? You don't want to admit these fellows were known gamblers and the only reason you had the places listed was to go around there and hit them up for money and they were supposed to give you money to operate without interference."

There was no direct answer.

Washington Shrine Symbol for Citizens and Believers

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the text of the sermon delivered by Cardinal Cushing at the evening mass on the dedication day of the National Shrine of the Immaculate Conception, Washington, D.C., as it was reprinted in the Pilot, Boston, Mass., November 28, 1959:

WASHINGTON SHRINE SYMBOL FOR CITIZENS AND BELIEVERS

If ever there were a time or place, beloved brethren, when no sermon would seem in order, surely it would be here tonight. The place—this miraculously beautiful new home of Jesus and Mary, this Nazareth such as Nazareth never knew, nor even great Jerusalem; the time—this quiet evening time, that links this Brookland hilltop with the hills of Galilee—these are the preachers, and we the listeners.

But if someone must break this awesome stillness, if someone must say a word, if someone must set on record the depth of our emotions, it is my great privilege, not from any personal deserving, but from my official standing in the church, to attempt the impossible, to say, in your name and my own, what mere saying can never say.

The splendor of this morning's ceremony of dedication was almost overpowering. We would not want it less. The pentup feelings of America since that "Salve Regina" on the quarterdeck of the flagship of Columbus in 1492 have never found more eloquent, more significant expression.

The eminent princes of the church, the personal representative of our holy father, Archbishop Vagnozzi, the archbishop of Washington, the distinguished pastor of the mother see of Baltimore, the presence of other archbishops, bishops, abbots, monsignori, priests and people, religious communities of men and women, students and professors—aged Simeons, rejoicing to have seen this day, and youthful innocents dancing with joy before God's ark—all this effected in intention, if not in accomplishment, the everlasting consecration of this place as a stone of covenant between man and God.

This solemnity, besides what was so beautifully said here, by its very nature, publicly demonstrated that this was not merely the opening of another church, or another cathedral, but of a unique citadel of prayer and faith, where all men who believe and pray must always feel at home.

Appropriately enough, this being a true home, it is dedicated to a mother, the mother of God and the mother of mankind.

This is a home where everyone is welcome; the door is always open, whether a child comes to escape the heat of the sun or the fury of the storm. This mother of so large a family does not even ask that we wipe our sin-begrimed feet on the doormat.

OUR GIFT

Catholic America, by which we mean the free Catholic Church in the free United States of America, has come of age today. At long last, as proud adolescents we are happy to place in the hands of our mother our first pay envelope. "This shrine, dear mother, is all yours; it is our gift to you."

By human standards, at least, by architectural comparisons, it is a lovely gift. Great temples of the past have been, in most cases, the benefactions of kings * * * sometimes we suspect that their stones were cemented by the sweat of the slave. This shrine is our very own giving, prayer upon prayer, mite upon mite, sacrifice upon sacrifice. Could we have made it better, it would better be; could we have built it sooner, it would not have waited until today.

The most satisfying feature of the planning and erection of this national shrine is the fact that its building was not a strict necessity. It is our luxury gift to Mary, over and above the ordinary call of Christian duty, as she, indeed, was Christ's luxury gift to us, over and above, it would seem, the structural necessities of His church.

For mass, for the sacraments, and for devotion and the right honoring of God, there are many adequate churches almost everywhere in this city and beyond it. None of us would be without the consolations of religion were this area, Mary's Acre, still the empty farmland it was a half a century ago, windswept and still unploughed by the contractor and the builders.

The magnificent cathedral of St. Matthew fittingly houses the throne of jurisdiction here. The parish churches, and the splendid edifices of religious communities give religion in Washington a unique Rome-like variety that has enriched the life of all of us. Nor did we build here from the mean and shoddy motive that others were building national churches and we could not be outdone by them.

But the heart has its own necessities; the eyes of faith see vacancies in the completeness of Christian organization that cry out to be filled. And thus, although every parish in the land might have all the parochial buildings that it could possibly use, and every diocese its worthy cathedral, we needed the opportunity to express a more unselfish sacrifice, a more abundant generosity.

This is what this shrine has tried to tell the world, sometimes in feeble whispers, sometimes in exuberant shouts, during these 40 years since the great far-seeing Gibbons laid its cornerstone in the unpredictable world climate of the postwar year of 1920.

YEARS OF LABOR

Throughout these 40 years, this Lent of 40 years, the Christian piety of many, now dead, and many more still living, has labored here amid hardships, disappointments, and unrecorded sacrifices. But today, beloved brethren, is the "resurrection day" of Mary's Shrine. "Let us be glad and rejoice therein." "Unless the seed be buried in the earth, and wither it cannot fructify and spring up again."

An abandoned crypt almost, under an unattractive roof, entered by makeshift ways over sticks and stones—this was what greeted the eyes of those who took the trouble to look for the National Shrine of the Immaculate Conception. And if a visitor inquired—as we hoped he wouldn't—we had to tell him, in truth, that this seemed to be the symbol of the love of the Catholic people of the United States for the Mother of God.

Today "somebody's folly" exists to confound the wise. Today somebody's unrealistic vision stands the realest thing of all. Reach out and touch these sturdy walls; caress with your eyes these lofty vaults.

Mary knew, and we know, most of us, what occasioned the delays. Problems beyond the solution of anyone halted the incarnation of the dream. Oceans of heart-sickness surged around empty wheelbarrows and emptier purses. Zealous directors and others immediately concerned learned "the hard way" the lesson of submission to the will of God. But in each thinking Catholic heart, as we worshipped in the catacomb, there was the unwearying hope of someday seeing the cross in the clouds. Beloved brethren, this is the day.

From this day on, the mood is changed. From this "truly blessed night" we change our "de profundis" to "exultet." "O felix cupla," O truly happy fault from which has come this blessed night of fulfillment.

From this day on, beloved brethren, no longer need we search the shadows of the Old Testament for texts befitting our assemblies here, no longer quote the prophecies of penitential writings that mourn the lot of Sion in her exile. Rather we turn with joy to the end of the book where in the inspired words of the Apocalypse we find appropriate words of benediction. Can we not apply to this great day in the history of the faith in America the words of Mary's first adopted child when he says:

"I saw the holy city, the new Jerusalem,
Coming down out of Heaven from God,
Prepared as a bride adorned for her husband.
And I heard a great voice from the throne
Saying: Behold the tabernacle of God with men;
And He will dwell with them."

But, beloved brethren, let us not be carried away by the greatness of what here surrounds us. Let us keep in mind the sobering thought that "God dwelleth not in temples made with hands." "Unless the Lord buildeth the house, they labor in vain who build it." Unless through these years of material construction we have been building a temple to God and Mary within our hearts, better that this shrine be a classic ruin like the colosseum or the ancient wonders of the world.

HEAVEN AND EARTH

But this can never be. This can never be because we meet here tonight not to praise ourselves but to pray for ourselves and for all we love. On this great day as we make our gift to Mary, is it conceivable that she will send us away without a special souvenir of our pilgrimage? And while we luxuriate in thoughts of heaven, will she let us forget the earthly blessings which this, of all our cities, so compellingly symbolizes?

Down this broad avenue is another shrine, another dome. Surmounted by an image of freedom, the Capitol of our country assures us that all is well. The path between the two unites them, but leaves them distinct and separate. May they remain so. While either stands, both shall stand. When either one is threatened, let the other tremble.

Every so often some one of superficial outlook, usually of sincere enough intent, runs up and down this symbolic avenue of which I speak singing outmoded songs about what they call separation of church and State. These prophets of gloom, these readers of long dead entrails, grow wearying at times; even sympathy can lose its smile when overtaxed. Let the location of this shrine and its carefully selected distance from the Capitol reassure them. Although faith can move mountains, it cannot be expected to shorten the distance between these two domes. In this holy spot, on this significant occasion, let us sincerely and without equivocation declare before all that there can be no rivalry between our patriotic and spiritual loyalties, no competition for the Catholic in his roles as citizen and believer.

But beloved brethren, we should add that Catholics do unite our church and our State—we unite them in our prayers. This monument we dedicate today is our enduring pledge of it. May our beloved country become even more worthy—because of our worth as loyal citizens—of God's choicest benedictions:

"Long may Our Land be bright
With Freedom's holy Light;
Protect us by Thy Might
Great God Our King."

Thoughts on America's Greatness

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. MADDEN. Mr. Speaker, Msgr. Paul S. Schmid, chaplain of St. Margaret Hospital of Hammond, Ind., has forwarded to me the following editorial by Msgr. Leonard J. Fick. The thoughts set out therein reflect sentiments which few people remember of the great contributions our pioneers made to this land of liberty and freedom.

A DREAM, A VISION, AND PROVIDENCE

(By Msgr. Leonard J. Fick)

These are days of thanksgiving—official and otherwise: days when Americans the country over thank God for a bountiful harvest, for heavily laden tables, for the good things of this world with which He has so richly endowed them.

And so they should: no nation has been more blessed. But man does not live by bread alone; and those who are scouting about for an even more generous manifestation of the Creator's goodness to us Americans may well return thanks to the Almighty for the giants He has raised up through the years to dream the dreams and implement the vision that still guides America today.

I am mindful of the black-robed padre who, more than two and a half centuries ago, climbed a hill overlooking the Gila River. It was evening as he unslung his telescope and stood there, alone, against the glory of a desert sunset. Far below him he saw the confluence of the Gila with the mighty Rio del Norte, the Colorado. And far into the western skies melted the golden haze of California.

As Padre Eusebio Kino, tireless explorer, dauntless missionary to half a continent, watched the shadows grow longer, he conjured up a vision of the lands that must lie beyond the confines even of a telescope. He saw a vision of a new Christendom, "a new Navarre wherein seven new kingdoms might replace the seven cities of Cibola which led Coronado on with his adventurous thousand in search of fabulous riches."

Even before Padre Kino climbed the crest of that hill, a young French Jesuit, Pere Marquette, sailing down the great rolling mass of Mississippi waters, had a similar vision; and before them both, men and saints like Isaac Jogues and John de Brebeuf looked far down the shadowy depths of Indian trails and saw the vast possibilities of a great and mighty nation.

From his mission station among the Hurons, Father Le Mercier, on April 5, 1637, predicted: "And some day, long after we are dead, this may finally be a greater Christian people than the nations of Europe."

Now there's a dream for you—and a vision: a dream that's more than 300 years old.

But the crapehangers, the gloom dispensers among us are quick to add that this dream is as much a dream today as it ever was, that it even now shows not the slightest promise of becoming a reality.

I disagree. I could quote statistics on the millions of boys and girls in America who are not juvenile delinquents, whose names have never been on a police blotter. These same statistics would show a land dotted with millions of unbroken homes. There is no mass movement to leave these shores for greener pastures beyond the seas. In fact, most Americans have seen just enough of the vision fulfilled to give them the commonsense to know that the ceiling here in their own country is spectacularly unlimited.

For through the years, the men who have guided the ship of state that is the United States of America have shown themselves singularly devoted to making this American dream a reality. They have not always succeeded, but they have never lost sight of the vision of greatness.

In fact, this very aspect of the American way of life is brought home, with an emotional impact common only to novels, in Allen Drury's current bestseller, Advise and Consent, a story of the pressures and forces, the counterpressures and counterforces, which dominate the political life of Washington, D.C.

Despite its varied cast of characters, all somehow caught up in the maelstrom of politics, and despite its complex, though amazingly interesting plot, the essence of Advise and Consent lies in the feeling the book creates of Washington itself; the Washington Monument, rising splendidly into often darkening skies; the Lincoln Memorial, with its "charity toward all, with malice toward none"; the Capitol itself * * * its unending coffee breaks, its mile-long corridors, its cloakroom conversations, its private offices, where so much of the business of Government is carried on, and carried on so well and so devotedly * * * this city on the banks of the Potomac, where the ideals of human beings so often come into conflict with the ambitions of human beings, where the glorious dreams of human beings so often come into conflict with the baser desires of human beings, and where, through some magnificent providence of Almighty God, the ambitions and the desires so often end up serving the purposes of the dreams and the ideals.

One of the fictional Senators in the novel shows something of the dedication of the men who carried forward the dream of America when he told his colleague: "You've got to judge. You can't sit still and allow yourself to be paralyzed by your own shortcomings, or by something you may have done sometime, or by some past mistake. You've got to judge. You've been elected to judge, to advise and consent, and you've got to; and you've go to do it on your own conception of what is best for the country; and if you really love the country, you've got to stick with your judgment, no matter what."

The novel's Senator Knox puts it equally well, this life of politics: "to seek, to strive, to serve—about all, to serve; tend to the serving, and the seeking and the striving will take care of themselves."

This Nation has been blessed, throughout its history, with an abundance of dedicated men and women who have placed their talents and their vision at the service of their country. To be sure, very few of them were knights in shining armor, totally without fear and without reproach; all were mere human beings, beset by their own vast problems and pressures, both from within and from without. But God kept His eye on this experiment in democracy that is the United States of America, and by an alchemy known only to Him, He so presided over their ambitions and their work that the result is today a reason for pride and for thanksgiving.

Small wonder that, a little less than a century ago one of the truly great leaders of this Nation, Abraham Lincoln, should have publicly noted this fact in one of his Thanksgiving proclamations:

"No human counsel hath devised, nor hath any mortal hand worked out these great things. They are the gracious gifts of the most high God, who, while dealing with us in anger for our sins, hath nevertheless remembered mercy."

Panamanian Anti-U.S. Campaign

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. FLOOD. Mr. Speaker, following the attempted Panamanian mob invasions of the Canal Zone on November 3 and 28, 1959, the coverage and interpretation of those crucial events in the press of the United States was generally inadequate.

However, the Christian Science Monitor, one of the great newspapers of the world, subsequently featured a series of three news stories by Mr. Ralph K. Skinner, special correspondent of the Monitor in the Canal Zone, who was a witness of much of the recent turmoil and is thoroughly grounded in the problems of the Panama Canal.

In order that this informative series of articles may be permanently recorded in the records of Congress, I include them as part of my remarks:

[From The Christian Science Monitor, Nov. 30, 1959]

Double Wage Scale Aired in Anti-U.S. Panama Riots

(By Ralph K. Skinner)

PANAMA CITY, PANAMA.—Panamanian agitation against the United States includes demands for higher wages for Panamanian nationals employed by the U.S. Government in the Canal Zone.

Panama concedes that its citizens working in the Canal Zone receive from 30 to 200 percent higher salaries than they would receive in Panama for identical work. But even higher salaries are demanded.

Panamanian officials have led their citizens to a disputed general belief that the 1955 U.S. treaty with Panama calls for U.S. scale wages to be paid for all jobs in the Canal Zone. Actually the treaty says only that, in any given grade level, United States and Panamanian citizens will receive the same basic wage. This is done in every case.

WORKERS MISLED

One great difficulty in Panama-United States relations, observers say, is that national aspirations and treaty commitments are spoken of, published, and treated as one and the same thing, whereas they differ greatly.

Thus the working class here has been misled to expect something which the United States went on record in 1955 saying that it would not do. Panama politicians insist that the United States is not complying with treaty provisions which in fact do not exist.

A leading Panama newspaper published the complete text of the Senate hearing on the treaty. Included was testimony that the treaty did not require Panamanians to be paid U.S. rates of pay on all jobs. Also this statement, "It is clear that there is no obligation to pay Panamanian employees U.S. wages except for those positions for which employees are normally recruited from the United States."

This is the true picture. Canal Zone policy is that for jobs which can be filled by local recruitment, wages are based on prevailing Panama wages.

For positions requiring U.S. recruitment because of lack of qualified applicants here, wages are based on U.S. standards for comparable positions.

POLICY FOLLOWED

This simple policy has been followed for some years. It is the same policy used by Panamanian firms who need specialized American employees and pay them U.S. wages while paying local Panama wages to local employees. It is done in Venezuela, Saudi Arabia, and wherever local employees do not meet the employment need.

A Panamanian citizen in a Canal Zone job based on U.S. rates receives the same basic salary as an American citizen in the same position.

Something seldom discussed in Panama but essential to the subject is the matter of job qualifications.

Panama's educational facilities do not approximate U.S. standards in many fields. Actual experience for many types of Canal Zone jobs is not available in Panama. This, plus the lack of fluency in the English language, works against selection of Panamanians for some Canal Zone positions.

Appointments are based on civil service-type examinations. These prove difficult to many Panamanians who must compete with American citizens taking identical examinations.

Agitators' aspirations are not always realistic. As an example, discrimination is alleged because all Panama Canal pilots are American citizens.

WAGE SCALES NOTED

The minimum qualification is that a Panama Canal pilot hold a license as master, all oceans, unlimited and have commanded a good-sized ship for at least a year. It is claimed here that not one Panamanian citizen meets these minimum qualifications, though Panama expects pilots to be employed on a basis of nationality and not of ability. The U.S. view is that it cannot relax standards because of its responsibility to transit 10,000 ships a year through the Panama Canal safely and expertly.

As evidence of discrimination, figures were quoted recently showing that in 1958 Panamanian citizens working in the Canal Zone averaged $150 a month while American citizens averaged about $600. Because the two groups do not perform the same type of work, this alleged disparity would be equally true in Boston or London.

Because of their lack of specific training, Panamanians do the menial, helper-type unskilled labor work in the Canal Zone. Wages for that work are low, but generally higher than in Panama.

The United States brings American citizens to the Canal Zone only for jobs which cannot be filled locally. These include professionals in many fields, skilled craftsmen, licensed pilots, tugboat masters, and so on. Wages for this work are high.

LOW PAY IN PANAMA

Of course, wages in Panama are far inferior to those paid in the Canal Zone. Through many years the ruling families in

Panama have defeated all efforts for minimum wage legislation. The oligarchy has tried to distract nationals from seeking wage increases in Panama by agitating for higher wages in the Canal Zone.

Last month, tremendous popular pressure forced the National Assembly to pass a minimum wage of 40 cents in this city and Colon, and 25 cents elsewhere.

This applies to both private and government employees. Industrialists forecast it will bankrupt the country. The government has paid as low as $25 monthly to employees until November.

In contrast, the minimum wage in the Canal Zone is 56 cents an hour and this is paid only to a handful of beginners who soon receive more.

Americans were paid in gold coin and Panamanians and other foreigners in silver coin in the early days of the Canal Zone. The term "silver workers" clung to Panamanians and was considered discriminatory, and Washington stopped use of the coins some years ago.

In February 1959 a single wage scale was adopted in the Canal Zone uniting both Panamanian and U.S. workers on a single pay plan. This was done to eliminate cries of discrimination from Panama, but it has not succeeded in its object.

Actually, many jobs once held by American citizens now are being filled by Panamanians. In Canal Zone hospitals, there are 11 highly placed doctors of Panamanian citizenship, some of them chiefs of clinics. They receive the same basic salary as their American citizen counterparts.

[From the Christian Science Monitor, Dec. 1, 1959]

ENVY SEEN KEY IN PANAMA

(By Ralph K. Skinner)

PANAMA CITY, PANAMA.—There is one factor that is basic to an understanding of the current antipathy toward the United States as reflected in Panama today: How Panamanians think and feel about persons living in the U.S.-administered Canal Zone.

It is no overstatement to write that there are many Panamanians who are envious of U.S. citizens in the Canal Zone.

This has an important bearing on relations between the two groups.

In a speech made before an anti-United States demonstration in this capital city on November 28, a Panamanian leader spoke of the Canal Zone as a "paradise for U. S. citizens."

This state of economic grace may have been partially true several years ago when housing was subsidized, when there were fringe benefits including no income tax, and the Government stores had no profit motive.

ZONE CONDITIONS

Today income-tax-paying Americans in the Canal Zone consider they are unjustly bearing the full brunt of all concessions made to the increasing demands of Panama, which appeasements, as they term them, should be a national problem met by the American people at large.

The Canal Zone seems to Panamanians a veritable paradise because everyone has a job, there is efficient police and fire protection, exemplary sanitation, good housing at rentals which are not exorbitant, dependable utilities at fair prices, free education of high quality from kindergarten through high school, and medical facilities at moderate cost to workers.

In addition, there are Government stores which make a substantial profit but not an exorbitant one. There is freedom of speech, no visible political graft to be paid, and, generally, it is a community of law-abiding citizens.

CONTRAST NOTED

The reverse of most of these factors is found in Panama, at least in this capital city. A great many Panamanians wish they could transplant themselves into the Canal Zone.

To most Panamanians, the Canal Zone seems to be a land of plenty in the midst of a desert of poverty, misery, crime, instability, unfulfilled hopes, and lack of future. Under such circumstances, Panamanians cannot be condemned for their envy of what seem like Utopian conditions compared to their own.

Panamanians consider that Americans look down on them. It is true that scores of Americans in the Canal Zone know Panamanian citizens only as servants, grass cutters, clerks in the stores, chauffeurs, etc. The rest of the Panamanians they know are shopkeepers—to Americans trading in Panama. A large number of Americans have no contact with cultured, upper class Panamanians.

In the same manner that Americans may be condescending to lower and middle class Panamanians, many of the top ruling families of Panamanians despise the average American in the Canal Zone, considering him an overpaid craftsman or Government clerk. They have social interchange only with the very top Canal Zone officials.

This means there is no communication between average Americans in the Canal Zone and average Panamanians in Panama. It is more than just a language barrier; it is a barrier of customs and of social hurdles.

Panamanians resent criticism of their national customs by Americans, who speak out against prostitution as an important industry in Panama and ask searching questions about the profit of the Government-run lottery.

Americans must bear the brunt of failing to promote better relationships in at least two ways: First is the refusal of many Americans to learn and speak Spanish, the official language of Panama. Bilinguality would promote better relationships here. Second is the American attempt to measure the stunted growth of Panama by U.S. standards.

AMERICANS WITHDRAW

Canal Zone Americans might have more compassion for their Panamanian neighbors if they considered their polygenetic background; their unbalanced Panamanian economic system which makes the rich richer and the poor poorer; and the unequitable distribution of wealth, property, and opportunities.

While there never has been any considerable amount of relations between Panamanians and Americans in the Canal Zone, they have now been reduced to a trickle at the topmost official level.

Whereas Americans once belonged to some social clubs in Panama, they now belong to fraternal clubs in the Canal Zone. Americans at large have withdrawn into their own highly integrated preserve. They feel they are not wanted in Panama. They are constantly reminded of this.

Anyone who has lived on the isthmus for 10 years or more has witnessed demonstrations against the United States. There were two in November, of great intensity. They are part of a deliberate anti-American buildup, to be discussed in the final article of this series.

With language difficulties, little opportunity to meet and to start friendships, little incentive to cultivate relationships, and with very real personal danger sometimes attached to visiting Panama, Americans are likely to withdraw even more.

Even the contacts between officials of the Panama Government and the United States are seen as deteriorating, but for different reasons, mainly that of the United States not making Panama feel important.

Panama political patriarch, Don Enrique A. Jiménez, a former President, told this correspondent in October that a principal cause of friction between the United States and Panama was the lack of effective representation here by the State Department.

Since the use of facilities in the Canal Zone is restricted to U.S. Government employees and their guests, it would appear that one way to improved relations must lie with Panama's offering attractions for Americans in the zone, observers here believe.

If they can be attracted into Panama once more and do not feel the atmosphere of hate and belligerency now existing, better relations may be established. Any full interchange between Panamanians and Americans in the Canal Zone may be conditioned upon a change in the social system of Panama which would allow the formation of a substantial middle class—something in the order of opposite numbers to the rank and file of Americans in the Canal Zone.

[From the Christian Science Monitor, Dec. 8, 1959]

ANTI-U.S. CAMPAIGN TRACED IN PANAMA

(By Ralph K. Skinner)

PANAMA, PANAMA.—Communist agitation may be the easiest explanation for anti-American sentiment in Panama, but it is not the correct one, according to the consensus of observers here.

Nor can the Panama agitation be considered as based solely on antigringoism. The typical Latin American resentment is based on envy of the "have nots" for those who "have," according to close observers here. Throughout the hemisphere, many American citizens have unthinkingly flaunted a standard of living so far above their neighbors that anti-American envy and resentment are widespread in Latin America.

In Panama, there is something more.

The concentration of about 5,000 American citizen employees in the transplanted typical U.S. community known as the Canal Zone brings a spotlight on this area. Living as close to a stateside manner as possible, these Americans have a standard of living astronomically higher than that of the average Panama citizen. Panamanians are in the Canal Zone 24 hours a day, observing and, part of that time, envying.

PLANNING SEEN

But the crux of the matter is that anti-American sentiment in Panama is a planned affair, close observers say, the result of a deliberate hate campaign during the past few years in which press and radio propaganda has been bulwarked by political speeches and inflammatory incitement.

It is accepted by observers here that the purpose is to use Uncle Sam as a whipping boy for Panamanian discontent over chaotic conditions in this Nation. The unrest of the people has been channeled away from the ruling families which have exploited them, monopolized industry and commerce, and perpetuated themselves in political office. The distraction has been the United States.

Panamanian political leaders have diverted the pressure of public opinion from their own failures by focusing discontent on the United States, by blaming the United States for its economic and other distress, these observers declare.

TWO ANGLES STRESSED

Two angles have been stressed in the anti-American propaganda here. First is an appeal to the nationalistic tendencies of the Panama people. This has been done by demanding that the United States recognize Panamanian sovereignty over the Canal Zone in every facet, not just titular sovereignty.

The issue selected is one where the United States cannot capitulate with honor. It provides a continuing trouble spot.

The real issue, in the view of observers here, is money—U.S. money, and lots of it. It is problematical whether the man in the street will be any better off if the United States pays Panama $2 million or $50 million annually. The record shows that in the past several years, with constantly larger national budgets, the people have not been benefited significantly, but have suffered increased unemployment, poverty, and a deep sense of futility.

Various demands are being made on the United States by Panama, but all are basically the same—more money. Whether it is a 50–50 split of the Panama Canal's gross income, a greatly increased annuity, more pay for Panamanian workers in the Canal Zone, a captive market in the Canal Zone for Panamanian products regardless of quality or price, or even threats of nationalization of the Panama Canal—all demand that more money flow into Panama for the dominant Panamanian families.

CALLED PRESSURE TOOL

The anti-American sentiment so deliberately generated here is merely a tool to exert pressure on the United States for economic concessions, it is generally agreed here. With Panama so patently an underdog in size and economy, and with its general backwardness, the United States faces international censure when Panama cries it is being "mistreated by the imperialistic colossus of the north."

The United States, observers say, is hampered in the situation by three factors: The weakness of the Panama Government, the political control of the Panama press, and the weakness and ineptitude of some State Department representatives.

During many years, the Government of Panama has been an instrument of the ruling class used to protect and enhance its vested interests, political observers note. In doing so, it frequently incurs the wrath of the people and of nonruling class opposition.

PRESS ROLE NOTED

Because of its weakness, the administration of Panama is a mere facade, according to most observers here. They say the administration is so fully occupied in endeavoring to stay in power that it dare not attempt any defense of the United States.

Majority opinion here is that the Panama Government has taken no action to combat the anti-American press and radio campaign but some administration leaders have promoted it.

The press has played a vital role in building up anti-American tension. In Panama, the Spanish-language press is a political weapon, not a business enterprise. If newspapers make money, so much the better, but it appears here that often they exist primarily for the purpose of controlling public opinion, to manipulate the people in the direction chosen by the publishers.

With one anti-American individual controlling the majority of the newspapers and influencing most of the others, the United States has no means to rebut the hate campaign.

Many North Americans here think that Panama already has received more than its fair share of handouts and appeasements.

Even the most hopeful American citizens on the Isthmus of Panama do not foresee any time when United States-Panama relations can be on an even keel.

Because of the increasing harassment of the Unted States by Panama, it is considered possible that the United States may look with favor on internationalization of the Panama Canal under the United Nations or some similar international body.

United States Faces Ruinous Foreign Trade—Will Russia-China Become World "Discount Houses?"

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. GROSS. Mr. Speaker, throughout the length and breadth of the United States there is growing concern as exports decrease and the flood of foreign imports increases, displacing the markets for American-made products both at home and abroad.

Accelerating this situation is the movement of American capital abroad for the establishment of factories from which come additional low-cost products. To top it all off, hundreds of millions of dollars are extracted each year from American taxpayers and sent abroad to support the economies of countries whose products are overrunning U.S. labor, industry, and agriculture.

Now comes the drive to open the doors to allout trade with Russia. Next will be Communist China. In no case, Russia, China or any of the nations constituting the so-called free world can U.S. labor, industry, or agriculture, operating on anything approaching free enterprise, compete on a cost basis. It is easy to invoke the argument of competition, but how can there be true competitiveness when almost all elements of cost in foreign production are substantially below costs in this country?

Sharing the concern of all thoughtful citizens as to how the productive plant of this nation can thrive in this uncompetitive climate is the National Federation of Independent Business whose vice president, Edward Wimmer, points out in a published article some of the reasons why U.S. export-import trade faces ruin. The article by Mr. Wimmer follows:

Counters were piled high with hundreds of millions of dollars worth of foreign made merchandise during the Christmas buying season, one department store executive remarking: "It was difficult to find something made in America, in some of our departments."

Recently, I again picked up a little American flag beside my plate at a banquet, and on the bottom it read: "Made in Japan." I bought a scarf in Seattle with the map of Washington on it, and in the corner it bore the same inscription. An operator of a local drug store told me the totem poles made by the Indians are now being duplicated to sell at half the price. I looked at a cigarette lighter, exact duplicate of an American made, for one-third cost of U.S. product.

This past year saw nearly $200 million in sales of foreign made women's wear. The busy Japanese passed the 4 million mark in radio sales. Over half U.S. sales of portable typewriters came over our borders, and it is estimated that 95 percent of all china sold this past year was foreign made.

From Hong Kong has come ship loads of blouses, men's suits, gloves, and shirts. Since foreign manufacturers (many American) are buying cotton 8 cents a pound lower than domestic manufactured, 1960 is expected to see even greater invasion of U.S. textile business. Consider the startling figure of 20 million pairs of leather shoe imports in 1959, and don't overlook the fact that more and more of these imports are coming from subsidiaries of American manufacturers. Said the Boot & Shoe Workers Union, in a special bulletin on imports:

"When big American shoe manufacturers, operating their own chains of retail stores, are the leading importers, promoters, and sellers of foreign made shoes, their pretended consternation over imports cannot be sincere. If they would withhold promotions of imports and intensify promotion of their own domestic product, they would better equalize our import-export balance of trade."

Congressman H. R. Gross, Iowa, reports: "Faye Bennison, a former Cedar Falls citizen, went to California and opened a semi-porcelain plant. Three years ago the plant hired 2,000 people. Today the plant is closed, jobs are gone, building sold. It could not compete with Japan. Seventeen other china and porcelain plants in California are closed."

American firms are stampeding to foreign countries. Fifty tire plants have been established. The outboard motor export business will soon be lost to the United States, and they'll come in here by the thousands from plants that didn't cost American promoters a nickel. Yet our officials are talking about easier taxation on U.S. earnings invested aboard, putting us in the position of financing our own destruction.

Some 5 years ago this column said—"look out for China and Russia—the upcoming world discount houses." We quoted Russian leaders as saying the big war to come was on the economic front—and "we'll win it." Allen Dulles now says that both countries will be "trading anything and dumping anything if it advances communism or helps to destroy the West."

Look at the Texas oil fields where the small operators and wildcatters are being frozen out by petroleum imports, leaving more and more of the business to the giants who have billions invested in foreign countries. Oil imports are now about 25 percent of U.S. markets, with domestic producers being held down to a few days production each month. The bigs can stand it and gear restrictions to tax benefits, but the smalls lose their shirts.

Such is the story in every field of business today. The smalls losing their shirts—not only to the bigs at home but to their subsidiaries abroad. The answer, a real fight to establish our free enterprise system on a basis of fair wages, fair prices and fair profits—with tariff walls high enough to insure fair competition, and relentless war against undue growth of power in agriculture, industry, finance, labor, and government. If you have better ideas, let's hear them.

Children's Milk Program

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, yesterday I introduced a bill to increase the amount of Commodity

Credit Corporation funds which can be used for the children's milk program during the 1960 and 1961 fiscal years. Under the provisions of my bill, the authorization for this program would be increased from $81 to $85 million for the fiscal year ending June 30, 1960, and from $84 to $90 million for the fiscal year ending June 30, 1961.

The increased authorization will be necessary if the children's milk program is to fulfill the bright promise of the program's 6-year history. During the 1954–55 school year, the first that the children's milk program was in operation, 41,094 schools used 449,800,000 half pints of milk. Since that time, both the number of schools participating and the amount of milk consumed have shown a steady and gratifying increase. Throughout the 1958–59 school year, some 80,000 schools and child-care institutions took part in the program, and the children drank 2,175 million half pints of milk.

These figures do not include the summer camps, which became eligible to benefit from the program under the provisions of a bill I introduced and which was enacted into law in 1956. The following year, 2,220 camps participated in the program. By 1958, the number had gone up to 3,026.

Mr. Speaker, as successful as the children's milk program has been during its first 6 years, it still reaches barely half of our Nation's schoolchildren. Nutritionists agree that milk is nature's most nearly perfect food. I feel it is vitally important for the children of our country to be provided with a sufficient amount of wholesome milk in order to strengthen their bodies as they grow to maturity and take their rightful places in our democratic society.

This can hardly be accomplished unless sufficient funds are made available so the children's milk program can keep pace with rising school enrollment as well as encouraging additional schools to join this worthwhile program. For a school which is considering taking part in the children's milk program, nothing could be more discouraging than the fear that the funds for the program might run out in the middle of the school year—or the fear that the reimbursement rate to the schools might be cut.

At the present time, the Federal Government's maximum reimbursement rate to schools which offer milk to children as a separately priced item is 4 cents per half-pint in schools serving type A lunches under the national school program. In schools serving milk but not the lunches, the maximum reimbursement rate is 3 cents per half pint.

Mr. Speaker, I was very disturbed to learn that the funds now authorized for the children's milk program for the 1959–60 school year will not be sufficient to cover the increased number of children and schools participating in the program. As a result, the U.S. Department of Agriculture has announced that, effective March 1, 1960, the maximum reimbursement rate will be cut by half a cent per half pint of milk in both categories.

If the reimbursement rate to schools goes down, naturally the price the school children or the school districts have to pay for the milk will go up. This will result in a decrease in milk consumption in the schools, particularly among children from low-income families. And they are the children who need the milk the most because they are very likely not getting enough milk at home.

These are not mere conjectures on my part. During the first year the children's milk program was in operation, numerous federally financed research projects were undertaken to discover problems which might hinder the rapid and effective expansion of the program and to explore new and effective ways of increasing milk consumption.

In my home State of Wisconsin, we cooperated in the study of price reduction. The Wisconsin experiment proved conclusively that: First, reduced prices resulted in increased numbers of children drinking milk at school; second, the greater the price reduction, the greater was the increase in consumption; and third, the increased milk consumption at school was new consumption, not a replacement of home consumption.

Mr. Speaker, another study conducted in St. Louis, Mo., during the 1955–56 school year shows beyond a shadow of a doubt that children from low-income families would be hardest hit by an increase in the amount of money they have to pay for milk at school. When the Federal reimbursement to the schools participating in the children's milk program was applied toward the reduction of the price of milk to the children, the pupils in the low-income districts increased milk consumption by 171 percent. Milk consumption by children in the middle-income districts went up 157 percent, but the increase by pupils in the high-income areas was only 44 percent.

We are lucky to live in a land which is blessed with an abundance of food. But this blessing of abundance carries with it a large responsibility. There is little excuse for malnutrition in this country, and even less excuse when it comes to our children. I would not have it on my conscience that I deprived any school kids of needed milk through short-sighted economy. I am sure my colleagues share my feelings and will support my bill to increase the funds for the children's milk program so it can continue the job it has been doing so well.

The Late Steven V. Carter

SPEECH
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 6, 1960

Mr. ELLIOTT. Mr. Speaker, I did not know STEVEN CARTER for a long time. He sat in this body for a single session. But I can say that in that period his demeanor and work made it obvious that his death is a great loss to his district, State, and Nation. I pay tribute to him as a man of devotion to his country who in the space of a year won the esteem of his colleagues and promised to be a great legislator.

STEVEN CARTER served his Nation in many ways: as an officer in the U.S. Navy, as a leader in Boy Scout work, as an active layman in the Christian Church, and as a citizen fulfilling civic responsibility. For 10 years prior to his election he was a worker in the political activity of his district.

I think he will be long remembered here despite his short tenure; and that memory will be one of a fine, outstanding American who gave great service to his Nation. I extend to his family my deepest sympathy for their great loss.

Problems Facing the Congress

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. WOLF. Mr. Speaker, much has been printed in newspapers and periodicals since the first of the year heralding a booming, exciting and progressive 10-year period in our future. We hope that all the good predictions will come true. But, I submit, Mr. Speaker, that before we can go forward with a new blueprint for the sixties, we must finish some of those tasks left undone in the last decade. In this session of Congress we must not let ourselves be sidetracked by false issues.

Some of the issues with which we must deal effectively are social security, agriculture and food for peace, interest rates and fiscal policy, education and school construction grants, and re-evaluation of our defense programs. My views on these problems are outlined below:

1. SOCIAL SECURITY

In my travels through the district, I was struck with the fact that far too many of our older people—those who have made this society great—are not enjoying the wealth and prosperity of our society. We must drastically revise our present social security laws to enable our older citizens who desire to work to be given the chance to work without being penalized. It is becoming increasingly obvious that some form of national health insurance scheme must be worked out which will help all of our older citizens. For example, there are some 4 or 5 million people over age 65 and women over age 62 who are not eligible for social security benefits, although they have contributed to the system for many years, and although they are incapacitated for life. I believe that the present requirement that one must have worked under social security for a least 5 years out of

the 10 years before becoming disabled should be revised.

2. INTEREST RATES AND FISCAL POLICY

The Federal Reserve Banks and the Treasury Department are following independent and often mutually contradictory policies. Our Federal credit policies must be integrated lest we stifle economic growth while continuing the aimless road to inflation. We must create a national monetary and credit council which would include the Chairman of the Federal Reserve System, Secretary of the Treasury, Chairman of the Federal Deposit Insurance Corporation, and heads of the other lending agencies.

The policy of high interest rates as set out by the administration are not stopping inflationary tendencies, but they are stifling competition and economic growth. From the little businessman in northeast Iowa to the high-powered economics professor, to the corporation executive who makes $100,000 a year, there is an awareness of the fact that only the giant corporations have easy access to money at all times regardless of interest rates. However, high interest rates destroy the chance for small businesses to borrow, compete and grow since these groups depend on readily available money at reasonable interest rates in order to be able to borrow for expansion purposes.

The surest way to destroy small business and continue the road to monopoly and the surest way to destroy the small farmer is by encouraging and keeping a tight money program.

3. EDUCATION AND SCHOOL CONSTRUCTION

Congress should authorize and appropriate more money for more classrooms and higher teacher pay scales. Nationally we are short some 140,000 classrooms and our teachers are woefully underpaid. If this Congress does not pass the kind of legislation in education which will give this Nation more scientists and engineers, philosophers and social scientists, we will cease to be a first-rate power. This Congress must make the school bells ring loud and clear for better schools and teachers, rather than have those same bells toll for a nation that prefers to spend more on cigarettes and cosmetics than on education.

4. DEFENSE

This year Congress must take a long, hard look at its defense budget. Sixty-seven percent of the taxpayer's dollar is spent on defense and defense-related expenditures. It is clear that we are overspending in some areas and not spending enough in other areas. There are over $34 billion in military goods which have, in the last few years, been taken out of use and circulation by the Armed Forces.

Every dollar that is wasted in our national defense program and every dollar that is unnecessary takes away money which could be better spent in making our society richer and freer than any that has ever been known.

5. AGRICULTURE AND FOOD FOR PEACE

An international food for peace program through the United Nations that will get the food out of the storage bins and into the stomachs of the hungry of the world must be initiated. There is nothing more disgraceful to the United States than the fact that we have $10 billion worth of food and fiber resources rotting in our storage bins while a billion people are on the edge of starvation.

A thorough investigation is called for in the price structures of food resources. This Congress must explode the myth that the farmer is living off the fat of the land. We must study how it is that with a $10 billion food surplus on hand, paid for by the American taxpayer, the farmer's income has been lower than it has been in 18 years and, furthermore, why the consumer is paying more for food than he has ever paid before.

Mr. Speaker, when we have finished these tasks, then we will be ready for the adventure of the sixties.

Extend Soil Bank, Encourage Gradual Farm Bank To Reduce Overhanging Farm Surplus

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. QUIE. Mr. Speaker, one of the major responsibilities of this Congress concerns farm legislation. The present overhanging crop surplus constitutes a threat which cuts across every segment of our economy and confronts not only the Nation's farmers but all Americans.

For that reason, I believe that one of the first priorities on the agenda of the Congress is to determine how best to reduce the crop surplus.

One of the Nation's most important farm programs is the conservation reserve, known as the soil bank. This legislation is necessary as one of the most acceptable means of reducing production by placing acres in idleness.

The Soil Bank Act is due to expire. On the opening day of this second session of Congress, I introduced legislation to extend the program for the next 5 years. I believe that we must continue the land retirement program which attempts to balance production with consumption, and in these remarks I would like to detail the various features of this legislation.

The Department of Agriculture has viewed the conservation reserve as an opportunity to remove the greatest number of acres from production with the funds appropriated by Congress. I believe this concept is faulty. To my mind, we should remove not necessarily the greatest number of acres, but the more productive acres, in order to cut down the surplus. An increased effort must be made to retire land of higher productive capacity into the conservation reserve than has been the case in the past. I believe the legislation I have introduced provides the incentive to accomplish this end.

In addition to extending the life of the program for 5 years, my bill would set up a goal for the Secretary of Agriculture of $150 million per year to take in contracts with producers for additional conservation reserve acreage, including cost of materials and services.

Also the bill provides that the Secretary would not "enter into contracts with producers which would result in increasing the number of acres of land in the conservation reserve by more than 10 million acres in any year." This means that it will take from 3 to 5 years for sufficient land to be taken out of production by soil banking entire farms. It is necessary to take this time, so that communities are able to adjust to the program. I believe that this program will be of interest to older farmers who are still active, but planning for eventual retirement.

To my mind, the practice of soil banking entire farms ranks as the most efficient, effective way to cut production. If only a part of a farm is taken out of production, the labor and capital formerly used on the idled portion goes into increased output on the remaining acres.

The practice of retiring whole farms has two great advantages. First, the program is the least expensive one for the taxpayers. Secondly, the program at the same time provides more income to the farmers who will remain in farming.

The legislation I have introduced contains a provision of the 1956 act, to prevent the soil banking of land in reclamation projects and the placing of price supports on any crops raised on such land. I believe that the cost of our farm program could be reduced as well as crop production if vast reclamation projects, bringing new land into production, could be at least temporarily halted.

Mr. Speaker, I hope that this legislation will be endorsed by this Congress and that a program of increasing value to America can continue to operate.

Ever-Loving Friends of the Little Man

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. DINGELL. Mr. Speaker, I ask unanimous consent to insert into the CONGRESSIONAL RECORD an editorial appearing in the Detroit Free Press on December 25, 1959, in regard to fair trade legislation.

EVER-LOVING FRIENDS OF THE LITTLE MAN

Another fair trade law has been introduced in the U.S. Congress. The bill would permit manufacturers to fix retail prices of their goods for retailers.

The controversy over price fixing has been of long-standing duration. Although the legislative actions and court decisions are numerous, the outcome in every legal test has been in favor of competitive-minded storekeepers and consumers.

The courts struck down a 1937 law that empowered States, 45 of which did so, to enact fair trade laws applicable to those merchants who signed agreements with

manufacturers. In the early fifties, Congress authorized the States to try again, with a law binding even those who refused to sign agreements with manufacturers. In the last 5 years, such laws have been held unconstitutional in 15 States.

How strange it is to see men who, publicly proclaiming a great regard for the consumers, are in the forefront of most fights against price fixing by manufacturers (as in the current investigation into drug prices) but who support mass price fixing that would banish from retailing much of the competitiveness through which the consumer benefits.

Even a small amount of belief in an economically free market, with its carefully balanced controls in the hands of those who support it through their considered purchases, should make price fixing of any kind extremely distasteful to those Congressmen who profess to represent that powerful individual whom they dub and cajole as the little man.

William C. Hull, Executive Assistant to the U.S. Civil Service Commissioners, September 23, 1891, to December 23, 1959

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. REECE of Tennessee. Mr. Speaker, when I came to Washington in 1921 as a young Member of Congress, one of the men in the Civil Service Commission who was very understanding and always ready to render any service within the limits of the Civil Service regulations was William C. Hull, the executive assistant to the U.S. Civil Service Commissioners, a position to which he had been appointed under the administration of Woodrow Wilson, and it was with much sadness that I learned of his passing.

Mr. Hull had served during administrations of 9 Presidents and under 30 of the 48 Civil Service Commissioners in the 76-year history of CSC. The occasion of his golden anniversary in Federal service was marked informally by CSC officials and employees in September 1958, with a reception at which Harris Ellsworth, then Chairman of the Commission, paid tribute to Mr. Hull on behalf of the CSC staff.

All but 3 weeks of Mr. Hull's long service had been with the Civil Service Commission. He entered Federal service on September 18, 1908, with the Patent Office, serving there until October 3 of the same year. On October 5, 1908, he started work as a messenger at $360 a year for the Commission. He became executive assistant to the Commissioners on October 18, 1917.

Mr. Hull's long and able service brought him many commendations. Among them was a golden anniversary salute from Representative JOHN L. MCMILLAN, Democrat, of South Carolina, in an extension of remarks printed in the CONGRESSIONAL RECORD. "I think every Member of Congress who has had occasion to transact any business with the Civil Service Commission during the time he or she has been a Member of Congress, will agree with me that Mr. William Hull, who has so ably served for a number of years as executive assistant to the Commission, is one of our most outstanding public servants," Representative MCMILLAN said. "Because of his experience accumulated over the years and his close associations with Commissioners, he is a frequent and authoritative source of information to Members of Congress, high-ranking department and agency officials, representatives of union and veteran groups."

The Commission gave formal recognition to his many contributions to the Federal service by presenting him a special citation for outstanding devotion to the public service at the Commission's diamond anniversary awards ceremony on January 16, 1958. He was named "civil servant of the year" by AMVETS in 1959.

Despite his long and distinguished career with the Civil Service Commission, which reflected great credit upon the Civil Service, he never worried about titles or grades for himself and at the time of his death he still held a grade 14, although he was assistant to the U.S. Civil Service Commissioners. His one great interest was upholding the dignity and integrity of the Civil Service itself and interesting himself in seeing that other employees were justly recognized.

A native of Arlington County, Va., Mr. Hull was long active in community affairs. He served on the boards of trustees of the Arlington Community Chest and Arlington Hospital Association and as vice president of the latter, and as secretary of the Leeway Citizens Association. He has been a delegate to the Arlington County Civic Federation and to the Inter-Federation Council, during this time serving as president of the federation and chairman of the council. He was also a charter member of Lodge 32 of the American Federation of Government Employees and a member of Local No. 2, National Federation of Federal Employees.

He is survived by his wife, Gladys, of their home, 2255 North Powhatan Street, Arlington; two daughters, Mildred Page, Annandale, and Marguerite Oakley, Arlington; two brother and four sisters to whom, I know, my colleagues join in an expression of deep sympathy.

Who's Running the Shop?

EXTENSION OF REMARKS
OF
HON. JACK BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. BROOKS of Texas. Mr. Speaker, apparently it is becoming popular for the members of the Eisenhower administration to prejudge the work of this 2d session of the 86th Congress as solely seeking political advantage for the national elections this coming November. I do not believe our work here in the House of Representatives, under Democratic leadership for the past 5 years, to help solve the problems of our people and our country can flippantly be dismissed as politics. I am confident that Democrats will continue to work for constructive solutions to our problems and if this is also good politics our people will recognize it in good time.

The fundamental difference, it seems, between the Republican administration and the Congress led by Democrats lies in the fact that the Democrats have worked hard to formulate positive programs for progress here at home and for substantial strengthening of our defense posture abroad and we stand fully responsible for our work. During these same years the Republican administration has offered our people almost everything except genuine leadership and responsibility.

Columists Walter Lippmann and Robert W. Akers, editor of the Beaumont (Tex.) Enterprise, have asked: "Who's running the shop?" It is a penetrating question and the fact that two unusually well-informed members of the press are unable to pin the responsibility for decision or lack of decision on the President or any member of the administration is particularly disturbing. This type of administration does not strengthen our democracy.

I would like to submit for the attention of our colleagues Mr. Akers' column of January 3, 1960, in which he reviews Dr. Lippmann's column of the previous day and asks the pertinent questions: Who is really responsible for the administration—Who's running the shop?

IT'S LIKE THIS—

Walter Lippmann's column in this spot yesterday made it appear the American people have taken leave of political reality and soared off on a flight of fantasy.

He writes about Mr. Eisenhower becoming a sort of kingship symbol to the Nation, about him occupying a position up there in the clouds, clear above partisan concern, floating lightly above such mundane duties as administering the Government.

He says the citizens themselves have created this lighter-than-air quality for him in a burst of veneration which places Mr. Eisenhower in state unique among all our Presidents.

And Mr. Lippmann may be exactly right, in fact, I'm afraid he is exactly right.

If he is, then we'd better quit sniffing the "happy-powder" and ask a very important question: Who's running the shop?

Hero worship's fun and all that. Emotional jags provide relief for tension, true.

But Mr. Lippmann's thought on who's in charge of the Government is a vague reference to the "ministers" taking the blame, while Mr. Eisenhower, living in another world, receives only adulation, like Queen Elizabeth bestowing regally distant waves upon admiring throngs.

What ministers? To whom do we turn before the Federal system becomes even more like the early day aviation story: "Who, me? I thought you were flying the plane."

By Mr. Eisenhower's own definition, inflation is a serious threat to our economic system, yet in the 7 years since he took office inflation has grown steadily without one serious action on the part of the White House to check it. Words, yes, but not action.

Mr. Eisenhower has declared over and over that the steel strike could be disastrous to American business, but he has never yet exercised aggressive leadership nor used the tre-

mendous weight which the presidential office once carried as a means compelling settlement in the public interest.

Lately, we have seen allusions to the Vice President getting into the act and holding conferences with the Secretary of Labor toward possible strike settlement. The Vice President is most hesitant to talk afterward, preserving a politically strategic position which will enable him to step up and take credit if things do break right, or hastily abandon ship if the vessel's about to sink.

But the question of who's hands (if anyone's) are on the controls goes unanswered.

Mr. Eisenhower took over the presidency with loud sounding of the trumpets about reducing the national debt. Now it's higher than ever.

There were logical hopes that, as a career military man, he could bring some unity into the Pentagon, more efficiency into armament expenditures. Interservice rivalries have now been projected clear into outer space, there still is colossal waste and duplication in military spending, firm civilian control over the Armed Forces is lacking.

The farm surplus has grown steadily and no one seems to have any idea of what to do about it. What was a national scandal when Mr. Eisenhower took over has now become a world scandal: We send our President over the globe talking about peace and better living while we stay home greedily clutching a mountain of food we don't know what to do with.

Those are some of the problems—and they're ones which can destroy the country if someone doesn't act decisively.

All right, so Lippmann's right. So President Eisenhower is now King Ike and we have no right to place the responsibility on him.

Then who is responsible?

Vice President NIXON?

I'll go along with Prime Minister NIXON—if he asserts his position. But this business of the Vice President holding somewhat covert conferences on issues which normally are the serious concern of the President of the United States, yet keeping just detached enough not to get hurt if things go wrong—that won't answer the question either.

On the other hand, if the plan is to let the Vice President do the President's job, taking credit in the 1960 campaign in case of success, then Lippmann's lofty talk of the President being above politics comes crashing down into the dusty arena of slug-it-out vote-getting.

By the Lippmann theory, then, America enters a strange sort of year in 1960.

The man elected to carry out the responsibilities of the Presidency has been relieved of any accounting for these duties through having been elevated to an even more exalted position—by those very same voters.

But the voters also see all too clearly that great domestic decisions are not being made, great domestic leadership is absent.

Which brings us back to the original question, the one which can only be answered by the unfolding of events over the next 12 months: Who's running the shop?

President Ducks Again

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. WOLF. Mr. Speaker, in the January 1, 1960, issue of the Capital Times, Madison, Wis., two very significant editorials appeared on the question of the FEC and FTC responsibility in the TV mess.

The last few weeks of 1959 were filled with revelations of immorality behind certain television programs. We cannot expect too much from the television authorities when the FCC and the President himself will not assume responsibility in cleaning up this blot on American integrity.

The way in which the administration has dealt with this question is similar to the way it deals with all questions. It first creates the illusion that it is going to do something, and then, in fact, it refuses to carry through its proposals. In this case, the Justice Department made it quite clear that the FTC is not doing its job. The President, who called for the recommendations from the Justice Department, apparently does not intend to pursue the lines outlined in the Justice Department report. The two editorials follow:

JUSTICE DEPARTMENT REPORT HITS FCC BUT PRESIDENT DUCKS AGAIN

President Eisenhower has been quick to fire the Justic Department's hot report on the TV scandals and the derelictions of the Federal Communications Commission right back to Attorney General Rogers.

The President said nothing about the explosive aspects of the report. He merely acknowledged it with a message saying "I would appreciate it if you continued to follow the matter for me."

It is obvious that the White House is going to sweep the FCC scandals back under the rug.

The report makes it clear, despite the assertions of FCC Chairman John Doerfer that the Commission lacks authority to have prevented the TV frauds, that the mess could have largely been avoided if the FCC and the Federal Trade Commission had used the powers they now have. The report says:

"The FCC and the FTC appear to have authority adequate under existing law to eradicate most, if not all, of the deceptive and corrupt practices in broadcasting which have been disclosed—particularly if the agencies are accorded the full cooperation of the broadcasting industry."

In other words, the FCC and the FTC did not do their duty in protecting the public interest.

The President's duty is clear under the circumstances. He should demand the resignations of the public officials who failed in their duty.

This is particularly true where it has been shown, as it has in the case of most of the members of the FCC, that they received gifts, lavish entertainment, and various other favors from interests with business before them.

The President is doing what comes naturally. Despite his claims of leading a great crusade for new morality in Government, he has ducked this mess from the time that White House personnel intervened to assure that the congressional investigation would not get out of control. For all the efforts expended, it did get out of control because its chief counsel, Bernard Schwartz, tried to conduct a genuine investigation only to be fired.

The trail led straight to the White House and the sordid Goldfine-Adams scandal. Adams was let out only after the impact on the public became apparent when the Democrats swept the rock-ribbed Republican State of Maine.

It is obvious that the coverup is to continue.

THE ATTEMPT TO HIDE REPORT OF JUSTICE DEPARTMENT ON TV MESS

The Report of the Justice Department on the TV scandals carries this strong language:

"The testimony before the House committee in connection with the quiz shows has shown that school teachers, infants, clergymen and others from all walks of life had been drawn into a gigantic hoax perpetrated upon the Nation through the medium of television. Other disclosures have revealed substantial corruption in other aspects of the broadcasting industry. The disclosures have been accompanied by a sense of public shock and disgust."

All this is true. But what of the "public shock and disgust that would be forthcoming if it were made aware of the coverup going on to hide this mess?

There has been a most obvious attempt to hide the Justice Department's report. This report was sent to the President on Wednesday. But a rigid deadline for release at 6:30 p.m. Thursday evening was imposed.

This meant that the report would receive a minimum of publicity. The story was timed to break for Friday's papers—New Year's Day.

Washington officials, who are skilled in publicity techniques, are well aware that many of the biggest papers in this country are not published on New Year's Day. For example, the paper with the largest circulation in Wisconsin, the Milwaukee Journal, is not published today.

And they can be confident that the TV news coverage of this embarrassing report will not be too thorough or energetic.

If the public was conned by the TV industry, what about the conning it is getting from officials in Washington who held up this important report for a day when it would go virtually unnoticed?

New York's Billion-Dollar Racket

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. POWELL. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following:

[From the New York Journal-American, Jan. 5, 1960]

POLICY PAYOFFS ROCKED POLICE

(By James D. Horan, Dom Frasca, and John Mitchell)

The announcement released from police headquarters was terse. It read:

"Charges and specifications have been lodged against 12 members of the (police) department. * * * Eight of them are involved in the motion pictures. Four were charged with failing to report gambling on the premises.

"In the 10th division, one deputy chief inspector and two inspectors were transferred, reduced to captain, and retired from the department. Two lieutenants and 31 patrolmen were transferred to other commands. * * * Charges and specifications also were brought against two lieutenants, one of whom retired before trial.

"In the 28th precinct, 1 captain, 4 lieutenants, 24 sergeants, and 32 patrolmen have been transferred to other commands. One patrolman has been dismissed from the department."

FILMS UNDER STUDY

Behind the blunt announcement is the story of the police department's long, enduring, and sometimes losing battle against the policy racket which so often has tarnished its proud and favorite cliche, "New York's finest."

For months police brass have been viewing and reviewing eight rolls of 16-millimeter film. It is strictly an amateurish production staged by the department itself on Lenox Avenue between 110th Street and 115th Street in west Harlem.

The frames sometimes quiver. The neon lights on taverns, automobiles, and children on skates dance across the screen with no apparent meaning to the casual viewer.

But the camera is held steady when a police officer or a prowl car appears.

Here every move is recorded in detail.

During the past several months, the films have been shown many times to high police officials. In a darkened, quiet room of police headquarters, they have seen police officers walking in and out of policy "drops" and laughing and talking with the gambling fraternity.

Ironically, the films were taken by policemen and constitute a documentary of corruption within their own department.

They are members of a select undercover squad sworn to secrecy. Their boss is Assistant Chief Inspector John W. Walsh who led the now celebrated raids on the policy "banks" in East Harlem in March 1958.

The raids climaxed an investigation triggered by information received by this newspaper.

POSED AS BOOKMAKERS

Inspector Walsh became convinced after a preliminary probe that the gambling racketeers were operating under a cloak of police protection. Consequently, he handpicked several members of his special squad to prove it.

Young patrolmen, posing as policy runners and bookmakers, rented a room and made a series of films from a window overlooking the scene of the mob's main "drop."

When policemen appeared on the scene, the cameras ground away. Then came the arduous task of identifying officers in the film. Some were miles from their regularly assigned posts when caught by the hidden eye of the camera.

For weeks, police brass viewed the films with bitterness. Finally, with the evidence in hand, Commissioner Kennedy angrily shook up entire commands, lodging charges and specifications against scores of policemen.

SHAKEUP EXPECTED

The sum-total of Commissioner Kennedy's punitive acts was released to this newspaper in the announcement that appears at the beginning of this article. However, it was said at police headquarters that decisions in the departmental trials of additional officers are still pending.

Shakeups like this comes as no surprise to ranking police officials. They have seen it happen too often before. And each time the honest members of the force have so to speak, paid for the sins of their dishonest brothers.

The stigma of scandal may touch only 2, 3 or 10 officers, but too often the man of the street is inclined to accept it as a broad indictment of the entire 24,000-member department.

Former Special Prosecutor John Harlan Amen in 3½ years' work digging deeply into the machinations of the police department as part of a probe into official corruption in Brooklyn.

In 1942, his work completed, a grand jury returned a presentment charging that 49 policemen were grafters.

THE GROSS SCANDAL

And who in the police department can forget pudgy, vociferous Harry Gross, seized in 1950 as head of a $20 million a year bookmaking empire?

Harry reeled off the names of policemen on the pad like a quiz whiz on a TV show. The only difference was that Harry wasn't rigged.

It was a black chapter in the history of the police department. And 10 years later, the germ bred by greed and known as gambling is still casting its shadow on New York's Finest.

Appreciation Given as Okefenokee Project Nears Completion

EXTENSION OF REMARKS

OF

HON. IRIS FAIRCLOTH BLITCH

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mrs. BLITCH. Mr. Speaker, I am pleased to report the approaching completion of the project for improvements and fire protection of the great Okefenokee Swamp made possible by passage of H.R. 9742 during a previous session of the Congress. A completion date has been estimated for April and as we begin the 2d session of the 86th Congress, I wish to express appreciation to my colleagues for their assistance and approval in making the Okefenokee project possible, and thereby, better protecting from fire the natural features and substantial values represented in the Okefenokee National Wildlife Refuge located in the Eighth District of Georgia. I am grateful also to the people of the district for their overwhelming support of the Okefenokee project and under leave to extend my remarks in the RECORD, I wish to include the following editorial from one of the fine daily newspapers of the eighth district, the Waycross Journal-Herald, Saturday afternoon, January 2, 1960:

SWAMP PROJECT NEARS COMPLETION

It is very good news that the ambitious Okefenokee Swamp conservation and fire protection project is nearing completion.

The very concept of a road around the great swamp attracted national interest. We are now informed that, barring bad weather, the perimeter road and the water-retaining structures will be completed by next April.

The road around the swamp is designed to serve as a firebreak and as a means of moving firefighting equipment and personnel into the vast wilderness.

There remains the grim memory of the fires of 3 and 4 years ago which swept from the heart of the swamp over thousands of acres of timberland.

Homes, livestock and, indeed, whole communities were threatened by the racing flames. Scores of firefighters and thousands of dollars worth of equipment were used in the battle to contain the fire.

When the situation was finally under control there remained acre after acre of charred timberland worth thousands of dollars.

The sills and dikes now under construction in the swamp are designed to prevent other disastrous fires like the ones described.

They are built for the purpose of holding back enough water to keep the swamp from drying out during periodic droughts and thus reducing the possibility of fires.

Legislation for the protection of the Okefenokee area was sponsored by Representative IRIS BLITCH, of Homerville, after a series of meetings with Government engineers, landowners, and others.

Cost of the overall project is $728,500 and, it is our opinion that the money is being well spent. The Okefenokee protection measures will represent insurance for homes and property over a vast area.

Among other things it should serve as an important factor in the continued development of the forestry and pulp and paper industry in southeast Georgia.

Our Challenge for 1960

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. PUCINSKI. Mr. Speaker, following is the annual message which I delivered to my constituents, Sunday, January 3 over station WIND:

OUR CHALLENGE FOR 1960

Thank you—next Wednesday, the 2d session of the 86th Congress will reconvene in Washington and for the next 6 months, efforts will be made to translate into law the soundings which most Members of Congress garnered from their constituents during the 14-week recess. In a sense, this will be a rather historic session if for no other reason than that it will be the first time Congress will assemble in the new decade of the 1960's. But there are other reasons why this session could become historic. We as a free people in the United States—through our Representatives in Congress—must attempt to strengthen our traditional formula of freedom and well-being at a time when the surface of the world is stirring; when entire continents are surging; when time itself is being telescoped. Everywhere throughout the world there is movement; awakened hopes—new horizons. And all of this springs from the knowledge, no longer subject to suppression, that human life should mean more than a deadening subsistence. The time bomb of human expectancy is loudly ticking. Those who close their ears to it shall have them rudely opened by its explosion.

It is neither my purpose this evening to be an alarmist on the one hand nor an ignoble quiescent on the other. Rather, I should like to discuss with you briefly this evening on "Congressional Report," the problems which confront our Nation and the world as we begin this new decade of the 1960's. I am certain that many of you may have mentioned some of these problems as you toasted in the new year yesterday. But I am equally certain that many of you, more comfortable than ever in your day-to-day existence, have not given them even a fleeting thought. In my brief career as a Representative in Congress, I have found that many people are anxious to discuss the great challenge which lies ahead, if America is to survive as a republic—governed by free people. But I have also found that many of our citizens do not want to face up to reality—do not want to hear anything which may in the slightest disturb the placid calm of their very comfortable existence. Paradoxically, after spending the last 3

months talking to thousands of people, I have a feeling that the ranks of this second group are increasing at an alarming rate. I've found that many of our citizens want to do nothing which might disturb the status quo. This indeed is tragic. For it is my firm conviction that the dynamics of a democracy such as we have, and which has made our Nation the most prosperous in the world, cannot afford the luxury of relaxing when the entire world is on the move. I am deeply concerned about the widespread apathy—the total conformity—which dictates the spirit of so many of our people here in America at a time when leaders throughout the world are inspiring their people into various ventures—some designed for good and unfortunately, some designed for evil.

Frequently, however, it is difficult to be frank in this type of atmosphere. I should like to recall for you an ancient legend about the Locrians in Greece who reportedly gave the first expression to free speech, but at a price that many considered too costly. The Locrians would permit any person to address an assembly on any subject he or she wished but under one condition. A rope was placed around the speaker's neck and if the audience did not agree with what he said, he was promptly hanged. I have recited this story because I hasten to assure you, that as a Member of Congress who must take a position on controversial issues, I frequently understand and appreciate how some of these Locrian speakers must have felt as they faced their audience. While millions of Americans can very easily avoid the fate of the Locrians simply by not engaging in the debate of issues confronting our Nation, a Member of Congress cannot shirk this responsibility. I should like to assure you there is no more lonely place in the world than in the well of the House of Representatives or the Senate when a Member of Congress must stand up and be counted by casting either a "yea" or "nay" vote on a controversial issue. For you see, even after a Congressman has listened to all of the arguments pro and con on an explosive issue; even after he has read all of the editorial comments; studied the mail from his constituents; heard out the lobbyists—he, and he alone, must make the final decision on his vote. Because the world, and our own Government in it, have become so fantastically complicated, I can assure you that a Congressman's final decision frequently is a most difficult one to make.

I shall not go into detailed analysis of the fifties which we laid to rest only yesterday and which in my own humble opinion were to a great extent unproductive. I would rather address the limited time I have this evening to the problem which we as Americans must resolve as quickly as possible during the 1960's if we are to survive as a nation. It is my very firm conviction that overshadowing all else is the great challenge that we as Americans must face in dealing with the growing menace of international communism. Bluntly stated, you and I—and millions of other Americans like us—must decide whether we shall have the courage to stand up against the spread of international communism or whether we shall idly sit back and wait—like the ancient Chinese who never did find a way to deal with the locust—until it devours us. As U.S. News & World Report pointed out in a leading article last week, at some time, not many years from now, the American people are likely to be offered this choice: surrender or fight a nuclear war. And, the article points out, the way things are going, the United States could lose that war. What is the basis for this pessimism at a time when optimism appears to be bursting out on all sides and world leaders are talking of peace and disarmament? Three reports prepared by Americans whose entire lives have been devoted to studying the powerful forces at work in the world—reports prepared for the Senate Foreign Relations Committee—may give us a partial answer. The first report was prepared by a research group at Johns Hopkins University; a second report was prepared by the Stanford Research Institute and a third by experts operating under the Rockefeller Brothers Fund. Add to this the views of highly informed Government officials and these conclusions emerge:

(1) The United States is now open and vulnerable to a direct attack by nuclear missiles and this country's vulnerability is steadily increasing.

(2) There can be no guaranteed security in the world when rival systems of government exist, each possessing the means of mass nuclear destruction. As more nations develop their own nuclear devices, the horror of nuclear war may prove no deterrent if a showdown comes; just as possession of poison gas by both the Western Powers and Nazi Germany proved no deterrent to World War II.

(3) The indisputable trend in the world today is toward dominance in the world by a single power. Let there be no mistaking of Khrushchev's beguiling smile for a sincere desire to work out the problems of the world. For those who might be tempted toward those conclusions, let me remind them that international communism has made fantastic gains in 72 nations of the world in the last decade and that the Communist Party—even though operating from the sewers of the underground, is more powerful and effective in America today than at any time in the history of our Nation. My basis for this statement is a recent report issued by the head of our own Federal Bureau of Investigation, J. Edgar Hoover.

(4) As U.S. News & World Report points out, the United States, at the end of World War II, was in a position to assume world domination. That opportunity was rejected. The United States, ever since, has been retreating gradually from one position after another. Soviet Russia, on the other hand, is demonstrating a determination to rule the world. At the end of World War II, Russia was prostrate. Today, only 15 years later, she is able to challenge America. There is no precedent in world history of such a reversal of positions of nations in such a short time. This Russian success breeds Russian confidence and strengthens Russian determination to push ahead. There are those among us who still cling to the naive belief that an uprising in Russia may reverse this threat, but on the basis of best available information which I have received in Washington, such a move is highly doubtful. Forty years of Communist tyranny in the Soviet Union have destroyed any possibility of revolt among the Russian people and today they stand firmly behind their leadership. In tragic contrast, compare how badly divided is the free world on its own aims. The suggestion in Paris last week by the heads of state that a series of conferences be held with the Soviet rulers should make it clear to all of us that the leaders of the free world are unable to agree on their aims and, in effect, they will let Khrushchev suggest the final decision at the summit.

Finally, No. 5, Soviet Russia, because of her gains, while the United States and her allies draw back under a policy of peace at any price, is tilting the balance of power steadily in her own direction. When the tilt appears to Russia's rulers to be decisive, she then will be tempted to offer the United States the fateful choice—surrender or fight a nuclear war. There undoubtedly will be much testing of strength and alarms—such as the Berlin crisis—before the final showdown comes.

My most bitter indictment of the past decade is that the constant threat of nuclear destruction—used so effectively by the Communists and also, unwittingly, by many decent Americans—has become a form of nuclear blackmail. This second session of the 86th Congress will have to put our Nation's entire foreign policy under a scrutinizing spotlight and see whether we have the wisdom and courage to find an answer. I know this: the free world has always won when it had the courage to stand up for its traditional faith in the truth of human freedom and justice. It is my firm conviction that the unprecedented reception given President Eisenhower on his recent tour of 11 nations in Europe and the Middle East was a manifestation of how deeply the people of these nations rely on the United States to provide courageous leadership in the struggle with international communism. If we as Americans can only accept the doctrine that there is vastly more vigor in defending a right rather than fighting a wrong, we shall destroy Khrushchev's hopes for world domination. Lamentably, however, I fear that the formulators of our foreign policy have already written off the captive nations of Europe—Estonia, Lithuania, Latvia, Poland, Hungary, Bulgaria, Rumania, and East Germany—as belonging to the Soviet sphere of influence even though the announcement has not been made official. Khrushchev and his followers, I am certain, will retreat only when we make the liberation of these enslaved nations the cornerstone of our foreign policy.

There are many domestic issues which we Americans must face up to if we are to fulfill the real meaning of democracy. This session of Congress will have to deal with legislation which will give America the edutional tools with which to wage intellectual war against the Soviet Union. I believe passage of the Federal aid to education bill is a must on our agenda when we reconvene. We will have to deal with nationwide strikes so that our economy can meet the growing challenge of foreign trade but here again we are faced with the great problem of trying to avoid nationwide work stoppages without destroying the collective bargaining rights of the American businessman or the American worker. In this next session we must attempt to rewrite our archaic tax structure so that there will be a more equitable distribution of fiscal responsibilities by eliminating many of the tax loopholes now in existence; we will have to meet the ever-increasing need of adequate medical and hospital care for our senior citizens; we will have to help our great cities—including Chicago—rebuild the core of their metropolis so that dead property now considered unproductive slums can be placed back on the tax rolls. In my own 11th Congressional District on Chicago's Northwest Side, thousands of homeowners are paying excessive real-estate taxes because the city now collects little if any tax yield from the slum areas of the city; we must in this session produce effective farm legislation which will end the national scandal under which we are spending $6 billion annually for farm support programs and finally we must produce a budget which will eliminate deficit spending. This is the great challenge for the second session of the 86th Congress.

In closing may I again thank Station WIND for making this time available and to assure all of you that not only I but every Member of Congress shall direct his efforts in this next session toward meeting the great challenge facing America. I will be most grateful, however, if you will be good enough to send me your own views on the problems I have discussed addressing your letter to Congressman ROMAN C. PUCINSKI, 11th District of Illinois, Washington, D.C. May I take this opportunity to wish you all a very happy, healthy, and prosperous New Year.

Coal, Atoms, and Kilowatt Making

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Coal, Atoms, and Kilowatt Making" which appeared in the December 30, 1959, issue of the Messenger of Madisonville, Ky.

The editorial is as follows:

COAL, ATOMS, AND KILOWATT MAKING

Usually, when the subject of coal or oil or gas comes up, somebody will veer off from the discussion of these usual fuels and forecast that atomic power will in the future displace these sources of energy.

Some of the forecasters, allowing their imaginations to run without check, overestimate the possibilities in the matter of peaceful application of nuclear energy, especially in the electric power field.

Since nuclear energy is dramatic, new, and strange, it is natural that it should capture the imagination. However, there is a danger that so great an emphasis might be placed on atomic power development that a lot of people may tend to forget the necessity of fostering continued development of adequate supplies of conventional fuels which have proved to be so good in the past and present—coal, oil, and gas.

People in coalfields like our own know this danger and often point it out.

A warning to this effect has indeed been given Congress by President Sporn, of the American Electric Power Co., who backed up his warning with predictions of his own, based on sound data rather than guesswork.

By 1975 the Nation's electric requirements will be far larger than at present, and nuclear energy will have its place in meeting the demand. Even so, Sporn estimates, the place of nuclear power will be small, only about 7.5 percent of the electric power which the country will need will be atom generated.

The rest of the power will come from coal and oil and gas—mostly from coal—but after 1975 the importance of nuclear energy will grow. Between 1975 and 2000 nuclear power, in Sporn's opinion, is expected to account for 75 percent or so of the increase in electric generation. But coal will still be doing business in a big way, and the year 2000, needless to say, is a long way off, even though the years have a way of speeding by.

The fact is that nuclear energy is simply a fuel which, when used, replaces another fuel. And the cost of fuel is a relatively modest part of the total cost of providing electric service. There is absolutely no foundation for the idea which has been suggested that atom-generated power would be so cheap that it wouldn't be worthwhile to meter its use.

Meanwhile, the development of coal-powered electric plants goes on and on—witness the big Tennessee Valley Authority plant for which grading is now under way at Paradise, in neighboring Muhlenberg County—although the utility people and other interested groups are hard at work learning more about the atom and its application to practical peacetime jobs.

This is the normal course of events, of course, but it does not necessarily mean that within a decade or so coal will be a back number so far as production of electricity is concerned.

Rather the opposite is the case, so far as can be foreseen now, for like the man (Mr. Sporn) said, nuclear power will absorb a lot of the increase in kilowatt generation but coal will still be in business supplying the bulk of the power.

Dedication to Torah Breakfast

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. SANTANGELO. Mr. Speaker, on December 6, 1959, I attended a breakfast of the Association of Jewish Court Attachés. Over 1,200 people assembled at this function, through the industrious activity of the vice president, Jacob Simburg.

The president, George Hodes, made a stirring speech in introducing Attorney General Louis J. Lefkowitz of New York State. Mr. Lefkowitz's remarks made a profound impression upon the audience, and especially upon me.

I believe that the readers will profit by a reading of the attorney general's splendid message, which is as follows:

REMARKS OF ATTORNEY GENERAL LOUIS J. LEFKOWITZ, AT THE DEDICATION TO THE TORAH BREAKFAST OF THE ASSOCIATION OF JEWISH COURT ATTACHÉS, AT THE COMMODORE HOTEL, NEW YORK CITY, ON SUNDAY, DECEMBER 6, 1959, AT 10 A.M.

This is your fourth annual dedication to the Torah breakfast.

A happy occasion such as this annual breakfast is refreshing to the spirit, and equally so to the mind. It brings a pause in our daily tasks, and lifts our eyes and our hearts to a broader vision of life.

When persons of the Jewish faith speak of the Torah, they usually mean the Five Books of Moses. But in a real sense, Torah also stands for all the great Jewish teachings and for all Jewish learning. It reflects the traditions, the ethics, and the values which are our Jewish inheritance. When we dedicate ourselves to the Torah, we assume the sacred obligation to carry on the high moral and intellectual perceptions which have been passed on as our Jewish heritage through countless generations.

Many are the teachings of our sages. To us, as members of the judiciary and of the bar, as administrators and as officers of the courts, must be of particular interest, the admonition of our Talmud that the world is sustained by three things: By justice, by truth, and by peace.

A little more than a century ago a learned Talmudic commentator had this to say of truth: "By truth is meant, literally, speaking the truth to one's fellow. And because the world has grown accustomed to lying talk, people do not consider it an evil thing, they do not perceive that it is evil."

This bit of wisdom has never been more true than it is today. For the past 2 months our attention has been focused strongly on a sad commentary on our adult moral climate. Disclosures of deceptive practices in the conduct of television quiz shows have left us not alone with a feeling of outrage but with a sense of shame at our own gullibility. "Payola" has become a word of common meaning to us. Petty graft in the marketplace which takes money from those least able to afford it has been front page news. In every field of human endeavor we find an unscrupulous segment which preys upon the consumer, the investor and the legitimate business and tradesman.

Have we, indeed, grown so accustomed to "lying talk" that we do not consider it an evil thing, that we do not perceive that it is evil? Have we, by our apathy, permitted a debasement of our moral concepts, our ethics and our standards of integrity in dealings with our fellow men?

Laws alone do not insure decency. The only antidote is a reawakening of our sense of values. I am confident that the American people, spurred on by religious and social views which lay enormous emphasis on honesty and respect, will not tolerate those who make a farce of integrity and truth.

The brain of man has created scientific marvels which stun the imagination. But men have not yet learned to live with one another in peace, in justice, and in truth.

These are the values which are inherent in all religious faiths. In our houses of worship, in the ideals and traditions of our religious groups we can find the wisdom and the strength to live in the spirit of true brotherhood, with heartfelt respect for the legitimate hopes and aspirations of our fellow man.

The Association of Jewish Court Attachés, and the Council of Jewish Organizations in Civil Service of which it is a constituent member, under the spiritual guidance of the New York Board of Rabbis, are making a magnificent contribution toward the promotion and fostering of religious activities among your members. In perpetuating the spirit and traditions of Judaism, you have made our Jewish men and women proud of their religious faith and ever the more loyal and true to the ideals and aspirations of our free American way of life. The recognition and gratitude which you have earned is well deserved.

Greed

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. HOFFMAN of Michigan. Mr. Speaker, in the closing days of last year a reporter asked me, "Why so many harmful strikes?"

My answer: It may be because those controlling large labor unions, other special groups—veterans, postal employees, farmers—yes, and Congressmen—today, the steelworkers—are never satisfied with what they have. Each group, often individuals, want what might be an unfair share of the national income, of special privileges.

AMBITION

Greed is an acquisitive desire beyond reason. It is not a desirable characteristic. Ambition is an uplifting desire to achieve or obtain, and without it neither the individual nor the Nation would make progress. Without it, we would all become stagnant, never better our individual or national status.

PRESENT TREND

Since coming to Washington, I have observed what seems to me an unfortunate development—laudable ambition displaced by an excessive, acquisitive de-

mand for ever higher wages, salaries, prices, and special privileges, which, granted, injure all.

Politically and financially, powerful pressure groups put the heat on legislators, continually increasing power and incomes for their members, with harmful inflation the result. Naturally, we have always had and probably always will have special groups successfully making such demands. But certainly, if successful demands continue, the disparity between those who have and those who do not will grow wider until finally we may drift back into a situation where a few are inordinately wealthy, privileged, while the many are in dire want and without recourse when a degree of their freedom is taken from them.

Powerful pressure groups from State and Nation—yes, and local governments—are getting more and more for their members, with the result that even today there is just not enough to go around. Illustration: From my district come letters from incapacitated and elderly people, who, because of the high cost of living, have extreme difficulty in obtaining the necessities of life. Result: A high wage, income for the few, little for many.

What we all apparently forget is that, if, for example, today's striking steelworkers are to have an increase in wages and fringe benefits, not only those in the steel industry but all will pay the cost. A part of the cost will fall upon each and every one of us and prices will continue to go up—higher cost of living for the needy.

The same is true wherever in any productive industry wages are increased out of proportion to the increase in production, with the net end result that, while a few receive a special benefit, the additional cost falls upon all. There is an ever-widening gulf between members of a few pressure groups and the great majority. And, quite naturally, those who are on the short end want more.

When increasing salaries, wages, compensation, force the cost of production ever higher, the demand, the ability of all to purchase, grows less—depression threatens.

The answer: We will all be forced to disregard our greed, confine our ambition to limits which will not unduly, ultimately, bring harm to all. What do I mean? Less reliance upon fantastic legislation designed to benefit a few, more compliance with nature's law of supply and demand, and sound economic practices.

Progress is fine but ever-increasing wages, salaries, prices—none are ever through legislation—equitably distributed. Ultimately a disastrous depression. That has been the result every time government has attempted to fix prices, distribute wealth. The Egyptians tried it. The Chinese tried it. The Romans tried it. Other nations made the attempt. No people can ever legislate prosperity, happiness, or contentment. The law of supply and demand, while harsh, ultimately prevails.

Sellers of Smut Saved by Supreme Court Decision

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. LANE. Mr. Speaker, obscene printed matter is a factor in juvenile and adult delinquency.

Parents, churches, and civic groups are trying to eliminate this corruption, but their efforts have been hampered by a recent decision of the U.S. Supreme Court. In effect, this decision will require the police to prove that a newsstand dealer or the proprietor of any other outlet for the sale of such material actually knows the nature of a particular publication before he can be convicted.

It seems to me that the Congress should study this serious problem and take steps to assist rather than obstruct the campaign to eliminate obscene printed matter. In order to comprehend the new challenge that now faces us, I bring to your attention the following article titled "Supreme Court Ruling on Smut Will Make Convictions Difficult," from the December 26, 1959, issue of the Pilot, official organ of the Catholic archdiocese of Boston:

SUPREME COURT RULING ON SMUT WILL MAKE CONVICTIONS DIFFICULT

(By John J. Daly, Jr.)

Hundreds of cities will now find it more difficult to convict sellers of obscene books, according to the attorney who argued—and lost—an obscenity case before the U.S. Supreme Court.

Los Angeles city attorney Roger Arnebergh's pessimistic opinion was expressed after the U.S. high court released a Los Angeles bookstore owner (Dec. 14) who had been convicted of possessing an obscene book in his store.

How could the Supreme Court clear the seller of a book described by one high Court Justice as "repulsive" and by Mr. Arnebergh as a "veritable smörgåsbord of sex"?

These were its reasons:

1. The prosecution failed to show that the seller knew the book was obscene—the key point to the court.

2. The public's access to books might be restricted if a dealer had to know the contents of all his books. He would sell only those he inspected and since he couldn't read all, some books would not be put on sale.

3. While it is true that pure food and drug legislation demands that the seller be responsible for the purity of all his wares, there is a constitutional barrier—freedom of speech and of the press—to asking this of booksellers.

What happens now? How do police prove that a bookseller knows the nature of a book they challenge?

MAJOR WEAPON

This is the crux of the matter for those States and municipalities which have an antipossession law as a major weapon in their legal arsenal to curb obscenity.

Even the Supreme Court split on this point.

The majority opinion said it wouldn't be too hard to prove a bookseller knew about the book. One Justice said it would be very hard and the Court should tell how to do it. Two Justices said they thought it would be too easy.

These opinions all came when the Court presented not only a majority opinion, written by Justice William J. Brennan, Jr., but also three separate concurring opinions and one other opinion in which the Justice voted one way on one point and another way on a second point.

However the net result was to strike down the Los Angeles law and upset the conviction of Eleazar Smith, who was arrested in Los Angeles in 1956 for possessing in his bookstore a copy of a volume entitled "Sweeter Than Life," a story of lesbianism.

Mr. Smith was found guilty by Los Angeles municipal court and sentenced to 30 days in jail. The conviction was upheld by the appellate department of the State superior court. Mr. Smith appealed to the Supreme Court.

AWAITED DEFINITIONS

The High Court's opinion was awaited because it was expected to indicate further the nine men's thought on what constitutes obscenity and what may legally be done to ban it.

But in their decision, the Justices never did get to the question of whether or not the book Mr. Smith sold was obscene. Only Justice William O. Douglas said he had read it and found it "very repulsive." But the Court itself confined its opinion to the question of the law's validity.

After stating the majority's reasons for striking down the ordinance Justice Brennan addressed himself to the problem of how it can be shown a bookseller knew a challenged book is obscene

"It is argued," he noted, "that unless the scienter (knowledge of the book) requirement is dispensed with, regulation of the distribution of obscene material will be ineffective, as booksellers will falsely disclaim knowledge of their books' contents or falsely deny reason to suspect their obscenity."

"We might observe that it has been some time now since the law viewed itself as impotent to explore the actual state of a man's mind," he commented. He added that eyewitness testimony of someone who has seen a seller look through the challenged book is hardly necessary. "The circumstances may warrant the inference that he was aware of what a book contained, despite his denial," he wrote.

He then said, however: "We need not and most definitely do not pass today on what sort of mental element is requisite to a constitutionally permissible prosecution of a bookseller for carrying an obscene book in stock."

SEPARATE OPINION

Justice Felix Frankfurter said in his separate opinion: The Court obviously does not hold "that a bookseller who insulates himself against knowledge about an offending book is thereby free to maintain an emporium for smut."

But Justice Frankfurter said the Court's decision would reach beyond Los Angeles and for this reason, in Justice Brennan's decision, it "ought at least to be made clear, and not left for future litigation, that the Court's decision is not intended to nullify the conceded power of the State to prohibit booksellers from trafficking in obscene literature."

He said that the majority opinion suggests only "an unguiding, vague standard for establishing 'awareness' by the bookseller."

Justice Hugo L. Black, on the other hand, was impatient with the majority decision because it wasn't strong enough against censorship.

It will be easy, he said, for the prosecution to prove that a bookseller knew a challenged book is obscene and this will leave "the way open for both Federal and State governments to abridge speech and press."

He said the first amendment to the Constitution "leaves no room for inference that abridgments of speech and press can be made just because they are slight."

"That amendment provides, in simple words, that 'Congress shall make no law * * * abridging the freedom of speech, or of the press.' I read 'no law abridging' to mean no law abridging," he said.

Justice William O. Douglas, who said he had read the book, said his opinion is that it could be suppressed only on an argument not presented the Court.

"Freedom of expression can be suppressed if, and to the extent that, it is so closely brigaded with illegal action as to be an inseparable part of it," he said in alluding to his opinion first expressed in an earlier case.

SAFEGUARDS

He said "rather fluid tests of obscenity prevail today" and they require judges to pass judgment on a piece of condemned literature—a role he called "not an edifying one."

While disagreeing with the majority opinion that it must be proven a bookseller knows a challenged book is obscene, he said he regards this ruling as having "no harm and perhaps some good."

"What the court does today," he continued, "may possibly provide some degree of safeguards to booksellers by making those who patrol bookstalls proceed less high-handedly than has been their custom."

Justice John M. Harlan wrote the other separate opinion. He agreed to reversing the conviction of Mr. Smith, but disagreed with striking down the Los Angeles city ordinance.

He said the Court had only "meager data" on which to base a decision on whether the absence of a requirement of knowledge in the law renders it unconstitutional.

"I must say * * * that the generalities in the Court's opinion striking down the ordinance leave me unconvinced," he wrote.

He said the majority's argument that the law would scare booksellers into restricting their offering "seems more dialectical than real."

Mr. Harlan said he would reverse the conviction of Mr. Smith, but would send the case back to lower courts for a new trial, not strike down the law.

He would take this course, he explained, because the trial judge was wrong in turning aside every attempt by the bookseller to introduce evidence bearing on community standards, that is, such matters as whether the book is better or worse than other books openly sold and purchased by the public.

21st U.S. Army Small Arms Tournament

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. GAVIN. Mr. Speaker, during the past fall Mr. Bill G. Wescoat, publisher of the Reynoldsville (Pa.) Star, attended the 21st U.S. Army Corps (Reserve) Commander's Small Arms Tournament at Fort George G. Meade, Md.

Under unanimous consent I insert in the RECORD the very interesting and informative article he wrote relative to the tournament and the Army Reserve program:

(By Bill Wescoat)

It was an interesting experience for me to spend several days recently as a member of the tournament staff of the 21st U.S. Army Corps (Reserve) Commander's Small Arms Tournament at Fort George G. Meade, Md., and to observe firsthand the tremendous progress that has been made, not only in the marksmanship program of the 21st Corps, but in the overall relationship between the troops of the Regular Army and the Reserve.

While you may or may not have any knowledge or interest concerning the U.S. Army Reserve program, it nevertheless affects you inasmuch as it makes quite a dent in the Army's fund appropriation, which of course is all taxpayers' money. Because of this and because national security and the military are so much a part of our daily lives, I feel that a firsthand report on various aspects of the program is indicated whenever the opportunity presents itself.

The 21st Corps is comprised of Reserve troops from Pennsylvania, Delaware, Maryland, Virginia, and the District of Columbia, with its headquarters at our own Indiantown Gap. Within the corps area are combat and service units of almost every description, manned and operated entirely by Reserve troops. Superimposed over this Reserve structure is a sort of skeleton command of Regular Army personnel in an advisory and coordinating capacity. The mission of all concerned is clear—to provide a trained, ready Reserve for quick mobilization in the event of a national emergency.

For years there has existed between the Regular Army and the reservists a certain amount of animosity as the Regulars were inclined to look upon the part-time civilian soldier with disdain. To the Regular Army people charged with the success of the Reserve program the integration of mind and spirit between the Regulars and the reservists for the accomplishment of any given mission has presented a great challenge. It is not unreasonable to believe that the entire success of our military security depends on how well this challenge is met.

The 21st Corps Commander's Small Arms Tournament afforded, among other things, an excellent opportunity to measure the tremendous progress that has been made in welding the Regulars and reservists into one Army and to gage the relatively newly acquired prestige of the Reserve program.

Col. Thomas Mifflin, the present Corps commander and a native Pennsylvanian, has been a tireless worker in behalf of the Reserves and took a personal and forceful interest in the corps tournament. Under his direction, the number of competitors participating in the various matches of the tournament has doubled in less than a year. At the tournament this fall there were 270 competitors and the western Pennsylvania sector commanded by Col. William Rossing, of which we are a part, sent the largest delegation.

One of the chief objectives of the tournament, from a training and economy standpoint, was to saddle the reservists with a maximum of responsibility for the entire operation and thus call for a minimum of help from the Regular Army. To this end the tournament was especially successful. Within the ranks of the Reserve can be found an almost endless variety of talents and abilities and the idea is to place the possessors of these things on active duty for a few days and let them run the show.

In some cases, of course, a few days' duty was not sufficient. It was necessary, for instance, to place a young Reserve captain from the engineers named John G. Koshak on duty for a period of 5 months prior to the actual shoot as the marksmanship coordinator. The success of the entire operation, which was to cost thousands of dollars and involve several hundred people, became his responsibility and he met it headon in excellent fashion.

Captain Koshak had several aces up his sleeve, however, for he knew that within the Corps area he could call on people like Lt. Col. James E. Bartgis, of Frederick, Md.; Lt. Col. Ellis Lea, of Falls Church, Va.; Chief Warrant Officer Floyd E. Kreh, of Frederick, Md.; Lt. Col. John H. Belles, now on duty at IGMR, and a host of eminently qualified enlisted personnel. Within the world of the small arms enthusiasts the names of these people are well known, and it is doubtful if their distinguished records of achievement can be bettered anywhere. The salient feature of this is, of course, that these people are reservists. It is my opinion that your tax dollar couldn't buy better hired hands if and when the balloon goes up, which is Army jargon for the outbreak of war.

It would be grossly unfair to praise the reservists to the exclusion of the Regular Army's part in this project. Let it suffice to say that the wholehearted cooperation of the regulars was a splendid indication that the Reserve program is succeeding, that the reservists are being accepted by the regulars as fellow members of a great team. Everyone, from cooks to generals, went out of his way to be helpful to the 21st Corps reservists. The special rifle and pistol instruction supplied by personnel of the Second Army advanced marksmanship unit was the acme of professional perfection, and was in itself worthy of the time and trouble of the whole tournament.

It has been decreed that the Reserve program is here to stay. That it is succeeding in such fine fashion is about all we can ask.

La Salle Centennial, 1863–1963

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. TOLL. Mr. Speaker, I had the honor of being selected by Gov. David L. Lawrence, of Pennsylvania, as a member of the Governor's Committee for Development and Expansion in connection with La Salle Centennial, 1863–1963. The committee included the leaders of the community in the fields of business, the professions, civic, religious, and political life.

Among those who attended were the Honorable WILLIAM J. GREEN, JR., Member of Congress and chairman of the Democratic City Committee of Philadelphia, the Honorable James H. J. Tate, president of the City Council of Philadelphia, the Honorable Gerald A. Gleeson, judge of the court of common pleas No. 7 of Philadelphia and other members of the committee prominent in government, law, medicine, and the clergy.

La Salle is an outstanding educational institution located in my district and is contributing to the culture of our country by turning out well educated and well prepared graduates. The chairman of the evening was Commissioner Randolph E. Wise, of Philadelphia, and the meeting

was also addressed by Brother Daniel Bernian, F.S.C., the President of La Salle College.

The Governor of Pennsylvania is the general chairman of the La Salle Centenary Fund. His talk was so timely, so inspiring and so appropriate that I present same herewith for consideration of the Members of the House. Remarks of responsible leaders of the country on the problem of educational facilities should receive the careful attention of all students of government.

REMARKS BY GOV. DAVID L. LAWRENCE, CENTENARY FUND COMMITTEE MEETING, STUDENT UNION BUILDING, LASALLE COLLEGE, PHILADELPHIA

Last March 7, I was pleased to come to LaSalle for a father-son night, and it was a most enjoyable event. A man who never went to college has missed, I am sure, much of the spirit which campus life adds to the hearts of young people. He has no school he can boast about; no camaraderie for later days when older men exaggerate their youthful adventure.

But if he has a son who goes to college, it makes up for this lack of personal memories. The son's school becomes his school; he reads of its victories and losses with personal feeling; he is elated at the progress he sees in what he considers—now—his college.

If there is a school which I can claim as my own, it is LaSalle; a distinct part of me is very much here in the person of my son. It was, then, no problem for me to accept the chairmanship of LaSalle's centenary fund. I am proud of what the Christian Brothers are doing here for my boy and perhaps yours.

Therefore, whatever I can do in their behalf, I must do—as must all who understand the complete and unselfish personal effort of LaSalle's faculty and administration.

There is much concern at large today on the future of education—higher education, specifically. As I review in my mind the host of really great American colleges and universities in Pennsylvania, I realize we are too great—too firmly rooted in a rich intellectual past—to be actually fearful of what may be ahead.

Few States in the Nation—indeed few nations of the world—are so uniquely blessed with institutions of higher learning.

They range from the sprawling might of Pennsylvania State University, to urban-packed LaSalle, to the simple, pious campus of Messiah College, near Harrisburg. Some are vigorously energetic; others cultivate the virtues of meditation. All are a part of Pennsylvania's greatness.

Like many others in government, I must be deeply concerned about the demands that will be placed on these institutions in the next 10 or 20 years. The raising population, plus the growing economic and cultural needs for a college education, will test our mettle as no other set of conditions since the end of World War II. And unlike that, it will be a permanent test—from this point on, never ending.

But, I know that the Commonwealth—and I know that you—can meet every educational demand put upon us.

Pennsylvania is meeting the problem head-on right now, just as you at LaSalle are preparing to meet that problem with the LaSalle Centenary Fund. No fewer than 60 privately endowed Pennsylvania colleges have already undertaken to build $600 million in new dormitories, classrooms, and similar facilities.

Since the fall of 1958, our colleges and universities have absorbed an additional 15,000 new students with no visible cracking at the seams.

But here is the rub: By 1961 the colleges must be able to absorb an anticipated 25,000 more students than today; and by 1964, another 35,000 more beyond that. And so, progressively, until we find that by 1969 there will be well over 100,000 more young adults seeking a place in a Pennsylvania college or university.

There are two answers to this problem. The first: Simply don't accept them.

The second: To make every reasonable effort to give them what they seek. In the past few years in State government, we have made a great effort to increase the facilities of our State teachers colleges. We have bought additional lands, looking forward to a tripled enrollment by 1970. We are in the midst of the greatest building program of secondary schools and teachers' colleges of any State in the Nation.

And we have fought for the establishment of a system of community colleges—junior colleges with a 2-year course—which could, in the long run, alleviate the overcrowded conditions which are bound to exist in the future.

Community colleges will not only add to the prestige of our existing colleges and universities; they will also screen out the poorer students and identify the better ones. They will provide terminal education for the technicians who are in such great demand; and they will permit the colleges and universities to raise their own admission standards, and to concentrate on the upper level courses—with all that this means for improved education in Pennsylvania.

To go further, I sincerely believe that Pennsylvania cannot long resist creating a program of scholarship loans for students, who should go to college and who want to continue their education, but who lack the resources needed to pay for training which would be of such benefit to them and to our society.

A program of individual assistance in which the State participates with the schools and other groups—Federal and private—would round out a realistic plan for higher education in Pennsylvania.

I am convinced that Pennsylvania, with its abundance of facilities and its wealth of academic heritage has a remarkable opportunity to develop a vigorous and wise program for higher education. It would recognize the great merit of independent institutions like La Salle, while at the same time accepting the public responsibility for higher education which cannot be ignored or denied.

To ignore or deny education to anyone—regardless of economic status—would be to deny the premise established by John Baptist de la Salle—that education was the province of the many and not the few—of the deserving poor as well as the rich.

You have been true to La Salle's concept to "teach the poor gratuitously." In building the centenary fund you will continue this concept. You have consistently maintained modest tuition fees. Yet your faculty and teaching staffs are great ones—if the success of your alumni is any criterion.

What you lack are facilities. The existing buildings are overtaxed by both your daily and your evening schools.

It was a president of Princeton, I believe, who bemoaned the fact that "if you were to throw a brick through the windows of one of our hallowed halls in the late afternoon, no one would be disturbed at all."

To do so at La Salle would be to endanger up to 2,000 diligent day students. Indeed, to do so at 9 in the evening would cause harm, for another 2,000 who are using the facilities at that late hour.

Were this not true—if you were not providing education in every square inch of your facilities at all hours—the problem would not be so great.

But La Salle is filling that great void which exists in America today in adult education. As proof, I refer any of you to the dozens of Philadelphia companies and industries which are dependent on La Salle for the development of their employees at this college's evening schools.

One cannot help being impressed with the effort here at La Salle—or at nearby Temple University—to provide education for our adults in evening classes. Both institutions are taxed to their limits.

I was at Temple Monday and recalled the high hopes of the early reformers for the intellectual era that a shorter working day—and more leisure time—would bring. They envisioned libraries rising on every village square. Symphony orchestras, forensic societies, repertoire theaters, literary groups and art museums would spring up, they said, and America would take on an intellectual attitude unsurpassed in history.

But leisure has not proved an intellectual stimulant, too often it is a sedative, an inducement to mental vacuity, rather than mental energy.

Radio, television, and movies provide a great entertainment, but not learning. They have tried, to be sure—but I am afraid that a forensic battle between Jack Paar and Mickey Rooney will never replace the Lincoln-Douglas debates. Our problems are then, to educate the masses of our youth—and masses they will be in the next few years—for future responsibility. Our problem, also, is to expand intellectual opportunities for adults—politically, scientifically, and historically updating them to the present. For, at this point in our history, only 3 percent of the people between 25 and 65 years of age are actively studying and learning.

To get an idea of La Salle's great contribution to this need, remember that more than half its students are evening students, many of them in the adult area. La Salle, indeed, is doing more than its share; and it is typical of the Christian Brothers to attempt to do even more.

To meet the need, this college has established the Centenary Fund and I am honored to be its campaign chairman.

John Baptist de La Salle espoused education for the many. Unlike many contemplative and saintly men, he was also a practical man. He felt that quantity was equally as important as quality—that the masses were entitled to education.

Today, this college, founded on principles set down by the patron saint of all teachers, is at the crossroads.

It has willingly assumed its share of the immense burden falling on higher education. Yet it can no longer provide effectively for its enrollment—or the doubled enrollment of the near future—without improving and increasing its facilities.

The Christian Brothers have provided high school, college, and community junior college—taxing La Salle's facilities beyond its limits.

This great fount of education is at the point where it can advance and continue its great work only with the cooperation and assistance of those who benefit from its teaching—either as students, as graduates, as parents, or as potential employers. With the rising costs of education, which cannot be matched by commensurate increase in tuition, your support is absolutely necessary.

I ask you to join me in fulfilling the duty which we, collectively, have to La Salle. Together, we will see the fruition of our efforts—in the buildings and the chapel which will someday grace this campus, and which will provide to the world not only the scientists so vitally needed in this age, but the scholars who will assume the future teaching burdens of the Christian Brothers.

Those burdens are many. But the opportunity will be assured if the Centenary Fund is successful.

With your help and your efforts, and with God's blessing, it will be done.

New York State Banking Laws

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. CELLER. Mr. Speaker, in the forthcoming session of the New York State Legislature, efforts will again be made by a few giant New York City banks to amend the State banking law so as to eliminate the State branch bank district lines that have safeguarded competitive independent banking in this State.

A concurrent effort will be made by the same group to prevent the New York Legislature from continuing the legislative freeze on bank holding company expansion within the State.

For your information I have prepared a statement on this subject. The statement demonstrates that if independent banking, through the competition of numerous small unit banks, is to be preserved in New York State and a monopoly in banking avoided, we must assure, one, that the present branch bank district lines are not changed; and, two, that the current freeze against the expansion of bank holding company operations is continued. I do hope that you will find this statement helpful in your consideration of this most important problem.

The statement follows:

STATEMENT BY REPRESENTATIVE EMANUEL CELLER, CHAIRMAN OF THE HOUSE COMMITTEE ON THE JUDICIARY, U.S. HOUSE OF REPRESENTATIVES ON PROPOSED CHANGE IN NEW YORK STATE BANKING LAWS

In recent years the giant New York City banks annually have sought to amend the law and eliminate the State branch bank district lines that have safeguarded competitive independent banking in this State. Every year these big city banks have sought, thus far unsuccessfully, authority to extend their dominion over all of the New York State banking business. They try to do this either through vastly expanded branch banking operations, or, in the alternative, through the use of the bank holding company device to operate by means of a multitude of subsidiaries throughout the State.

It is certain that their efforts will be repeated in the coming session. Both Governor Rockefeller and his assistant, G. Russell Clark, the State superintendent of banks, announced shortly after the State senate rejected on March 24, 1959, last year's omnibus bank bill, that bank legislation would be given first priority.

Another aspect in the banking picture is equally important. The current freeze on bank holding company expansion, which the New York Legislature has imposed since January 29, 1957, is due to expire on February 14, 1960. If nothing is done, if prompt action is not taken, the large New York City banks will be in a position, through the holding company device, to swallow up all of the little banks in the State.

In my considered judgment continuation of independent banking in New York State is dependent upon (1) the defeat of any bill that would change the present State branch district lines, and (2) the passage of a bill that would extend the current legislative freeze on bank holding company expansion.

BRANCH BANK DISTRICT LINES

The banking system of New York State traditionally has relied for its vitality on vigorous competition by a multitude of independent banks, locally organized, locally financed, and locally managed. Nevertheless, there has been in recent years a discernible trend in New York State toward concentration of the banking business into fewer and larger hands. Indeed, in New York City, the four largest banks now control over 60 percent of all commercial bank assets. What is more, the two largest—Chase Manhattan and First National City—control almost 42 percent of the city's banking assets.

Present statutory branch bank district lines were drawn in 1934 in the shadow of the bank holiday in order to arrest undue concentration of banking facilities. The single most important reason for such geographical restrictions was to prevent banks with head offices in New York City from establishing branches in the suburban counties of Westchester, Nassau, and Suffolk and thus to protect independent unit banks outside of New York City from the encroachment of the giant money market institutions located in the city.

In addition, it was felt that control and ownership would not and could not meet the needs of the community as efficiently as locally owned and operated banks. This is as true today as it was in 1934 when the branch bank district lines were first established.

Owing to the increase in concentration among the city's banking institutions in the past 20 years, it is even more important now to guard against the encroachment that the big banks desire. There seems to be little doubt that if giant banks in New York City are allowed to penetrate into the suburban areas, the small unit banks there would be placed in far greater jeopardy. For one thing, their means of competing would be hardly comparable to those available to their huge city rivals. Indeed, to suppose that entry by the giant financial institutions of New York City into the suburban areas might have no adverse competitive effect on the independent banks located in these areas is to suppose that a chicken could dance with an elephant and come out unharmed. With the present district line obliterated, the suburban banking communities would soon be transformed into an area overwhelmingly dominated by a few large city institutions.

Last year the legislature rejected the omnibus bank bill which would have obliterated the branch bank district lines between New York City and the outlying suburban areas of Nassau, Suffolk, and Westchester Counties. This change would have permitted branch bank expansion throughout the entire new district. It is essential that we assure that this type of legislation or some similar legislation does not get enacted during the next session of the State legislature.

EXPANSION OF BANK HOLDING COMPANIES

State branch bank district lines can also be circumvented and their safeguards against banking monopoly destroyed through the use of the bank holding company device. Geographic limitations can be avoided by the simple expedient of forming a holding company to acquire control of banks throughout a State without regard to district lines.

This whole issue of holding company circumvention of branch lines came dramatically to life in New York State when the First National City Bank applied to the Federal Reserve Board for permission to form the largest bank holding company in the Nation. Initial objective of First National City was to acquire control of the County Trust Co., of White Plains, N.Y., the dominant commercial bank in Westchester County, and thus pierce the branch line separating New York City and Westchester. In short, through the device of forming a holding company, the same management which was restricted in its operation under a bank charter to New York City, sought to acquire a unit bank in another district, operate it in the same manner a branch would be operated, and flout the expressed will of the legislative body of New York State regarding the establishment of banks. Moreover, there was every prospect that the First National City Bank plan would initiate a chain reaction until ultimately a handful of giant New York City banks, through the holding company device, would be in control of nearly every sizable bank in the State of New York. Success of the plan would have meant that the day of independent unit and regional banking would have passed and that money and credit in New York State would be largely controlled by a few gigantic banking institutions.

For these reasons, I testified at length before the Federal Reserve Board calling attention to the alarming competitive consequencies of the proposal. You will recall that the Federal Reserve Board after hearing exhaustive testimony on this proposal by all affected parties, concluded that approval of such transaction would be detrimental to competition and contrary to public interest.

In addition, I testified in the early part of January 1957 before the State of New York Joint Legislative Committee To Revise the Banking Laws and pointed out the necessity of amending the State's banking laws to prohibit any bank holding company from acquiring in the future any bank located outside the district prescribed for branch banks.

It is gratifying that Governor Harriman and the New York Legislature recognized the threat to the State banking structure implied in the First National City plan. This was evidenced by adoption on January 29, 1957, of stopgap legislation, effective until May 1, 1957, prohibiting any bank holding company from acquiring a bank located outside the branch banking district. It has been reaffirmed by subsequent legislative approval of measures extending this legislation until February 16, 1960.

It must be remembered that the proposal to expand bank holding company operation seeks to employ an ingenious device to accomplish indirectly that which is prohibited by the State in establishing branch district lines. It thus effectively dissolves bank district lines.

It is my view that practically speaking a holding company system is a substitute for a branch system and the difference between branch banks and subsidiary banks in a holding company system is a difference without a distinction. Bank holding company groups and branch banking systems both accomplish the same thing—the operation of a number of banking units under one control and management.

You will recall that the omnibus bank bill, which the legislature rejected last year, would have established two bank holding districts in the State, the first consisting of New York City, Long Island, and Westchester and Rockland Counties, the second of the balance of the State. That bill would have allowed a bank holding company to acquire banks anywhere within the district. Beyond that the bill would have permitted a holding company formed by a bank in the second district to acquire banks in the first district if the first district banks constituted 45 percent or less of the holding company's total assets.

If the State legislature had ratified this bill, as Governor Harriman previously had stated, on November 20, 1956, there would have been "ignited what may be the greatest chain reaction in recent banking history"

the effects of which "will go to the very roots of the entire banking structure of New York State" with the "distinct possibility" of "concentration of banking assets in the hands of a few institutions."

In his comments on a holding company proposal similar to the one in the omnibus bank bill, Mr. George A. Mooney, the former superintendent of banks of the State of New York, had this to say on December 12, 1956:

"The very existence of a number of large bank holding companies would create competition amongst them for future expansion in other communities. If the many unit banks found it impossible to resist the holding company movement, we could expect in short order a heavy concentration of banking assets, facilities, and credit in a handful of giant statewide bank holding company systems."

The argument has been advanced that if future bank holding company expansions are to be limited to branch district lines, the effect would be to create a monopoly for the Marine Midland banking system. I am not aware that this system constitutes a serious threat to the competitive banking system of New York. But if this is, or even threatens to be the case, legislation limiting bank holding company acquisition to branch districts, could well be made applicable to the existing Marine Midland system.

The fact that no such suggestion has been made gives rise to the conclusion that existence of the Marine Midland group is seized upon as an excuse for permitting statewide expansion of banks through the holding company device. Moreover, the problem raised is not a new one by any means. Congress was faced with an essentially similar problem in connection with a provision in the bank holding company bill prohibiting future interstate expansion by bank holding groups. The Act as adopted, you will recall, does not affect interstate acquisition of banks by holding companies which were completed prior to the Act's passage. Therefore, a bank holding company's interstate status, accomplished prior to the act's adoption, is frozen.

To follow the rationale advanced here to its logical conclusion, once a company obtains dominance, no action of any kind should be taken against other companies which attempt to obtain similar monopoly status. If this contention were to be followed by the Congress, no action would have been taken in December 1950 to adopt the Celler-Kefauver Anti-Merger Act, which you will recall, amends section 7 of the Clayton Act to forbid corporate mergers, regardless of how accomplished, where the effect may be substantially to lessen competition or tend to create a monopoly. And if this contention were to be followed, the Federal Government would have taken no action to prevent the Bethlehem-Youngstown merger on the basis that the United States Steel Corp. has assets exceeding the combined assets of the merging companies.

It may also be noted that a number of States, including Illinois and Georgia, have enacted legislation recently, prohibiting bank holding company groups from acquiring 15 percent or more of the voting stock of each of two or more banks. Again, such legislation does not apply to stock of bank holding companies acquired prior to passage of the measure.

It has also been contended that unless bank holding companies are permitted to expand on a statewide basis, the hands of supervisory authorities would be tied in any future period of economic decline. It is stated that if weak points in the banking structure developed in a district in which there was no bank strong enough to acquire the failing institution, the supervisor would not be able to call in a holding company from another district.

What must be recognized is that the situation today is entirely unlike that which existed during the last bank depression. Today, the FDIC Act and other measures adopted in the middle or late 1930's, serve to insulate depositors from financial loss. In any event, if this is now a matter of serious concern, there is no reason why legislation limiting bank holding companies to the geographic area in which banks are permitted to operate branches, could not contain an exception so as to allow a holding company in appropriate cases to acquire a bank in another district, if this is necessary to save a failing institution. It is one thing to incorporate such an escape clause in legislation. It is quite another to seize upon the failing bank argument to justify statewide expansion of bank holding companies.

One final point needs comment. It has been contended by advocates for certain city banks that the Federal Bank Holding Company Act of 1956 has preempted the field and that there is no area for permissible State action in respect of bank holding companies. The argument, in short, is that continuation of the State freeze on bank holding company expansion is futile in light of the Federal statute. This, it is evident, is entirely fallacious.

The provisions of the Bank Holding Company Act coupled with its legislative history make it crystal clear that there has been reserved to the States wide latitude to adopt appropriate bank holding legislation. Thus, section 7 of the Bank Holding Company Act specifies that "the enactment by the Congress of the Bank Holding Company Act of 1956 shall not be construed as preventing any State from exercising such powers and jurisdiction which it now has or may hereafter have with respect to banks, bank holding companies, and subsidiries thereof."

I turn to legislative history which explains in detail what that section means. The report of the Senate Banking and Currency Committee[1] makes this comment:

"Another provision of this bill expressly preserves to the States a right to be more restrictive regarding the formation or operation of bank holding companies within their respective borders than the Federal authorities can be or are under this bill. Under such a grant of authority each State may, within the limits of its proper jurisdictional authority, be more severe on bank holding companies as a class than (1) this bill empowers the Federal authorities to be or (2) such Federal authorities actually are in their administration of the provisions of this bill. In the opinion of the committee this provision adequally safeguards States' rights as to bank holding companies."

Beyond that, Senator ROBERTSON, sponsor of the legislation in the Senate and chairman of the Banking and Currency Subcommittee which considered the measure, pointed out in Senate debate that "each State may * * * enact legislation to regulate bank holding companies."[2] As an example of the type of legislation States were empowered to enact, Senator ROBERTSON inserted in the CONGRESSIONAL RECORD the text of a bank holding bill recently passed by the Georgia Legislature,[3] preventing any bank holding company incorporated under State law or doing business in the State, from acquiring 15 percent or more of the voting stock of each of two or more banks. Illinois enacted similar legislation.[4]

The decision of the Federal Reserve Board on July 10, 1958, denying the application of the First National City Bank to establish a holding company to acquire the County Trust Co. of Westchester, in nowise derogates from these conclusions. On the contrary, the Federal Reserve Board made it clear in its decision that it assumed the validity of the New York State freeze on bank holding company expansion. The Board ruled on the merits of the application holding that while the validity of the New York State statute freezing bank holding company expansion must be assumed, that statute was temporary in nature and there was not certainty that it would be further extended beyond its expiration date. The following excerpts from the opinion of the Federal Reserve Board in the First National City matter are relevant in this connection:

"The extent of the 'power and jurisdiction' of the States in the field of bank holding company regulation is, of course, not a matter for this Board's decision; nor may the Board undertake to determine whether the New York statute represents a valid exercise of that State's power. These are matters for determination by the courts. Unless and until a court of competent jurisdiction holds the New York statute to be invalid, the Board must asume its validity."

The foregoing makes it clear that the Federal Bank Holding Company Act in nowise precludes the New York State Legislature from continuing the present freeze on bank holding company expansion.

Footnotes at end of speech.

[2] CONGRESSIONAL RECORD, Apr. 23, 1956, p. 6043.

[3] Ibid.

[4] Mississippi outlaws bank holding companies while Vermont bars any corporation whose primary business is the holding of stock in other corporations. Wisconsin law provides that any corporation controlling a majority of stock in a State bank is to be deemed engaged in the business of banking and subject to supervision of the State banking department.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

Appendix

Tribute to Senator Lister Hill

EXTENSION OF REMARKS
OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, January 11, 1960

Mr. MANSFIELD. Mr. President, in the November 1959 issue of Harper's magazine there appears a brilliant article by an excellent writer about an outstanding Member of the Senate. I refer to the article by William S. White entitled "Medicine Man From Alabama." It concerns our distinguished colleague, the esteemed Senator from Alabama [Mr. HILL] and what he has done for the Nation's citizens by his quiet, intelligent, and persuasive legislative leadership in the field of health. Mr. White's article is an excellent tribute to the Senator from Alabama. It is a tribute in which, I am sure, Members of the Senate and millions of Americans who have benefited from his labors are happy to join. I ask unanimous consent that the article by Mr. White be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MEDICINE MAN FROM ALABAMA

(By William S. White)

WASHINGTON.—It is an undeniable fact that LISTER HILL comes from the Deep South. Once you have said that about a man, many people seem to feel that you have said everything—all of it unappealing.

So I may be writing only for practice in trying to suggest that there is something else that needs to be said about Senator HILL, of Alabama. All the same, it is worth a trial; maybe somebody here and there will listen.

For countless millions owe their health to this spare, tall, gray-faced Alabaman, and thousands even owe their lives. He has done more for the public's health than any American in history. A master politician, he has accomplished all this because he is aware of the following:

(1) That certain public welfare matters are too important for the playing of strictly ordinary politics. (Though he plays good, pragmatic politics in this field within these limitations.)

(2) That meaningful reform is too important to be left to the reformers, whose moistly excessive good will and innocence of commonsense have so often paved that well-known road to hell.

(3) That medicine in bulk is too important to be left to the too-relaxed attentions of the American Medical Association.

HILL, that is to say, is a rare, walking compendium of practical and intuitive skills of a special kind. These he applies with devotion—but with an unterrified sense of humor—to a peculiarly sensitive place in public affairs. This is the point where the area of public health joins the political interests of men who are placed (like himself) in the hard framework of political realities.

Considering certain intractable facts of life, including the fact that conservatives control most of the powerful committee posts in Congress, LISTER HILL is the indispensable man. He makes welfare innovations—even those which may look awfully like "socialized medicine"—politically respectable and, far more important, politically viable. A hundred times and more in his long career, he has caused the U.S. Government to play a genuine (and ever-increasing) part in the war against disease of all kinds. (More or less with his left hand he has done much, too, for both education and public power; but these have been mere subsidiary efforts.)

You do not pass the clutch of expensive health bills that HILL has shepherded through Congress simply by being aware that there is great need among the sick and the suffering. You do not pass them merely by proclaiming your liberalism. You pass them only if, first of all, you truly know your profession (politics) and your troops (your colleague). In the second place, you maintain the requisite alliances of convenience and necessity with other legislators, who have other dominant interests and other itching backs to be scratched.

In the third place, you must so conduct yourself over a long and painful period as to convince other men—who, after all, have their own designs upon the Federal Treasury—that you will never call upon them to support programs that are (a) demontrably extreme and silly or (b) demonstrably destructive to a politician's natural hope of reelection. All this is peculiarly true in taking the lead for social legislation, for the idealists who are most interested in it often tend to look down their noses at crass political motives.

What you require to be so effective as HILL for years has been, as the untitled leader for the public's health, is to be wisely obsessed with your mandate and flexible enough to carry on a prolonged, genial conspiracy to push that mandate through. It also helps, of course, to be in the right places of power at the right times. HILL is not merely chairman of the large and quarrelsome entity known as the Senate Committee on Labor and Public Welfare. He is also—and not by accident—head of the Appropriations Subcommittee that must in the end allocate the hundreds of millions of dollars annually dished out to programs first approved, as to policy, by Chairman HILL under his labor and public welfare hat. If one is in charge of recommending a project it does no harm to the cause if he is also in charge of whatever outfit must provide the money.

In his early days in the House of Representatives, HILL's legislative interest was principally in the armed services; he was long an active member of the old House Military Affairs Committee. A hangover of that period is still with him. In moments of joviality (and these are rather overpowering in decibel count, for HILL is at heart a quiet, sensitive man who sometimes feels obliged to go through the motions of the loud, extrovert politician) he will call a civilian friend "colonel," or, perhaps, "my favorite of all the field marshals."

The earnest and sometimes vindictive squabbles among the braid and brass for the congressional ear and funds long since ceased, however, to enchant him. Basically a man of constructive motives, he found military legislation no longer to his taste, and so turned his exertions elsewhere. Moreover, he has the rather special and perhaps somewhat exaggerated father-admiration of many of his age and class in the South. His father was a physician—as was, of course, the man whose last name was given to the Senator, Dr. Joseph Lister. Thus Senator LISTER HILL found himself required to justify both his own heritage and a Christian name that had come from a famous medico.

This sort of drive could have had very sticky results. It is dangerous to mix political operations and purposes—even those in aid of indisputably good objectives—with motives of any precious or strongly moral kind. HILL, by the grace of God and his own choice, is no Puritan or professional mankind saver, so he has entirely avoided the sugary approach.

He is a member in good standing of the Society of the Practical. And this is most fortunate for the country, for he has been intermittently pressed hard by various professional southerners who felt they would like to take away his Senate seat.

That this national disaster has not occurred—and it would be nothing less than that, in sober truth—is attributable primarily to HILL's ability to avoid confusing the theoretically desirable with the patently possible. He has never acted so as mortally to threaten either his own head or the heads of his friends.

He is, I believe, as truly liberal a man as sits in our national councils; for decades he has been performing liberally for the millions who need public help, while more frenetic liberals have been parading purposes that never reached performance. But he has never seceded from his home region, never righteously fouled the southern nest from which he sprang. He has, for example, remained in the Senate's unofficial but very real "southern caucus," and he has borne his filibuster burdens even when they were less than welcome to him. He has borne them as his duty and without apology. He is, however, at least one deep southerner whose continued service is manifestly needed by the whole country, even though the right-minded will surely say he is very wrong on civil rights.

This has not been an easy thing for him. For while northern liberal colleagues endlessly push at him from the leftward side, he is one of many courageous southern politicians who have had far more trouble fighting off the rightward side at home. Alabama politics has of late years sometimes seemed to be almost as determined as is the politics of South Carolina to retire from this century. It is amazing that HILL has survived in a State which has so yearned for the past. The "mules"—HILL's term for the wealthy political contributors who are in other areas called "fat-cats"—have been trying to beat him off and on for a long time, though with diminishing enthusiasm every time he comes up for reelection. So far as I can make out from Alabama friends he has accomplished the small miracle of political longevity simply because he is a virtuoso politician.

The fundamental characteristics of this odd and exclusive breed are the same in the Senate as on the stump down home—though of course different scenes require different tactics. In the scenes with which I

am reasonably familiar, the Senate scenes, HILL's behavior pattern (as his sociologist friends would call it) is deceptively simple. He never forgets that the real purpose of debate and maneuver is political action, and that successful action cannot be had unless one has enough votes or the means to scare up enough. Thus upon any of his enterprises—whether it be the providing of 4,000 hospitals and health centers in the country in a single bill or some comparatively small matter like increased cancer research—he does not move until he has counted up the prospective ballots. His rare floor speeches are urgent and thunderous; but of course even he himself pays no real attention to them. He actually works with a blander kind of power than the alleged persuasion of Senate oratory.

The nature of his legislative career has thrown him into perpetual contact with what are to most of Capitol Hill, a disturbingly alien folk, the earnest uplifters. These usually want much more than any politician could possibly get for them; and they want it much quicker than the physical law of politics could possibly allow. But, on the other side, the present administration often asks, in this field, for a good deal less than it really ought to have and is prepared to accept more delay than it really ought to contemplate.

HILL, therefore, sits at the confluence of these two main pressures—to go very far and too fast, or to go not far enough and too slow—and uses his southern vocal cords to spectacular advantage. His soft, lulling voice warms and calms the do-gooders in spite of themselves. They do know, after all, that his bona fides in welfare work is matchless and that when he tells them to slow down it is in their interest and not in his own. And this same voice, though now pitched in quite a different tone, jollies and hectors and spurs the overcautious administration people who would dearly love not to be so timid but are understandably afraid that the Budget men will get them if they don't watch out.

Once at a dinner party I heard Senator HILL operating in this way on an able young official of the Eisenhower Department of Health, Education, and Welfare in behalf of a medical bill. Congress under HILL's leadership had passed it over Presidential objection that it would cost too much.

"Now boy," boomed HILL, as he reached into his vest pocket for a ball point. "Now boy, you take this little ole pen and go down there to the White House and persuade your President to sign this little ole bill that we have got up to protect him in spite of himself. You just tell him this little ole bill won't hurt anybody. You just do that for me—and you can't tell * * * that Department of yours needs a lot of things, doesn't it, now? And I don't know why, but somehow or another those fellows up there in the Senate will listen pretty well to me sometimes when I am up there really trying to get the things you fellows down there really need."

This small, amiable offensive of nerves was conducted with the grace and charm of an old-fashioned gentleman complimenting a lady on her frock—and with the smiling touch of steel that a good politician can put even into a comment about the weather. My friend from the administration grinned wryly and a little nervously; he knew he had been just pinked by a powerful senatorial sword but he was left unclear as to just where the weapon had entered and how best to withdraw it to the advantage of his department and of himself.

At this point it might be well to heave in an armful of statistics. Senator HILL has been responsible for, among other things:

(1) The Hospital and Health Construction Act, which has brought new medical care to countless communities.

(2) Hundreds of millions of dollars' worth of research into cause, cure, and prevention of cancer, mental illness, heart disease, arthritis, rheumatism, and the other killing and crippling diseases.

(3) Training and education program for thousands of medical people.

(4) Preventive medicine all over the country in State and county units.

The last Congress alone enacted into law more than 20 "Hill bills" affecting the public health. These impressive data please but do not enchant HILL. Neither the odor of a thousand beloved hospitals nor the keen, inspiriting scent of the political chase is always in his nostrils. He is so serious underneath that he can be gay, almost flippant, on the outside. Even in his private conversation he is apt (with those he does not know well) to adopt rather the manner of Joel Chandler Harris speaking of the exploits of Uncle Remus.

This he does because of the immense, innate courtesy of his kind and generation. Most people will expect southern stories; by God, then, southern stories they shall have. But beneath all this agreeable nonsense, this social refusal ever to be solemn in a social occasion, is another man entirely: a deeply educated and cultivated mind; an awareness of the interests of the intellectual man; a special, even delicate, sense that every page in the unfolding book of history is every man's true and final concern.

Transport Revolution at the Last Frontier—the Thought Barrier

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. McCORMACK. Mr. Speaker, one of the outstanding business leaders of our country and particularly in the transportation business, is Morris Forgash, president of the United States Freight Co., the headquarters of which company is located in New York City. I have a profound respect for Mr. Forgash's views on any subject concerning our country. His views on the transportation problems and questions of our country are worthy of profound consideration. Not only because of his experience in this important field, as well as his ability, but because of his vision.

On October 13, 1959, at the annual convention of the National Defense Transportation Association, held in Seattle, Wash., Mr. Morris Forgash made an address entitled, "Transport Revolution at the Last Frontier—the Thought Barrier." The views of Mr. Forgash are worthy of profound consideration by everyone, particularly by those in the transportation field, as well as Government officials of all agencies of our Government, particularly those having jurisdiction over governmental transportation.

In my extension of remarks, I enclose the address made by Mr. Morris Forgash on October 13, 1959.

TRANSPORT REVOLUTION AT THE LAST FRONTIER—THE THOUGHT BARRIER

It is a pleasure to be with you and an honor to have a place on this impressive program of the 14th annual convention and logistics forum of the National Defense Transportation Association.

The theme of this convention is "Revolution in Transportation." Revolution is a comprehensive word. It means many things. It signifies change—and can mean blood-spilling revolt against the established order of things or progressive development resulting from wide acceptance of challengingly new and different concepts. Industrial revolutions generally are kindled by invention, discovery, or advancing technology, but the lasting benefits and long-range progress resulting therefrom depend entirely upon the extent to which we are willing, in our minds, to accept change. If we are unwilling to discard time-worn concepts and accept new ideas, such a revolution becomes only a struggle which dissipates our energies. Without mobility of the mind we would live in the good old days forever.

We have already demonstrated our awareness of the revolution in transportation. But without decision, continued leadership, and action we will neither make progress nor meet the defense necessity requirements which today challenge transportation as never before. The consequence of failure to face up to these responsibilities could be disaster, for in the words of Bernard Baruch, the only choice that America has today is the choice of the quick or the dead. Transportation lies at the center of this choice.

The oldest records of man, crudely done on the walls of ancient natural caves, include pictures of wheeled vehicles. The story of human progress, from then until now, is simply the saga of transportation. Transportation surely was revolutionized by that unnamed man who in the dim and unrecorded past carved or chiseled or molded the first wheel. But during all the centuries since the inventor of the wheel found an unmarked grave it was the men who adapted the wheel to new uses who changed the course of history.

In the entire spectrum of history—except for the tiny speck represented by the last 150 years—the only force for propelling people and goods about the globe was natural force, wind, and current—muscle and gravity. The revolutions which occurred with the ushering in of the mechanical age in the 19th century, and the multiple-media age in the 20th century, while based on invention, were years behind invention. They were revolutions in the ideas of man.

Steam propulsion was actually devised before the Christian era but the first steamboat was launched by Papin in 1707. The people were not even then ready for the idea and a mob destroyed the boat, almost killed Papin, and set steam navigation back another hundred years to Robert Fulton's *Clermont*.

The automobile was likewise delayed as a medium of transport for almost a hundred years by the "Red Flag" Act in England, which required all self-propelled vehicles to be preceded by a man carrying a red flag or lantern. The speed limit—4 miles per hour in the country and 2 in the city.

Col. John Stevens, with his almost fanatical belief in the future of railroading, kept fanning the flame of idea and concept in America for decades until the Revolution finally materialized and steel rails knitted together a wilderness. Rudolph Diesel made the first working model of his engine in 1897, but to other generations were left the perfection of idea and acceptance of the concept of dieselization.

The motor vehicle and the airplane completed a cycle in the development of trans-

port, and the second quarter of the 20th century found us with the basic transportation plant that we have today. For a long time now it has been the custom to refer to the rapid changes that took place in the structure of our system of transport, during the period roughly bounded by the two World Wars, as the revolution in transportation. Quite recently we have come to realize that we have been talking about yesterday's revolution and that it has literally and figuratively run out of steam. The time has come to put away the uniforms in which we captained the old revolution and, at our peril, to adjust our thinking to conditions which surround us in this, the year 1959.

The potter's clay of change is available in ever-increasing supply. It is for us to mold it to our will. Nuclear power, supersonic speeds, jet propulsion, cargo on a curtain of air. A hundred centuries and a hundred and fifty years. Maybe the next cycle will be completed in a decade. Will the wheel perish as a symbol of transport? A recent editorial in a responsible magazine asked this question and reported the facts which make the question both genuine and earnest.

At the threshold of what I am going to say about developments in the field of equipment and transport pricing, I ask another question: Are we about to witness the demise of the boxcar as the predominant symbol of freight movement? Just hold the question in your minds for a moment, if you will.

Thirteen hundred and fifty billion ton-miles of freight were handled in 1957 by rail, motor, inland waterway, pipeline, and airways, and each of the basic modes functioned almost in a world of its own. Each mode used, primarily, equipment peculiar to its own needs, with deplorable lack of standardization even within modes.

Each basic form of carriage has a means of locomotion, a road or way on which or in which to travel, and a carrying unit. And the only common denominator of these three is the carrying unit. We cannot, in the nature of things, have transport coordination until we perfect interchangeable equipment, for coordination depends on standardization. We found that out long ago when we had a multiplicity of widths of rail tracks in this country and by painful process inevitably came to a standard gage. We have done the same thing with light globes and screw threads. Why should it be thought strange, therefore, to talk about standardization in the transport container field? NDTA, in a sense, is masterminding this part of the revolution. It has submitted to the shipping and carrier public a "crash" program for containerization. Standardization is the central picture of that program.

THE SEEDS OF REVOLUTION

The container, its standardization, and the means of its interchangeability among modes of carriage will revolutionize transportation in this country. It sounds simple, stated that way, but involved are tough problems of engineering, of compromise of viewpoint, and of pricing new services based on radically new concepts. How shall we lick these problems?

Fortunately, the least of these is the engineering problem. We have the inventive and productive skill and ability in this country to produce anything that we agree upon and in any quantity. The elusive problems are the intangibles—the meeting of minds on basic standards—the acceptance of new ideas—the approval and acceptance of new pricing structures tailored to meet new and radically different concepts of service.

When we overcome these problems—and we must and will overcome them—we will reap the harvests of the greatest revolution in transportation in recent time. Let's look at what we of NDTA have done in tackling the various facets of the problem.

STANDARDIZATION

Just a little more than a year ago, at the St. Louis convention of NDTA, I made a brief talk in which I stressed the need for standardization of transportation equipment. The reaction surprised me. I do not take credit for having fathered any new thinking on the subject—the enthusiasm was there and everybody was simply waiting for a chance to get down to brass tacks. The result was appointment of a special subcommittee on containerization and standardization, of which I have the honor of being the chairman.

A distinguished group makes up the membership of our subcommittee, a cross section of American economy, transportationwise. We got to work immediately, and made our report on the major project in less than a year.

First we studied the studies—more than a dozen of them—made by American Standards Association, the Maritime Administration, the Army, and others. We held meetings, and for a time the problem loomed so mountainous that it looked as though we might not find a place to catch hold of it. Finally, we agreed that if we were to crash through any barriers we had to make a start. Based on the best information available, and upon the combined judgment of our members, we unanimously recommended a standard container with a maximum length of 40 feet, for use singly or in multiple, the basic multiple being 20 feet, and standard width and height of 8 by 8 feet.

Among the considerations which led our subcommittee to recommend this first step were: The lengths we recommended are adaptable for use aboard the latest 85-foot rail flatcars; highway chassis can be designed to accommodate either the 20-foot- or the maximum 40-foot-length container; ships and cargo planes, now on the drawing board or in production, can accommodate the lengths and multiples we recommended; and even if we reach the goal slowly we must have a goal—otherwise obsolescence will overtake us all if each man is his own engineer.

As with any bold undertaking in an uncharted field, our recommendations have been widely discussed and written about. One writer, in an article in the Journal of Commerce titled "Standardized Freight Unit Faces Snags," had this to say on the credit side of the ledger:

"If the plan ever reaches fruition it will mean that virtually all common carriers of freight, shippers and receivers of freight, and the Armed Forces will be packing, unpacking, shipping, receiving, or carrying the same container or its multiple, and that all cargo-handling equipment will be specifically designed to handle it."

We simply cannot afford to let the "if" remain in this otherwise accurate summary of the benefits of the universal container. Whether we have recommended the ideal dimensions or not we have demonstrated that the interests most directly involved can agree on something.

Our subcommittee commends to you, as the most important step toward achievement of our goals that we will have the opportunity to take in our time, the necessary concert of action to make fully effective the "first step" recommendations which we have laid before you.

COORDINATION—ITS MILITARY AND COMMERCIAL POTENTIALS

When we have established the standard unit of equipment that can ride on steel rails, on the highways, on the inland and coastal waterways and the high seas, and in the air, with facility of interchange and without breaking seal, then we can reach the goal that has always eluded us—coordinated transportation. The stakes are very high—for the benefit of the shipping public undreamed of speed and economy of transport—for the carriers the solution of economic and operating problems that have always posed a serious threat to their very existence as private enterprises—for the military insurance of adequate public transportation geared to its own transport functions on a global basis.

The revolution that already has taken place in the applied science of destruction has rendered obsolete not only most of the weapons but most of the concepts of yesteryear's warfare. The problems of transport will still be largely one of getting there "first with the most." It is how this is to be done that becomes important. Wherever the battlefront may be, our entire supply line will be within enemy range and, being vital, it will be a prime target.

Dispersal of military depots and supply bases will be one of the first consequences of a future war and the connecting link of a standard, interchangeable container will be the only way the transit pipeline can be kept open. Over-the-beach loading of export cargo, at points not accessible to rail service, may be the only answer to destruction of port facilities. At the foreign beachhead, unloading of cargo where there are no port facilities is an even more likely necessity. Transfers of cargo at sea, the motorization of freight trains, or the transfer of truck cargo to rail service, will add the essential flexibility without which our whole transportation system may be immobilized by a few well-placed explosions.

The military needs for a standardized, interchangeable container, with its many advantages, will not materialize unless such container finds commercial and military acceptance and an everyday basis of use, and this, as all students of the subject realize, cannot be accomplished without the proverbial "bridge" of a proper freight rate or charge to make it feasible from the economic or cost standpoint. All present-day units of haulage, whether truck trailer, boxcar, tankcar, rubber tank, or something else, are simply containers. The problem, after standardization, is interchange and coordination, on such a basis that the container will move by the most economical combination of services available between any two points.

Experiments with interchangeable units of carriage, which would permit transfer of cargo without rehandling of lading, have been conducted for almost a hundred years. But most previous containerization programs have in the end petered out. Today the whole idea is associated with the word "piggyback." There are related "fishyback" and "birdyback" operations, but this program is being conducted according to the clock and not the calendar, so let's consider piggyback for a few moments.

Piggyback means simply the movement of a highway trailer on a rail flatcar. The modern concept of this method of transportation was pioneered by the Milwaukee Railroad back in 1928. It rocked along as a minor novelty until it exploded with electrifying effects on the public conscience about 5 years ago. The growth of piggyback was accelerated by a decision of the Interstate Commerce Commission in 1954, answering certain legal questions propounded by the New Haven Railroad.

Various plans of piggyback operations had evolved and the Commission undertook, at the behest of the New Haven, to clarify the legal atmosphere surrounding them. Basically, there are three plans, although one of them had been subdivided, and there may be further subdivisions.

The first plan involved the transportation on rail flatcars of the trailers of common carrier trucks. Called plan I, this is theoretically a joint motor-rail service, and it was approved by the Commission with the proviso that joint rates be established. In

reality, plan I piggyback is motor service, moving at motor carrier rates and under motor carrier lading, with a rail haul substituted for a part of the over-the-road motor movement. It is limited in scope by the operating authority of the motor carrier. The amount paid to the railroad by the motor carrier is a flat or contract charge, in theory called a division. In fact it is simply a form of a contractual relationship and is not in accordance with the traditional legal concept of a joint rate.

The second plan, or plan II piggyback, is an all-rail service, where the railroad transports its freight in trailers on flatcars instead of in boxcars. The service under this plan cannot get away from the rail lines.

The third plan, which is subdivided into plan III and plan IV piggyback, contemplates the transportation, under open tariff, of freight tendered by the shipper in his own trailers. Under plan III the shipper owns or controls only the trailer and the railroad provides the flatcar on which it rides. Under plan IV the shipper owns or controls both the trailer and the flatcar on which it rides.

Both plans I and II have been in operation—not counting the limited experimentation prior thereto—for about 5 years. Plan I, which is limited primarily to the East, is on the wane. This is shown by the brief of the railroads filed July 1, 1959, in Docket 32533. In the rail brief referred to, the Eastern Railroads quoted with approval the following statement by Dr. Lewis K. Sillcox, an eminent transportation scholar:

"Neither plan I or plan II, in any event, effectively solves the major problem which plagues the railways, namely that of controlling the volume of traffic and the increasing proportion of freight carried by private shippers in their own or leased trucks."

The railroads also said that:

"Since the motor carriers have been unable to stem the tide of private carriage in their over-the-highway operations, there is little reason to believe that plan I will be of any assistance in that important area of competition."

THE BREAKTHROUGH IN PIGGYBACK

The real breakthrough in piggyback came in 1958 when the railroads began to publish rates for plan III and plan IV piggyback. For the first time in the modern era transportation was offered to the public purely as transportation, priced as transportation, shorn of all the costly and time-consuming incidentals to transportation.

The problems of the railroads demanded heroic action and this was their answer. In a constantly rising economy the railroads were rapidly losing ground. The 71 percent of total ton-miles handled by railroads in 1943 had declined to 46 percent in 1957. The Senate committee handling the Transportation Act of 1958 had told railroad management, in its report, that there had been failure to "recognize changing conditions, times, and tastes," and "Failure to compete aggressively for business by use of modernized equipment," and finally failure "to adjust rates to compete effectively for traffic."

In establishing and using plans III and IV piggyback the railroads, shippers, and freight forwarders inaugurated a radically new service, based upon a new and completely scientific pricing formula. With the elimination of most other costs, except pulling the flatcars between ramps, the carriers could determine their costs with ease and accuracy.

In fixing a rate the railroads published a flat charge per flatcar movement, arrived at on the basis of a predetermined amount per car-mile. The charge applies in both directions, whether the trailers on the flatcar are loaded or empty. For example, the rate between New York and Chicago, under plan III, where the shipper supplies the trailers but not the flatcars, is $451.50 per flatcar. Between Chicago and the west coast the charge, under plan IV, for moving shipper-owned flatcars and trailers, is $924. In each case there is a maximum weight, with a per hundredweight charge for freight in excess of the maximum. A mixing requirement specifies that no more than a certain weight of any one commodity may be included on one flatcar.

This is the only basis of charges that provides any hope to the common carriers of stemming the tide to private carriage. I am not decrying private carriage, but I am convinced that many shippers have gone to private carriage simply for the reason that public carriage has not met their needs. The shipper by private truck determines his cost per truck movement and it is affected only to a minimal degree by the commodity or content of the truck. By experience the railroads know what these costs are and what they must publish to meet them. Also by experience under plan I the railroads know what highway costs are eliminated by substitution of a trailer-on-flatcar movement for an over-the-road highway movement. With these known factors the railroads were able to come up with a charge that will move the traffic and yet provide them with a substantial margin of profit.

This method of transportation is truly coordinated service, and not merely substitution of one mode of carriage or one type of equipment for another. The basic economics of cost, speed, service, flexibility, and convenience will determine the extent to which the trailers move on the highway and on the rails.

The flat piggyback charges do not ignore rate classification. One of the most important characteristics of freight in today's competitive transportation system is its density. The space limitations of the trailers used in piggyback service—their cubic capacity—provide a near perfect classification of the lading, based solely upon density and the ability to load. Thus the rates do reflect classification principles which are the most significant under modern conditions. Since the enactment of the Interstate Commerce Act in 1887, basically all rates have been constructed upon the following items of carrier cost:

1. Capital investment in equipment and maintenance thereof.
2. Common carrier liability.
3. Value of the service to the public.
4. Cost of terminal switching and other accessorial services.
5. Empty car movements which are always reflected in the charge for a one-way movement.
6. Line haul cost from terminal to terminal.

Basically, piggyback transportation insofar as the railroad is concerned, only involves the cost of line haul. Therefore, is it not apparent that the elimination in the items of cost involving services not performed requires a radical departure from the former traditional concepts of ratemaking?

An unrealistic, and perhaps unwitting, application of classification principles that no longer had practical significance once set the containerization movement in this country back 20 years. Most of you will remember the containerization service originated by the railroads in the early 1920's. A steel container was devised of such a size that six would fit on a gondola car. By experimentation and shipper demand a rate ultimately was arrived at that applied mathematically on a mileage basis to the unit, without regard to the nature of its contents. But in 1931 the Interstate Commerce Commission condemned this basis of rates and prescribed rates on a classification formula. The prescription killed the patient, for that experimentation in containerization faded from the scene.

At the time of the aforementioned decision the public had not been offered the great flexibility which is now offered by modes of transportation other than the railroads and was, therefore, not a consideration in the decision. I do not think that the Commission in that case was unsympathetic to the idea of a flat rate per unit, but, at the time, there was no backlog of experience from which a just and reasonable charge could then be determined. Fortunately, this no longer need be a barrier to progress since the passage of time has permitted us to accumulate the experience formerly lacking.

I would be delinquent in the duty which I owe to the freight forwarding industry if I did not say that Piggyback plans III and IV profoundly affect the ability of forwarders to provide the shipping public a faster, more universal, more economical and better service. As you probably know, forwarder volume rates, made possible in greater number by piggyback, have been challenged. In a decison of the Commission rendered September 4, with one Commissioner dissenting, the principles on which forwarder volume rates rest were unqualifiedly approved. It is a wise and far-sighted decision and its benefits will accrue not alone to the forwarding industry but to the shipping public, the national welfare, and our national transport system.

TRAFFIC IMBALANCE—WHY?

Of course there is an imbalance of traffic movement today. It is reflected throughout the transportation system and we have been paying for it all these years in our freight rates.

But I say to you that the imbalance of traffic arises largely as the result of specialized equipment, lack of standardization, and adherence to outmoded concepts. Geographically there are sections of the country which predominantly are agricultural—others are strictly industrial. Through the use of multipurpose containers supplanting the present specialized type of equipment empty mileage will be reduced to the very minimum.

The freight train loaded with manufactured products from New England passes the train laden with fruits and vegetables from California, and each train carries a string of empty cars.

Large numbers of rail cars—even some boxcars—are suitable for handling only one commodity and they, of course, have a 100-percent empty return load factor. The same specialization is found in truck equipment, like the automobile hauler, the tank truck, and the refrigerated trailer. The answer to empty car miles—eliminate specialized equipment and substitute an all-purpose, interchangeable unit of haulage.

I am asking you to think way beyond the standard container on which we have set our sights. Think of a container that will carry dry cargo, liquid cargo, new automobiles, products of the farm, the factory, and the processor—almost everything except things that will not physically fit in closed cars. Impossible you say? Not at all. May I introduce you to the first prototype?

At the Milwaukee Road freight station here in Seattle, there is at this moment a Flexi-Van flatcar which we have brought in from the east coast for this occasion. On it has been loaded two 20-foot containers and a 40-foot multipurpose container. This equipment has been manufactured by the Strick Trailer Co. The two 20-foot containers, after removal from the flatcar, can be operated as separate highway vehicles or they can be physically joined and operated as a

single 40-foot trailer. The 40-foot container, as you may see, is now loaded with two automobiles and a rubber tank manufactured by the United States Rubber Co. filled with liquids. This multipurpose unit will carry four automobiles. The ramps on which the auto rides, hydraulically controlled, lift to the ceiling when not in use and presto you have a 40-foot trailer, with normal cubic capacity for other cargo. It can be insulated and refrigerated. The engineers now have on their drawing boards plans for the development of that additional feature. Liquid cargo can be carried in rubber tanks, alone or in combination with automobiles or other freight.

At the Annual Exhibition of the Allied Railway Supply Association, Inc. in Chicago, September 20 to 23, there was on view a number of interesting new ideas on piggyback equipment. This is indicative of how rapidly equipment manufacturers are adjusting their sights to this transportation development of the future. The General American Transportation Co. exhibited an entirely newly devised 85-foot flatcar which would carry four 20-foot containers, or two 40-foot trailers or a mixture of both. A special system of handling the containers on and off the flatcar was devised through the tackle block system. The trailer is driven aboard in the traditional manner by a tractor, but the innovation in that direction is a new hitch to fasten the trailer down.

The Pullman Standard Corp. also had a very interesting prototype of a flatcar to be used exclusively in the handling of containers with special shock absorbing principles. It is anticipated by the manufacturer that this equipment will be on the market for commercial sale in the near future.

The collapsible rubber container is 35 feet long and has a capacity of 3,800 gallons of liquid. Visualize two of these containers on a flatcar and we have a capacity of 7,600 gallons which compares favorably with a great many of the tank cars now in use.

The American railroads chalked up 11,598 million empty car miles against 19,068 million loaded freight car miles in 1957. In other words, approximately 40 percent of the total mileage represents the transportation of empty cars. Think of the enormity of the waste. If the all-purpose container should even cut that empty mileage in half—and I predict it will do better than that—think of the savings in cost which could not help but reduce the price of public transportation.

This all-purpose unit of equipment can change the entire pattern of distribution in this country and have a profound effect on our social and economic life. It can create new markets, accelerate relocation of industries, develop backward areas. It will dramatically affect prices, sales, and marketing.

The inexorable march of time forces me to leave to your imagination—which I hope I have aroused—the limitless horizons to which this new all-purpose equipment may carry us. There are other revolutionary facts and concepts with which I would like to challenge your interest and I think I can best bring them to your attention by reaching back a little ways into recent history.

MYTH OR MIRACLE

In a talk I made last December before the Traffic Managers Conference of Southern California I made certain predictions of things to come in the world of transportation.

I predicted that:

1. Sometime within the next 10 years, the larger portion of the boxcar and refrigerator fleets of the railroads of America will be supplanted by trailer and demountable truck bodies on flatcars.

2. This will bring about revolutionary changes in the growing, merchandising, and transportation of perishable products and other products of the farm, including the frozen foods industry.

3. Empty rail-car-miles will be reduced by at least 50 percent.

4. The deficits in rail passenger transportation on all symbol runs will be solved by hitching piggyback flatcars to passenger trains.

5. Roller bearing piggyback equipment will shrink freight transit time between the east and west coasts to 48 hours.

6. Piggyback will enable the railroads to prevent further erosion of their higher rated commodities to air transportation.

7. Ultimately we will be able to ship a container load of freight from any point in the United States to any point in the world without physically rehandling the contents.

Now look 10 years ahead with me. How much payload does a passenger train need to take it off the dole? Hitch it on. How do you rearrange schedules to reduce 3 days to 2? Surely the intelligence to solve that one can be mustered. And how many hours' margin does it take to make rail a differential service compared to air?

Until we start shipping freight by missile I suggest that the railroads can hold their own against any competitor with piggyback on passenger trains or freight service at passenger train speeds. With this kind of service every primary train movement can be made to pay and even show a profit. Vital passenger service which, in the interest of national defense must be maintained at all costs, can be continued and improved.

Esthetic values will not be sacrified in this mixing of cargoes. The unit of freight haulage can be made to exactly match the motif of any passenger train, and the passenger-freighter, streaking through the countryside, will still be as beautiful a sight as you can find on the American scene.

Ladies and gentlemen, that is the picture I bring you of revolution at work. Myth or miracle, I leave my predictions to your judgment and to the verdict of history. I have told you that revolution is forged on the anvil of the mind and you are the voice and the conscience of America. As the strongest weapon in our arsenal of defense, as the most promising development in transportation to appear on the 20th century scene, I commend to you the new concepts in method and action which I have had the honor to discuss with you.

The progress which I have already outlined to you in the areas of standardization of containers, revolution in practice and pricing represented by plans III and IV piggyback, and development of the all-purpose unit of equipment has brought us to the very brink of some of these predictions. And that in 10 months, not 10 years. You read the newspapers and you know that trailers on flat cars are replacing box car service at a pace which outdates the figures before they can be collated. This is happening despite the handicap of legal controversy which has limited the scope of the piggyback service and increased the risk to private capital which is building the piggyback fleet.

The multipurpose container of which I have spoken holds great promise in contributing toward a substantial reduction in empty car miles. That, ladies and gentlemen, is going to give America a whole new transportation fleet by increasing capacity without increasing the size of the plant.

Now about reducing the rail passenger deficit—shrinking freight transit time to 48 hours coast to coast—competing with air for high grade commodities. Surely you would be entitled to classify these as myths if there is myth to any of the prognostications.

However, the Chesapeake & Ohio Railroad has been experimenting with the carriage of roller bearing freight cars on passenger trains. Within the past several weeks the Interstate Commerce Commission has granted that railroad the right not only to continue such a service but has authorized them to increase the number of freight cars in passenger trains. It is only a question of time when this will be the normal make-up of long-distance passenger trains. There is no reason why such a service could not be inaugurated at once from coast to coast with third morning delivery.

Navigation on the Great Lakes

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, January 11, 1960

Mr. WILEY. Mr. President, I received today from Mr. R. F. Malia, harbor consultant in Milwaukee, Wis., an address delivered by Edwin W. Nelson, Chief of the Engineering Division, North Central Division, Corps of Engineers, U.S. Army, relating to the present and future of the Great Lakes Basin.

I ask unanimous consent that the address be printed in the Appendix of the RECORD:

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NAVIGATION ON THE GREAT LAKES

(Address by Edwin W. Nelson, Chief, Engineering Division, North Central Division, Corps of Engineers, U.S. Army, Chicago, Ill., presented at symposium on Great Lakes Basin sponsored by American Association for Advancement of Science and American Geophysical Union at Hamilton Hotel, Chicago, Ill., on December 29, 1959)

Seven years ago I presented a paper on Terminal Facilities on the Great Lakes at a meeting of the American Geophysical Union here in Chicago. That paper dealt particularly with the development of harbors as well as terminal facilities.

Major changes have taken place or are in process at this time in connection with the development of navigation facilities on the Great Lakes. I will review briefly the changes, the basis, or background which provided the impetus for these changes and the present status of the further development of the Great Lakes navigation system.

The Great Lakes system consisting of five great bodies of fresh water, extending half way across the North American Continent, are joined with each other by realtively short connecting channels. In its primitive state, the watershed of these lakes was covered by virgin forest. Enormous deposits of iron ore were found in the present States of Michigan, Wisconsin, and Minnesota. Throughout the watershed were inexhaustible deposits of limestone rock. To the south and east lay the coal fields of the upper Ohio Valley, while to the northwest, west, and south were situated the agricultural areas of Canada and upper Mississippi Basin. The Great Lakes Basin, therefore, contained, or was adjacent to, the natural resources necessary for industrial and agricultural development, and the lakes themselves provided a natural transportation route which was ideal for the movement of bulk commodities. The development of channels and harbors on the lakes has been a vital factor in the exploitation of these

natural resources and in the development of the industrial region of the North Central States.

Navigation improvements on the Great Lakes and their connecting channels have paralleled the growth and development of the Great Lakes region. The improvements provided have resulted in low-cost transportation of basic raw materials such as iron ore, coal, stone, petroleum products, timber products, and grain. Economical water transportation has been a major factor in developing the industrial heart of the Nation in the Great Lakes area. The advantages of low-cost water transportation between Great Lakes ports, particularly for bulk cargo, are well known in industry.

Most of the commerce on the Gerat Lakes consists of bulk raw materials such as iron ore, stone, coal, grain, and petroleum products. Total U.S. traffic on the Gerat Lakes averaged about 219 million net tons annually for the 5-year period 1954–58. The maximum during this 5-year period was in 1957 when the total was about 244 million net tons. During the 5-year period the annual average traffic in iron ore was about 82 million tons; in coal about 58,500,000 tons; in stone about 27 million tons; and in grain about 7,500,000 tons. During 1957, 108 million tons passed through the St. Marys River and 130 million tons through the Detroit River. These amounts are not additive since a large portion of the traffic passes through both the St. Marys and Detroit Rivers between Lake Superior and Lake Erie.

The Great Lakes and their tributaries above Ogdensburg, N.Y., on the St. Lawrence River, drain an area of approximately 298,000 square miles and constitute the major portion of the St. Lawrence River Basin. The length of steamer track from Duluth at the west end of Lake Superior to Ogdensburg, N.Y., in the St. Lawrence River is 1,216 miles.

The Great Lakes, together with their deep-draft connecting channels, constitute the greatest deep-draft inland waterway system in the world. Extensive improvements to channels and harbors have been required to develop this system to accommodate Great Lakes traffic. Up to this time no improvements by the Federal Govermnent have been required on the Great Lakes to accommodate overseas traffic since existing connecting channels and harbors were more than adequate for the small, shallow-draft ocean vessels which could pass through the 14-foot St. Lawrence River canal system.

Although the lakes are deep, the connecting rivers commonly called the connecting channels had shallow reaches in their original state and over the years it was necessary to dredge the river channels to provide adequate depths to accommodate deep-draft lake vessels. In addition, the St. Marys Falls in the St. Marys River at Sault Ste. Marie, were impassable and locks were required to overcome the drop at the falls to permit vessels to pass between Lakes Superior and Huron.

The Great Lakes connecting channels include the waterways between Lakes Superior and Huron, Lakes Huron and Michigan, and Lakes Huron and Erie. The St. Marys River, including the shoal approach to the head of the river, is the connecting channel between Lake Superior and Lake Huron. The Straits of Mackinac and approaches thereto comprise the connecting channel between Lake Huron and Lake Michigan. The St. Clair River, Lake St. Clair and the Detroit River, with the approaches in Lake Huron to the head of the St. Clair River and in Lake Erie to the mouth of the Detroit River, comprise the connecting channel between Lake Huron and Lake Erie.

Experience on the Great Lakes during the past 50 years has clearly demonstrated that ship owners have always taken full advantage of improvements in the connecting channels and harbors. Today there are many vessels in the Great Lakes fleet of such characteristics that they can load only to reduced drafts except during the relatively short periods when the levels of the lakes are at extreme high stages.

Major changes have taken place in recent years in the character of the U.S. bulk cargo fleet. Prior to World War II the fleet was comprised generally of vessels of from 450 to 600 feet long, 55- to 65-foot beam, with maximum drafts of 21 or 22 feet, and with carrying capacities of from 8,000 to 13,000 net tons. In 1942 and 1943, 21 new vessels were constructed from 600 to 625 feet long and 60- to 67-foot beam with maximum drafts of 24.5 feet and with carrying capacities of from 17,000 to 20,000 net tons. Contacts with vessel interests in 1945, in connection with a study of the connecting channels, did not indicate any plans for construction of vessesls larger than those built in 1942 and 1943. However, construction of the *Wilfred Sykes* by the Inland Steel Co. in 1949 instituted a new era in the type of Great Lakes vessels. This vessel is 678 feet long and 70 feet wide, has a maximum draft of about 27 feet, and with cargo carrying capacity of about 23,000 net tons. Since that time 25 large bulk freighters have been built and 8 ocean freighters have been converted for Great Lakes service. These 33 vessels are from 602 to 730 feet long, from 67 to 75 feet wide, with maximum drafts from 24.5 to 28 feet and with carrying capacities or from about 16,000 to over 28,000 net tons. The speeds of these newer vessels have been increased up to 16 or 18 miles per hour as compared to 12 or 13 miles per hour for the older vessels.

The limiting depths of 25 feet in the downbound channels and 21 feet in the upbound channels are inadequate to accommodate the many new large deep-draft vessels being added to the Great Lakes fleet.

Recognizing the inadequacy of the connecting channels for the newer deep-draft vessels, and that legislation then being considered for the St. Lawrence Seaway would provide a 27-foot-depth channel westward only as far as Lake Erie, the Public Works Committees of both the House and the Senate adopted resolutions in March and June 1953 authorizing the Board of Engineers for Rivers and Harbors to review previous reports on the connecting channels to determine the advisability of further improvements to those channels including consideration of providing depths of at least 27 feet.

Engineering and economic studies by the Detroit district, Corps of Engineers, led to a favorable report to Congress to deepen the connecting channels between Lake Erie and the upper three lakes to provide channels with a minimum controlling depth of 27 feet. The improvement was found to be fully justified in the interests of Great Lakes bulk cargo traffic alone although it was recognized that the deepened channels would provide commensurate depths with those provided in the seaway. Deepening the connecting channels to provide controlling depths of 27 feet in both upbound and downbound channels has been authorized by Congress and work is now underway.

Present safe controlling drafts in the connecting channels for bulk lake freighters are considered to be 22.3 feet in downbound and 18 feet in upbound channels when the ruling lake level is at low water datum, whereas after the deepening is completed it will be 25.5 feet for both downbound and upbound traffic. This will provide generally in the connecting channels an increase in allowable draft of over 3 feet in downbound channels and of about 7.5 feet in upbound channels. Estimates of safe drafts pertain only to the Great Lakes type bulk carriers and do not necessarily pertain to ocean vessels as no studies were made to estimate safe draft allowances for such vessel when underway. The apparent inconsistencies between controlling depths and drafts under present conditions and for the deepened channels with depths of from 27 to 30 feet are accounted for in the design of the deepened channels in order to obtain the most economical balanced through-channel system after studying the physical and navigation conditions in each reach to be deepened and the characteristics of modern bulk carriers. The allowances established between channel depth and vessel draft vary from 1.5 to 4.5 feet in individual reaches of channel.

Controlling depths of 25 feet are already available in downbound channels and such depths will be available for through traffic in both directions between Lake Erie and Lakes Huron and Michigan in 1960. The date when 27-foot depths will be available throughout the entire connecting channels system is, of course, dependent upon appropriation of funds, but it is believed that such depths may be available throughout by 1962 or 1963. This controlling depth in the connecting channels is equivalent to that provided in the 27-foot St. Lawrence Seaway which was opened to deep-draft traffic from Montreal to Lake Erie last July.

One lock at the Soo, the MacArthur lock, has a depth of 31 feet over the sills, which is more than adequate for the connecting channels depth now being provided and is large enough to accommodate any vessel which can enter the Great Lakes through the St. Lawrence Seaway. A replacement for the obsolete Poe lock at the Soo is now under design. This lock will be 1,000 feet long, 100 feet wide, with a depth of 32 feet over the sills.

The St. Lawrence Seaway is a project to provide a 27-foot ship channel between Lake Erie and Montreal. From Montreal to the ocean Canada has already provided a ship channel with a controlling depth of 35 feet. There is a fall of about 225 feet in the 183-mile reach of the St. Lawrence River between Lake Ontario and Montreal. Most of this fall is in the 115-mile reach between Montreal and Chimney Point, which is about 68 miles below Lake Ontario. Canada had an existing navigation system in this 115-mile reach of the river with a series of canals and locks bypassing the rapids in the river. These canals had a controlling depth of 14 feet with controlling lock dimensions of 44 feet by 250 feet with 14-foot depth over the sills. The 68-mile reach of river from Chimney Point to Lake Ontario is wide and deep and only removal of rock shoals was required to provide a deep-draft 27-foot channel.

The seaway project has 7 deep-draft locks in the St. Lawrence River 860 feet by 80 feet with 30-foot depths over the sills, and canals and channels between Montreal and Lake Ontario with controlling depths of 27 feet. Five of the locks were built by Canada and two by the United States. The two U.S. locks were built by the Corps of Engineers.

Traffic between Lake Ontario and Lake Erie is through the Canadian Welland Canal which has locks of the same dimensions as the new seaway locks. The seaway construction in this canal comprised only deepening the canal from its former depth of 25 feet to 27 feet.

The large lake type bulk freighter can be expected to be used in the future in traffic between Great Lakes and St. Lawrence River ports as well as in inter-lake traffic. It is also expected that a large volume of overseas traffic into the Great Lakes will be in deep-draft vessels because of the inherent economies in operation of larger vessels.

Contacts with vessel owners and operators indicate clearly that the trend in construc-

tion of the larger, faster Great Lakes vessels will continue. No firm information is available as to the maximum size vessel which can be expected on the Great Lakes in the next few decades. However, it appears that the maximum size vessels on the lakes will be those designed for Great Lakes traffic rather than those entering the lakes from the ocean. Consequently, it can be expected that the channels provided for Great Lakes traffic will continue to be adequate for seaway traffic in the foreseeable future. This same situation will prevail in those harbors or portions of harbors which are improved to accommodate the large Great Lakes vessels. Consequently, improvements to channels and harbors for Great Lakes traffic will provide also a large measure of such improvements required for seaway traffic.

There are 58 federally improved harbors on the Great Lakes with project depths of 18 feet or more. Of these 58 harbors, 3 have depths of 26 feet, 12 of 25 feet, 5 of from 22 to 24 feet, 27 of from 20 to 21 feet and 11 of 18 feet. The deeper harbors are used predominantly for iron ore, stone, grain and coal. In addition to the federally improved harbors there are 9 deep-draft private harbors used predominantly for shipment of iron ore and stone and for receipt of iron ore, stone and coal.

The federally improved harbors on the Great Lakes have in generel been developed progressively from their earliest concept. The present harbors were designed to accommodate the vessel fleet as constituted some 30 years ago. At that time vessel lengths were limited to about 600 feet with maximum drafts of 21 or 22 feet. Many of the present harbor structures, particularly the parallel piers at river mouths, were designed for channel depths several feet less than are even now provided. With few exceptions, structures at all major harbors were completed at least 20 or 25 years ago and were not designed for channel depths in excess of those now existing in the connecting channels.

There are over 50 vessels in the present U.S. fleet which must now load at reduced draft except when the lakes are at extreme high stages. Even then a few of these vessels would be required to load at less than maximum allowable drafts. Upon completion of deepening the connecting channels increased depths will be required in harbors in order that these vessels can take full advantage of the deepened through channels. The 27-foot St. Lawernce Seaway will also generate deep-draft traffic which cannot be accommodated in existing harbors.

Harbor development on the Great Lakes has paralleled the improvement of the connecting channels so as to provide adequate depths and maneuver areas for vessels at ports and terminals. Since practically all of the deepest draft iron ore vessels pass through the connecting channels, the depths provided in those channels have generally been a determining factor in the maximum depths required in the major deep-draft harbors.

The need for improvements at harbors on the Great Lakes to accommodate the large, deep-draft vessels which will transit the deeper channels now being provided has been recognized. Resolutions adopted on May 18, 1956 and June 27, 1956 by the Public Works Committees of the Senate and of the House of Representatives, respectively, requested the Corps of Engineers to determine the advisability of further improvements of harbors on the Great Lakes in the interest of present and prospective deep-draft commerce. In undertaking this study the Committees requested that due regard be given to the scheduled time of completion of the St. Lawrence Seaway and of the deepening of the connecting channels between the Great Lakes.

Studies by the Corps of Engineers are well advanced to determine the deepening and other related improvements at individual harbors which are required to realize the navigation benefits resulting from deepening the connecting channels and from traffic through the St. Lawrence Seaway. Each harbor must be considered individually as well as collectively with other harbors in the area, and the improvements proposed at any individual locality must be justified on their respective merits.

Our studies to determine improvements which can be justified at Great Lakes harbors involve three major elements—namely, traffic analysis, engineering studies, and an economic analysis.

The first step is to do the necessary research to form a basis for estimating the reasonably prospective waterborne commerce to and from a harbor. Next, an estimate must be made of the character of the vessel fleet which will carry this commerce. After preparation of these estimates of prospective commerce engineering and economic studies are undertaken to determine whether the considered improvements can be justified on the basis of savings in transportation cost resulting from such improvements. Each harbor situation is an individual problem and must be given special study to assure that the estimated savings will actually be realized because of the reduced cost of transportation as compared to the cost by any known present or prospective alternative means. Improvements are not recommended for authorization unless there is a clear showing that the annual benefits exceed the annual costs of the proposed improvements. The Great Lakes harbors study is being processed so as to accomplish the most productive work in the shortest possible time. Separate reports must be prepared on each harbor considered. In many cases interim survey reports are being submitted to consider navigation improvements required to serve navigation involved in the transportation of commodities of major importance, such as iron ore, stone, coal, grain, and petroleum products, since the economic analysis of considered improvements which will benefit vessels moving these commodities could be completed in a much shorter time than the analysis of improvements for other Great Lakes traffic and of improvements for general cargo traffic and miscellaneous bulk cargo entering or leaving the Great Lakes through the St. Lawrence Seaway. The general plan for undertaking this comprehensive study therefore contemplated submission initially of interim reports on harbors, or portions thereof, which handle such major bulk commodities. Such interim reports recommending increasing depths to 27 feet in harbors or portions of harbors have already been completed at 16 harbors. Fourteen of these reports have been submitted to Congress. It is pertinent to note here that improvements recommended for Great Lakes bulk cargo traffic will also serve deep-draft seaway traffic, particularly at iron-ore harbors where depths of 27 feet are justified.

Comprehensive studies have been made as a basis for estimating future traffic at Great Lakes harbors for major commodities such as iron ore, stone, coal, grain, and petroleum products. These estimates in conjunction with estimates of the composition of the future Great Lakes vessel fleet are then used to establish the economic justification of considered harbor improvements to serve the traffic in those commodities.

The importance of prospective general cargo or miscellaneous traffic through the St. Lawrence Seaway is fully recognized. This is the first time that the Corps of Engineers has made any detailed studies of prospective foreign commerce to or from harbors in the entire Great Lakes area. In fact, in planning for such traffic studies it was found that data which could be utilized to make a thorough analysis of prospective overseas traffic to U.S. Great Lakes ports through the St. Lawrence Seaway were not available and that a considerable amount of basic research and investigation would be required to arrive at a reasonable estimate of such traffic, first, to the entire Great Lakes tributary area and, second, to individual U.S. harbors on the Great Lakes.

The plan to develop an estimate of the potential Great Lakes overseas traffic as a result of the 27-foot St. Lawrence Seaway involved several basic studies, each one of which has a definite relationship and interdependence upon the other. The program of the traffic analysis study includes several comprehensive studies dealing wtih the following major phases:

(a) Basic economic background factors of the area and its growth prospects.

(b) Origin-Destination of imports and exports.

(c) Freight rates and transport cost differentials.

(d) Prospective traffic patterns of the Great Lakes area.

(e) Delineation of Great Lakes Tributary area.

(f) Estimate of potential Great Lakes traffic.

As a result of above studies an estimate is being made of future overseas traffic from the Great Lakes area. The studies also develop the savings in transportation through Great Lakes ports as compared to shipment through ocean ports. It is necessary for the Corps of Engineers to develop the cost advantage of shipment through Great Lakes ports in order to determine the harbor improvements which can be economically justified for deep-draft overseas traffic. In fact this is the reason why we have been required to make the comprehensive studies of potential overseas traffic through Great Lakes Harbors.

The studies of potential foreign traffic to the Great Lakes through the St. Lawrence Seaway and to individual harbors on the Great Lakes are nearing completion such that we can now use the results in determining harbor improvements which can be economically justified to accommodate such traffic.

It is presently estimated that additional interim reports recommending deepening at 15 harbors will be submitted during the current fiscal year. Some of these reports will include proposals for deepening for seaway traffic as well as for Great Lakes traffic. Providing funds are appropriated therefor as required it is planned to complete all studies and reports for the comprehensive Great Lakes harbors report during the fiscal year ending June 30, 1961.

Studies made by the Corps of Engineers of potential resources of iron ore economically available to the Great Lakes region and of the conveniently located almost inexhaustible resources of limestone and coal in the region coupled with other studies of future trends in population and development of industry find there is every indication that the production of iron and steel will continue to increase in the area. Major improvements to the Great Lakes connecting channels and at many deep-draft harbors are fully justified because of the tremendous volume of estimated future traffic in those commodities. These are, of course, the basic raw materials for the large concentrations of heavy industry in the area and such industries should continue to expand accordingly. The St. Lawrence Seaway will contribute to this phase of the economy of the region as the St. Lawrence River ore-loading points will be accessible to our large economical Great Lakes ore carriers. Although these carriers may not

come as far as Lake Michigan, the availability of eastern Canada ore to the Great Lakes area will tend to conserve the ore resources in the Lake Superior region. Such conservation will, in turn, further enhance the future economy of the region.

The increase in foreign traffic to the Great Lakes through the St. Lawrence Seaway will result in deepening Great Lakes harbors to 27 feet in many areas in order to accommodate such traffic. Some of this deepening will be in areas not required to be deepened for domestic Great Lakes traffic including bulk cargo traffic to and from Canadian ports.

In summary, we are entering a new era in transportation facilities on the Great Lakes. The Great Lakes connecting channels between Lakes Superior, Michigan, Huron, and Erie are being deepened from a controlling depth of 25 feet in downbound and 21 feet in upbound channels to a controlling depth of 27 feet in both downbound and upbound channels. The St. Lawrence Seaway with its 27-foot controlling depth from Montreal to Lake Erie replaces the old 14-foot St. Lawrence River canals and increases the depth of the Welland Canal from Lake Ontario to Lake Erie from 25 feet to 27 feet. Thus, we will have through channels throughout the Great Lakes-St. Lawrence System with minimum controlling depth of 27 feet.

Harbors on the Great Lakes will be deepened to 27 feet as may be required to handle all deep-draft commerce through the connecting channels and the St. Lawrence Seaway.

These improvements will provide an increase in vessel drafts of about 3 feet in the downbound connecting channels and a little over 7 feet in upbound channels. The 27-foot St. Lawrence Seaway provides an increase of about 12 or 13 feet in safe draft to the ocean and also provides large locks to permit the deep-draft ocean ships to enter the Great Lakes system.

The Late Richard M. Simpson

SPEECH
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. RHODES of Arizona. Mr. Speaker, it was with a sense of profound shock that I learned of the serious illness of my good friend DICK SIMPSON. I am sure that the prayers and thoughts of all Members of Congress were with DICK during his illness, and are with him now. Those prayers extend to the family of our friend and colleague, asking that the Almighty may assuage their grief and leave them only with the memory of the fine strong man that was DICK SIMPSON, and a solemn pride in his life, his accomplishments, and the niche which he has carved for himself in history and in the hearts of all who knew him.

My association with DICK SIMPSON was primarily in my capacity as a member and secretary of the National Republican Congressional Committee. I was privileged to serve as secretary under DICK's chairmanship for the last 4 years. He had a fine mind, great resolution, and an outstanding ability to get things done. His devotion to duty was probably the crowning aspect of his entire character. Once he had agreed to do something, it could be regarded by all as having been done.

DICK SIMPSON possessed many virtues. The one which stands out in my mind is his modesty in all things. I have never heard him utter a single word of self-praise, or even one which caused me to believe that he recognized in himself the abilities which others saw in him. Rather, he was full of praise for his fellow workers, and anxious that they should receive the credit for any tasks well done.

The Congress will miss DICK SIMPSON. The country will miss him. The people of Pennsylvania, and particularly of his own congressional district, will miss him. To Mrs. Simpson and the Simpson family, I extend my heartfelt condolences and sincere sympathy, in which Mrs. Rhodes joins me.

Here's How Farm Leaders Are Thinking

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, a group of farm leaders in my home State of Wisconsin met October 30, 1959, for the 31st annual farmers' get-together conference of the Wisconsin Council of Agriculture Cooperative. After discussing the current farm situation, they adopted a set of resolutions on matters affecting agriculture. Under leave to extend my remarks, I would like to include seven of those resolutions in the RECORD:

TAXATION OF PATRONAGE SAVINGS

The recommendation of the Secretary of the Treasury, urging enactment of a special and discriminatory tax on cooperative savings, was formally introduced in the House of Representatives on June 19, 1959.

This legislation for the first time singles out cooperatives for imposition of an income tax not levied on other business, unless cooperatives pay an interest rate of at least 4 percent on their securities, and redeem securities issued for a patronage refund within a 3-year period. Equity investments in all other business corporations are not restricted as to time of redemption or amount of dividend payments, and this proposal singles out cooperatives for such unfavorable treatment of its equity capital investment.

Cooperative associations must depend almost entirely on their members rather than investors for their equity capital used in financing operations, and would have undue difficulty and be particularly handicapped in the orderly process of financing by complying with these proposed unreasonable restrictions.

Hearings have already been scheduled on this question when Congress reconvenes the first of the year: Therefore be it

Resolved, That the Wisconsin Council of Agriculture Cooperative protests against the passage of such unfair and punitive tax proposals, and directs its board and staff to use every effort to defeat them.

The council reaffirms its position that the net proceeds of a cooperative returned to patrons on a patronage basis in any form—cash, certificate of equity, or allocated book credits—is income in the hands of the patron and not income of the cooperative making the distribution. It is our conviction that such proceeds are not taxable to the cooperative, but should be included in the computation of the recipient's personal income tax. This is in accord with the clear intent of Congress in the tax law. It is likewise consistent with the basic concept of a cooperative as a nonprofit institution in which any income over and above the costs of operation rightfully belongs to the member patrons and is returnable to them on a patronage basis; therefore be it further

Resolved, That the Wisconsin Council of Agriculture Cooperative asks Congress to spell out the 1951 compromise which was put into Federal law and regulations under the leadership of the late Senator Taft, so that our courts will have clear instructions regarding cooperative patronage refunds.

IMPROVING THE COMPETITIVE STATUS OF COOPERATIVES

One of the basic purposes of agricultural cooperatives is to improve the competitive position of farmers in their business relations with other forces in the economy. In recent times there has been a trend toward greater concentration of economic power in most segments of the economy. While cooperatives have shared in this trend, their rate of growth has been much slower than that of noncooperative businesses. If cooperatives do not keep pace with the growth of noncooperative business, farmers will lose much of their present competitive strength and may be forced to rely increasingly on Government programs to protect their interests.

Therefore the council urges—

1. That members of cooperatives give wholehearted support to their established organizations.

2. That associations cooperate more fully with one another at both the local and regional levels.

3. That studies be undertaken to show the effects of competition between cooperatives and the benefits which may accrue from coordinated action or from consolidations, all for the purpose of strengthening cooperatives and enhancing the incomes of producer members.

4. That greater consideration be given to the purchase of established independent outlets as a means of increasing distribution facilities of cooperatives.

AGRICULTURAL PRICE SUPPORTS

The council recognizes the need for programs of Government assistance to agriculture and that present programs have forestalled even greater declines in farm prices which would have occurred without these programs. It is therefore considered advisable that these programs be continued and improved to give protection to farmers' incomes.

The dairy price support program has been of particular significance to Wisconsin dairy farmers. The council recognizes, however, that there are certain deficiencies in what can be attained by continuation of the program in its present form. Both economic and political considerations indicate that some improvements should be made toward adapting the program to meet the longer run problem and to deal more effectively and adequately with the dairy farmers price and income problem. It is recognized by the council that these improvements can probably best be accomplished by the adoption of a mechanism to more closely adjust milk production and marketings to the demand for milk and dairy products.

It is therefore recommended that the council staff work for the incorporation of a supply adjustment feature into the present dairy price support program with the condition that any marketing quotas or allotments be applicable to all dairy producers.

The objectives of such a program should be to—

1. Help improve the incomes of dairy farmers.
2. Promote and provide incentive for technical progress and improved efficiency within agriculture.
3. Provide a wholesome atmosphere for the family-type farm.
4. Provide for a democratic expression of choice through a producer referendum.

Food Best Bargain Ever

During this past year, numerous articles have appeared in the press, and especially in metropolitan centers, that leave the impression that food prices are high as a result of national farm price support programs and prices received by agricultural producers of such food products. The facts are that at no time has the American public been able to buy so much high quality, well graded, and sanitarily packaged foods for 1 hour of labor as at the present time. From two to three times as much food can now be bought with 1 hour of industrial wages as could be bought with 1 hour of labor 30 years ago. Food unquestionably is a good buy. Prices received by farmers for their products have fallen during the past several years and, therefore, the increases in the cost of living are not attributable to the prices of food or returns received by farmers. In fact, lower farm prices have provided one of the principal anti-inflation influences in the national economy.

We, therefore, deplore the fact that urban consumers are misled concerning the true status of the relationship of farm prices to retail food prices and that urban-rural relationships are unfortunately strained by such misinterpretation.

National Uniform Sanitation Standards for Milk

Municipalities, counties, States, and other governmental units rely more and more upon recommendations of the U.S. Public Health Service in formulating sanitary regulations applicable to milk and dairy products. Such regulations, however, are permissive, and some governmental units provide for sanitary regulations above and beyond those considered necessary for maximum protection to consumers at minimum cost to producers. The Wisconsin Council of Agriculture favors legislation to establish uniform sanitary requirements for fluid milk and dairy products sold in interstate commerce throughout the United States.

Foreign Market Expansion

The Agricultural Trade Development and Assistance Act has been very useful in the development of foreign markets. We commend the Congress and the Secretary of Agriculture for extending and expanding programs under this and other similar laws and we urge their continuation.

We commend the Secretary of Agriculture for providing means through the Commodity Credit Corporation whereby dairymen and their representatives may deal directly with foreign buyers in the development of foreign markets.

Protection From Imports of Farm Products

Imports of farm products or products manufactured therefrom, may and sometimes do damage or obstruct the proper working of programs designed to further farmer prosperity: Therefore be it

Resolved, That this Wisconsin Council of Agriculture Cooperative oppor s any increase in import quotas and favors revision of section 22 of the Agricultural Adjustment Act, as amended, to provide positive and mandatory protection from imports whenever such imports endanger, penalize, or retard the accomplishment of the objective of increased farmer prosperity under the operation of such programs; be it further

Resolved, That products imported must meet the same quality standards as domestically produced products.

Prospects for Industrial Expansion in State of Oregon

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, January 11, 1960

Mr. NEUBERGER. Mr. President, one of the most able young citizens in our State is Gerald W. Frank, of Salem, Oreg., who serves as chairman of the advisory board of the Oregon Planning and Development Commission. Mr. Frank, who is a leading businessman, has made a very close and careful personal study of the vast opportunities offered in Oregon for further industrial development.

On January 4, 1960, Mr. Frank spoke on this very pertinent topic at the annual banquet of the Milton-Freewater Chamber of Commerce in Milton-Freewater, Oreg.

Because Mr. Frank's address is so thoughtful and thorough a summary of the resources—both natural resources and human resources—offered by the State of Oregon, I should like to invite to the attention of my colleagues in the Senate exactly what he has had to say. Therefore, Mr. President, I ask unanimous consent that pertinent excerpts from the address by Mr. Gerald W. Frank, manager of the Meier & Frank Co., of Salem, Oreg., be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

SPEECH PRESENTED AT MILTON-FREEWATER ANNUAL BANQUET

(By Gerald W. Frank)

I

May I thank you for your courtesy in inviting me to participate in your annual banquet. This is an occasion I have been looking forward to for some weeks, as it has given me a chance to renew old acquaintances in this area, as well as to make new friends in your community. I was very flattered to be asked to become a part of this program, and I hope that my remarks tonight will be of interest to you.

I have been in your position many times, listening to a banquet speaker at a program such as this, and I am sure that as you are sitting here tonight, you are hoping that I'm not going to talk too long, and I assure you that I'm not.

I'm not going to talk with you tonight as a politician, because I am not one of those; I'm not going to talk with you as an authority on government, or planning, or economics, because I'm not one of those either; I'm not going to talk with you with any axe to grind, because I honestly have one. I'm going to talk with you tonight only as an Oregon businessman and as a private citizen interested in just one thing—the welfare of our State. I believe all of us in this room share this interest, or else we wouldn't be here tonight.

My family's roots, like so many of yours, are deep in the soil of Oregon—as a matter of fact, 103 years deep. We have watched five generations help build our great State. We, like you, are proud of the past and excited about the future.

Tonight I would like to discuss current economic conditions in Oregon, and where we are headed in the years to come.

The experts tell us that Oregon's population by the year 1975 will be about 2½ million people. This represents an increase of some 46 percent over present levels. Along with this population growth will come a tremendous economic growth.

According to past estimates, the maintenance of Oregon's population requires one job for each two to three Oregon residents. Therefore, between now and 1975 Oregon's population increase will necessitate the development of some 340,000 new jobs.

The first question you might ask is: "Why are we assured of this tremendous growth in our area?" Well, mainly because we have to offer here in Oregon just about everything that prospective investors and settlers are interested in.

Actually, there are 11 major factors that industry considers in the location of new facilities. Just scanning the list, one can readily see how high we here in Oregon stand on most items on this list.

Industrialists are looking for handy location of markets for finished goods; for raw materials and supplies; for low-cost power, and other utilities; for reasonable building costs; for quantities of available land, and room for expansion, for reasonable transportation costs, and good transportation facilities; for pleasant community relationships; for moderate living costs for employees; for an adequate supply of skilled labor; for pleasant labor management relations; for a reasonable labor cost; and most of all, for a place where living for workers is pleasant. We'll talk about how Oregon stands on some of these items in just a moment.

In a recent survey, 56 percent of the industrialists questioned about the possibility of locating in Oregon said that a strong influence in their selection was their personal desire to live in Oregon. Half of these mentioned favorable climate as a major consideration, but an even larger percentage mentioned community factors made up of everything from the appearance of the shopping areas to the quality of the schools and roads as being important.

It's apparent that selling Oregon to industrialists is not so much different than promoting tourist trade. Climate; scenery; nearness to mountains, valleys, and seas; fishing, hunting, and boating—all these need to be stressed.

Add to this the general quality of public services, in which some of you people in this room play such an important part; the excellence of the highway program; the high standing of our school system; the availability of modern shopping centers, hospitals, parks, libraries; and you could almost put the vital statistics in the back of the brochure.

People looking for places to establish new industries are not cold, impersonal computing machines. A good catch of salmon while

vacationing down on the coast, or a fine golf game on one of our beautiful courses, or a scenic ride through the Wallowas probably has brought many an owner and his plant to Oregon.

It's our job as members of the Oregon Planning and Development Commission to sell all of these things for our State, and we think that there has been good progress in the Pacific Northwest, and particularly in Oregon, in the past few years.

One hundred new production workers increase personal income in the community by more than $500,000 annually. They create additional employment for 175 other people. They make possible four more retail establishments and introduce about $360,000 worth of retail sales a year.

We have many examples of new industry in our State. In pulp and paper there are new mills in many communities, some of the most important of which are the Weyerhaeuser Mill at Springfield and the Western Kraft plant at Albany. In plywood alone, 61 new plants have been erected in the past 10 years.

In metals, the activity has been just as impressive, where we see the tremendous Harvey development at The Dalles. Hanna, near Riddle, Oreg., is producing nickel. Uranium ore is being processed at Lakeview, Oreg.

In chemicals, we find sulfuric acid plants springing up throughout the entire Northwest. Factories to make phosphate and fertilizer also have been built in the past 10 years. Others have expanded, such as Pennsalt in Portland.

In electronics, a strong new industry has sprung up, paced by Tektronix in Portland.

Oregon in the past 10 years has made a striking rise in diversified manufacturing—a category embracing aluminum and steel smelting, metal fabrication, machinery, transportation equipment, and other durable goods. This group rose 45 percent in employment in the last 10 years, from 17,000 to nearly 25,000 employees; this classification is important because the number of jobs it provides brings diversity and stability to our basic economy. Thus we are not in a position like Boeing in the State of Washington, where such a large percentage of the labor force is engaged in one particular industry.

II

Let's review for a moment some of the assets of our great State. First and most important, we have a highly skilled, stable labor supply. This is more than just opinion, for census figures show that the median school year completed amongst people in Oregon over 25 is 10.7, or about 3 years of high school. The national average is 9.3. The Army recently reported that Oregonians taking Army intelligence tests had scored second highest average grades of personnel of any State.

And our work stoppage record is great, too. Man-days lost in 1955 were only two one-hundredths of 1 percent of the estimated total working time, compared to the national average of twenty-nine one-hundredths of 1 percent.

How about our water supplies? You and I both know that the day is not far away when adequate supplies of fresh, pure water for industrial processes will be the determining factor in the location of many types of plants. How high we stand on the list of areas having adequate water supplies.

How about agricultural production? Our State's widely diversified agriculture is the foundation of a constantly growing food processing industry and also has a potential of providing raw material for chemical, plastic and similar industries.

How about power? Oregon has plenty of wheel-turning power for industry, and rates are very favorable.

And while we're talking power, we must mention natural gas. We find that it is a big advantage in bringing metal-treating industries here, and a necessity for glass and ceramic plants.

Besides low-cost fuel and direct firing applications, natural gas also is a raw material for the chemical industry.

Sites in planned industrial districts, with utilities and transportation facilities available, and affording freedom from zoning wrangles, are important to industry. Portland now has 1,300 acres available in 12 industrial districts of parks.

Hillsboro and McMinnville industrial development commissions have bought up tracts of farmland and developed industrial parks. At least five other community development groups have raised capital for industry-attracting activities.

No discussion of Oregon's assets, of course, would mean much without reference to our forest resources. Oregon's huge stands of timber, now estimated at upward of 500 billion feet, still remain the No. 1 asset and best hope for a dynamic economy.

The lumber industry has the greatest effect on the Northwest economy of any, of course. The payroll of our lumber business is now twice that of Pennsylvania coal and twice that of the corn crop of Iowa and Illinois.

But the important question which comes most often from all segments of this industry is: "When will our timber supply be exhausted?" The most expert foresters tell us that by the year 2000 the region will be growing as much new timber as it cuts. While this is some time off, of course, the fact remains that we still have enough timber to bridge the gap, and permanency ahead is assured.

Leaving the matter of harvesting the trees, an interesting and important development has taken place the last few years—the utilization of the other half of the log.

Out of this other half of the log, we see new industries cropping up, with payrolls which will eventually reach those of the lumber business. It is the advent of the wood chemical era.

A striking example of the lumber industry's efforts to obtain the most from the logs is the fact that several years ago it was considered by the industry that only 45–50 percent of the log was used. Today's estimate is 90 percent.

To give you an idea of the magnitude of the lumber business in the Northwest, 2,500 out of the 7,000 industrial establishments in Oregon and Washington use wood as the basic raw material. Some 170,000 workers in Oregon and Washington receive $600 million in wages per annum directly from wood-using industries.

Oregon ranks first in the lumber production of the United States and has held this rank since 1938.

III

Now let's talk just a little bit about highways and their importance in our State. Highway improvement and construction in any part of the State is of significance to all other areas of the State, as all of our communities are linked together by the State's 7,400-mile system of primary and secondary highways.

Oregon's major transport problem—that of sheer distance—is complicated by the spotty distribution of our population, and the fact that the metropolitan trading center of Portland is well-located with respect to deep sea and transcontinenal rail transport, and to the Willamette Valley, but remote from many important production centers to the south and east.

The second major factor in our transport problem is growth. Between 1945 and 1955 vehicle registrations almost doubled in Oregon, and our vehicle mileage has kept pace with our growth in population and registration.

Now what about our recreational facilities? I don't have to stand here and tell you what we have to offer in the way of recreation. That is God's country.

We have wonderful facilities in the way of motels and lodges to make any tourist's mouth water for a return trip to this area. And look at all the things we have for them to do once they get here: Rodeos, water carnivals, livestock shows, floral pageants, ski tournaments—just everything for the active sportsman or for the person who just wants to look on.

Our own State highway department is doing everything possible to attract more people to our area to take advantage of those things with which we have been so richly endowed by nature. In 1957 the travel division of the highway department spent over $300,000 to bring people to our area.

The State's visitor industry is estimated to over $140 million—certainly enough to be a prime contributor to the State's economy.

Industrial growth comes in waves and surges. It is never consistent, nor is it spread evenly. One wave in the past 25 years brought vigorous expansion in lumber and plywood in Southern Oregon. Another, in the postwar period, saw a surge in light metals.

IV

It seems to me that in the next decade there are eight likely sources of growth for the Pacific Northwest.

I will not go into them in detail, but it seems to me that the eight fields that we should watch for expansion are: First, that of consumer goods—both producing them and selling them. As business swells, markets grow for countless consumer goods now brought in from California and east of the Rockies. Thes consumer goods are produced by small independents who see a chance to make a start, and by national corporations who find that the Pacific Northwest has become large enough to warrant a new branch.

The tremendous growth of California helps the Pacific Northwest. In recent years it has been common for eastern manufacturers who wanted to establish manufacturing on the west coast to locate their first branch in California.

These consumer goods must be distributed also, and I am sure that most of you are aware of the new gigantic Lloyd project now taking shape in downtown Portland. This fantastic project, which will be the largest integrated shopping center in the world, will be open next spring.

The second field is that of forest products. As we have mentioned, forest products are the backbone of industry in Oregon.

With integration and fuller utilization of logs, more jobs are created out of every tree that's cut. A suggestion of what this can mean comes from a typical producer like the Hult Lumber Co. in Junction City, Oreg. Hult began making lumber, then added green veneer to get more value from its logs. In 1946, Hult employed four men for every million board feet processed. Last year, it employed eight men per million board feet. In the next 10 years, without using any more logs, but by making new products, it expects to double employment.

The third field is that of raw materials and supplies for heavy industry.

The shift in the manufacture of forest products to items like plywood, pulp, paper, particle board, and laminated products calls for more chemicals and adhesives. The output of chemicals will also increase for fertilizers, fungicides, and weed killers.

The fourth field of interest is that of agriculture and food processing. Continued ex-

pansion of west coast population will open many new opportunities for Pacific Northwest agriculture.

The fifth field of interest is that of the undeveloped natural resources. The Pacific Northwest's abundance of low-grade minerals challenges development of cheaper methods for industrial production.

The sixth field of interest is that of recreation and the sale of scenery. Oregon's matchless combination of mountains, lakes, and salt water will become an increasing attraction as other parts of the Nation become more crowded. Scenery can be sold and resold without wearing out. With promotion and construction of good vacation facilities, this region can add millions to its income from tourist trade. It's no secret that attractive living and pleasant recreation facilities are a great impetus to the attraction of new industries to an area.

The seventh field is that of fisheries and waterpower. The development of the ocean shrimp fisheries off of the Oregon coast is an example of latent resources being brought to production.

Low-cost waterpower, which has meant so much in postwar industrial growth, could be in for new expansion. If Canada and the United States can agree on the division of power from dams on the upper Columbia, this region may again be seeking new manufacturing, for low-cost power is an attraction.

And the final field that shows interest at this time is that of offshore trade. New growth and statehood for Hawaii and Alaska will help the offshore trade and should mean growth of markets where the Pacific States hold an advantage.

V

In order to bring about the fulfillment of these developments, we must have a healthy business climate which will give a boost to Oregon's industrial growth. We feel that our business climate is considerably better after the last legislature, where favorable action was taken to make the Oregon package more attractive to prospective new industries.

I thought you might be interested in some of the new laws which will aid us in helping sell Oregon.

First, the capital gains provision for income taxes—although the legislature tied a "reinvest in Oregon" string to it, provision for special income tax treatment of capital gains should help the State attract and keep capital.

Secondly, the 2-year tax exemption for manufacturing plants under construction—this will be an important asset, and one the industrial developers can use with telling effect in their sales presentation to new industry.

Thirdly, the freeport law exempting goods in transit from personal property taxes—this will give a real boost to growth of regional warehousing and distribution in the Portland area, where it is already big business.

Fourth, the tightening of unemployment insurance benefits to seasonal workers—businessmen consider this a step toward making jobless insurance less of a welfare program.

Fifth, the enabling law for a State industrial development credit corporation—this permissive act will put the State in a position to continue to use Federal funds to finance future development through community development corporations.

And finally, Oregon has a balanced budget, unlike so many other States in the Union.

VI

In short, those of us working on this industrial development work are actually concerned with two phases: First, determining what advantages Oregon has favoring its economic development and then publicizing these factors effectively; and secondly, learning the unfavorable factors and working toward eliminating those that can and should be eliminated.

And so on the brink of our second century of progress in Oregon we can look back to the so-called good old days, when women wore hoop skirts, bustles, petticoats, cotton stockings, high-button shoes, and puffs in their hair; did their own cooking, baking, cleaning, washing, and ironing; raised big families; went to church on Sundays; and were too busy to be sick.

The men in those days wore whiskers, square hats, and red flannel underwear; carried big watches and chains; chopped wood for stoves; bathed once a week; drank 10 cent whisky and 5 cent beer; rode bicycles and buggies; went in for politics; worked 12 hours a day, 6 days a week; and lived to a ripe old age.

Our businesses burned coal oil lamps; carried everything in stock from needles to a plow; trusted everybody; never took inventory; placed orders for goods a year in advance; and always made money.

Today, the women wear silk stockings, short skirts, pointed-toe shoes, an ounce of underwear; have short hair; smoke, paint, and powder; drink cocktails; drive cars; have pet dogs; and go in for politics.

The men have high blood pressure; wear no hats and some, no hair; shave their whiskers; ride in airplanes; never go to bed the same day they get up; are misunderstood at home; work 5 days a week; play tennis; and die young.

Our businesses have electric lights, cash registers, escalators, elevators, never have what the customer wants; trust nobody; take inventory daily; never buy in advance; and never make any money.

Maybe we should go back to the good old days, but I doubt it. All of us pulling together, taking advantage of our advantages, can truly make our great State of Oregon the most prosperous and most pleasant place in which to live as the last frontier of these United States.

The Late Richard M. Simpson

SPEECH

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. WALTER. Mr. Speaker, the news of the death of DICK SIMPSON cast a cloud of gloom over the entire State of Pennsylvania. It will be a long while in lifting.

DICK SIMPSON was known and respected by thousands of Pennsylvanians because of his human character, his honesty and his stanch and abiding belief in the institutions of our beloved Republic. All of us are going to miss DICK'S words in debate. Whether we agreed with him or not, we were certain that he enunciated a policy that he believed in and that he sincerely thought was in the best interests of America. The State of Pennsylvania has lost a great son. The Union has lost a wise and experienced statesman. We of the House have lost a beloved friend.

To the members of his family I extend my deepest and heartfelt sympathy.

Montana Gourmet Comes to Washington

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, January 11, 1960

Mr. MANSFIELD. Mr. President, the Congressional Club here in the Nation's Capitol has a new manager, Ruby F. Swanson, from Troy, Mont. She brings with her a talent in the culinary arts which will please the discriminating palates of connoisseurs of fine food.

In recent years Mrs. Swanson has been managing a summer resort, Swanson's Mountain View Lodge, in western Montana. Her Swedish recipes have been a contributing factor to the annual return to the lodge of many of her guests.

Montana and its visitors will miss Ruby Swanson, but I know that Washingtonians will realize in a very short time the great talents they have in the new manager at the Congressional Club.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the January 7, 1960, issue of the Washington Post.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Jan. 7, 1960]

SHE'S SERVING CONGRESSIONAL WIVES—FOOD FLAVORED WITH A TRACE OF SWEDEN

(By Marie Smith)

Food will have a distinctly Swedish flavor at the Congressional Club this year thanks to the club's new manager, Ruby F. Swanson.

When she arrived to take over last month she brought along a book of favorite recipes from Swanson's Mountain View Lodge in her home town of Troy, Mont., which she manages during the vacation season.

Many of the recipes are old family favorites handed down from her grandmother in Sweden and all have been tested at the resort lodge and approved by its guests.

She'll give her first sampling of the Swedish food at the reception the club is giving Sunday afternoon for new Members of Congress and their wives. "I plan to have prune bread and orange cake," she said yesterday.

It was through one of her guests that she got her job as manager of the Congressional Club here.

Representative and Mrs. WALT HORAN, Republican, Washington, stopped at the lodge en route home last summer. It was one of their many visits there and Mrs. Horan, knowing about the club's need for a new manager, asked Miss Swanson if she'd consider the job.

She did, and a flow of correspondence between her and Mrs. Walter Norrell, club president, followed with Miss Swanson arriving here with cookbook to fill the job.

It was not her first job in Washington. She came here first in 1936 to do research with the Social Security Administration. A year of personnel work in New York followed, and then she came back to do personnel work at the Pentagon during World War II.

An excellent cook herself, Miss Swanson said she rarely got a chance at the lodge except on cook's day off, but she always tests a new recipe before springing it on her guests.

Her hobby when not planning menus and other club activities, is golf, and Miss Swanson has several trophies won at Sherwood Forest when she lived here before, to show her skill at the game.

A Review of the Activities of the Congressional Joint Committee on Atomic Energy During the 1st Session of the 86th Congress and a Look Into the Future

---

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. VAN ZANDT. Mr. Speaker, it was a pleasure to attend the meeting of the Nuclear Energy Committee of the National Association of Manufacturers held in New York City, at 10 a.m., on Friday, October 23, 1959.

The program consisted of a review of NAM policies in the nuclear field and a general discussion of the Federal-State relationships in this field.

During the course of the program, as a member of the Joint Committee on Atomic Energy, I delivered the following address in which I discussed the activities of the Joint Committee during the 1st session of the 86th Congress as well as the prospects for the 2d session.

The address follows:

REMARKS BY REPRESENTATIVE JAMES E. VAN ZANDT MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, BEFORE THE NUCLEAR ENERGY COMMITTEE OF NATIONAL ASSOCIATION OF MANUFACTURERS, OCTOBER 23, 1959

Mr. Chairman, ladies, and gentlemen, the distinguished chairman of your nuclear energy committee, Mr. Fairman, in his letter of invitation, suggested that I speak today on the activities of the Joint Committee during the 1st session of the 86th Congress as well as the prospects for the 2d session.

With all due respect to your distinguished chairman, I believe he has given me quite a large order.

As you will see, the activities of the Joint Committee during 1959 ranged all the way from radioisotopes to reactors, and from the genetic effects of fallout to the fine print in insurance policies.

Our committee held hearings on waste disposal, employee radiation hazards, workmen's compensation, patents, liability, Federal-State relationships, atomic power, new weapons, nuclear war, our nuclear submarine program, and a host of other subjects.

The testimony varied from atomic energy regulations in local communities all the way to international atoms-for-peace agreements, Euratom, and the Geneva negotiations with the Russians for cessation of nuclear weapons tests.

Our committee, and its various subcommittees, held a total of 84 public hearings and 77 hearings and meetings in executive session.

Some 25 publications, consisting of reports and hearings were printed by the Joint Committee during the first session, amounting to over 11,000 pages.

And so I say, Mr. Chairman, you have given me a fairly good sized order.

But, with your indulgence, I will try to touch briefly on most of the activities of the Joint Committee during this past session, and then look into my crystal ball for 1960, as you requested.

I am very glad to begin with the 1959 amendment to the Atomic Energy Act of 1954 to permit greater participation by State and local governments in regulating the atom, because I understand it is on your agenda this morning.

The 1946 and 1954 Atomic Energy Acts both set forth comprehensive frameworks for regulation of the atom by the Federal Government, but were silent as to the role of State and local governments.

As the peacetime uses of atomic energy spread throughout the country, a growing crescendo of interest by State and local officials developed.

In particular, radioisotopes began to find more and more applications in the fields of biology and medicine, agriculture, and industry.

By 1959 the AEC had outstanding over 4,500 radioisotope licensees, spread throughout our 50 States and in almost every community.

In May of 1959, the Joint Committee held 4 days of public hearings and received testimony from representatives of the AEC, Public Health Service, State and local governments, industry, and labor.

As a result of these hearings, the Joint Committee made a number of changes in the bill originally proposed by the AEC.

After a number of committee meetings, we then unanimously reported out the bill, with amendments, together with our committee report.

Let me quote briefly from some of the comments of the Joint Committee in its report:

"2. The approach of the bill is considered appropriate, in the opinion of the Joint Committee, for several reasons:

"(a) The approach is on a State-by-State basis. * * * The bill does not authorize a wholesale relinquishment or abdication by the Commission of its regulatory responsibilities but only a gradual, carefully considered turnover, on a State-by-State basis, as individual States may become qualified.

(b) The bill applies to some, but not all, atomic energy activities now regulated exclusively by AEC.

It applies principally to radioisotopes, whose use and present licensing by AEC is widespread, but whose hazard is local and limited.

Licensing and regulation of more dangerous activities—such as nuclear reactors—will remain the exclusive responsibility of the Commission.

When the bill was considered on the floor of the House, it was my privilege, together with my colleague, Representative MELVIN PRICE, of Illinois, to explain its purposes and intent to the other Members of the House.

After explaining some of the provisions, I summarized for the House as follows:

"In summary, Mr. Speaker, this bill would help the States assume independent regulatory jurisdiction in areas which are now regulated exclusively by the Federal Government under the provisions of the Atomic Energy Act.

"It would assist the States to prepare themselves for assuming such responsibility by increased training and programs of assistance for the States.

"As pointed out in the Joint Committee report, this would increase the protection of the public health and safety because most citizens look to their local health officers for advice and protection against hazardous materials used in the community."

I am happy to say that the House, as well as the Senate, passed the bill in the form recommended by the Joint Committee.

It was signed by President Eisenhower on September 23, 1959, as Public Law 86-373, and is now the law of the land.

The AEC is developing regulations under the new law and has entered into discussions with representatives of at least one State (New York) leading, we hope, to an agreement whereby that State will begin to assume some of the regulatory responsibilities of atomic energy applications.

I think most of you will agree with me that this new law to shift some responsibility out of Washington and to the States represents an important and healthy development.

All of us realize that it is going to take a number of years to develop commercially atomic energy, especially atomic power.

But some day we will have atomic power stations, as well as research reactors and radioisotopes, spread throughout the country.

It's time now for our State and local governments to start preparing to assume increased responsibilities in understanding and controlling this new force.

I would like to emphasize three things about this legislation.

First, it attempts to provide, for any given operation, that either the Federal Government will be responsible, or the State government, but not both.

From the point of view of industry, this should tend to prevent over regulation.

The Joint Committee put it this way:

"3. It is not intended to leave any room for the exercise of dual or concurrent jurisdiction by States to control radiation hazards by regulating byproduct, source, or special nuclear materials. The intent is to have the material regulated and licensed either by the Commission, or by the State and local governments, but not by both."

Secondly, the bill, as amended, tries to encourage uniform standards.

On this point the Joint Committee said:

"5, The Joint Committee believes it important to emphasize that the radiation standards adopted by States under the agreements of this bill should either be identical or compatible with those of the Federal Government. The committee recognizes the importance of the testimony before it by numerous witnesses of the dangers of conflicting, overlapping, and inconsistent standards in different jurisdictions, to the hindrance of industry and jeopardy of public safety."

Third, this is only the first step toward increasing State and local responsibility.

The committee's final comment, number 7, in its report was:

"7. The bill recognizes that this is interim legislation. The committee believes that the uses of atomic energy will be so widespread in future years that States should continue to prepare themselves for increased responsibilities."

Related to, and prior to, the Federal-State hearings, the Joint Committee held hearings on industrial radioactive waste disposal, and also on employee radiation hazards.

Disposal of radioactive wastes from reactors is recognized as one of the growing problems in atomic energy.

We therefore wanted to assess the extent of the hazards, the quantities of wastes being generated now and estimated in the future, and explore the new research on treatment and disposal now underway in our AEC laboratories.

We held 5 days of hearings and received testimony from 52 scientists and experts working in this field.

As finally printed, the waste disposal hearings, including the technical papers for the record, run over 3,000 pages in length, and consist of four volumes.

They are without a doubt the most complete library yet compiled on this important subject.

I have copies of our committee's summary analysis of the hearings here with me if any of you would like one.

The hearings in March on employee radiation hazards also explored workmen's compensation problems.

In the past, workmen's compensation has always been handled at the State level, but there are suggestions now that a Federal workmen's compensation law for radiation injuries should be considered.

We found certain areas of agreement and certain areas of disagreement growing out of our hearings.

We then listed 10 possible future courses of action in the summary-analysis which we prepared after the hearings.

The Joint Committee took no action on this subject this year, but it will no doubt be before us again when we return in January.

The Joint Committee also held hearings this year on insurance and liability problems.

Nuclear reactors are designed with every possible safety device and precaution, and the record of the AEC and industry in operating reactors to date has been fantastically safe.

However, there is always the remote possibility of an accident which could cost hundreds of millions of dollars of damage.

Private insurance companies managed to put together pools totaling $50 or $60 million.

Above that amount, the Congress in 1957 enacted, as recommended by our committee, the so-called Price-Anderson amendments to the Atomic Energy Act to provide governmental indemnity and limitation of liability.

This year we reviewed the operation of these indemnity amendments, including international liability problems, and possible insurance and indemnity coverage for nuclear powered merchant ships.

In general, the indemnity amendments seem to be working well.

There has been no major reactor accident, and no call upon the governmental indemnity funds.

The best insurance, of course, is preventive insurance, and to this end we receive an annual report from the members of the advisory committee on reactor safeguards.

One bad accident would set this industry back many years in terms of public confidence.

We must continue our efforts to prevent this possibility.

After hearings on liability and reactor safety, we held hearings on fallout.

We read in the papers every day about the dangers of radioactive fallout, and it is a difficult subject to evaluate.

In 1957 the Joint Committee held voluminous hearings on this subject and in 1959 we wanted to bring ourselves up to date.

We therefore heard statements from the leading scientists and experts in the field as to the hazards, and as to our program to protect the public against fallout.

The Joint Committee then prepared a summary-analysis of these hearings, following our usual practice.

In general, I think we are in agreement that the fallout caused by debris from past bomb tests, both on the ground and still in the atmosphere, does not constitute a hazard to our public.

If we were to resume atmospheric tests, however, levels of strontium 90 could become uncomfortably high.

We said in our report:

"Thus for testing already conducted, man's exposure to fallout radiation is and will be relatively small compared to the normal background radiation or the standard recommended by the International Commission on Radiological Protection (ICRP).

"Assuming successive cycles of testing over the next two generations or less, following the same pattern as the past 5 years, the predicted average concentration in bone will be about 48 strontium units.

"This is close enough to the maximum permissible body burden of 67 strontium units recommended by the ICRP to suggest that a hazard to the world's population could result during this period."

This suggests the advisability of tests underground rather than in the atmosphere.

This is, of course, one aspect of the prolonged and difficult negotiations with the Russians now taking place in Geneva.

Many military experts believe we may need to resume testing in order to improve our weapons program, including development of small, low-yield tactical weapons.

If the President should decide that we need to resume testing in the interests of national defense, it may be possible to reach an agreement with the Russians to conduct all future nuclear tests underground.

I think we would be willing to do this, and underground tests cause no fallout, of course.

But we have been talking with the Russians on this subject for almost a year now, and it is difficult to predict what, if anything, they will agree to.

Our final hearings this year were on the biological and environmental effects of a hypothetical nuclear war.

For the purposes of the hearings, the subcommittee set up an assumed attack pattern of nuclear weapons by an enemy against the United States.

We received testimony from military and civil defense experts, medical doctors and scientists.

After the hearings, the joint committee met to discuss the results.

Our summary-analysis of these hearings on the effects of a nuclear war are also available, and if any of you would like a copy, I will be glad to send one to you.

I think that you would find it very interesting reading.

The attack pattern assumed for the purposes of the hearings was that the enemy had delivered 263 nuclear weapons in 1, 2, 3, 8 and 10 megaton sizes, with a total yield of 1,446 megatons on 224 targets within the United States.

An additional 2,500 megatons were assumed to be detonated elsewhere in the northern hemisphere in attacks on overseas U.S. bases and in retaliation against the aggressor homeland.

Some of the subcommittee's conclusions were as follows:

"Probably the most significant finding presented to the subcommittee was that civil defense preparedness could reduce the casualties of the assumed attack on the United States from approximately 30 percent of the population to about 3 percent.

"The provision of shielding against radiation effects would at the same time protect against blast and thermal effects for the vast majority of the population.

"The cost of providing high-performance shelter protection for 200 million people was estimated at between $5 billion and $20 billion.

"The main conclusion presented to the subcommittee was that the country must have a national radiological defense system if the Nation is to withstand and recover from an attack of the scale which is possible in an all-out nuclear war."

We all hope to avoid a nuclear war, of course, but we have been less successful in some past years in avoiding a congressional war on another subject: The development of atomic power.

For the past 2 or 3 years before 1959 this had become an annual slugfest.

We used to debate, warmly and with some feeling, the issues of public versus private power, the rate of atomic power development, comparison with other countries, the role of government and industry, the advantages of different reactor types, and so forth.

However, this year, primarily because of the excellent relationships between the new AEC Chairman, John McCone, and our distinguished chairman, Senator CLINT ANDERSON of New Mexico, the Joint Committee and the Commission, after hearings, were able to reach agreement on a balanced atomic power development program for this fiscal year 1960.

This year the AEC authorization bill was approved unanimously by the committee, after a number of amendments to which the Commission consented.

The bill was then passed by both the House and Senate in the exact form recommended by the Joint Committee.

I hope that this spirit of harmony and cooperation will continue, and that we can find means for the Government and industry to work together to develop commercial atomic power.

The Joint Committee also held hearings in April of 1959 on the subject of atomic energy patents, and I know that this is a subject of considerable interest to your committee.

The AEC recommended, and the committee and the Congress approved, after our hearings, a 5-year extension of the so-called compulsory licensing provisions of the Atomic Energy Act.

The Commission testified while the industry is still in its infancy, the "reserve power" of the compulsory licensing section should continue to be available.

The compulsory licensing provision has never been invoked since enactment in 1954.

We wrote in many limitations and restrictions on its use, and it is truly a "reserve power" which I doubt will ever be used.

Our hearings disclosed, I am glad to say, that the number of applications and patents by private inventors is steadily increasing.

In 1947 AEC filed 282 patent applications, and others 110.

Ten years later, by 1957, AEC filed 260 patent applications, and 715 patent applications were filed by others, mostly private industry.

The other patent amendments requested by the AEC are still pending before the committee and will be considered further next year.

One of the most interesting problems is in the international field.

It presents the question whether AEC contractors should receive preferential patent rights abroad on research and development financed by the Commission.

I am not a lawyer—and I can assure you that this subject is very complicated.

But we will continue to try to follow policies of encouraging inventions and development by private industry, and at the same time making any technology developed by AEC financing available to all of industry generally.

Now for the crystal ball.

What will be the activities of the Joint Committee in 1960?

First of all, we normally begin each year with hearings on the development, growth, and state of the atomic energy industry, under section 202 of the Atomic Energy Act.

That section provides for annual hearings by the committee during the first 60 days of the session, with testimony from representatives of industry, labor, science, and the public.

I hope that some of the industry leaders in this audience will take advantage of this

opportunity to make known to the committee your views, either by written statement or by oral testimony.

The "202" hearings are scheduled for February 1960.

Also on the docket for next year will probably be further discussions of radiation standards and allocation of responsibility between the AEC, Public Health Service, and other agencies in formulating standards of protection.

In the past, the National Committee on Radiation Protection and Measurement has recommended standards which have been adopted with only minor changes by the AEC.

In 1959 the President established by Executive order a Federal Radiation Council to review these standards and to advise the President as to policies in the radiation field.

Our committee, in the Federal-State bill which I mentioned earlier, established by statute the Federal Radiation Council, adding the Secretary of Labor as a member, and providing that the council should receive the best possible technical advice.

This year I am sure we will be concerned with the operations of the council and the Federal agencies in developing new radiation policies and standards.

These will, of course, be very important to the atomic energy industry, as well as to labor groups and the public.

We can also look forward next year to a review of the atomic power program.

I believe that the Federal Government should devote its efforts primarily to research and development, and that private industry should concentrate on construction of reactors.

The building of atomic power stations is a very complicated and expensive business.

It requires dollars for bricks and mortar and standard generating equipment which industry should provide.

But new atomic power stations also require heavy research and development expenditures, as Mr. Fairman can testify.

The Commission can, and should, stand ready to bear some of the research and development expenses, in order to accelerate our atomic power program.

Government construction of some small prototypes of new reactor types will probably also be necessary.

New reactor types are being developed, and further refinements and advances are being made in some of our older reactor types, such as the pressurized water and the boiling water reactors.

The committee will review the entire atomic power program thoroughly again next year, probably in connection with AEC authorization bill, since Government assistance in this program requires annual congressional authorization.

I think we can look forward to an interesting year, but it is still too early to predict what reactor types, if any, the committee will add to the Commission's recommended program.

Finally, it is likely that the committee will make an overall review of our international atoms-for-peace program next year.

Many of our friends abroad are fascinated with the atom, and there are many ways that we can work with them to mutual advantage.

Many of them are naive and do not realize the technical, financial, and legal problems involved, but all of them are anxious to work closely with the United States, and to improve their atomic know-how.

But how do our 45 bilateral agreements, our cooperation with Euratom, and our participation in the International Atomic Energy Agency all tie together?

What were the original objectives of each type of program?

What has been accomplished?

Should we redefine our objectives in our international atoms-for-peace programs?

These are all interesting questions which grow out of the past, but also have real significance for all future policies.

So you can see that we have not been idle in 1959, and that we have a very interesting agenda to look forward to in 1960.

The atom was developed during wartime and under conditions of secrecy, but is now finding more and more peaceful uses, with increasing possibilities for bettering the future of mankind.

I hope that this association will keep up its good work, and will make known its views to our committee during the forthcoming year, so that our committee can carry out its responsibilities in formulating policy, both with respect to the military and the peaceful uses of atomic energy.

A Singular Policy

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. McCORMACK. Mr. Speaker, within the past 10 days the Eisenhower administration, despite protests from at least 60 Members of Congress, approved an International Bank loan of $56 million to the United Arab Republic in order to widen the Suez Canal.

In the minds of millions of Americans this action is difficult to understand, in fact, cannot be understood. It is another sign of uncertainty and uneasiness.

In my remarks, I include an editoral "A Singular Policy," appearing in the Boston Globe of December 31, 1959, objectively evaluating this loan. I was one of the Members of Congress who opposed the approval of this loan. Denying any country, in this case Israel, the use of the Suez Canal for shipping purposes is a violation of an international agreement.

A SINGULAR POLICY

About a fortnight ago, despite protests from 60 Members of Congress, the Eisenhower administration approved an International Bank loan of $56 million to the United Arab Republic, for the purpose of widening the Suez Canal. The protests stemmed from the fact that, though Suez is supposed to be an international waterway open to all shipping, President Nasser continues the policy he inaugurated last spring of barring Israeli shipping and cargoes from the canal. Indeed, so recently as December 17, his police seized a Greek freighter bearing a cargo originating in Israel.

This latest seizure, antedating by less than a week approval given the $56 million loan by Washington, again focuses attention on Nasser's defiance of the directives of the United Nations that the waterway be opened without discrimination, and of international law.

The State Department now voices hope anew that the U.A.R. will honor its pledges and reopen the canal to Israeli shipping. This optimistic utterance, after granting the loan and while plans are afoot to lend another $50 million to the U.A.R. from the Redevelopment Loan Fund, is unlikely to butter any important parsnips for the U.S. policy in the Middle East. It suggests that the administration's right hand doesn't care what its left hand is doing.

Nasser is presently feuding furiously with Iraq to prove himself a stronger foe of the Israeli than the dictator at Baghdad. To assume that he will alter his blockade policy against Israeli shipping takes credence. If U.N. Secretary General Dag Hammarskjold, due in Cairo January 21, can induce him to do so as Washington evidently expects, a miracle will have come to pass. Meantime this country is in the position of sinewing an international lawbreaker.

Dedication of Dickerson Generating Station by Gov. J. Millard Tawes

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, January 11, 1960

Mr. BEALL. Mr. President, on September 24, 1959, Gov. J. Millard Tawes spoke at the dedication of the Dickerson Generating Station at Dickerson, Md.

I recommend this talk to the reading of my colleagues, and ask unanimous consent that Governor Tawes' speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY GOV. J. MILLARD TAWES AT DEDICATION OF DICKERSON GENERATING STATION OF POTOMAC ELECTRIC POWER CO., DICKERSON, MD.

I should like, first of all, to congratulate the officers and the management of the Potomac Electric Power Co. for their industry and their foresight in erecting this magnificent new generating station in Dickerson.

And may I express the thanks of the people of Maryland, especially those living in the Washington metropolitan area, to the company for this valuable adjunct to the social and economic life of our community.

This powerplant, situated in the charming and peaceful Potomac River Valley, stands as a monument to our American system of free enterprise, refuting the alien doctrine we have heard so much during the last several days that capitalism, motivated by the desire for profit, breeds evil and dissatisfaction among people.

Here we see demonstrated by deed private industry's capacity to provide the needs of the people and private industry's interest in promoting the general welfare of the populace it serves.

I was gratified to learn, from your president, Mr. Dunn, and others, of the cooperation Potomac Electric Power Co. received from the officials of Montgomery County in this undertaking.

It is satisfying to me to know that the project, in a measure, then, is a product of the cooperative effort of public officials and private businessmen.

The political and economic system we have set up in this country will fulfill its potential only if this spirit of cooperation—of a joint effort to attain a common objective—prevails in the relationship of government to business.

The primary significance of this project, as I see it, is that it evidences PEPCo's determination and ability to supply the people in its operating area—the city of Washington with the urban sections of Montgomery

and Prince Georges Counties in Maryland—with the electric energy they need now, and will need in years to come, to maintain their homes and operate their businesses.

To those of us in government and elsewhere who are engaged in the important task of planning the orderly and healthy growth of Maryland, this Dickerson Generating Station of PEPCo has a special meaning.

A healthy and orderly growth of our State demands careful, precise planning for its economic development, and, as we all know here, economic expansion in this age would be impossible without the production of adequate electric energy.

Maryland has been generously endowed by nature with characteristics which have made it a place of pleasant and abundant living.

The hills, valleys, woodlands and fields that spread out before us here afford man all the delights of nature he needs to live prosperously and happily.

But the full life demands that man not only be provided with the necessities of food, clothing and shelter, but that resources surrounding him are sufficient to permit him to exercise to the fullest degree his instincts to build and to create.

These resources the Maryland man possesses in great quantity.

The growth and development of our State over the past three centuries has been determined to a great degree by the wealth of its natural resources.

Its early economy, primarily agricultural, was founded on the sound base of a fertile and productive soil. Commerce, and later industry, supplanted agriculture as the keystone of its economy, although agriculture, even today, is a vital part of it.

The thriving city of Baltimore grew up around one of the finest natural harbors in the country, a seaport that permitted the thrifty and enterprising merchants of Maryland to trade with the peoples of all parts of the world.

Railroad, canals, and highways were built, opening up the West and creating a natural outlet through our State of the commerce of that region with the rest of the country and the rest of the world.

The coal of western Maryland, which we hope Pepco will use in even greater quantities as the years go by, promoted a healthy, vital economy in western Maryland—in cities like Cumberland and Hagerstown.

A remunerative industry was built around our beautiful and priceless Chesapeake Bay with its great abundance of fish, oysters, and other kinds of seafood.

But an economy does not, and cannot, remain in a static condition. It either grows or it decays.

Understanding this, the States and regions of this country are competing keenly for industrial and commercial expansion. One State in the South last year added $153 million to its basic industrial wealth by inducing new industries to locate there.

If Maryland is to retain its favorable economic condition, it must enter spiritedly into this competition.

One of the first decisions I made as Governor of Maryland was to establish a new State agency, the department of economic development, whose responsibility it is to keep Maryland abreast or ahead of its competitors in the development of its economy.

This department is still in the fledgling stage and hence its worth cannot yet be appraised. But I have complete confidence in its leadership and no misgivings about its ability to reach the goals we have set.

Maryland, as I have shown, has plenty to sell, and the selling job can and will be done.

I should like to discuss at some greater length the assets of Maryland and what we can do to improve them. And I should like to use as an illustration this part of Maryland in which we find ourselves now.

This county—Montgomery—was described in an article that appeared in one of our metropolitan newspapers only a few days ago as one of the "richest, highest taxed, and most prosperous" counties of the country.

It enjoys the well-deserved fame of being one of the finest residential areas in the country, with attractive towns, villages, and suburban communities, good schools, good roads, excellent park and recreational facilities.

And the average value of new, single-family homes built in 1958 was approximately $20,000.

Situated as it is within the bulging metropolitan area of our National Capital and being as attractive as it is for gracious living, Montgomery County must of necessity grow and grow at an accelerated pace.

The rate of the population growth of course is conjectural, but I note that the Washington Board of Trade is estimating that the county, with a population now of 350,000, will have 435,000 inhabitants in 1965 and 670,000 by 1980.

Growth at such a rapid rate must be guided, controlled and regulated to escape what the planners call "suburban sprawl." It is consoling to residents of the county, I know, to realize that they have a county government and a planning agency which is equipped to handle this situation and avert the disaster of a suburban sprawl.

Montgomery County for many years has had excellent planning to provide for the orderly development of residential communities, shopping areas, and employment centers. The quality of its planning has been a main factor in its development as one of two or three of the most prosperous counties in the Nation.

Counties which become bedroom areas for adjoining big cities are likely to have serious problems of taxation and financing, and it is to the everlasting credit of Montgomery County planners that they have been aware of this and have taken measures to meet the problem.

They have realized that its economic base for taxation must be broadened by the attraction of industry, but industrial zoning has been carefully programed to avoid injury to residential areas.

Here again the county is most fortunate in that, situated as it is near the seat of our National Government, it is peculiarly suited to the more desirable types of industrial plants—the light, scientific industries.

The Federal Government has established some of its finest and largest research establishments here, including the National Institutes of Health, the Naval Ordnance Laboratory, and the Naval Medical Center.

Some of the world's greatest scientists are doing research in these laboratories. This, of course, affords a great attraction to the kind of industry Montgomery County needs to expand its economy without changing its basic characteristic as a pleasant place in which to live.

In constructing this new generating station and in planning its enlargement in the future, the Potomac Electric Power Co. has envisioned this industrial growth, along with the general growth in population, and is making provisions for the increased use of electric power in the area.

That is what I had in mind in the beginning when I offered my commendations to the company for its foresight. I know we can expect it to grow along with this great community and provide the public with the electric power that is needed.

I alluded earlier to the cooperation between Pepco and the governmental authorities of this county in the construction of this project, and I should like to say a little more about this.

The handsomely printed program for these dedicatory ceremonies graciously acknowledges the help that was extended by these public officials, stating that "without their understanding assistance, our (that is, Pepco's complex and multifarious tasks could not have proceeded as rapidly as they did."

As Governor of the State, I should like to pay a personal tribute to these county officers and agencies for working closely with this private corporation in the construction of a project that will be of enormous benefit to both.

Montgomery County's representatives in the general assembly, its county council, the Maryland-National Capital Park and Planning Commission and others were very helpful in what was a gigantic task, I have been told. The advice and the assistance given by Melvin Reese, the county manager, was of inestimable value, a company official told me.

It is quite apparent to all of us that the Potomac Electric Power Co. will be required to expand its generating facilities if it keeps pace with the growth of this community and fulfils its responsibility as a public utility.

I think we can pledge to the company here, as we dedicate this splendid new plant, the continued cooperation of the State and its counties in the tasks of the future.

Statement Made by the Chairman of the Brazilian Delegation, Mr. Augusto Frederico Schmidt, in the First Committee of the United Nations General Assembly, on October 19, 1959

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. McCORMACK. Mr. Speaker, a truly great American was the late Gen. George Marshall. There is so much that could be said about the life of the general and his great services and contributions to our country in preventing the forces of vicious totalitarianism from dominating the world.

One of the finest tributes, and which came from his heart, was made on October 19, 1959, in a statement made by the Honorable Augusto Frederico Schmidt, Chairman of the Brazilian Delegation, in the First Committee of the United Nations General Assembly.

I include in my remarks the brief but all-embracing and touching tribute paid by Mr. Schmidt to our late friend, Gen. George Marshall.

Mr. Chairman, just two words to pay homage to the memory of General Marshall, deceased on last Friday. The free world owes him a great debt of gratitude. We cannot forget such a debt at the moment he leaves us for the repose of death. We have already forgotten too many things.

No other name is more deeply linked to the cause of the West than that of the illustrious American public man. His was the initiative of the most constructive of all enterprises dedicated to the maintenance of democracy, namely the Marshall plan, which allowed Europe to accomplish the grandiose

task of its reconstruction after the last World War. For this reason General Marshall was most justly granted the Nobel Peace Prize.

The fact that this tribute comes from a Latin American country vouches for its impartiality.

Thank you, Mr. Chairman.

Economic Trends, Labor and Management Conferences, and the Steel Strike Settlement—Address by the Secretary of Labor

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, January 11, 1960

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by the Secretary of Labor James P. Mitchell, before the Economic Club of Detroit, today.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SECRETARY OF LABOR JAMES P. MITCHELL BEFORE THE ECONOMIC CLUB OF DETROIT, DETROIT, MICH., JANUARY 11, 1960

Mr. Chairman, members of the Detroit Economic Club, distinguished guests, some 2 years ago I was invited to luncheon with you and, as some you may recall, I had to do it at that time by telephone, neither nutritious nor personally satisfactory.

I am happy to be here myself this time, and I want to thank you for again extending an invitation to me.

I have been asked to speak on the question: "Where are we and where do we go from here in the labor-management relations?"

I don't think that I can return a responsive answer to that question without indicating first what I believe to be important evolutionary changes in our economic life. For labor-management relations exist in a context of change.

It seems that the evolution of our economic life is leading toward larger concentrations of economic power within institutions—power based not on the ownership of wealth but on the control of wealth.

These institutions are various: corporations, of which 500 now account for two-thirds of our total industry; pension and trust funds, already totaling some $40 billion and growing at the rate of $4 billion annually; labor unions, supported by 16 million members; mutual funds, trusts, insurance and banking firms and so on.

It has been estimated that 50 million citizens are now sharing in the profits of the 500 largest corporations, directly and indirectly. Since 1952, the number of direct stockholders in public corporations has risen from 6.5 million to 12.5 million.

In the United States more and more people are enjoying greater and greater degrees of wealth.

At the same time, the control of economic wealth is concentrated in greater degree in our economic institutions, and in the hands of the managers, administrators and leaders of those institutions.

Outside a free society, this might be a dangerous condition, but inside a free society it has an opposite effect; it places in the hands of private citizens both the power and the resources to attain the social and economic goals they set for themselves.

A free society, has within itself the weapon to curb injustice that might result from a selfish or blind use of economic power; that weapon is the political power that the people have reserved for themselves.

We are all familiar with the use of political intervention, from antitrust laws through the regulation of transportation and broadcasting the regulation of labor-management affairs.

Intervention usually results when economic institutions have not lived up to the responsibilities that society has expected of them, either through incompetence or willful mismanagement and abuse of control.

We have, in America, a rapidly growing society, one with impressive needs, and even more impressive wants.

America will be looking to its private institutions to initiate and support positive programs for social and economic advancement.

At the same time intervention by political power has the latent danger of sapping the vitality of private responsibility, frustrating private initiative, and, most importantly, creating a drift toward vesting government with more and more controls over private affairs.

When political power and economic power are joined, as they are in Russia, it can be devastating to the ambitions of freedom.

At the same time, the vigorous and expanding society of tomorrow will not hesitate, I believe, to exert its political power if the needs and the wants the people feel are not met by private means.

That is one of the reasons why it was all-important that the recent steel strike be settled voluntarily—to preserve these vital institutions from political regulation.

And that is one of the reasons why more has to be done in the private sector to solve the social needs represented by the older worker, by the minority group—and on down a long list of problems waiting for remedies.

I disagree vigorously with those who believe that government is the only institution committed by nature to a forwarding of the common good.

We have estimated, at the Department of Labor, that the population of the United States will increase to 226 million by 1975. The labor force in that period will grow to 95 million, an increase of 23 million. Eight million of that increase will be men and women over 45 years of age.

At present, because of senseless prejudices, because of changes in business technology, the older worker is often excluded from employment. He finds that his age has erected invisible barriers around him, cutting him off from participation in the active economic life of his society.

Well, whose problem is this?

Is it the problem only of the mature worker himself, and one that he can meet only by recourse to his political power?

In New York and in other States there are now laws on the books that prohibit discrimination in employment because of age. Is it possible, unless the managers and the leaders of our centers of private economic power realize that this is their problem too, that a national law might someday be on the books—and it will be there not because the Government is seeking to control but because millions of people, frustrated in their desire to join into society in an active way, have demanded such control.

The fact that this economy will be called upon for a maximum response to meet domestic needs and international commitments makes it plain that the maximum utilization of human resources is not a choice but an imperative.

And it is plain to me that business management and labor unions have prime responsibility to get this job done.

A corporation must exist for larger ends than the mere accumulation of profit, the production of goods or the payment of wages. It must also use its economic power to further national goals and serve society's purposes.

It can't do this of it has, for example, discriminatory employment policies in regard to minority workers.

It can't do this if color is made a condition of employment.

I think you will agree with me that the clamor for general use of political power to meet social ends is based on a vote of no-confidence in the ability, and the intention, of the private sector of our economy to assume the responsibility.

I do not mean to give here the impression that the private and public powers stand at opposite poles. On many of the social needs of today they must join. Certainly the problems afflicting those areas of chronic unemployment require such a dual approach—legislation by government and action by the private economy.

The older worker, the minority worker, the area of chronic unemployment—add to these urban renewal, educational facilities, civil rights, housing and health. These, and many more, are problems of total society, and total society solves them in its own way, using the instrument that works best.

I believe that the concentrations of economic power in America have a responsibility to the common good, and that many of our needs can best be met through the exercise and the initiative of that private responsibility.

This is one of the reasons why there must be wider, better, more profound, more continuous communication between those in whom the power to control resides.

Last Thursday, in his state of the Union address, the President spoke of "voluntary, dependable, abiding cooperation among the important segments of our own free society."

Such cooperation rests upon voluntary, dependable, and abiding communication.

The time for labor and management to start talking to one another is now.

To forward this end, I have been suggesting for some time now that labor and management provide a means for communication outside the bargaining table. I suggested this need to the construction industry when I met with them in New York a few years ago, and I am happy to see that a committee has been formed within that industry, with representatives from labor and management, to address itself to mutual problems.

The President announced last week that it was his intention to "encourage regular discussions between labor and management outside the bargaining table to consider the interests of the public as well as their mutual interests in the maintenance of industrial peace, price stability, and economic growth."

We hope to encourage labor and management themselves to begin communicating with each other. For in order for anything practically useful and sound to come from such communication, it seems to me that the parties themselves must first want to communicate.

Without that desire for understanding, without that condition of good will, they are "doomed before they take the vow."

Certainly none of you sitting here this afternoon need an engraved invitation from the White House to talk out mutual problems with your employees or your employer.

It is true that the Government has been talking, and will continue to talk, with men in both labor and management, encouraging them to get together. It is my hope that this encouragement will prompt the repre-

sentatives of labor and management to initiate conferences in every industry—without waiting for Washington to fire the starting gun.

The advantages of open, continuous communication outside bargaining are, it seems to me, clear. Problems not susceptible to bargaining can here be met—the impact of research and development on employment, any practices that may be detrimental to labor or to management or to an entire industry, the impact of foreign competition and the maintenance of a high order of productivity. I am sure that many things come immediately to your minds as well.

And I would hope, finally, that out of these industry conversations, both labor and management will agree to the principle that owners, workers, and consumers are all entitled to a fair share of the fruits of increasing productivity.

And, in line with my previous remarks, it would be a demonstration that the public welfare can be forwarded by private interest.

It is my hope that eventually the bargaining table will become not an isolated battleground upon which hereditary opponents infrequently meet for an often-bitter Indian wrestle over the size of shares but the logical culmination of a continuously developed understanding, where the public interest and the welfare of the industry find their formal expression and their most positive fulfillment.

I was pleased that the steel agreement provides for a Human Relations Research Committee that will recommend solutions to mutual problems in the areas of wage and benefit adjustment, job classification, wage incentives, seniority and medical care.

In regard to the total steel settlement, there have been many misleading reports as to its cost.

I am sure that all of you are interested in the cost aspect of the settlement, and I would like to clarify it for you.

Mr. Roger Blough, chairman of the board of United States Steel, has said that the average annual increase in hourly employment costs resulting from this settlement will be 3.5 to 3.75 percent.

This is in contrast to other steel settlements during the postwar period, during which hourly employment costs have been rising, according to Mr. Blough, at an average of 8 percent a year.

The steel companies and the steel union, in the present settlement, have cut the postwar trend by half.

A comparison of the average annual increase in hourly earnings between the steel and other major settlements shows the following:

Aluminum, 5.2 percent; can, 4.5 percent; Kaiser, 3.82 percent; steel, 3.75 percent.

When compared with other wage settlements reported by the Bureau of Labor Statistics in 1950, the steel wage increase of 7 cents—which does not go into effect until next December—is less than the average. As a matter of fact, 65 percent of wage increases in 1959 exceed that figure.

What this means is that the steel wage settlement is in line with others negotiated this year, and thus cannot set off a wage pattern with highly inflationary effects, as has happened sometimes in the past.

A great part of the misunderstanding about this settlement is due to news accounts that failed completely to take into account the fact that the steel settlement has been described in terms of total employment costs while other major settlements have been described in terms of wages and benefits to employees.

Thus, to say that the reported steel package of 39 cents is comparable to the reported aluminum package of 28.2 cents is not only untrue but meaningless. The steel package figure describes total employment costs to the companies; the other is a description only of the wages and benefits received by employees.

Mr. R. Conrad Cooper, in comparing recent major settlements in terms of employment costs, said: "* * * the effect on our employment cost of the contractual arrangements we made is from 3½ to 3¾ percent per year. We estimate the can, aluminum, and Kaiser settlements would have approximated 4½ to 5 percent if they had been accepted by the steel industry, or nearly 30 percent more."

On the basis of this settlement—I am convinced that if management and labor mutually seek, as I know they will, to increase the rate of productivity in the steel industry, Mr. Blough's statement that there will be no price increase at present will be good for some time to come.

Certainly no one can predict price stability indefinitely because other cost factors than wages enter into the determination of price policy.

With good will and good sense, and with awareness that an economic institution like a steel corporation or a labor union must serve the public interest as fully as its own interests, it could be possible—on the basis of this settlement—that the United States will have seen its last major steel strike.

It has always been the pride of our people that we have been worthy of freedom. That is because we have turned power to the use and the betterment of the individual; we have made free decision and voluntary cooperation the touchstones of a system that serves and honors the highest ends of society—the elevation of each man toward wider horizons.

The issue before us is the old test of freedom with the new forms of power. It is an issue we should meet with full confidence in our private institutions, and in the ideals of reliance and service that have brought us successfully to this new decade. Thank you.

The NATO Parliamentarians Conference

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. SMITH of Mississippi. Mr. Speaker, during the week of November 15–21, the Fifth Conference of NATO Parliamentarians was held in Washington, with the general assemblies held in the caucus room of the Old House Office Building and committee meetings in various committee rooms.

Members of the 14 visiting delegations told me that they thoroughly enjoyed the visit to Washington, which was appropriately held here in the 10th anniversary year of the North Atlantic Treaty Organization. Much of the credit for the successful meeting, together with the arrangements for extending the hospitality of the U.S. Congress to our visiting colleagues, should go to Representative WAYNE L. HAYS, chairman of the House delegation to the conference, and the U.S. member of the NATO Parliamentarians Standing Committee. Mr. HAYS served 1 year as president of the Conference and is presently a Vice President. His work with the NATO Parliamentarians Conference has brought great credit to the United States and to the U.S. Congress among our allies in NATO.

The Parliamentarians meeting here was very successful from the standpoint of discussion of some of the critical problems which face the NATO alliance. The Military Committee, for example, recommended in a resolution approved by the entire Conference immediate action to improve the air-defense system in Western Europe. The gravity of this problem has been made clear in the Council of Ministers meeting and in the conferences in which the President participated last month.

It is now conceded by all concerned that if NATO is to fully meet the challenge to strengthen Western unity, there must be far greater cooperation in political, economic, and cultural fields among the members of the alliance. I think the NATO Parliamentarians Conference should receive a major share of the credit for the impetus given this idea since the Parliamentarians meetings began. Most of the practical proposals for more fully coordinated activity in these broad fields were originally given responsible support in the NATO Parliamentarians Conference.

Citizenship Versus the Power Groups

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, January 11, 1960

Mr. RUSSELL. Mr. President, during the fall recess, I had the opportunity of reading one of the most challenging critiques of the current state of the American political system that I have come across. It was an address by the Honorable George Romney, the dynamic president of American Motors Corp., to the Commonwealth Club of California. It was delivered on September 14, 1959.

The thesis of Mr. Romney's excellent address is that economic power or pressure groups have all but taken over from the individual citizen the control and direction of our political system and institutions. This power grab by the power groups, as Mr. Romney sees it, involves both of our great political parties. He seems to fear that the arena of American politics has, to a large and dangerous degree, become the exclusive battleground of big labor versus big corporations. The rights of the individual citizen and the general welfare of the country have been ignored in this battle of the giants.

Mr. Romney has an answer for the dilemma facing the American political system. He urges a revival and resurgence of participation and responsibility by the individual citizen in the political affairs of the Nation. This is the only hope for cutting the big power groups down to size.

Mr. President, I have long been alarmed by the growing power and influ-

ence of the political pressure groups over our Government. I have warned time and again that these groups are exerting power and influence out of all proportion to the numbers they purport to represent. Even worse, they callously disregard the general welfare of the country as a whole in the interest of their own selfish and narrow end.

Mr. President, these pressure groups do not confine their activities to the economic field; they operate in virtually every area of our national life. They appeal to the noble instincts of our people, to their patriotism, their devotion to their country, and the like; while actually they are seeking to impose their selfish philosophy on the Government.

I am delighted to hear an outstanding American business leader speak out frankly and courageously against the growing menace of the pressure groups. Mr. Romney's Commonwealth Club remarks amount to a ringing call to citizenship. I believe every Member of this body could profit by reading Mr. Romney's remarks and I therefore ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CITIZENSHIP VERSUS THE POWER GROUPS

(By George Romney, president, American Motors Corp.)

Some years ago, Justice Brandeis, one of the most thoughtful and probing observers of the American scene, declared:

"It is not good for us that we should ever lose the fighting quality, the stamina, and the courage to battle for what we want when we are entitled to it."

Today, I think we have lost a great deal of that "fighting quality." The majority of our people have few flaming interests that they are willing to struggle for. In many important areas of our national life, the individual is being engulfed in vast organizations and power groups. In larger and larger numbers, he is transferring his rights of citizenship to the corporation or the union, or idly watching his responsibilities drift to Washington.

To a very large extent, the people owe their security to corporations or unions which are concerned with the most important single interest that individuals can gain from such association—the individual's economic interest. As long as this is reasonably secure, people have no burning interest that would move them actively into political participation. On the contrary, large numbers of them consider it safer to be nonpolitical.

Without personal interests or convictions, they remain nonpolitical because the ways in which politics operate on them are so generalized and so remote that they consider it all but impossible to interfere.

There are three major dangers from this renunication of politics:

If the people as citizens are unable to fill the role in politics traditionally assigned to them, we will be confronted with a vacuum in political power and leadership.

Impersonal economic interests are replacing and eliminating political and citizenship interests. The substitution of economic citizenship for direct political citizenship could be the doom of our way of life.

Parallel economic and political conflict would destroy the social unity vital to society as a whole.

Today, I would like to deal with these fundamental problems. As the basis of discussion, let's review briefly the established principles of our American democracy.

First, the moral principles.

1. The rights and basic responsibilities of man are derived from the Creator, in whose eyes each man is an individual, created with equal rights and responsibilities and in perpetual brotherhood.

2. Each man in meeting his responsibilities has the right to all freedom that does not infringe on the rights of others.

3. Freedom can be a reality only with separation of church and state. Religious freedom is the key to all the others. If the civil and ecclesiastical governments were joined, the latter would necessarily have to dominate, since it could point to an authority higher than the people.

4. The state derives all of its authority from the people and should be responsive to their control.

With the moral principles established, the mechanics of the social order become the prime consideration, requiring basic agreement among citizens as to principles of government.

I believe these are the essential elements of that agreement:

1. A system of representative democracy most effectively insures individual liberty.

2. Government must limit itself to those rights specifically assigned to it by the governed.

3. The authority of government should be divided to provide cross-checking and dispersion of power.

4. Government should be as close as possible to the people it serves, therefore state and local governments should have adequate responsibility.

5. The people assume responsibilities to be met by voluntary means, in order to avoid excessive reliance on government and the consequent abridgement of liberty to obey or disobey their Creator.

6. The mainsprings of progress should be individual action or the voluntary cooperative action of free individuals.

7. The state should do for the people only those things they cannot do at all or as well for themselves, either individually or in cooperation with each other.

8. Economic and nonreligious social institutions derive their authority from the people and should be responsive to their control. As organizational magnitude and complexity grow, the state becomes for the people a joint instrument of economic and social control. Properly used, the purpose of the state is to maintain the ability of the people to exercise direct ultimate control—as in the case of economic control through antimonopoly laws to enforce competition.

9. The exercise of direct ultimate economic and social control by the people requires the division and dispersion of economic and social power. Power concentration in one place fosters it in others. It diminishes control by the people, and thereby limits their freedom, responsibility and development.

Taken together—these moral principles and principles of government are the foundation stones of our society; the authority of the Creator * * * the sanctity of the individual * * * the brotherhood of man * * * the state as the creature and servant of man * * * the dispersion of power, that freedom may be insured * * * that men should compete and cooperate and be rewarded on the basis of what they contribute to society.

Have these principles changed in any way? I can't see that they have. But circumstances change, affecting not the validity of the principles but their freedom to work. When the system fails in some degree or another, it is not the fallacy of principle but the failure of techniques or the failure of men.

Our techniques will continue to fail from time to time if we freeze them, if we fail to recognize that the American Revolution is a continuing process of applying our basic principles to new problems that arise out of new experience. The fact that new problems arise is in itself almost sufficient proof of the strength of the system, which is fluid rather than static. It produces new successes, new situations and, naturally, new challenges. As Whitman observed, the fruition of each success brings these new challenges, making a still greater struggle necessary.

In the early days of our Nation, it was hardly possible to foresee that our revolution would also embrace other revolutions, particularly in technology. Nor was it possible to anticipate our phenomenal growth, our ascendancy to world power, the enormous economic changes, the growth of the corporation and union concepts * * *. To name only these, is it possible to conceive of an ideal inflexible system? Or to deny the living character of our revolution?

Failure to modernize our techniques as we have moved along has created some severe problems, none of which, in my opinion, has exceeded the problem of power concentration.

This strikes at our basic principles. We fought against the power concentration that made our liberty and independence impossible. The weak state of the original Confederation reflected the peoples' fear of concentrated authority. The Constitution itself, while providing for a strong central government, bristles with safeguards against excessive power held in the hands of a few. Jefferson defeated Hamilton and his ideas, Jackson defeated the Bank of the United States, Teddy Roosevelt defeated the trusts, Franklin Roosevelt divided the power of big finance and big business. We are ignoring the problem when we allow the Federal Government, or unions and industry to assume too much responsibility.

I think one of the most regrettable aspects of American life today is a situation in which union power and employer power can be concentrated to the point that an industry which is basic to the economic welfare of the total nation can be shut down as a result of the position of either group. I think that is an unheard-of concentration of private economic power. I think it's going to be impossible to solve the economic problems of this country without dealing with that hard reality of excess economic power. I think any time we permit a few men in labor or a few men in industry to reach the point where they can cripple the economy and adversely affect the public interest, we have created a condition completely contrary to the spirit of America. The employer and union power in the steel strike is a present example. I do not agree that it will impress Khrushchev favorably. I think it will impress him as an abusive exercise of excess private economic power.

When I have discussed concentration in labor and industry on previous occasions, some have remarked that I am seeking increased government regulation. Quite the contrary. We do not need more law but modern law. Neither our labor laws nor our anti-trust laws are up to date. Bear this in mind: when law is not clear or specific or up-to-date, either the problems grow or the intervention of government must necessarily be increased. Vague and outmoded laws are difficult to observe and to enforce. Our present anti-trust laws make their criterion the intent to use power wrongfully—opening up an endless field of litigation and legal interpretation. How can intent be proven and judged with accuracy in the field of business? As in the case of our Constitutional safeguards, the criterion should be the ability to wield power to excess. In the case of labor, our inconsistent laws encourage the fostering of labor monopoly and the creation of a concentration of power that could be matched only by a massive coalition of industrial power. The collision between these two excessive forces is confronting us with the necessity of intervention of government to protect the people as consumers—and the

end result of the road we are on will be some form of totalitarianism.

The attitude of outspoken people toward highly centralized government may be divided generally into three categories: those who believe in the idea of social "drift" that, like a raft on a Gulf stream, society will somehow get where it's going. Another view is that big centralized governments are necessary for big societies, and that comfortable countervailing forces will keep the balance. A third view is that concentration of power ought to be fought wherever it exists or the individual will be smashed—one way or another.

I take the latter view. Certainly big societies, especially those in competition with other big societies, need strong—even big—governments and strong—even big—unions and corporations. But their power can and must be dispersed. The ultimate control can and must be in the hands of the people.

This will be impossible unless we recognize that it is morally and economically wrong for either unions as unions or corporations as corporations to get into politics directly or indirectly.

To me, it is wrong for the very simple reason that it is wrong for any American to transfer his personal rights of citizenship to an institution, and wrong for an institution to act in any way to encourage the relinquishing of such rights.

There is little difference in principle between the present excessive political influence of unions and the earlier excessive political influence of business denounced by both Roosevelts. One excess is as wrong as the other. Both are obstacles to political freedom, economic justice, and individual development. The creation of union power was a desirable offset to business power. Economic power is better distributed now between unions and business than it was earlier when exercised largely by business. Current union political activity does not differ in principle from earlier business political activity. Unions can try to justify their programs on that basis, but the question is whether in a democracy based on political freedom and the rights of the individual, economic organizations should be permitted to participate directly or indirectly in political affairs.

Let me be clear. I am not referring to individual union leaders or members participating in political activity. I do not mean individual business leaders or white-collar employees participating in political activity. Nor unions or businesses presenting economic facts to political bodies or to private citizens' groups. What I am talking about is direct or indirect political activity on the part of economic organizations, whether they are union organizations, business organizations, or other organized forms of economic endeavor.

Before church and state were separated, unquestionably church participation in politics and government exerted a direct influence on the political attitudes of church members. Similarly, political activity by a company is likely to cause an executive to feel that his economic opportunity in the enterprise is affected by his political support of company political thinking. Conversely, the attitude of many American businesses has resulted in political inactivity on the part of its executives.

The same thing is true of unions. How could union members or union officers fail to feel that their treatment by the union would be affected by conformity or opposition to union political programs?

I believe we must prohibit economic organizations from direct or indirect political activity and expenditures. What right have they to use the funds of stockholders or members to support specific political candidates or partisan issues? What right has either to create an atmosphere where a member's or employee's economic status can possibly be thought to depend on his political views and convictions—as long as they conform to the basic principles on which our free society depends to protect individual freedom and inalienable rights?

With the difficulty being experienced in securing competent candidates for local, State and even some Federal offices, it is obvious we must overcome the lack of political participation by individuals, whether they be corporate employees or union members. I believe that corporate officials and union officials should participate personally, as individuals, in political affairs * * * but I think they should take every possible step to assure members and employees that this right is a personal right not to be abridged in any manner, and to encourage others to use it.

We must bring back to life the feeling that each individual can participate with effectiveness.

One businessman wrote me the following question: "How can a public-spirited individual be effective or influential unless his energies are combined with similar energies of other individuals?"

He cannot. He must work with others. But his work must be personal and direct, not by proxy. He must be directed by what he believes in, not what his corporation or his union believes in. He must speak for himself, and not suffer his voice to be drowned in the loudspeaker of an institution. The instrument available to him for the combination of his effort with those of others is the political party, when the party system is functioning properly.

Unfortunately, our political parties at present have given victory at the polls such engulfing preeminence that neither will take a position that might offend any sizable segment of voters. The result is a close similarity between stated party objectives, with very little choice left to the voter. Attention is focused on money and organization power rather than broad citizen participation and sincere spontaneous support.

The parties have allowed themselves to a large extent to become the captives of dominant economic groups. In Michigan, for example, one party is largely under the control of big labor, while the other is largely in the hands of big business. The dominance of these power groups, expressed through organizations and not individual citizens, resulted in a 7-month deadlock that thwarted the progress of the State. The individual has a sense of frustration and helplessness.

To combat this, we are developing a nonpartisan citizens' program identified as Citizens for Michigan. It is made up of individuals acting for themselves and not as representatives of any organization of any type.

Through this effort, we hope, first, to establish a means by which an influence greater than the minority economic groups now dominating our two political parties can be created; second, to acquaint enough citizens with the facts on the State's problems and the means for their solution to secure essential political and governmental action; and, third, to restore citizen belief in the effectiveness of individual political participation.

The success of our program can provide the basis for releasing the political parties from their captivity and restoring to the people these necessary instruments for self-government.

To encourage an increase in political participation, we must have two political parties with programs and methods that provide the people a clear choice. At least one should be devoted to the interest and welfare of all Americans. At least one should be more dedicated to the principles of human liberty and justice than to political victory at any cost through economic power, subsidy and advantage.

Individuals of character and principle, working at free citizens with others of like mind and purpose, can achieve this. Individuals working politically as units of business or labor can only intensify special interest party domination and increase the magnitude and scope of our present economic conflict, while personally giving up the rights, responsibilities and respect of citizenship.

There are three important things we must do to stop the drift toward increasingly massive centralized government.

One, to make certain, by modernized law, that power outside government is dispersed and kept dispersed. Surely the principal way to reduce the size and power of centralized government is to disperse power that only big government can hold in check and increase the influence and control exercised directly by the people.

Two, to improve the character of State governments and modernize the smaller government units, such as the parish or the county, that were set up on the basis of travel and population distribution in a frontier country.

Three, to revive the political participation of the people in control of the government by dramatic steps that would bring back to life the feeling that they can participate with effectiveness.

The most effective means of putting some hope and zest back into political participation would be for the political parties to reject economic power group participation, reach out for citizenship participation, put less emphasis on dollars and more emphasis on people. The give-a-dollar-to-the-party-of your-choice campaigns would be more effective with a give-an-hour campaign. The method today is too much one of guarded exclusion rather than participation. The parties are not going to get participation if the people feel they have no opportunity to choose anything but the word that is passed from the smoke-filled room. Widely publicized open forum-type meeting would put excitement and opportunity back into the political arena at the local level.

Participation on an effective basis would arouse the interest of people who are today without interest. It would simulate people to take stands on issues and it would generate issues. One of our problems today is issueless politics, with a tragic simplicity between party positions that give the voter little choice. How can a citizen help but vacillate between parties and be ill attracted to either in such circumstances?

We need to bring our political parties and the people together, if our democratic system is to continue to be truly representative. When the people have no choice, they are powerless to act, and control is defaulted to willful power groups that can be arrogantly unaccountable to a listless electorate.

Today, the power groups are rapidly extending control over the people, the political parties and the State. The individual must use his citizenship to bring the power groups under control, not primarily through the State but primarily through making them responsive to the people. The unions should be primarily responsive to the control of citizens who are members. The corporations should be primarily responsive to the control of citizens who are stockholders and consumers. The citizen must fight for his citizenship, or he will find himself enslaved by the power groups or an all powerful State that is exercising his inalienable rights on the premise that the State must protect him from the excesses of the power groups. The internal struggle of our age is citizenship versus the power groups.

When Franklin D. Roosevelt talked to your club on September 23, 1932, he discussed the necessity of curbing the barons of business, as it had once been necessary to curb the barons of feudalism. He led in releasing the forces that created the barons of unionism. This division of power was better than its unilateral exercise, but the existence of two sets of barons and their widening contest for economic, political, and social power threatens our future at home and abroad. The union barons and the business barons must be curbed anew. When both are so strong that separately or jointly they can jeopardize the interests and rights of the Nation as a whole, citizens are face to face with the age-old struggle to keep power in any form from becoming excessive.

Greater exercise of citizenship is an essential factor in America's future.

We need to reawaken the idea, I believe, that America has some important unfinished business. The American Revolution was not a distant explosion, from which the dust has long since settled. It is a continuing process, and we should never forget this.

We must continue our revolution by restoring faith in the individual and helping the individual to restore faith in himself and his citizenship.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. RUSSELL. I am glad to yield to the Senator from Illinois.

Mr. DIRKSEN. I merely wish to supplement what the distinguished Senator from Georgia has said with respect to George Romney, the president of American Motors. He is not only one of the most courageous and dynamic and forthright leaders in American industry, but some years ago George Romney was associated with one of the senatorial committees, as I recall.

I remember that when he appeared before the Judiciary Committee at one time, he made some observations with reference to his committee experience on Capitol Hill. Therefore he sees the whole picture, not only from the standpoint of industry, but also from the basis of his experience in the legislative branch as a sort of working member of a committee. I share the high esteem which the distinguished Senator from Georgia has of Mr. Romney.

Mr. RUSSELL. Mr. President, I do not recall ever having met Mr. Romney, although it is entirely likely that he was associated with a committee during the time that I have served in the Senate. It so happens that during the adjournment of the Senate I have more time to spend in my office than I am able to do when the Senate is in session, and therefore have more time to read material which comes to my desk. I read Mr. Romney's speech, and it impressed me tremendously.

I am confident that he points to one of the real threats to our system of government. It is the fact that the pressure groups operate in almost every area of our life, and in doing so they make more noise and receive more credit and claim more strength than they are entitled to, and exercise more influence on the operation of our Government and on the making our laws and the enforcement of our laws than their numbers and the merits of their case would justify.

Farm Program

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. LIPSCOMB. Mr. Speaker, during November 1959 the Los Angeles Mirror News carried a very informative series of five articles on the agriculture program, by Jack Tobin, staff writer, calling attention to the magnitude and seriousness of the farm subsidy and surplus problem. In my view, the Mirror News has performed a valuable public service through its efforts in this regard and I feel the articles should be brought to the attention of the Congress. Under leave to extend my remarks in the RECORD, I include the first article of the series:

[From the Los Angeles Mirror News, Nov. 2, 1959]

CITY FOLK PAY COST OF FARM PRICE AID

(EDITOR'S NOTE.—Today The Mirror News starts a serious report on a serious problem—farm subsidies. Any urbanite who asks, "What's this got to do with me?" should pause and reconsider. Because all of us city dwellers, all of us who grumble and groan under our tax load, pay the freight. Our tax dollars—literally by the billions—finance a program which started in the depression, mushroomed during World War II, and continues now that we have neither a depression nor a war. The figures will startle you. Your share in both the cost and the results of this program will shock you. We've tried to find out where your tax money goes, what you get for it. We've spent months at it. We talked to farmers, big and small. We've interviewed brokers, economists, bankers. We've pinpointed the problem in California. The report is factual. What can you do about it? Think about it as the five-part series unfolds. We have some ideas of our own. We intend to spell them out in our editorial columns Thursday and Friday. See if they jibe with yours.)

(By Jack Tobin)

Nearly 5 cents of every tax dollar you send to Uncle Sam is spent to perpetuate a wasteful national disgrace.

That's what it costs you—and every other taxpayer—to sustain the most outmoded, wasteful, misguided farm price support program in all history.

It was created in 1933 to aid the depression-stricken farmer. Objective: Keep the farmer in business by guaranteeing him a price for his produce.

Now, 26 years later, the program's still going. As big as ever. Few will claim the average farmer is suffering from a depression. Few will argue the farmer, if he's worth his salt, can't make a living off the land.

POCKETBOOK HOLE DEEPER

But the Government continues its aid to the farmer, good times notwithstanding. The politicians refuse to reduce or eliminate the price support program. The hole they've been digging in our pocketbooks over the years gets deeper.

The experts readily admit the program perpetuates the uneconomic farmer. Depression-designed benefits now help the big get bigger, the rich get richer.

And who pays?

The city dweller. The consumer. The taxpayer.

Consider this:

Taxpayers—all of us—have $9,100 million invested in Government-owned farm surplus commodities right now.

Taxpayers—all of us—shell out $1,750,000 every day of the year to store the farm glut that grows and grows and grows with each harvest.

Taxpayers—all of us—lost $810,854,471 above the original commodity cost just to give away surplus farm produce in the fiscal year ending last June 30.

And so the figures leapfrog to ever-mounting totals. And the taxpayer, who picks up the tab for the farm aid, is hit again in the pocketbook at the consumer level.

He pays just a bit more for the cotton shirt he wears, the loaf of bread he eats. Inflationary? Of course.

This Mirror News exclusive series is based on months of extensive investigation. I talked to farmers up and down the length of California, farmers who profess distaste for the price support program but who use its provisions to build financial empires.

I talked to processors, brokers, consumers. I talked to agricultural economists.

MOST SACRED COW

When The Mirror News launched this study, a high-placed politician said:

"I wish you well. But I doubt if you'll get very far.

"Of all the issues that come before Congress, this price support program is by far the most sacred of the sacred cows. You just can't lay a glove on it.

"Why? Because too many Senators and Congressmen are scared to death of the so-called farm vote and what it might do if price supports were reduced or abolished."

We dug hard for facts. They didn't come easy. Farmers, generally, were cooperative. Most of them level with you. But the Department of Agriculture all too often represented a classic study in foot-dragging and evasion.

'INFORMATION' WORTHLESS

The department's office of information, headed by R. Lyle Webster, employs 236 persons. At least it did November 30, 1958, the last available check-point in congressional testimony. The information section's budget for fiscal 1959 was $1,413,665.

But as far as our requests were concerned, the department was worthless. We had to go to other sources for our facts.

In operation 26 years, the price support program rolls along under a full head of bureaucratic steam. There are agencies and bureaus and divisions. There are bureaucratic domains of all sizes and shapes.

And it doesn't come cheap.

The massive bureaucracy had a total budget last year of $3,200 million. That's more than the entire Government operations budget in 1930.

BENSON OPPOSED

Oddly, the man charged with responsibility for the program doesn't think much of it. He's Ezra Taft Benson, Secretary of Agriculture and favorite whipping boy for farm belt politicos.

The price support program, as we know it now, "is the most costly, irrational hodgepodge ever patched together," says Benson.

And yet his proposals to breathe a little commonsense into it bring the full wrath of Congress down on him.

President Eisenhower, in a masterful understatement, says the price support program "does little to help the farmer in the greatest difficulty."

HURTS FARMER, BUYER

Another bit of low-key criticism comes from L. E. Evans, general manager of Challenge Creamery Co. and an astute observer of the dairy products division of the price support program.

"It doesn't lead to economy or enhance the free enterprise system," Evans said.

Take a loaf of bread, for example:

In 1948, the national average price of a 1-pound loaf of bread was 13.9 cents. Last year, the average price was 19.3 cents, an increase of 39 percent.

But during this period, the farm value of all ingredients in the loaf of bread dropped from 3.4 to 3 cents.

In other words, the farmer's share of the retail price decreased from 24 to 16 percent.

And yet, during the same period, literally billions of tax dollars were poured into the price-support program. Why?

Certainly not to reduce the cost of bread to the consumer. And the farmer didn't improve his proportionate share of the consumer sale.

Obviously, the billions went into an economic squirrel cage that defies logical explanation.

A tour of California's farm-rich Central Valley shows, that most of the big cotton-growers, the so-called corporate farmers, find the price-support program a gilt-edged boon. The bigger the farm, the greater the per-acre production, the more valuable the subsidy.

BIGGEST BENEFIT MOST

The big farmers profess distaste for Government handouts. But so long as subsidies are being passed around, most of them will have some, please, thank you.

To the little farmer, price supports are necessary to stay in business. They'd be gobbled up by the big boys if it weren't for price supports, they say.

BENEFICIARY CRITICAL

Take the case of E. C. Salyer. This crusty, tough-talking Corcoran farmer bosses a 30,000-acre farm empire that is the archetype of the bigtime operation. He's on outspoken critic of the price-support program—although he's not above benefiting from its provisions.

"I'm in the mood now," Salyer said recently as he pounded a cotton bale with his fist, "to take all them supports off and let the fittest survive.

"If they did, 50 percent of the farmers in the country would go broke."

Then he mused:

"And ole Clarence would go broke with 'em."

Grantsburg, Wis.: A Community That Refused To Die

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, January 11, 1960

Mr. WILEY. Mr. President, one gets a real kick out of observing what we used to call the traditional spirit of the independent American. Grantsburg, Wis., was supposed to be down and out. It reminded me of what happened in my own community when I was a youngster and graduated from law school. At that time the great mill in Chippewa Falls went out of business. People said the town was dead. Instead, the people of the community faced the problem together and built up shoe factories. The community is now a thriving one, located in a beautiful spot in the heart of Wisconsin.

Mr. President, the traditional spirit of independent action and free enterprise, which has served as the foundation of our country's progress, must, I believe, be encouraged, if the Nation is to promote progress and provide for security.

Over the years there has been an increasing tendency to look to Uncle Sam to resolve more and more problems confronting our people.

Where Uncle Sam has a proper responsibility, I believe, of course, that he should do the job, or at least provide the necessary assistance and stimulation to local or State efforts.

In view of the substantial volume of obligations approved by past actions of Congress, however, there will be a real need, I believe, to attempt to establish a priority basis for recommendations for new spending programs.

This will demand of our citizens, special-interest groups, and Congress, itself, a real self-discipline—if we are to maintain a sound fiscal structure in this country.

The situation, I believe, demands a resurgence of the imaginative, forward-moving spirit of enterprise, particularly at the local community level, to find solutions to problems confronting the people.

What can be done?

For communities facing economic and other lack of growth problems, the following principles, if properly applied, would help build a better, stronger economy. These are as follows:

First. Organizing community and area development committees to resolve unemployment and other economic problems.

Second. Spurring local efforts for greater industrial development.

Third. Searching out sources of venture capital—local and elsewhere—for possible new enterprise.

Fourth. Encouraging investments by local people in local enterprises as opposed to letting savings be idle.

Fifth. Encouraging home, store, and public building modernization, as well as community clean-up, fix-up campaigns.

Sixth. Attempting to diversify economic programs, especially in areas where there are seasonal fluctuations, to avoid recurring cycles of unemployment.

Seventh. Making a survey of needed services in the community and its trade area, and attempting to encourage development of such service establishments.

Eighth. Surveying the potential agricultural, mineral, timber, and other resources, including manpower, to see what new industries could possible be developed.

Ninth. Examining the community potential for development of tourist, recreational, or other activity.

Today I would like to pay tribute to a particular community—Grantsburg, Wis.—that has symbolically demonstrated the imaginative creative spirit of American free enterprise.

Five years ago, Grantsville was faced with the prospect of decaying and withering away.

Lack of industry, migration of people to metropolitan areas, and other factors threatened the life of the community. To meet the challenge, about 60 citizens of Grantsburg got together to see what could be done to forge new ideas, and mobilize local skills and resources to improve the outlook.

What was the result? Within these 5 years the community has attained the following accomplishments:

In 1959 the local industries shipped over $2½ million of finished products out of Grantsburg.

Telephone service has been improved.

The town has had its streets surfaced, and a good water and sewage system—debt free—installed.

Under construction is a $600,000 medical center.

Through organization of businessmen, new industries have been born in the community, benefiting both the town and the surrounding farm people.

In summary, the community—by a "bootstrap" operation—lifted itself to a progressing town that has won top rating and recognition among small communities in Wisconsin.

Symbolic of the kind of enterprising spirit needed in the country—particularly when Uncle Sam is bearing such a heavy burden—I request unanimous consent to have an article, by Bernie Manuel, published in the Wisconsin Agriculturist and Farmer, outlining Grantsburg's progress, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GRANTSBURG, WIS.: A COMMUNITY THAT REFUSED TO DIE

(By Bernie Manuel)

Survival and growth, death and decay, stalk villages and hamlets in Wisconsin's north country like the fishermen and hunters who seek wildlife along the rivers, lakes, and forests of the region.

Here an old era is dying and a new era is being born. Migration of rural people toward job opportunities offered by gigantic metropolitan areas and large and small cities has been slowed.

These cities and towns are spilling over. Factories moving out of large metropolitan areas bring people with them. And as decentralization speeds up, small factories in rural arens increase.

Expansion of the lumber and paper industries, in particular, offer inducement to stay on the farm in the commercial forest counties of northern Wisconsin.

It was here only a few years ago, that towns, villages, even communities withered and died as urban areas lured away their industry, their youth, and their trading dollars.

THE VILLAGE WAKES UP

Today, there are signs of new life, as villages like Grantsburg in Burnett County, pull themselves ahead. From a sleepy little village—population 1,000—eaten with decay, and strangled by a lack of industry and jobs, the village has emerged as the hub of a growing community.

What does a thriving community mean to both farmers and businessmen? Here's the answer in Burnett County: Local industries shipped over $2½ million worth of finished products out of Grantsburg in 1959.

The healthy impact has provided employment for part-time farmers, brightened the

town's outlook and brought stability to the local economy with home spent dollars.

"No longer do you see empty farm houses along the country roads," says Banker Walter Jensen, who has close contact with community affairs. "Any house that's livable has been rented and new homes are going up in clean, attractive, residential areas."

Behind the success of a small village, 400 miles northwest of Milwaukee, is a rags-to-riches story with a rural twist. It was at Grantsburg that 60 people met five years ago—a group which included businessmen, farmers and people who wanted to see the town grow and jobs made possible.

Here was a group which analyzed their town and found assets that were little more than a reputation for the coldest spot in the Nation.

Liabilities were more numerous—an out-of-the-way location, no railroad, no bus connections and poor telephone service.

WORK MADE DREAMS REALITY

What they saw with imagination was something else. They visualized the prettiest little town in northwestern Wisconsin and went to work to make it a reality.

Once the steam roller got started, it gathered momentum. Homes were made neat and orderly. An old mill pond was restored and became the site of a scenic park.

Telephone service has been improved, a new dial system went into effect this fall. Streets are surfaced and the village has a good water and sewage system, debt free.

Under construction is a $600,000 medical center—a real asset to any community. With the completion of a new 30-bed hospital, one of three units in the medical center, the old hospital building will be converted to a nursing home for the aged in Burnett County.

Two years ago, businessmen organized the Grantsburg Industrial Development Corporation to contact factories interested in making a change in location.

The corporation, headed by Clarence Wagman, went to work writing letters, making phone calls and personal contacts. The rest is history.

Grantsburg's outstanding work of bringing new industry, developing facilities to handle manufacturing and organizational work won the village recognition and a top rating among small communities of Wisconsin at the State Fair in 1958.

Newest industry to settle in Grantsburg and provide jobs for part-time farmers is a manufacturer of a unique folding travel trailer.

INVENTOR INVITED BY INDUSTRY

Inventor Leo Hagenson, of Hastings, Minn., was contacted by the industrial corporation and invited to Grantsburg to manufacture the trailer, after his design was a grand champion exhibit at the Minnesota Inventors' Congress in 1958.

Another recent venture was to bring in a company which makes louvres and shutters. The company, which employs over 40 persons, started in a 60-by-250-foot building built by the industrial corporation last winter. Expansion plans include a new furniture line, which will require an additional 60 employees.

Largest manufacturing plant in town, with over 100 employees, stemmed from a farm shop in Burnett County.

Today the brothers, Jim, Don, and Miles McNally, sell machine parts nationwide.

Another manufacturing plant, owned by Herb Shoholms, makes snow fence and coarse stock for veneered doors from wood obtained at nearby farm woodlots. Here all employees are part-time farmers.

While Grantsburg has achieved a good start in its stable expansion, the job seems to have only begun, when you listen to the enthusiasm of the individuals and organizations who refused to quit a few years ago when factories went elsewhere.

Farm Program

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD the second of a series of five articles on the farm subsidy and surplus problem which appeared in the Los Angeles Mirror News during November 1959:

[From the Los Angeles Mirror News, Nov. 3, 1959]

REAL VICTIM OF FARM AID BILK: YOU

(By Jack Tobin)

An outmoded farm price-support program devised in the 1930's to help depression-stricken farmers is today's eight-headed monster.

The critics of the program are legion. The defenders appear to center in the Deep South and the Farm Belt.

Literally hundreds of experts—real and fancied—have told us how costly, how uneconomic, the program is.

But for more than a quarter century, the finest minds of government, agriculture, economics, and business have sought in vain to find some sensible solution to the problem.

Thus far, no one has succeeded. Usually, the defeats are recorded in the field of national politics.

Agriculture Secretary Ezra Taft Benson, who came into office in 1953 as a solid businessman and farmer, calls the price support program the "most costly, irrational hodgepodge program ever patched together."

He notes it was born in the depression and given new impetus during World War II when food and fiber production became a vital part of our war effort.

"Today, we have neither depression nor war," Benson notes, "and the old program just doesn't fit."

The city dweller, the common taxpayer, keeps doling out the dollars to maintain Government-fixed farm prices. And the city dweller pays a double penalty: in consumer prices pegged to an artificial standard.

That's why there's a growing revolt in California's cities, in metropolitan areas around the Nation, against the program.

MOUNTAINS OF SURPLUSES

Benson says the real responsibility for the expensive program, with its mountains of stored surpluses, "must rest with Congress."

A Farm Belt lawmaker, Representative CARL ANDERSEN, Democrat, of Minnesota, tosses the buck back to Benson and the Eisenhower administration.

The price support program "is your program," ANDERSEN growled at Benson in House hearings this year.

What is this monster known as the "price support program"?

How was it started?

Who runs it?

Why is it so costly?

The Nation's farmers—particularly the smaller ones—were in deep trouble in the depression. The Roosevelt administration decided the Government should step in and help them.

The result: A system whereby Uncle Sam guaranteed farmers they would receive a fixed price for certain crops, no matter how low the market price dropped.

The chain of command for the price-support program is a masterpiece of bureaucracy.

First comes the Secretary of Agriculture. Actually and politically, he's the boss.

Next comes the Commodity Credit Corporation. It has a six-man directorate plus the Agriculture Secretary as Chairman of the Board. It also has a five-man bipartisan Advisory Board named by the President.

A MIGHTY BIG BUSINESS

These men and this agency are supposed to run a business which has an annual inventory exceeding the combined total inventories of the five largest industrial corporations—General Motors, Standard Oil of New Jersey, Ford Motor Co., United States Steel, and General Electric.

And that's mighty big.

According to law, the CCC is authorized to engage in "the buying, selling, lending, and related activities in agricultural commodities," with the object of "supporting farm prices."

But although the CCC sits at the top of the bureaucratic pile, it really doesn't administer the price-support program. Another agency—the Commodity Stabilization Service—has that job.

FOR CALIFORNIA

The CSS operates through regional offices at New Orleans, Cincinnati, Chicago, Minneapolis, Kansas City, Dallas, and Portland, Oreg. The Portland office, headed by Earl C. Corey, Jr., serves California farmers.

All directives, program changes, plans, and information bulletins spread out from all high in Washington to the seven CSS offices. A veritable flood of paperwork.

Next in the chain of command is the Agricultural Stabilization and Conservation Committee. There's one in each State. In California it's located at Berkeley, headed by William J. Page.

An articulate, trained administrator, Page has the unenviable job of trying to explain the price-support program to each of California's 58 county ASC officials.

And, in turn, the county ASC men are the direct contact with California's farmers.

HOW IT WORKS

Finally, we get down to the farmer participation.

Each California county has an ASC committee of five members, elected by the participating farmers. This committee somehow tries to administer the various features of the program—acreage allotment, marketing quotas, soil bank, storage, conservation.

Now that we're down to the farmer level, let's see how the system works:

Every farmer growing one of the mandatory price support crops—cotton, corn, wheat, rice, peanuts or tobacco—gets to vote once a year on whether he wants acreage allotments with marketing quotas.

INDIVIDUAL VOTE

For instance, a "yes" vote might mean the farmer could receive 80 percent of parity for his crop if he'll limit his acreage. A "no" vote might mean the farmer would be assured only 50 percent of parity for his crop but with the same acreage allotments.

But this is important: Every farmer has a vote, not on the basis of how big an operator he is, but on an individual basis. And the voting is national, not local. And it takes a two-third margin to change things.

As one ASC county manager puts it, "the farmers have been voting 'yes' for as long as I can remember."

What is parity?

One way to put it is this: Parity is the ratio or percentage that the prices received by farmers for their products hold to the prices they should receive if the farmers are to get along just as well as they did in other more normal times.

THE FORMULA

A layman's definition might be: If you can sell a truckload of wheat and buy with your money as much food, clothing, farm machinery, fertilizer and the like as you could in the 5 years 1910–14—a base period during which prices received and paid by farmers were in good balance—your wheat is selling at the parity price.

Although the base period 1910–14 has been somewhat supplemented by congressional action, it still serves—for some strange reason—as the benchmark of parity pricing.

At the start of a crop year, a farmer can go to Uncle Sam for a price support loan. In other words, the taxpayers simply advance the farmer operating capital based on the estimated value of his crop. It's essentially the same as a bank loan, only at cheaper interest rates.

After the crop is harvested, the farmer has two alternatives.

If he finds he can sell his crop on the open market at a higher price than his federally guaranteed parity level, he can do so and pay off his crop loan.

OUT OF HOCK

But if he finds the market price is below his promised price from Uncle Sam, he can simply redeem his crop loan by turning over the crop and forfeit the loan in lieu of payment.

It is through these forfeited loans that the Government loses money—in huge chunks. It winds up with a lot of farm produce already glutting the market. And it must dispose of it at distressed rates.

Henry N. Taylor, Montanan, Wins Ernie Pyle Award

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, January 11, 1960

Mr. MANSFIELD. Mr. President, last week the winners of the seventh annual Ernie Pyle Memorial Award were announced. One of the winners was a Montanan, and, in addition, she is the first woman to receive this distinguished award, sponsored by the Scripps-Howard newspapers. I refer to Mrs. Dorothy Rochon Powers, feature writer on the Spokesman-Review, a daily newspaper in Spokane, Wash.

Mrs. Powers is a graduate of my alma mater, Montana State University, and was a student there while I was on the faculty. She has had a distinguished career in journalism, and has covered every kind of a beat in news reporting, in addition to writing feature columns.

I am much pleased that Mrs. Powers has received this honor, and I heartily concur with the statement of the judges of the contest that she "has the heart, the soul, and the insight of a woman Ernie Pyle."

Mr. President, I ask unanimous consent to have an article from the January 7, 1960, issue of the Washington Daily News printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HENRY TAYLOR WINS ERNIE PYLE AWARD

NEW YORK, January 7.—The Scripps-Howard Newspapers today announced two 1959 winners of the Ernie Pyle Memorial Award.

They are Mrs. Dorothy R. Powers, feature writer on the Spokesman-Review, Spokane, Wash.; and Henry N. Taylor, correspondent for the Scripps-Howard Newspaper Alliance, Washington, D.C. (Mr. Taylor's dispatches appear regularly in the Washington Daily News.)

Mrs. Powers is the first woman winner in the 7 years the award has been made.

Each will receive $1,000 cash and a bronze plaque for writing and reporting most nearly exemplifying the style and craftsmanship of the great war reporter and columnist.

The trustees of the Scripps-Howard Ernie Pyle Memorial Fund also announced a grant of $2,500 to the Inter-American Press Association for an exchange scholarship.

TREMENDOUS IMPACT

The judges said Mrs. Powers "has the heart, the soul, and the insight of a woman Ernie Pyle. Her reporting and writing have had a tremendous impact on her community."

Of Mr. Taylor, they said: "He combines good, solid reporting with good, easy-to-read writing devoid of frills. This is reminiscent of Ernie Pyle's topnotch copy. On any front, from home to Rome, Mr. Taylor makes the reader feel right there with him."

Mrs. Powers, 38, was graduated from Montana State University, edited a weekly, the Maryville, Tenn., Enterprise, and was State editor of the Clarksville, Tenn., Leaf-Chronicle.

"OUR TOWN"

She has covered virtually every beat on the Spokesman-Review, from courts to stockyards, and writes a column, "Our Town," in addition to general assignments and features.

She was named 1959 National Headliner of the Year by Theta Sigma Phi, honorary women's journalism sorority, and received a National Headliners' Club medal in 1959.

Mr. Taylor, 30, is a graduate of Virginia University, served as a U.S. Navy intelligence officer from 1951 to 1954, and while stationed in London was a contributor to the London Observer.

He became a reporter on the Cincinnati Post, a Scripps-Howard paper in 1954 and in 1956 won the American Political Science Association's Award for outstanding coverage of State and local politics.

3 YEARS HERE

For the past 3 years he has been a member of Scripps-Howard's Washington and international staff. He accompanied Khrushchev on his recent U.S. tour, and his recent foreign assignments have included Cuba, the Middle East, the U.S.S.R., Europe, and the Far East.

Judges for this year's Ernie Pyle Memorial Award were Edward J. Meeman, editor of the Memphis Press-Scimitar; Loye W. Miller, editor of the Knoxville News-Sentinel; and E. M. Pooley, editor of El Paso Herald-Post.

Brazil's New Capital

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. SMITH of Mississippi. Mr. Speaker, in September 1959 I had the honor to be chairman of a subcommittee from the House Committee on Public Works which attended the very successful meeting of the International Road Congress in Rio de Janeiro. Mr. Alberto Amarante, of Brazil, is the President of the Congress, and the public officials of Brazil together with many private citizens were very hospitable hosts to the many delegates and observers.

One of the highlights of our trip was a visit to the new capital of Brazil, Brasilia. This great new city, which will symbolize the beauty of modernistic architecture for the whole world, is representative of the new pioneering spirit visible throughout many countries of South America. I am sure that after President Eisenhower visits Brasilia next month, new attention will be focussed on this great project, which will very likely become one of the great tourist attractions of the world.

As an example of the interest in Brasilia being aroused in our own country, I include an editorial from the Saturday Evening Post:

BRAZIL'S NEW CAPITAL PROMISES TO BE AN ARCHITECT'S DREAM

Brazil is about to say adieu to her old capital city, Rio de Janeiro, for a new seat of government, the city of Brasilia. Brasilia, which represents an architectural breakthrough, is to be built for the automobile. Its planners proceed on the principle that there will be one automobile for every two inhabitants. There will be no overhead wires in Brasilia. All are underground. Roads are on three levels, with clever cloverleafs at main intersections. Broad speedways are carefully separated from highways for slow-moving traffic.

As a protection against future congestion, a ravine within the city is being transformed into an 8-mile-long cresent-shaped lake. Three rivers have been dammed to create the lake which will serve also as Brasilia's water supply.

Brasilia is planned to take care of 500,000 people. Carefully planned satellite communities will accommodate future expansion. President Kubitschek has promised to move Brazil's administrative offices to Brasilia by April. Already completed: 4 administrative structures, the presidential mansion, a hospital, 3 churches, 2 schools—and 10 apartment buildings each accommodating 1,000.

It took imagination to locate the new capital in Brazil's back country, in the state of Goiás, "back of beyond," a spot which was approached by no passable roads. However, Washington was carved out of the wilds. So was Australia's capital. Modernistic Brasilia might be said to have revived an old tradition.

Dr. Thomas A. Dooley Receives Criss Award for Outstanding Medical Achievement

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, January 11, 1960

Mr. NEUBERGER. Mr. President, in 1950 the Mutual of Omaha Criss Award was established by V. J. Skutt, president of Mutual of Omaha, in honor of the late Dr. C. C. Criss, founder of the company. The award consists of $10,000 and a gold medal, and is presented to the individual or individuals who, in the opinion of a distinguished board of judges, has made an outstanding contribution to public health and/or safety. This board of judges includes Dr.

Charles W. Mayo, Mayo Clinic, who serves as chairman; Lt. Gen. (Ret.) James Doolittle, chairman, Space Technology Laboratories, Inc.; Irene Dunne, actress; Henry Ford, II, president, Ford Motor Co.; Philip M. Klutznick, honorary president, International B'nai B'rith; William L. Lawrence, science writer for the New York Times; Harold Lloyd, actor; Don McNeill, radio personality; Dr. Louis M. Orr, president, American Medical Association; Dr. Thomas Parran, president, Avalon Foundation; Howard Pyle, president, National Safety Council; A. E. Stoddard, president, Union Pacific Railroad; and DeWitt Wallace, editor, the Readers Digest, all of whom have made outstanding contributions to public health and/or safety.

RECIPIENTS OUTSTANDING

Drs. Philip S. Hench and Edward C. Kendall were the first winners of the award which they shared jointly for their work in the development and use of cortisone, a drug which has great value in the control of arthritis. The second award went to a man distinguished in a number of fields, the eminent medical editor of the New York Times, Dr. Howard A. Rusk. The award was given for his outstanding success in rehabilitating the physically handicapped. In 1954, Mr. W. Earl Hall, editor of the Mason City, Iowa, Globe-Gazette, and past president and member of the National Safety Council, received the Criss Award for his distinguished work in the area of safety education. In 1955, the world famed Dr. Jonas E. Salk received the award for his selfless contribution to the development of a vaccine against polio.

Mr. President, on November 10, 1959, this distinguished group of men was joined by Dr. Thomas A. Dooley, the American doctor who has devoted his career to caring for stricken natives in the jungles of Laos and Vietnam.

I have spoken before in the Senate of the humanitarian dedication of Dr. Dooley, and I have written in magazines of this great American's courage, his skill, and tender care. Here is a man, now only 32, who has become the symbol of lifesaving, selfless Americans. He is the antithesis of "The Ugly American." His good deeds have helped conquer the barriers of custom, language, and hate—good deeds that made him become, as the President of Vietnam said, "Beloved by a whole nation." Dr. Dooley is truly a great person.

Mr. President, Dr. Thomas A. Dooley is the type of man whom our country needs for its ambassadors abroad—indeed, he is the type of man whom all humanity needs.

The Milwaukie Review, of Milwaukie, Oreg., on November 19, 1959, published a very thoughtful and eloquent editorial discussing Dr. Dooley's outstanding medical achievement, and his receipt of the Mutual of Omaha Criss Award. I ask unanimous consent, Mr. President, that the editorial from the Milwaukie Review, entitled "Another Tom Dooley," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ANOTHER TOM DOOLEY

Not too long ago there was a maudlin ballad about one Tom Dooley who was about to be hanged. Teenagers adored this character. His praises were heard wherever a jukebox blared, in adoration that was never clear. This teenage idol was a killer—and stupid, to boot.

This week another Tom Dooley should have become the idol of young people everywhere. In one place, he already is. In far off Laos, young Tom Dooley, now only 32, and 27 when he first came as a naval medical officer to the Orient, has become the symbol of life-saving, self-less Americans. He is the antithesis of the "ugly American."

Not financed by the Government, in fact at first scarcely financed at all, Dooley's outpost medical aid station in the tropic, disease-infected wilderness of Asia, became the hope of life itself for men, women, and children otherwise condemned to a hideous and inevitable death.

Dr. Dooley is an angry man. A young, ordinary, ambitious graduate medical student, he did a bitter internship in the rigors of the Korean war and its aftermath of refugees, of flood, famine and disease. He couldn't forget the misery, the need, the swollen, dying children. He went back and stayed. With modern medicine and with his own talent and that of his recruited associates, he performed miracles.

This week, young Tom Dooley, M.D., received a coveted award. An award received in the past by such as Jonas Salk. It was the Criss Award of the Mutual of Omaha Insurance Co. for outstanding medical achievement. Young Dr. Dooley had thought he would have to use the $10,000 he received to pay for his own recent cancer surgery, but that was subsidized. So he contributed it to another outpost in the wilderness, Africa.

Albert Schweitzer told Dr. Tom Dooley when he was so honored, "All the world should love you for what you do."

Hey, kids, how about this new Tom Dooley?

Alvin Ray Bush

SPEECH
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 6, 1960

Mr. VAN ZANDT. Mr. Speaker, on November 5, 1959, the Nation lost one of its outstanding citizens in the death of our colleague and my good friend ALVIN R. BUSH, who for many years represented the 17th District of Pennsylvania in a highly efficient manner.

AL, as he was commonly known, was born and reared in Boggs Township, Clearfield County, in my congressional district. Many of his relatives are my constituents and have told me over a period of years of AL's early life in the Clearfield-Philipsburg area in Pennsylvania. Like many successful Americans, AL BUSH began life in humble circumstances—as a matter of fact in the coal mines—and by diligent efforts he advanced himself in the business world and at the time of his death was one of central Pennsylvania's most successful and outstanding businessmen.

AL's experience as a soldier in World War I, his success in the business world, and his willingness to help and understand the problems of his fellow man were recognized by the residents of the 17th Congressional District when they sought a capable successor to former Representative Robert F. Rich upon the latter's retirement from Congress. AL was elected to the 82d Congress, November 7, 1950, and since taking his seat in January 1951 he not only established himself as an able legislator but endeared himself to his colleagues through his friendliness and his love for people.

The death of AL BUSH leaves all of us with a heavy heart because we have lost a loyal friend and distinguished colleague. To Mrs. Bush and the children, I extend my deepest sympathy with the fervent hope that they will receive a measure of consolation in the knowledge that AL BUSH through his exemplary life has left many fond memories that will be cherished by the countless friends who deeply mourn his sudden death.

U.S. Army's 140th Anniversary in Nebraska

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, January 11, 1960

Mr. HRUSKA. Mr. President, the U.S. Army first became established in Nebraska on September 29, 1819. This was done upon the order of the then Secretary of War, John C. Calhoun, whose action established the Yellowstone Expeditionary Force, the location a few miles north of the present city of Omaha. The expeditionary force was commanded by Henry Atkinson, for whom the post was named.

Fort Atkinson thus became the Nation's most remote military outpost protecting the western frontier as of that time. The place where it was located and constructed was a site which had been recommended by Lewis and Clark in their journal as they passed on their expedition through the territory. Observations were made in the journal as to the strategic advantages of the location.

Since those early days, Omaha has been known as a good Army town. It has been the home of many fine military organizations. It has been favored with some splendid commanding officers.

This tradition of excellence in leadership was certainly carried on when there came to Omaha as commanding general of the 16th U.S. Army Corps—Reserve—Maj. Gen. Derrill M. Daniel.

On September 29, General Daniel addressed an assembly at a luncheon meeting in which he delivered a very splendid address commemorating the 140th anni-

versary of the Army in Omaha. It was a most significant occasion. It was followed in the evening by a dinner at the Ak-Sar-Ben Coliseum. The evening's program saw the honoring before a crowd of over 5,000 people assembled for the Ak-Sar-Ben Annual Rodeo and Stock Show, of the Nebraska's outstanding Army reservists and National Guardsmen of 1959.

Omaha and Nebraska are still a "good Army town and State." Because of its excellence in style as well as substance, I ask unanimous consent, Mr. President, that there be printed in the Appendix of the RECORD this very splendid address by General Daniel.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY MAJ. GEN. DERRILL M. DANIEL, COMMANDING GENERAL, 16TH U.S. ARMY CORPS, ON THE 140TH ANNIVERSARY OF THE ARMY IN OMAHA, SEPTEMBER 1959

In this day of incessant rush and bustle and hurry from here to there, most of us simply ignore the past; and there are even those who believe that the past is dead, cannot tell one anything and that toward the bright and shining future is the only way to look. Thus is avoided any instructive effects that a knowledge of the past might have on our solutions of today's problems.

And so it is a real pleasure to be with you as the Association of the U.S. Army—and the city of Omaha—commemorate the 140th anniversary of the establishment of Omaha's first Army post. For this gives us a chance to take a brief look over our shoulder at the instructive past. This area unquestionably faced a frontier situation in 1819, for hostile bands stood ready to take instant and deadly advantage of any relaxation in defenses. The establishment of the first Army post in Nebraska in 1819 indicated calm acceptance of those frontier facts of life and thus was prudently maintained a constant state of readiness against a foe who could and often did strike suddenly and without warning.

From 1819 to 1959, Omaha has been known in Army circles as an "excellent army town," and continues to be so designated in baedekers of the Army, which indicates that my enjoyment and satisfaction in being a member of this community are an affirmation of the opinions of my predecessors over the span of years.

The history and the destiny of the Army, of the city, and of the State of Nebraska are curiously and closely interwoven. This is true, of course, of the Army and the entire Nation, but it seems to me I find evidence of a particularly close relationship in the West and the Middle West, coming into sharp focus in this immediate area.

The pattern is recognized by a contemporary writer of Army history—and therefore American history—R. Ernest DuPuy, who describes the interlacing most vividly when he says, "The winning of the West is the warp and woof of the American tapestry." He speaks of the expansion era in terms of North American Indian tribes, cowboys, and pioneers; transcontinental railways spanning the plains; stagecoaches; wagon trains; buffalo herds; wheat, corn, cattle; the war whoop, the sharp crackle of rifle and revolver, the echoing thud of pounding hooves; supply and demand; fur traders. He sums it all up as "A tale of high drama * * * all bound round with a thin thread of blue—gaunt men in worn uniforms—the United States Army."

We have changed our uniforms from blue to varying shades of brown, from brown to Army green, in the 140-year interval. The Army's progress in doctrinal concepts is no less dramatic than the economic changes which have transformed the pioneer settlement of 1819 to the shining metropolis which it is today. But we are still in Omaha—and the relationship, the close association of the Army and the city, has not changed. It remains as strong and enduring as ever.

One hundred and forty years ago this month, September 29, 1819, at the order of then Secretary of War, John C. Calhoun, the Yellowstone Expeditionary Force established in an environ of what is now Omaha the city's first Army pose—the Nation's most remote military outpost protecting the western frontier. The expeditionary force was commanded by Col. Henry Atkinson, for whom the post was named.

Quite by coincidence and affirming the wisdom of their choice as well as emphasizing the strategic advantages of the location, Fort Atkinson was constructed, historians tell us, on the exact site which had been recommended by Lewis and Clark in their journal, as they passed here on their expedition through the territory. The frontier post occupied the natural vantage point from which they, Zebulon Pike, Stephen Long, and others gazed into the great unknown—the region west of the Mississippi.

Establishment of the post was part of a plan developed after the War of 1812 to build a chain of forts west of the Mississippi to serve as protection for the fur trade and as a warning against encroachments on the Nation's frontier. Atkinson was constructed and garrisoned by the troops of the Yellowstone Expeditionary Force; the rifle regiment, commanded by Col. Willoughby Morgan, the Army's crack regiment of that day, and the 6th Infantry Regiment—the immortal "Fighting Sixth," recruited originally in North Carolina and made up largely of war veterans who had distinguished themselves in hard fighting during the War of 1812.

Soon the Sixth's blue and white uniforms and the distinctive gray garb of the riflemen—the pattern of which is retained in the uniform of West Point cadets today—became familiar sights on the frontier—and history tells us these soldiers performed their mission well.

The post—even as are many Army installations today—was understaffed and plagued with budget limitations. The staff—even as mine in the accomplishment of our Reserve training mission—worked with full concentration at top speed. These soldiers battled the elements, the windstorms, and the severity of the plains winters, as well as marauders encroaching upon the frontier.

But, they became Nebraska's first farmers—good farmers, so proficient that some inspectors general complained that the soldiers, at time, did more farming than soldiering. They began the dairy industry, the cattle and meatpacking industry in which Omaha now leads the world. Reflecting the versatility required of the American fighting man down through the years, records of the day indicate it was the usual practice to assign the crack riflemen to act as guards to protect the cattle from wolves. The medical officers served as historians and weather observers. Officers and men served as missionaries and as teachers.

The weaving of the pattern of close relationship of Army and community is taking definite form now—the Army established schools for the Army children to which children of the new scattered pioneer residents were admitted; they conducted religious services—thus becoming the first teachers, the first missionaries, in Nebraska; they constructed roads; extended medical service to the pioneer residents—all in keeping with the Army's tradition of readiness for service to civilian communities and setting the precedent to be followed by later Army posts in the territory.

The few pioneer residents of the day, as well as travelers of a later period who pushed on farther west, came to know and love the white square outline of the structure of Fort Atkinson, with its eight 250-foot-long log houses of 10 rooms each, their rooftops sloping toward an interior court with its stone powder house, the post being nestled in the bluffs of the Missouri, the river on one side, the other three sides completely enclosed by a fence, at a distance of 50 paces, but with three gates, one on each side, which opened to the pioneers.

Here at Atkinson were Nebraska's first gristmill and sawmill (oxen driven), first bakery, smithy, the first cabinetmakers, carpenters. Here, in the wilderness, flew the U.S. flag, having 24 stars at that time.

Here were the first art collectors in this area—with such pieces as black basalt ware, Wedgwood and Staffordshire china—brought from the family homes in the East. Here were the first libraries. Practice sessions of the regimental band were held each evening. Amateur theatricals were presented.

If we look closely at the tapestry, perhaps we can trace in the pattern a faint, barely discernible line from these activities to the Society of Liberal Arts, the Omaha Symphony, and the little theater groups in Omaha today.

In 1827, budget limitations forced removal of the troops from Fort Atkinson to Fort Leavenworth, Kans., and transfer of responsibility for military activity in the territory to that post.

The closing of Fort Atkinson marked the end of service for the Rifle Regiment, as such, bringing to a close the saga of a gallant and colorful force which made a notable contribution to the winning of the West.

The soldier had departed from Fort Atkinson—but not from the territory. Military affairs in the region and protection of the frontier were administered by the Army's western department for a time. Between 1837 and 1842, Henry Atkinson (now advanced to brigadier general), as department commander, was again in command of the troops in the area.

The Army learned many valuable lessons from the frontier policy which was developed here in the Plains region to meet the needs of the time. The principles are applicable today. A frontier, whether it is located along the line which marked the approach to the West during the early years of the 19th century, between East and West Berlin, or in space, is still a frontier. The old problems of troops and supplies—and readiness—remain constant.

The year 1858 brought to Omaha the beginning of the jurisdiction of a major Army headquarters—the Department of the Platte, from which my headquarters is a direct descendant. So, in addition to our 140th anniversary, we are making another significant Army-Omaha-Nebraska milestone, the 101st anniversary of the establishment of a major Army command here.

Nebraska had become a territory. The prolonged struggle between the slave States and the free States for dominance in the region had begun and had precipitated the border conflicts which preceded the War Between the States. Omaha had been named the territorial capital. Plans were being developed for the construction of the Union Pacific Railroad. Settlers thronged to the West in increasing numbers. These events of the early territorial period affected the degree and character of military activity required.

But, the tapestry reflects the continued pattern of close relationship between the Army and the State and city, during this trying period and through the eras of the successive headquarters: Departments of the West, Northwest, Kansas, Missouri, Central Department, 7th Corps Area, 7th Service Command, and Military District of Nebraska, to the reactivation of the 16th Corps with headquarters in the city in January 1958.

To the Omaha headquarters came such men as William S. Harney; John C. Fremont, the explorer; Philip St. George Cooke; George Crook; Phil Sheridan; John R. Brooke, Edwin Sumner; Leonard Wood; some of whom had participated in the winning of the West prior to their command of the headquarters. The command was still known as the Department of the Platte when Generals Fremont and Sheridan flew their flags here. General Crook, for whom Fort Crook was named, twice commanded the headquarters.

The character of the city's military element varied with the years and the particular requirements of the time. When, with changing circumstances, the need for cavalry troops diminished, the foot soldier dominated the scene.

In World War I, Omaha was the site of the world's largest balloon reconnaissance training camp. By the time World War II flared, the command had become the headquarters of the 7th Service Command.

Fort Omaha was an Army post from 1868 to 1947—from the time the 2d Dragoons were stationed there to the days of its use as a residential post for officers of the 7th Service Command.

The 17th Infantry was stationed at Fort Crook for many years and was almost as much a part of the community as is our 355th Basic Combat Training Regiment or the National Guard's 34th today.

The city and the State have a proud Army heritage. They have given the Army many of its most illustrious leaders. You and I know well your part in our major conflicts. The pages of American history reflect the glory of the service of your gallant and distinguished sons.

In this one-hundred-fortieth anniversary year, the tapestry pattern of close relationship and interdependence of Army and community emerges bold and clear. We are again faced with a frontier situation; peril is again just across our threshold; again we are faced with an enemy who can, and undoubtedly will, strike suddenly and without warning.

The Army, Regular, Guard, and Reserve, and the other services, guard today's major frontier, the space in which the earth orbits. The Nike-Hercules and Atlas bases which are being constructed are designed to protect us from encroachment on today's frontier. We face equally destructive and far more treacherous enemies than did the riflemen and the 6th Infantrymen at Atkinson. Today's threat comes from the many-sided faces of Communist duplicity with its carefully designed plans for world aggression.

In this greatly changed world, we cannot defend adequately today's frontier with the flintlocks which were becoming outmoded in the days of Fort Atkinson. No one would suggest such a preposterous course. But, to continue our part in protecting the community—in a greatly broadened sense—we must keep pace with modern science. We must achieve a truly modern army.

The pages of world history are strewn with the gravestones of nations which perished because they failed to make adequate provisions for proper Army forces and their soldiers were overwhelmed by a better equipped enemy aggressor. We have the plans for the modern army we must have. Second and third generation missiles, improved rockets, light atomic weapons, improved conventional small arms and artillery weapons, and other items of modern equipment are required. To purchase them the Army must have additional funds. Our minimum strength requirement is 16 active combat divisions properly supplied with such equipment. This is not achievable within the means presently available to us. It must be made achievable. (Does 16 seem too much? That's the number available to Rumania, one of the lesser satellites of Russia; poor little Rumania, one-quarter the size of my 16th Corps; poor little Rumania with one-tenth our population has now two more divisions than the richest, most powerful nation in the world.)

It may at first thought surprise you, but the size of the Army, its effectiveness, its capability depend upon you. We are only as modern, only as adequate, only as effective as the public insists we be.

It is the personal concern of every one of you, of every member of your family, of every man, woman, and child in America to understand and support our national defense, which must be made adequate. We cannot survive without it. We have no choice.

There is a reciprocal dependence between us. The Army and the community are interdependent today, even as they were in the days of Fort Atkinson's active existence, when the natural resources of the community sustained the troops garrisoned there while the protection which they afforded the pioneers permitted those brave-hearted Americans to advance, to survive.

Your city, your State, your Nation cannot survive without an adequate national defense. We cannot fulfill our role in providing an adequate defense without your support.

Fort Atkinson served its purpose well. It was garrisoned by an Army which was relatively modern for its time.

A modern army in this time is the key to our survival as a nation, the continuance of our way of life, our priceless liberty.

I urge each of you to accept the responsibility, to recognize and support our mutual need so that we may present to the Communist conspirators a truly modern army of sufficient size and capability to stay their plotting for world aggression.

Lest the American tapestry be destroyed altogether, let us devote ourselves to keeping the pattern of close relationship of Army and the city and State clear and unblemished, with no wavering lines, no lack of clarity in design, no obscure blank spaces to mar its rugged beauty.

Let us pass on to the next Army-Omaha-Nebraska generation this precious heritage enhanced and enriched from having been in our custody.

Antitrust Bill To Ban Joint Ownership of Broadcast and News Facilities

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. CELLER. Mr. Speaker, I have today introduced a bill in Congress to prohibit the concentration of control of a substantial portion of the radio and television broadcasting facilities and a substantial portion of news publications in any section of the country.

Modeled on the Clayton Act, this bill would add a new section to that act providing that no news publisher shall own or acquire stock or assets of or a license to operate a radio or television broadcasting station where the result would give him control of a substantial portion of the broadcast and news facilities of the section of the country or area. Broadcasting interests would, in similar circumstances, be prohibited from owning or acquiring interests in news publications.

It has recently been revealed that the owners of many important publications are also the owners of TV and radio stations. This raises the entire question of concentration of ownership and control of communications media.

I am convinced that it was never the intention of Congress to sanction the control of radio, and now TV, by newspapers and magazines. Although the Communications Act is silent on this score, the great danger in permitting concentration of a community's media of mass communications in a single ownership is manifest. Newspapers and magazines have always played an influential part in molding public opinion and shaping public policy. Newspapers in this country have enormous power. TV reaches homes to an even greater degree than the press, and perhaps more effectively. Its visual and accoustical penetration is more dynamic than the written word. In any area, the man who controls both press and TV has an inordinate influence over the political, economic, and cultural destiny of that area.

We must ever bear in mind that the strength of democracy lies in the fullness and freedom of exchange in its marketplace of ideas. Limit the availability of ideas and we limit the effectiveness of our political system. Obviously this must be the result where all an area's media of mass communication are concentrated under one ownership or where there is undue concentration of such media in one entity.

The available spectrum for TV broadcasting is limited. Not every qualified applicant can secure a telecasting station. Hence the FCC must allocate the high privilege of telecasting only where the public interest will be served. What is more, the licensing of TV channels should take into account the basic need of a community for varied sources of information and ideas. The fact that newspapers and magazines control many of the leading TV and radio stations of the country makes manifest that the FCC has not given this principle adequate weight. The danger signals have been raised clearly enough for all to see. There must be a change in the standards for licensing new stations and for the renewal of existing licenses. Heretofore, the renewal of licenses has been virtually automatic. This has given rise to the false notion that a license is equivalent to ownership. The public interest requires that the FCC

give great weight to the principle of diversity of control of communications media, both in the granting of new licenses and in considering applications for renewals.

I should again like to make it perfectly clear that this legislation is not directed at newspaper ownership of TV and radio per se. It is directed at those situations where the press of a community also controls a substantial portion of the television and radio available to the community. Where the press-owned radio or TV station is only one of many operating in the community, as in the case of the New York Times ownership of WQXR in New York, the bill would effect no change in that relationship.

I should also like to repeat that this bill does not deal with the question of honesty in broadcasting and telecasting raised by the recent congressional hearings. It is my understanding that members of the investigating committee will introduce bills dealing with this problem. In the event that such bills are not introduced, I shall certainly offer appropriate legislation in the forthcoming session of Congress.

The bill would take effect on the 90th day after its enactment.

The text of the bill is as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Clayton Act (October 15, 1914, 38 Stat. 730) as amended is hereby further amended by adding after section 10 thereof (38 Stat. 734, 15 U.S.C., sec. 20), a new section 10A, which reads as follows:

"SEC. 10A. Notwithstanding any other provision of law, (a) no person engaged in the publication of a newspaper or newspapers or other news periodicals or periodicals shall own or acquire directly or indirectly the whole or any part of the stock or other share capital or of the assets of any radio or television broadcasting station or shall own or be granted a license to operate any radio or television broadcasting station where such ownership, acquisition, or grant may result in such person controlling the operation of a substantial portion of the radio and/or television broadcasting facilities and the publication of a substantial portion of the newspapers and news periodicals in any section of the country, and

"(b) no person engaged in operating or licensed to operate any radio or television broadcasting station shall own or acquire directly or indirectly the whole or any part of the stock or other share capital or of the assets of any newspaper or other news periodical where such ownership or acquisition may result in such person controlling the publication of a substantial portion of the newspapers and/or news periodicals and a substantial portion of the radio and/or television broadcasting facilities in any section of the country."

2. Section 11 of the Act of October 15, 1914 (38 Stat. 734, as amended; 15 U.S.C., sec. 21) is hereby further amended by substituting for the words "sections 2, 3, 7, and 8 of this Act" wherever they appear, the words "sections 2, 3, 7, 8, and 10A of this Act," and by substituting for the words "sections 7 and 8 of this Act" where they appear, the words "sections 7, 8, and 10A of this Act."

3. The provisions of this Act shall be effective on and after the ninetieth day following the date of its enactment.

The United Nations: The World's Hope for Peace

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, January 11, 1960

Mr. KEATING. Mr. President, although the United Nations has not made a great many headlines during the past few months, its sure, steady progress as a force for peace in the world has continued. It has strengthened its reputation as the world's best hope for achieving lasting peace.

None of us would be human if we did not become impatient with the slowness with which the U.N. moves in some situations. The important thing is that the U.N. provides a forum where the nations of the world can argue their differences and can disagree verbally. It is far better to throw brickbats in the General Assembly or Security Council than it is to throw lethal bricks behind the barn.

Therefore, it behooves all of us to pay attention to what the U.N. is doing and what it is achieving. In its often unspectacular way, it continues to contribute substantially to world understanding and global security. I am pleased to salute our representatives in the U.N. and the personnel of the U.N. who are responsible for this record.

An editorial published in the Rochester (N.Y.) Democrat and Chronicle on December 15, 1959, underscored some of the activities and accomplishments of the General Assembly during its 14th session. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

USEFUL UNITED NATIONS

Nothing very exciting or surprising happened at the United Nations General Assembly which concluded its 14th session over the weekend. But then seldom is the patient plodding of a peacemaking organization a dramatic affair.

Hopes for an easing of the cold war were high September 18 when Khrushchev appeared with his ambiguous disarmament proposal. The Assembly listened and cheered, then referred the plan to its disarmament committee. The cold war may have warmed a bit but it is still around.

The Assembly deplored Russia's failure to withdraw Soviet troops from Hungary and expressed indignation for the violation of the human rights of the Tibetans, without mentioning the Red Chinese invasion of Tibet. Aid for Palestine refugees was authorized for 3 more years. A 24-nation group was set up to regulate the peaceful uses of outer space. The U.N. declined to enter the Algerian hassle but asked France to give up an atomic bomb test.

The Assembly's final act—in which Russia and the United States agreed on splitting a 2-year Security Council membership between Poland and Turkey—showed how a tough issue in the U.N. can often be resolved when each side gives a little.

These actions sound pretty tame; it would be foolish to try to estimate their long-range effects. The U.N. record has often produced dividends where least expected. This much we know: There is a U.N.; it is not weakening in prestige and respect; it has prevented a large-scale war. As long as the U.N. can keep nations talking, they won't be fighting.

Egyptian Piracy Rewarded

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. CELLER. Mr. Speaker, the World Bank officially announced that it has made an agreement with the United Arab Republic to loan it $56½ million to widen the Suez Canal. The loan was made despite Egypt's anti-Israel blockade and over the protests of 67 Members of the House of Representatives.

The United States is the largest contributor and stockholder of the World Bank. No loan is made without its consent. The U.S. representative, T. Grayden Upton, voted for the loan. Eugene R. Black, American President of the World Bank, arranged the loan. The Eisenhower administration approved the loan on the score that the World Bank does not permit political considerations to influence granting or refusal of loans. Secretary of State Herter reiterated this principle, but no one is so naive as to believe in it.

The administration has conveniently forgotten the pledge that President Eisenhower made in February 1957, when he said that the society of nations should deal firmly with Egypt if Egypt violated the armistice agreement or other international obligations, at the time when the administration was pressing Israel to withdraw from Suez, Sinai and Gaza. He pledged free Suez passage of Israel ships and cargoes.

The World Bank is an arm of the United Nations, which by resolution condemns Egypt and Nasser for refusal to permit Israeli ships to pass through the Canal. Thus, the United Nations castigates Egypt, while its agent, the World Bank, gives it comfort. Does morality stop at the entrance to the United Nations? Does the President of the United States approve such immorality?

To add insult to injury, the Eisenhower administration, on December 22, 1959, entered into a new agreement with the United Arab Republic to assist it in the building of a multi-million dollar jet airport at Cairo. The cost will be in the millions. The Federal Aviation Administration will cooperate with the UAR, by sending representatives to

Egypt for planning and designing facilities to handle the largest jet planes and to facilitate takeoff and landing problems.

Not only does President Eisenhower's pledge of Suez passage remain unredeemed, but Egypt is handsomely rewarded for her piracy.

The NAACP Bares Its Goal

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, January 11, 1960

Mr. RUSSELL. Mr. President, on December 29, the Albany Herald, one of the leading daily newspapers in my home State of Georgia, published on its front page a searching and thought-provoking editorial dealing with the latest phase of the anti-South campaign of the National Association for the Advancement of Colored People.

The editorial, entitled "The NAACP Bares Its Goal," was written and signed by the editor and publisher of the Herald, the Honorable James H. Gray. Mr. Gray is not only widely regarded as an outstanding publisher and an able editor, but as an articulate and persuasive champion of constitutional government and the southern position.

Mr. Gray is uniquely qualified to discuss the problems confronting the South from a dispassionate point of view. He is a New Englander by birth and background, having settled in Albany after World War II. It is for this reason that I commend Mr. Gray's editorial to every Member of this body. I particularly would call attention to the concluding paragraph of the editorial which states:

Consequently, if there is to be future progress in this sensitive field, it must spring from the individual level in both races. It cannot accrue from the highhanded tactics of the NAACP, from Roy Wilkins, from Martin Luther King, or from a Federal Government responsive to their will.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE NAACP BARES ITS GOAL
(By James H. Gray)

In announcing a voter registration campaign among the South's Negroes to enhance their political power, Roy Wilkins, executive secretary of the National Association for the Advancement of Colored People, and the Reverend Martin Luther King, president of the Southern Christian leadership conference, were finally candid about the real goals they seek to attain. Of course, adding 1,100,000 Negroes to the voters' lists, swelling the South's total to 2,500,000 Negro voters in both rural and urban areas, could have a profound political effect on all elections—local, State and national in the affected areas. The power of the Negro bloc vote, in the South and elsewhere over America, has been too demonstrably profound in recent years to be ignored.

Yet, just as plainly, it is now clear that political equality is not the ultimate target at which such militant organizations as the NAACP and the SCLC are aiming for the South's Negro population. Nor is it merely integration of the racially segregated classrooms of the South. The goal is nothing short of social equality—fully and completely.

There can be no other interpretation of these words of Wilkins: "We're shooting for something that is more important than whether or not a few thousand Negro pupils or a few thousand white pupils go without schools for a few days or months." That "something," beyond question, is a wholly integrated society—in the classrooms, in the homes, in all public facilities, and even in the churches. The NAACP is fully committed to a destruction of the existing social order of the South, and proposes to substitute in its stead a new system of human association which, by persuasion if possible but by Federal force if need by, would legally compel social intercourse in violation of every American precept of individual choice.

Patently, the current NAACP campaign for school integration is but a single, isolated manifestation of this unerring intention. What is even more tragic is that some gullible Southern white self-styled moderates currently prating about the need for keeping the South's public schools open at all costs, even unto accepting what they describe as "token integration," are deluding themselves about the singlemindedness of the NAACP's efforts.

"Token integration." The NAACP is the first to laugh scornfully at this white-devised subterfuge. To the thinking Negro as to the thinking southern white man, "token integration" or "local option" on the burning issue of the day is a sham, a deceit, an intolerable compromise with principle, a cowardly attempt to avoid dispute. "Token integration" is an aberration in the minds of a few misguided white men. It has never been, and will never be, considered a solution by the NAACP or by the majority of southern whites.

It is time, then, that both races in the South recognize this struggle for what it is—an uncompromising conflict of ideologies, one not wholly confined by its racial outline. The NAACP, which presumes to speak for all Negroes, would forever end the social fabric of the South. Secretary Wilkins holds that "the white South is licked on this subject. Like zombies, they don't know they're dead." The majority of southern whites, conversely, contend that the Constitution of the United States, as well as the long history of human development, grants them the right to choose their associates individually, rather than in the mass, free from the element of dictation as exercised by any government of whatever nature.

It may be, of course, that a social problem of this scope and depth will permit no permanent solution. Certainly, there is evidence that a once-crusading National Administration in Washington is turning toward this view. But if a solution is impossible, an accommodation is not. Certainly, southern whites and Negroes down the years have learned to live together and to work together for their mutual benefit. Where inequities existed in this society, they were being corrected quietly, if patiently, through the exercise of good will by intelligent leaders of both races. That is, they were until the current campaign of force legislation and judicial fiat aroused the unyielding opposition of southern white men.

Consequently, if there is to be future progress in this sensitive field, it must spring from the individual level in both races. It cannot accrue from the high-handed tactics of the NAACP, from Roy Wilkins, from Martin Luther King, or from a Federal Government responsive to their will.

Danger in Your Drinking Water

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, the residents of the Denver metropolitan area have shown increasing interest in cleaning up the pollution and contamination of our waters and streams. While we regret that one of our districts should be singled out for adverse mention, we are pleased to see a national publication making so constructive a report on the problem of "Danger in Your Drinking Water." I call this article by Alvin Toffler in Good Housekeeping, January 1960, to the attention of the Members in connection with further congressional consideration of House bill 3610. I am hopeful that this measure will become law in the immediate future.

The article follows:

Every time you turn on a faucet you are committing an act of faith. You believe that the water you give your child to drink, the water with which you cook and wash your dishes is fit for human use. Don't take it for granted.

The fact that you cannot take water purity for granted is pointed up by the statements of public health and water authorities across the country. Their words serve as an urgent warning that if current conditions are allowed to grow worse a water crisis involving a serious threat to the health and well-being of many American communities could become a very real and distinct possibility.

Behind the warnings of the authorities lies a rising tide of pollution in the Nation's waterways. With tax-poor cities pouring untreated sewage into our streams, with industry dumping everything from radioactive wastes to slaughterhouse remains into our water sources, the job of keeping our tap-water safe has become an increasingly vital and difficult task. And it has been made even more crucial and challenging as the population boom and mass movement to the suburbs has placed a greater and greater burden on our sewage disposal and water-purification facilities—some of them antiquated and others inadequate.

Despite heroic efforts to keep it pure—and our water is in many regards the best in the world—the water we drink today contains higher-than-natural levels of radioactivity. It contains detergents. In some places it contains traces of insecticides, weedkillers, fertilizers, and other poisons. It contains new industrial chemicals which our scientists do not understand, have been unable to isolate, and cannot remove through conventional water treatment. Nobody is certain what effects long-term exposure to these substances may have on us.

According to Assistant U.S. Surgeon General Mark Hollis, "The quantity and quality of America's water supplies are being endangered by synthetic living and pushbutton industrial processing * * * and the problem threatens to increase in the future."

Since some of the toxic chemical contaminants in our water sources cannot be removed by any known methods and since they are highly resistant to the natural purification process of rivers, scientists fear their concentration in tap water may build up.

We have been polluting our water sources so recklessly with both sewage and the newer

chemical contaminants that for some localities the threatened crisis has arrived ahead of time.

For example, 2 years ago the city of Rensselaer, N.Y., was told that its 11,000 population was threatened by an epidemic of infectious hepatitis. Dr. John J. Quinlan, as president of the county board of health, warned that "city water in Rensselaer is so polluted it is dangerous for human consumption. * * * A disastrously widespread epidemic * * * is greatly to be feared."

Dr. Quinlan based his warning on a study made by the Rensselaer County Board of Health, which, he said, "revealed that the (water) supplies drawn from the Hudson River just above Albany are inadequately filtrated and chlorinated * * * and have a soaring bacterial count in the water mains." Rensselaer was drawing its water from a point 11 miles downstream from the city of Troy, which, along with several other communities north of Rensselaer, was dumping its sewage into the Hudson—Rensselaer's only source of drinking water.

At the time, Dr. Andrew C. Fleck, then Rensselaer County Health Commissioner, asserted that the continued use of the Hudson River as a source, even with increased chlorine, "cannot be relied upon to provide the long-range optimum protection desired." Commissioner Fleck, who ordered the city to boil its drinking water until the crisis was over, also said that Hudson River water needed seven parts per million of chlorine to make it fit for human consumption. The chlorine level had been reported at one-tenth the required minimum.

In Salt Lake City, the Deseret News quoted sewage experts warning residents that community health was endangered as hepatitis cases shot up three times higher than the previous year's level.

In the East, the New Jersey cities of Paterson, Passaic, Clifton, Nutley, and Harrison were forced to switch to alternate water sources when Passaic River pollution became so bad it killed thousands of fish.

In November 1958 residents of a Denver suburb jammed the offices of the Baker Water and Sanitation District with bitter complaints about the "dirty, rotten water" they had been getting. Their tapwater, milky and swamp-smelling, originated in a creek into which six other communities fed raw sewage. When the creek was at low flow the Baker plant had to process 100 percent undiluted sewage. In January 1959 health officials in the Baker district completed a door-to-door survey. The results showed that customers in the district had suffered twice as much intestinal illness as a similar group in another water district. The survey forced a temporary changeover to well water. But many Baker district residents refused to drink their tapwater anyway. A housewife was quoted as saying, "I don't even bathe my children in it until I add a goodly amount of bubble bath. Sometimes the water is dirtier than the kids." Other Baker district residents were buying distilled water by the case for drinking and cooking.

In another instance, last March, the Lane County (Oregon) Medical Society warned residents of Eugene, Oreg., that sewage was contaminating the McKenzie River one-half mile above the Eugene water intake. The contamination, an outgrowth of rapid population expansion, was so bad the society declared it feared that even high chlorination might not destroy all the disease-producing organisms in the water supply.

Such problems are complicated by skyrocketing demands for water. Modern living uses this resource in staggering amounts. The automatic clothes washer churns through an average 17 gallons per cycle. The dishwasher uses 3. Thirty to 60 gallons slosh down the drain each time someone showers. Bathing Susie in the tub requires another 30 gallons, and Johnny uses 2 gallons every time he fills the sink to wash, however reluctantly, behind his ears. Each flush of the toilet takes 5 gallons.

In all, the average family of 4 uses over three-quarters of a ton of water per day—200 gallons. This is 73,000 gallons per year, or about 300 tons, exclusive of the water used for car washing, lawn spraying, and similar functions. And demand is expected to double by 1980.

Paralleling this increased use of water in the home there has been a sharp rise in industrial water needs. Our new industries require tremendous amounts of clean water. In 1950 industry consumed 65 billion gallons per day. By 1980 this daily figure will have shot up to 394 billions—a sixfold increase. Top Government experts have warned that we simply won't have the water we need unless we stop pouring filth into our rivers and streams, from which this water must come.

To supply our needs, 18,000 water plants apply a variety of treatments. Water is drawn from rivers, lakes, reservoirs, or wells and pumped to a plant where lime, alum, carbon, or other chemicals are added to counteract taste, odor, and harmful bacteria. Next, the impurities in the water are allowed to coagulate and settle to the bottom of huge basins. After this, the water is passed through sand to filter it. Some time during the process, chlorine is added to kill dangerous bacteria surviving the other treatments. Some plants also add fluorine to retard tooth decay.

Water officials find it ironic that the addition of beneficial fluorine in carefully controlled amounts has provoked a furor, while the presence of new and poorly understood contaminants in tap water has drawn absolutely no public reaction at all.

Among the most frightening of these new contaminants are radioactive wastes. Last year, according to the U.S. Department of Health, Education and Welfare, approximately 30,000 persons in southwestern Colorado and northwestern New Mexico were using Animas River water that ranged 40 to 160 percent above maximum permissible levels of radioactive content." The towns of Aztec and Farmington, N. Mex., were affected. Both drew drinking water from the river into which a uranium mill in Durango, Colo., dumped radioactive waste.

Under prodding from the U.S. Public Health Service, the mill agreed to dispose of its wastes in some safer fashion. But the incident sent cold chills down the spines of many health authorities who have been watching with some apprehension the rapid development of our atomic-energy industry. In addition to government installations and uranium mines and mills, laboratories, hospitals, and thousands of industrial plants use radioactive materials. As a result of this new threat, the city of Philadelphia, Pa., has purchased equipment to monitor its water supply for radioactivity, and many other cities have considered taking the same step. And at Shippingport, Pa., where the first large-scale nuclear-power reactor is in operation, a detailed emergency plan has been drawn to alert downstream users of Ohio River water in case, by accident, radioactivity over permissible levels is released into the river.

Another of the new contaminants is detergent. Though there is no evidence that synthetic detergents are in any way harmful, they are constantly surging into our sewers and septic tanks from dishwashers, clothes washers, sinks, garbage disposers, and other appliances, as well as from industry. From the sewer or septic tank they are finding their way into our water supply. According to scientists at the Robert A. Taft Sanitary Engineering Center in Cincinnati, only a few municipal surface-water supplies in the entire Nation are free of detergents. Many ground-water supplies are contaminated, too. Chemists at the Taft center have shown that the annoying foam in many city water supplies can be traced to the tons of synthetic detergents entering the water system each day—especially on Monday. What's more, according to Jesse M. Cohen of the Taft center engineering staff, conventional water treatment does not remove synthetic detergents from tap water.

A spectacular demonstration of the presence of detergents in water occurred not long ago in Chanute, Kans. The Neosho River, source of the city's water, ran dry in the drought of 1956. In desperation, city officials decided to recirculate the city's own sewage into the water-plant intake for purification and successfully supplied the town with usable drinking water for 5 months.

However, a buildup of synthetic detergent in the Chanute system caused the water to froth like beer as it came out of the tap. Agitation of a glass of water would send foam to the top. The detergent at the water plant accumulated into waves of foam 10 to 15 feet high, completely inundating a small building which housed equipment. On windy days a snowstorm of suds went sailing through the vicinity.

Detergent has also been found in well-water supplies in Peoria, Ill.; Dania, Fla.; Lac de Flambeau, Wis.; and other places. One of the hardest hit communities has been Babylon, N.Y., where detergent has turned up in both private wells and the public water supply. A study of the Babylon situation by Suffolk County health authorities revealed that one part per million detergent in water would cause foam. At one and a half parts per million, the water begins to taste oily, fishy. * * *

Still another troublesome group of new contaminants includes insecticide, pesticide, weed killer, fertilizer, and other agricultural chemicals and poisons, which are, in one way or another, beginning to get into our water sources. One-sixth of all croplands and millions of acres of forests, rangelands, and marshlands are treated with such chemicals each year, according to Ross Leffler, Chief of the Federal Fish and Wildlife Service. Sales of the poisons—DDT, DLD, dieldrin, methoxychlor, chlordan, aldrin, benzene hexachloride (BHC)—have quadrupled since 1956.

So far the traces of these substances found in water are far below toxic levels. They are measured in parts per billion. But according to Gordon E. McCallum, Chief of the Public Health Service's Division of Water Supply and Water Pollution Control, our normal treatment does not remove them. Mr. McCallum asks, "What is the cumulative impact of these chemicals, singly or in combination, on the human beings who drink them?" At this time, there is no conclusive answer to the question.

Each year American industry spawns thousands of totally new chemicals, each opening the way to new manufacturing processes and new types of waste. Today industry is pumping tons of these strange new substances into our rivers and streams. Some are so potent that a single teaspoonful can impart bad taste and odor to a million gallons of water. A million pounds of these synthetic organic compounds drift down the Ohio River alone every day.

Besides the problem of these jet-age pollutants is another, almost as old as man himself. Incredibly, many communities are still dumping enormous tonnages of disease-carrying sewage—raw and untreated—into the water sources of their downstream neighbors. With population booming, volumes of sewage are rising, and cities are crowding one another along river banks. Consequently, sewage outlets and water intakes are being forced closer and closer together. There was

a time when the natural bacterial action of a stream could purify much sewage within a few miles of downstream drift. Today, quantities of sewage are so great—over 50,000,000 pounds of solids per day—that many of our waterways are overburdened and cannot help in purifying.

Sewage isn't all. Congressman JOHN DINGELL, of Michigan, a leading advocate of pollution control says, "slaughterhouse wastes, toxic industrial and mine waste, garbage, and cannery refuse all go into our rivers and streams. So do petrochemicals, coal-tar dyes, rotting animal carcasses, and the effluent from mortuaries and hospitals."

A case in point is the Missouri River, source of drinking water for Omaha and other cities. The water just below Sioux City was described by F. W. Kittrell, a Public Health Service engineer as being "clogged with untreated packing-plant wastes. * * * Gas bubbles rose from sludge deposited on the bottom. Offensive odor filled the atmosphere."

Sioux City and its factories dump untreated sewage and waste in the river. "Some of the solid materials carry downstream as far as the Omaha water-plant intake, where they clog the metal screens * * * and sometimes pass into the water-treatment plant."

Conditions such as these are not merely disgusting. They are a red flag indicating that germ-laden, raw sewage is present in the water source. The menace of sewage is well known. It carries the seeds of dysentery, typhoid, hepatitis, and many other diseases. To correct the Sioux City situation, the city last September announced plans to comply with a Federal order requiring it to treat its wastes before disposal.

Despite severe problems, Omaha's water-plant operators have so far been able to distribute safe water. But T. A. Filipi, of the Nebraska State Department of Public Health, told Good Housekeeping, "Our scientists are working day and night to keep ahead of the pollution problem. How much longer we can, I don't know. In 1957 we had cases of infectious hepatitis going down the river. The cases weren't spotted all over the State. They were concentrated in communities that draw water from the Missouri. Omaha is at the mercy of Sioux City."

Omaha's dilemma is hardly unique.

Herbert L. Hartung, Sanitary Engineer at the St. Louis Water Company, said, during a conference on Missouri River pollution, that his company—which serves over 500,000 consumers—has been "noting with growing concern the increasing amount of pollution. * * * If this pollution continues to increase," he warned flatly, "the quality of the drinking water in St. Louis County will be seriously impaired and endangered. * * * This company has no assurance that its existing water plants can satisfactorily process Missouri River water unless pollution abatement becomes a reality."

St. Louis is concerned about Kansas City, Mo., which pipes its raw sewage into the river above St. Louis. Yet St. Louis itself—perched at the juncture of the Missouri and the Mississippi—draws its water from the Missouri, then proceeds to dump its raw sewage and its garbage, untreated except for grinding, into the Mississippi. This has caused serious problems for Cape Girardeau, Mo., and for Chester, Ill., with only slight improvement in recent years.

Mounting pollution is forcing our waterworks to boost chlorination levels. In some cities chlorination is so high that tap water smells and tastes of it. Still, this is preferable to exposing users to many diseases associated with bad water, some taking the form of a "mild cold," or diarrhea, or other seemingly minor conditions which are seldom reported, even to family physicians. Experts suspect, but can't prove, that waves of vomiting, cramps, upset stomachs, which sometimes whip mysteriously across a community are water-borne.

Most evidence that disease outbreaks are caused by contaminated drinking water is—as water-purification authorities point out—usually circumstantial. For it is difficult to prove that the source of the disease is indeed the water. However, as Norman A. Clarke, Sr., and Shih Lu Chang, writing in the Journal of the American Water Works Association, point out, "infectious hepatitis has been established as a water-bourne virus disease, and (in the past 15 years) more than 70 newly discovered viruses have been added to the original list of enteric viruses known to be present in human wastes."

Modern water-treatment methods can and do prevent contaminated water from affecting a community's health in almost every instance. However, with the vast amount of pollution of water sources, there is a limit to even the superefficiency of our purification methods. Where a plant is tremendously overburdened, where modern methods are not in use, or where no purification facilities exist, breakthroughs of disease-bearing water can occur. Clarke and Chang in their report say that an "explosive outbreak of poliomyelitis" in Edmonton, Alberta, Canada, was "reasonably correlated" with sewage pollution, and a similar outbreak in Nebraska was probably traceable to the same sources of infection. "There is also sufficient . . . evidence that the [infectious hepatitis] epidemic that occurred in the small town on the Tidal River (Pennsylvania) was water-borne," Clarke and Chang report.

A. E. Weatherford, operator of treatment facilities in Atchison, Kans., testified at a hearing held by the Public Health Service that badly polluted Missouri River water had been inadequately chlorinated and piped into homes by accident. No outbreak of illness was reported in this instance; but in New Delhi, India, late in 1955, contaminated water passed through the modern plant there. Result: 30,000 to 50,000 cases of infectious hepatitis.

What does all this mean to you? According to health experts, water-treatment officials, conservationists, and leading women's organizations, the time has come to mount an all-out crusade to protect our water supply. They believe women help safeguard our drinking water by battling on two fronts—one against pollution and one for better sewage-treatment and water-purification facilities where they are needed.

To begin with, the authorities say, you can check your own local water supply. According to a spokesman for the American Water Works Association, 40 percent of existing water-treatment plants are deficient in treatment capacity; 57 percent need improvements in their distribution system. Find out whether your water is treated, whether it is safe. Your State's water and health authorities can help you here.

In Chester, Vt., a few years ago, the town health officer recommended that the water supply be chlorinated. His suggestion was defeated in a village referendum. Local women took matters into their own hands. They learned that samples of Chester water were not reaching the State board of health regularly. So they began sending samples. When half the samples came back marked "Water unsafe for drinking," the women called on other nearby communities to get the facts on chlorination—how much it cost, what people thought of it, how the funds were raised. They made an exhibit which included a taste test. This involved bottles of both chlorinated and unchlorinated water. Anyone who could successfully taste the difference was awarded a prize. Two public meetings were held. Petitions were circulated and a new vote taken. The women won.

Second, we need better enforcement of existing laws against pollution, and we need better laws. Every State in the Union has a pollution-control agency and some statute regulating the contaminants which may be dumped into our water. But there are still many States where the law is loose and the enforcement lax. As a housewife and a voter, you can insist that your State bring its pollution law up to the standards suggested by the Public Health Service in a model law it has developed. You can help get better enforcement, too. The State authorities who police pollution have a thankless and difficult task. You can insist that they do their job, and you can help by lending them support when they get into a scrap.

We also must plug holes in our scientific understanding. Industry spends billions to produce the synthetic organics and other products polluting our rivers. But we, as a Nation, spend well under $5 million a year, from both Federal and private sources, on research aimed at keeping our tap water safe. This helps explain why the phrase "we don't know" turns up so often in relation to our water problems. Health experts are convinced the annual research outlay must be doubled or tripled.

Finally, and most important, is the clean-up job that can be primarily accomplished by building new sewage-disposal facilities. Communities cannot continue getting rid of their sewage by pumping it out of sight and mind. Sewage must be treated before it is dumped, and you can help make sure that it is.

In Idaho Falls, Idaho, the local League of Women Voters decided to study the town's sewerage problem. Shortly afterward, the town hired an engineering firm to make a survey. When the firm recommended additional water-treatment facilities, the league endorsed its report. When the sewerage-plant-expansion bond issue came up for a vote, the women rolled up their sleeves and went to work. They put up arrows all over town leading to a nearby sewage outlet in the Snake River. Signs read, "Follow the arrows" "See it now" "It's a shocker." They issued leaflets explaining in blunt language why "even increased chlorination" would not "sufficiently purify our drinking water" unless the community awakened to its problem. They got milkmen to distribute the flyers in every milk box. They put notices on every menu in every restaurant in town. They painted slogans on the sidewalks. When the bond-issue election was held, the community voted 4 to 1 in favor of building a new sewerage plant.

Today the city or town that wants to build or improve its sewerage-treatment facilities can get financial help from Uncle Sam. Congress considers the pollution situation so dangerous that in 1956 it set aside funds to stimulate local self-help. Under Public Law 660, your community can get Federal funds in amounts up to 30 percent of the cost of the new facilities or $250,000, whichever is lower. Some States provide additional assistance. You can find out about this by writing to the U.S. Department of Health, Education, and Welfare, in Washington, or to your State water-pollution control board.

But even with these aids, the initiative, the action, and the basic funds must come from your own community. Here is where intelligent and aroused women can do the most important job. The cleanup of our rivers to safeguard our precious water supply—this is the biggest housekeeping chore facing the Nation today.

Student Loyalty Oaths

EXTENSION OF REMARKS
OF
HON. OREN E. LONG
OF HAWAII
IN THE SENATE OF THE UNITED STATES
Monday, January 11, 1960

Mr. LONG of Hawaii. Mr. President, I am hopeful that the Committee on Labor and Public Welfare will come forward with a new bill giving the Senate another opportunity to vote on repealing or modifying section 1001(f) of the National Defense Education Act of 1958. It is well known that Harvard, Yale, Princeton, and a number of other colleges have withdrawn from the Federal student loan program because of the oath and affidavit requirements of that section. Although the University of Hawaii has not withdrawn from the program, it has, along with many other colleges, formally protested against this unfortunate legislative provision. I heartily agree with the committee majority which reported last June that "Experience has shown it—section 1001(f)—to be ineffective as a security device and harmful to the educational program." If it is necessary to have additional legislation for the prosecution of possible subversion, the proper course is to amend the Nation's internal security laws, not to hamstring an educational program with a vague and indefinite provision which may do violence to constitutional safeguards.

I ask unanimous consent that two editorials on this subject recently printed in the Honolulu Star-Bulletin be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Honolulu Star-Bulletin, Jan. 1, 1960]

STUDENT LOYALTY OATH

We admire the action of Harvard and Yale Universities in withdrawing from the Federal student loan program because of the loyalty-oath requirement.

In doing so, they join Princeton and several of the country's leading smaller colleges, such as Amherst and Oberlin, in the one way of effectively protesting the insult to American youth that is implicit in the National Defense Education Act of 1958.

* * * * *

Under this law every student recipient of a Federal loan must not only swear allegiance to the Government but also sign a disclaimer that he believes in or supports any organization advocating its illegal overthrow.

Why is this wrong and why is it insulting?

Because the imposition of oaths of this type on members of the academic community inevitably suggests a wider infringement on freedom of thought; because it suggests that students are more suspect than other citizens—such as farmers or manufacturers, to whom vast outpourings of Federal aid in the form of subsidies or tariffs are given without thought of loyalty oaths; because, finally, such formulas are utterly useless in their avowed purpose of protecting the state against real subversion.

The loan program, in which some 120,000 students are expected to participate during the current year, can be an extremely useful method of encouraging higher education among American youth.

But its values gravely suffers from anything so un-American and so fatuous as this relic of McCarthyism.

By a narrow margin last summer efforts of Senator KENNEDY and others to remove, or at least soften, the oath provision were defeated.

The stand now taken by Harvard and Yale should encourage a renewal of such attempts at the next session of Congress. (From the New York Times.)

[From the Honolulu Star-Bulletin, Jan, 3. 1960]

THAT TEST OATH FOR COLLEGE STUDENTS

Now that President Eisenhower has flatly stated his disapproval of the anti-Communist affidavit required of students seeking Federal loans, Congress when it reconvenes should strike down this obnoxious test oath.

The President objects to it for the same reason that a number of schools, including Harvard and Yale, have refused this aid to their students.

At his press conference on Wednesday the President said:

"I personally am ready each morning to take an oath that I am not a Communist and that I am loyal to the United States. I think, however, that when we begin to single out any group of citizens and say, 'This is a matter of legal compulsion,' I can see why they are resentful."

That is the big point. To require this oath of college students and not of citizens in general is to single out the students and to imply that their loyalty is questionable.

That is a gratuitous insult, and a serious one.

This was recognized by Congress when in adopting new labor legislation last summer, it repealed the Taft-Hartley statute's requirement of an anti-Communist oath by union officials.

The oath amendment was slipped into the education act almost by sleight of hand. Yet when Senator KENNEDY sought its removal, too many Senators lacked the courage to vote for its repeal. The Kennedy bill was maneuvered back to committee by a vote of 49 to 42.

The test oath is no protection for the Nation. But it is a gratuitous offense. Since the indignity is resented, it frustrates the very purpose of the education act, the training of specialists essential to the national defense. (From the St. Louis Post-Dispatch.)

Address by Samuel Rose

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

(Mr. FARBSTEIN was granted leave to extend his remarks by inserting address by Samuel Rose.)

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Samuel Rose, chief of contact, Central Office, Veterans' Administration, before delegates of the 32d Fleet Reserve Association national convention:

The Fleet Reserve Association. What a great outfit you are.

And what a grand feeling, to be here with you once again as the special representative of the Administrator of Veterans Affairs, Sumner Whittier. I bring you his greetings and his warm-hearted good wishes.

I am happy and proud to see all of you—my shipmates—and to receive the welcome I always do at your national conventions. I can assure you that this 32d national convention is no exception to the rule.

The Fleet Reserve Association membership carries its own special badge of honor. You don't just walk up a gangplank and sit down in an easy chair on the main deck, if you hope to become a shipmate in the Fleet Reserve Association. You have to complete 6 years of active service in the Navy or Marine Corps before you can hope to join up and become a member. In other words, it's a real privilege to belong to the Fleet Reserve Association.

It's good to see Charlie Lofgren aboard. Charlie has had some intimate encounters recently with surgeons at the Naval Medical Center in Bethesda, Md., but we must remember: One can push Charlie's head under salt water—but he's going to pop up again where we can all see and enjoy him. And it wouldn't be a Fleet Reserve Association convention without Schuyler Pyle—or Russell Langdon. It is unfortunate that because of an unhappy stroke of fate a familiar face is missing. I know you share my sorrow in the untimely and tragic passing of Shipmate Charlie McCarthy, the editor of Naval Affairs, his wife and sister. Charlie was a devoted shipmate and tireless worker. He will be missed.

Since we have dropped anchor in Texas, I want to pay tribute to a gallant soldier and an honorable gentleman, known, respected and admired far beyond the confines of the Lone Star State. I refer to the Honorable OLIN TEAGUE, chairman of the House Committee on Veterans' Affairs, and a sponsor of the Veterans' Pension Act of 1959, recently enacted into law by the Congress and signed by the President. He is a true friend and has served well the cause of veterans in America.

Speaking of the new pension law, I would like to say this. It modifies the pension programs for veterans of World War I, World War II, and the Korean conflict, and their widows and children. It does something new, something never before attempted, in rendering pension assistance to those whose need is greatest. It does this by providing a sliding scale of pensions, based on the income and the dependency status of the recipient.

I want to emphasize one further point. The new pension law does not go into effect until July 1, 1960.

Veterans, widows, and orphans now on the pension rolls or coming on the rolls before that date will be allowed to choose the present system of payment, or the new pension plan—whichever they prefer. VA will help them make the best choice by mailing them a form to be filled out to be followed by a detailed analysis of the new pension act. Writing to the VA will not speed things up.

I wish I could make you feel the wholehearted dedication of the VA as it seeks to serve veterans like yourselves everywhere in America. I wish Sumner Whittier himself could be here, to tell you in his eloquent way the inspiring story of the new, modern, streamlined, electronic-minded VA. It is a thrilling story.

The VA budget for the fiscal year 1960 totals up to more than $5 billion. It is a good budget, a hopeful budget for veterans and for those near and dear to them, because it demonstrates that the American people

have not forgotten the American veteran. It calls for more than $17 million in medical research, a record amount.

We have set aside $792 million, also a record amount, for inpatient care in our hospitals. This allows us a better staffing ratio and hence, improved care. We have set aside $84 million for outpatient care; that's a million and a half more than last year. We have set aside $47 million for maintenance and repair of our VA hospitals, and this too is a record figure.

And how much of this massive $5-billion-plus budget would you imagine is spent on administrative expense? Only 3 cents out of every VA dollar appropriated. Think of that.

You can bank on it, shipmates. When VA asks Congress for money to spend, practically all of it will be spent on service for veterans. That's the way we do business.

I want to mention one other medical fact. I mean the new authorized 125,000-bed policy for the VA hospital system. This might be termed the "Administrator's bill of rights," something dear to Mr. Whittier's heart—the freedom for the Administrator to assign beds where they are most needed, when they are most needed—and for the specific treatment that is most needed.

Other challenges are being met today by our new streamlined, electronic VA. One of them is the challenge of the aging veteran. Today, of more than 22½ million veterans, only about 6 million are over 45. But 12 years from now—and time moves fast these days—there will be only 6 million veterans under 45.

Today, almost half of the patients in our VA hospitals are 55 years of age, or older. We believe that the one important thing to an older veteran is the feeling that he is wanted; the feeling that there is something useful he can do, the feeling that he retains his self-respect.

And so we are seeking ways to establish good communications between the VA hospital, the VA domiciliary, and the nearby communities. We are interested in foster homes; we are interested in part-time jobs that are worth doing by veterans who want to do them well; we are interested in anything and everything that adds dignity and self-respect to the aging veteran.

This is our philosophy: We in VA are not in business to manufacture things. We are in business to serve human beings. Think of our GI insurance program. More than 6 million GI life insurance policies were in force at the end of August 1959. The face amount of those policies amounted to nearly $43 billion. What an invaluable stabilizing force in our Nation's economy. What a guarantee of future financial security to those near and dear to the veterans holding those policies.

It's the same hopeful story on our GI loan program. Think of 5,700,000 GI home loans guaranteed or insured by the VA with a combined value of more than $47 billion. Think of the unparalleled record established by veterans in meeting their GI loan obligations by having repaid in full more than 1,700,000 GI loans. Think of the national impact on the United States of all those houses built and occupied, all of those families setting up strong ties between their homes, the church, the school, the shopping center, the nearby communities.

Or think of the more than 10¾ million veterans who have received GI education and training over the years. Think of their amazing contribution to the sciences and the arts, to our industrial and business world. Think of what might have happened in America—the added perils we might have faced—had there been no GI bill for veterans. Home from war, their vigor has revitalized our colleges and universities.

We are a better nation, a stronger nation, a sounder nation, because of our veterans.

You and I know the answer. It is obvious. In serving the well-being of veterans, the VA is serving America. In assisting young veterans to improve their future, the VA helps America to improve its strength and stability.

I spoke a while ago of the VA budget of more than $5 billion. And do you know what the spending of that $5 billion actually represents? It is a tremendous investment in the growth possibilities of more than 22½ million fine Americans. It has already paid our Nation prodigious dividends. It will pay more and more, as the destiny of our Nation unfolds. This reminds me of a thought from the pen of a great American, Ralph Waldo Emerson. He wrote, "The true test of civilization is, not the census, nor the size of cities, nor the crops—no—but the kind of man the country turns out." In that gem of truth can be found the meaning of the facts I presented to you this morning.

To my shipmates of the Fleet Reserve Association I will say this: If you are puzzled about some benefits, if you want information or help or anything in connection with veterans' affairs—speak up. That is why I am here.

One thing is certain. I don't know any group of veterans I admire more than you shipmates of the Fleet Reserve Association. As I glance about me, I can see that some of you are gray—some of you don't have too much hair of any kind. But I can also see, when I gaze at your eyes, that every one of you here is young.

You remind me of a certain admiral, now departed. You may know who I mean. He was going aboard his ship one day. A sailor whispered: "There goes that old so-and-so." The admiral heard it. He turned around and said, "Call me a 'so-and-so' if you please. But don't you ever call me old."

That's the spirit of the Fleet Reserve Association. That's how I feel when I come to your conventions—my shipmates—my dear friends.

God bless you all.

Loyalty and Academic Freedom

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, January 11, 1960

Mr. NEUBERGER. Mr. President, last year the Senate defeated an attempt to repeal the loyalty oath and disclaimer affidavit requirements of the National Defense Education Act, and by a vote of 49 to 42 recommitted S. 819 to the Senate Committee on Labor and Public Welfare. But the Senate's action in removing the bill from the floor and returning it to committee has neither killed nor hidden the issue which it raised.

In the New York Times Magazine of December 20, 1959, there appeared an article by A. Whitney Griswold, president of Yale University, entitled "'Loyalty': An Issue of Academic Freedom." Yale University, like Reed College in Portland, Oreg., has refused NDEA funds in protest against politico-test oath provisions which the act contains. In clear, concise language, President Griswold explains exactly what is wrong with such loyalty oaths. He focuses his remarks on the negative disclaimer affidavit.

DISCLAIMER AFFIDAVIT DISCRIMINATORY

President Griswold points out that the only recipients of Federal benefits to whom the disclaimer affidavit now applies are students and teachers in colleges and universities. Farmers and veterans do not sign such a statement. Nor do social security recipients. Officials of railroads, steamship lines, and airlines are not called upon to swear that they are not disloyal each time they handle a Government subsidy check. Why should students and faculties be treated differently, President Griswold asks? Under the NDEA, he points out, "In one and the same breath they are told that they are the Nation's first line of defense—and the Nation's poorest security risk. They are called upon to put forth their best effort in the name of national security; yet they alone are obliged to submit to certain qualifications concerning their loyalty."

And colleges and universities—which supply 10 percent of each loan—are forced to perpetuate this discriminatory practice by administering the disclaimer affidavit if they participate in the National Defense Education Act. Some schools have decided that they would not be justified in denying needy and deserving students the help made available by such activities as the student loan program; they have protested vigorously this unfair provision, but continued to take part in the program. Others, like Yale and Reed, have declined to participate.

LOYALTY CANNOT BE COERCED

President Griswold points out that the entire concept of the disclaimer affidavit is a fallacious one. Such an oath is futile in achieving its declared purpose—loyalty to the Government. "Loyalty cannot be coerced or compelled," he states. "If men are born loyal, the only kind of loyalty that survives infancy in any thinking person is the kind that survives curiosity and withstands criticism and even doubt."

But if the NDEA disclaimer affidavit suffers from the faults of discrimination and ineffectiveness, it is guilty of a graver philosophical indictment. As President Griswold declares, the disclaimer affidavit, joined with the affirmative oath of allegiance in the act, distorts the combination and gives it the character of a political test oath—a type of declaration said by Alexander Hamilton to "invert the order of things, and instead of obliging the State to prove the guilt, in order to inflict the penalty, it was to oblige the citizen to establish his own innocence to avoid the penalty." The effects are those of bills of attainder.

ACADEMIC FREEDOM ESSENTIAL

President Griswold concludes his article with these words:

A people that is afraid to expose its political and social institutions to the curiosity and criticism of the rising generation is not free; by whatever method it whispers this fear to itself, it shouts its insecurity to the world.

It is not the disclaimer affidavit that will make our colleges and universities bulwarks of our security, nor even the oath of allegiance, which they accept. It is our trust in them to pursue the course the Nation has

set for them—a course they can pursue in freedom and in no other way.

Mr. President, I ask that President Griswold's cogent remarks appear in their entirety at the conclusion of my remarks in the Appendix of the RECORD.

The VICE PRESIDENT. Is there objection to the request of the Senator from Oregon? The Chair hears none, and it is so ordered.

(See exhibit 1.)

Mr. NEUBERGER. Mr. President, S. 819, introduced by the Senator from Massachusetts [Mr. KENNEDY] and the Senator from Pennsylvania [Mr. CLARK] would provide for repeal of both the positive loyalty oath and the negative disclaimer affidavit in the National Defense Education Act. I announced my support of this proposal immediately following its introduction. I was proud to back it with my vote when the Senate considered it on June 29, 1959. I regret that the majority of Senators present for that vote chose to recommit the bill, even after it had been modified so as to repeal only the obnoxious negative affidavit but retain the loyalty oath, which, though inappropriate and unnecessary, is affirmative.

PRESIDENT FAVORS REPEAL

On December 2, 1959, President Eisenhower told his news conference that he would favor repeal of the non-Communist affidavit. During Senate hearings last year Arthur S. Flemming, Secretary of the Department of Health, Education, and Welfare, declared that the oath and affidavit requirements of the National Defense Education Act are unnecessary, useless, and discriminatory.

In 1959, Congress eliminated the affidavit of nonbelief in overthrow of the Government and nonmembership in the Communist Party from union officials before they could use the services of the NLRB.

Administration backing exists for repeal of the disclaimer affidavit. Congress took a similar action last year in repealing such a requirement in the Taft-Hartley Act. I hope the Senate Labor and Public Welfare Committee will soon rereport S. 819 and that the Senate will again have an opportunity to eliminate this most undesirable addendum from the National Defense Education Act. I favor elimination of the entire section 1001(f) of title X of the National Defense Education Act. But certainly we must remove the distasteful and unfair "test oath" feature which violates the very principles which motivated enactment of the National Defense Education Act. Maintenance of this feature actually injures the very freedoms which it is said to protect.

EXHIBIT 1

LOYALTY: AN ISSUE OF ACADEMIC FREEDOM

(By A. Whitney Griswold)

(President Griswold of Yale explains why many universities, including his own, have refused Federal funds for student loans in protest against loyalty affidavits.)

A debate of large dimensions is going on over the issue whether loyalty oaths and affidavits shall be required of college students seeking Federal loans. But the central issue is not always entirely clear to those directly involved, and is blurred and confused in the public mind. It is not a question of being for or against the Constitution, for or against loyalty. It is a case of two different groups of Americans talking at cross purposes about the same thing—namely, the security and welfare of the Nation and the means of strengthening both through higher education. These are the only terms in which the central issue of the controversy can be accurately identified and understood.

Since the National Defense Education Act went into effect a year ago last September, the great majority of the Nation's colleges and universities have raised their voices in criticism of one particular provision. This is the disclaimer affidavt that accompanies the oath of allegiance, and that is required of all recipients of the act's benefits. The affidavit requirement appears in title X, section 1001(f), the full text of which reads as follows:

"No part of any funds appropriated or otherwise made available for expenditure under authority of this Act shall be used to make payments or loans to any individual unless such individual (1) has executed and filed with the Commissioner an affidavit that he does not believe in, and is not a member of and does not support any organization that believes in or teaches, the overthrow of the United States Government by force or violence or by any illegal or unconstitutional methods, and (2) has taken and subscribed to an oath or affirmation in the following form: 'I do solemnly swear (or affirm) that I will bear true faith and allegiance to the United States of America and will support and defend the Constitution and laws of the United States against all its enemies, foreign and domestic.' The provisions of section 1001 of title 18, United States Code, shall be applicable with respect to such affidavits."

Individually, and through such representative organizations as the Association of American Colleges, the Association of American Universities, the American Association of Land Grant Colleges and State Universities, the American Association of University Professors, and the Association for Higher Education of the National Education Association, the colleges and universities have protested this affidavit and have urged its repeal.

I

The Government has not been unresponsive to their views. Last winter the Secretary of Health, Education, and Welfare, Mr. Flemming, testified in their support, and Senators CLARK of Pennsylvania and KENNEDY of Massachusetts, introduced a bill repealing section 1001(f) in its entirety. Hearings on this bill, which had the approval of the Department of Health, Education, and Welfare, were held before the Senate Committee on Labor and Public Welfare in April and May, and the committee reported the bill favorably by a vote of 12 to 3.

After debate in late July, however, the bill was amended to eliminate the disclaimer affidavit but retain the oath of allegiance, and then sent back to committee. Finally, on December 2, on the eve of his departure for his trip abroad, President Eisenhower spoke out categorically in favor of the affidavit's repeal. There the matter rests awaiting reconsideration by Congress when it assembles next month.

The colleges and universities are not protesting the oath of allegiance. They do question its appropriateness as a condition to financial aid for college students, as distinct from its traditional usage in connection with the assumption of a public office or trust; and they also question whether more general use may not wear it thin.

Too, they are mindful of the historic fact that any oath required by the state can be misused. Nevertheless, they accept the oath of allegiance. By itself the oath is no more than an affirmation of the duties every citizen owes to his country, whether he takes the oath or not. It is thus coextensive with and expressive of the basic law of the land. The disclaimer affidavit, on the other hand, extends beyond the basic law of the land into the realm of belief and conscience, where definitions are vague and actions become matters of debate. What the colleges and universities are objecting to is this disclaimer affidavit.

II

Unfortunately, these are not the terms in which the issue is commonly presented. Although the position of the colleges and universities is extensively documented in the printed hearings on the Clark-Kennedy bill and in the CONGRESSIONAL RECORD, and has attracted widespread press attention, what comes through to the public is an oversimplified impression of fastidious intellectualism finding fault with the law, of the "egghead" refusing to accept the common lot of the citizen and the patriot.

What's wrong with loyalty oaths? We have all pledged allegiance to the flag as schoolchildren. Everyone who takes out a passport swears to uphold the Constitution. Why should anyone hesitate to take such an oath in any circumstances? Why should any American object to disclaiming beliefs abhorrent to all Americans? These and less temperate questions imputing subversiveness and disloyalty are evidence of a wide gulf of misunderstanding between the public and the colleges and universities.

III

A natural reason for the position of the colleges and universities is that no one enjoys being doubted when everyone else is trusted. Yet this is the way the colleges and universities are made to feel by the disclaimed affidavit. The affidavit originated in the Taft-Hartley Act. From this act it was written into the National Science Foundation Act of 1950, and then into the National Defense Education Act of 1958. Farmers, veterans, and beneficiaries of social security (to say nothing of other recipients of Federal benefits, such as the officials and employees of railroads, steamship lines and airlines) have never had to make a disclaimer affidavit. In 1950 it was dropped out of the Taft-Hartley Act. This means that the only recipients of Federal benefits to whom it now applies are students and teachers in colleges and universities.

To the latter, this seems like the short end of the stick. They do not see why their students and faculties should be treated differently from any other individuals, groups, professions, or occupations that receive Federal subsidies or loans. And it is all the harder for them to appreciate the justice of this when they reflect on the role they are being asked to perform and the manner in which they are being asked to perform it. In one and the same breath they are told that they are the Nation's first line of defense—and the Nation's poorest security risk. They are called upon to put forth their best effort in the name of national security; yet they alone are obliged to submit to certain qualifications concerning their loyalty.

IV

To them, this seems worse than discrimination in the ordinary sense of the word. It seems like a vote of no confidence from the very party that is asking them to come to its aid, at the very moment and in the very circumstances in which that aid is most urgently needed.

Is this the result of a native anti-intellectualism that stubbornly survives even the most serious crises? Whatever its origin, the fact is that the most important act of Congress to identify education with the national interest since the Land Ordinance

of 1785 and the Morrill Act of 1862 singles out higher education from all professions and occupations as a dubious loyalty risk—which goes far to explain the objections of the colleges and universities.

Feeling as they do, the colleges and universities are all the more averse to being parties to the discriminatory practice. Yet this, too, is forced upon them by the terms of the National Defense Education Act. In the student loan program the institution is required to invest 10 percent of its own funds in each loan, and to administer the disclaimer affidavit and oath of allegiance to each recipient.

Thus the institution not only becomes an active agent in administering an affidavit of which it does not approve; it also is forced to adopt a double standard for its students, as only those who need financial assistance are required to take the affidavit and oath. This places the institution in a moral dilemma which none enjoys, and which a number have decided they could resolve only by refraining from or withdrawing from participation in the loan program.

V

It is true that repeal of the affidavit will not wholly relieve the colleges and universities of the discriminatory practices of which they complain. Students and faculty accepting benefits under the terms of the National Defense Education Act will, presumably, still be required to take the oath of allegiance, while others will not. But, as already pointed out, the colleges and universities regard the oath of allegiance as a far less onerous requirement than the disclaimer affidavit, and one that, in present circumstances, is supportable.

Another and purely practical reason for the objection of the colleges and universities to the disclaimer affidavit is their belief that it is inherently futile. They know that similar affidavits have led to some convictions for perjury. But they do not think the affidavit can be relied upon either as a safeguard against disloyalty or as a means of inculcating loyalty.

That no truly subversive or treasonous person would hesitate to use it—or the oath of allegiance, for that matter—as a cloak for his intentions has been proved, rather than disproved, by the perjury convictions.

VI

On the other hand, the affidavit cannot create loyalty. Loyalty cannot be coerced or compelled. If men are born loyal, the only kind of loyalty that survives infancy in any thinking person is the kind that survives curiosity and withstands criticism and even doubt. Such loyalty may and usually does have an instinctive base; but if the opportunity to satisfy curiosity and answer criticism is limited, or qualified, or made conditional upon the acceptance of restraints, the instinctive base of loyalty is undermined.

The only loyalty upon which true reliance can be placed is the kind evoked by the inherent virtue of the cause or institution or individual toward which the loyalty is felt. In creating this kind of loyalty, oaths of any sort are of little value compared to the devotion of a man who has been free to examine and evaluate the evidence and, on the strength of that experience, in Cromwell's words, "knows what he fights for and loves what he knows."

While the oath of allegiance may have the effect of recalling or stimulating such a sense of loyalty in the person who takes it, that effect is hardly strengthened by the accompanying affidavit. When a man pledges his allegiance to the Government and the Constitution, either we take him at his word (in which case the disclaimer affidavit becomes tautological) or we doubt his word and say to him (as the affidavit seems to say), "Even though you have just affirmed your allegiance to the Government and the Constitution, you are still not to be trusted." In the latter case the affidavit implies perjury in taking the oath of allegiance. In either case it is difficult for the colleges and universities to see how it will inspire loyalty in the rising generation.

VII

The question now presents itself, Why are the colleagues and universities objecting to the affidavit in the National Defense Education Act, when for nearly a decade they have acquiesced in it in the National Science Foundation Act?

The answer is that, although they have not liked it in either act, in the National Science Foundation Act the affidavit was the responsibility of the individual receiving the benefit. But in the National Defense Education Act, through investment in the loan program and administration of the affidavit, the institution itself is involved.

Again, the broader scope of the National Defense Education Act, its trail-blazing character, and its weightier impact on the younger generation make the affidavit stand out more prominently as a matter of principle. It was also felt that the National Defense Education Act might be establishing the pattern for Federal support of higher education and setting the example for governmental relations with the colleges and universities for the indefinite future; and in this context matters of principle assumed special importance. When the framers of the National Defense Education Act followed the precedent of the Taft-Hartley and National Science Foundation Acts, and the disclaimer affidavit seemed about to be frozen into the system, the colleges and universities decided the time had come to make their opposition known.

But the case of the colleges and universities rests on more than mere discomfort at being objects of and parties to discriminatory practices. One possible remedy for any such practice is to generalize it. If every recipient of Federal benefits and all students in higher education were required to make the affidavit, the colleges and universities could no longer plead that they were suffering from discrimination.

The truth is they would find this cure no better than the disease. Justice Holmes once said that questions like this were better answered by a page of history than a volume of logic. The fundamental position of the colleges and universities is rooted in history, and it is only through an understanding of that history that we can fully understand what they are driving at today. The gravamen of their case against the affidavit is that, in juxtaposition to the affirmative oath of allegiance, it distorts the combination and imbues it with the nature of a political test oath.

VIII

This is the historic way in which such oaths have been constructed. They invariably begin with simple declarations or affirmations of allegiance, like the ancient oath of fealty or the present oath of allegiance. They are then expanded (as by the disclaimer affidavit) to include more and more avowals or disavowals of disbeliefs, doctrines and associations, as well as denials of unpopular or criminal acts. Thus they project the authority of the state into the realm of belief and conscience where, according to our political tradition, it has no business; and the individual may be forced to acquit himself of crimes and offenses left so vague that he can be convicted on the mere appearance of evil if he cannot be convicted of its practice.

Experience has taught us lessons about political and religious test oaths which are all too easily forgotten. It was under the scourge of these oaths that our Protestant ancestors emigrated from England to settle in America; that our Catholic ancestors lost their lands and lives; that Sir Thomas More died telling his daughter, "It was a very hard thing to compel me to say either precisely with it against my conscience to the loss of my soul, or precisely against it to the destruction of my body"; that Puritan dissenters and Quakers went to jail, sat in the stocks and had their ears cut off.

The oaths that caused these sufferings grew to be over a page long, and, in the words of Sir Frederick Pollock, became "swollen with strange imprecations and scoldings," until in 1868 they were at last abolished in favor of the simple oath of allegiance:

"I, ——— ———, do swear that I will be faithful and bear true allegiance to Her Majesty Queen Victoria, her heirs and successors, according to law. So help me God."

IX

These things are easily forgotten, but colleges and universities, where history is studied and the past is ever present, remember them. They were fresh in the minds of the framers of our Constitution, fresh enough for Alexander Hamilton to denounce test oaths as "a subversion of one great principle of social security, to wit: That every man shall be presumed innocent until he is proved guilty."

Their effect, said Hamilton, "was to invert the order of things, and instead of obliging the State to prove the guilt, in order to inflict the penalty, it was to oblige the citizen to establish his own innocence to avoid the penalty. It was to excite scruples in the honest and conscientious, and to hold out a bribe to perjury." All this, Hamilton concluded, was "repugnant to the true genius of the common law" and "unknown to the Constitution."

X

The colleges and universities recall more recent experiences with test oaths than those which began with the marital troubles of Henry VIII. They recall the oaths of religious conformity that bound the early American colleges in the 18th century and were not finally sloughed off until the 19th (by Oxford and Cambridge in the middle of the 19th)—oaths that militated against Catholics and Protestant sects dissenting from the established religion of the institution.

They recall, too, the loyalty oaths imposed by Congress in the reconstruction period after the Civil War, of which Lincoln declared: "I have found that men who have not even been suspected of disloyalty are very averse to taking an oath of any sort as a condition of exercising an ordinary right of citizenship."

In the words of the Supreme Court (in Ex parte Garland), "All enactments of this kind partake of the nature of bills of pains and penalties, and are subject to the constitutional inhibitions against the passage of bills of attainder, under which general designation they are included."

For the benefit of a generation which, fortunately for it, has less knowledge of them than the men who drafted the Constitution, bills of attainder were arbitrary bills which extinguished the civil rights of an individual and enabled the State to impose upon him such penalties as loss of property, prison, and death, without benefit of trial by jury. Bills of attainder and test oaths grew up together in the same country, in the same period of history, and, although they are not identified with one another in modern law, they partook of the same essence in their day and served the same brand of justice.

That oaths of allegiance, even without the objectionable features of the historic test oaths, can be misused as instruments of

oppression was proved by Hitler. He merely required that civil servants and professors swear allegiance to him. That was all he needed to give the semblance of legality to whatever coercive steps he chose to take to compel their adherence to the Nazi party line.

XI

It was in no small measure his use of the oath that drove many German university professors into exile—among them many of the leading nuclear scientists who enabled the United States to produce the atomic bomb instead of Germany. They and their fellow exiles in other fields of learning, finding posts in American universities, have testified to the dangers of all oaths, however innocuous their beginning, in a way that has undoubtedly made their American colleagues sensitive to those dangers.

The colleges and universities do not believe that the oath of allegiance in the National Defense Education Act will be used as Hitler used his oath of allegiance. Indeed, as I have already said, they have accepted it. But the German experience, with its peculiarly direct and intimate significance to our college and university community, and that community's continually fresh memory of the political and religious test oaths in Anglo-American history, make it that much more anxious lest the disclaimer affidavit bend the present oath of allegiance in the direction of either. Hence it is that much more critical of the affidavit and more strongly in favor of its repeal.

XII

Underlying this concern with test oaths, in fact underlying the whole position of the colleges and universities in this controversy, is their concern for freedom. For centuries, in Europe as well as in England and America, they have struggled for the right to pursue learning for its own sake without interference by church or state. They have done so not because they thought society owed them this right as a mark of respect or a special privilege, but because they have regarded it as a functional necessity identical with freedom of the press and similar to freedom of speech, freedom of religion, and freedom of assembly.

In this historical perspective, they see a consistent use of oaths like the disclaimer affidavit as instruments of coercion, condium. Nazi Germany is a glaring example. of learning as much as they are opposites of freedom. If, now, our colleges and universities are to serve the cause of freedom and discharge the solemn duties with which the public, through the National Defense Education Act, has vested them, they can do so effectively only through procedures consistent with both freedom and learning.

XIII

Again and again history affords object lessons of what happens to learning when it is denied the freedom that is its natural medium. Nazi Germany is a glaring example. Anation that cannot trust its intellectuals cannot trust itself. A people that is afraid to expose its political and social institutions to the curiosity and criticism of the rising generation is not free; by whatever method it whispers this fear to itself, it shouts its insecurity to the world.

It is not the disclaimer affidavit that will make our colleges and universities bulwarks of our security, nor even the oath of allegiance, which they accept. It is our trust in them to pursue the course the Nation has set for them—a course they can pursue in freedom and in no other way.

New Agony for Russian Jews

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in a recent issue of Life magazine. It is indeed shocking to read of the persecution of the Jews in Russia, especially in view of the fact that Mr. Khrushchev, while at the National Press Club here in Washington, vehemently denied that such discrimination exists in Russia today.

NEW AGONY FOR RUSSIAN JEWS—ANTI-SEMITIC DRIVE BRINGS SUPPRESSION AND VIOLENCE

(By Patricia Blake)

Over the last several months the Soviet Union's campaign against Jews and Judaism has intensified. All over the country synagogues have been closed, prayer meetings have been raided and newspaper articles have appeared attacking Jews as "thieves" and "enemies of socialism." In this climate of official attack, hoodlums have felt free to stone and set fire to synagogues. Jews have been severely beaten and even killed.

The extent and the virulence of the new campaign, which may come as a shock to the outside world, does not surprise the Jews of the U.S.S.R. They have had to live with organized anti-Semitism for more than a decade. "The government regards Christianity and Islam as the 'opium of the people,'" a Gentile Russian told me in Moscow recently, "but it treats Judaism as if it were poison gas. What's more, it doesn't matter whether a Jew is religious or not. He's pushed around just because he's a Jew."

Less than 15 years have passed since Russia valiantly pushed back the German armies which had slaughtered over two million Jews in Soviet territory alone. Yet since that victory the Jews of the U.S.S.R. have known little else but deprivation and despair. No other minority has been attacked so relentlessly and so mercilessly by the Kremlin.

Soviet officials will not admit to this discrimination. Khrushchev, when asked about it at the National Press Club in Washington during his visit, denied it vehemently. There is, after all, no ideological justification for a Communist to be anti-Semitic; the equality of all peoples is a cornerstone of Marxism-Leninism.

"Don't ask the doctor, ask the patient" goes a Jewish saying told to me in Russia in connection with official denials of anti-Semitic policy. During my two months in Russia, I followed this advice and talked with scores of Jewish "patients"—old and young people, intellectual and workers, believers and agnostics. From nearly all I heard the same story. As adherents of a despised religion, Jews are allowed far fewer facilities for worship than any other faith. As members of an alien nationality, they are being systematically excluded from higher education, government service, medicine, teaching and other professions.

The chief showplace of Judaism in Russia is the central synagogue of Moscow. The cavernous 80-year-old structure is empty on weekday mornings, but upstairs in the gallery where women sit during services, some older men and boys, in pairs, pore together over antique volumes. These, chief Rabbi Levin explained, are the yeshiva (Jewish theological school) teachers and students studying the Talmud. Other faiths—Russian Orthodox, Armenian, Moslem—have big classrooms and extensive libraries, but here there are no classrooms, no libraries. Students study in nooks under staircases, in corridors, in the basement.

There are 3 million Jews in the Soviet Union, 600,000 in Moscow alone. Yet Rabbi Levin's yeshiva has only 18 students—and it is the only one in the nation. In all Russia these 18 boys are the only ones allowed to study Hebrew, the only ones permitted any education in the traditions of Judaism.

The next morning, the Jewish Sabbath, I went to another one of the three synagogues in Moscow. It was typical of the facilities accorded Jews for worship: a small dilapidated wooden building, shaped like a quonset hut, standing in a muddy courtyard. Only a faded Star of David identified it. Some worshipers were closely wrapped in the ritual shawls which Orthodox Jews wear during prayer. The shawls were tattered, patched and stained with age. The men's headgear was varied and fanciful. Instead of the traditional black skullcaps—these, like all other religious articles, are not available in Russia—they wore Russian fur hats or the brightly embroidered beanies of Central Asia which sell for a few rubles at any department store.

Some of the worshipers sat huddled together in their seats, swaying and moaning their prayers. Others roamed the aisles like sleepwalkers, their eyes shut, their faces distorted by suffering, praying at the top of their lungs. Louder than the rest was the cantor's rhythmical chant which rose, broke now and then like a sob, was silent and rose again. Although the ritual of Jewish Orthodox services is the same around the world, the cry of these worshipers had a special quality. The destruction of the temple, the dispersion of the Jews to hostile lands, the massacres, the ghettoes, the pogroms, the gas chambers of Hitler and the slave camps of Stalin—the whole tortured history of a people was contained in that cry.

A small worn hand tugged at my sleeve. Would I like to share her prayer book, an old woman asked. I leafed through the ancient volume which was carefully bound in oilcloth. "What's this?" I pointed to a prayer across which she had drawn two thick black lines. "That's a prayer to Czar Alexander III and his family," she answered. I turned to the title page. The book was dated 1891. Jews must preserve these antiques preciously; only 3,000 copies of the Hebrew prayer book have been printed in Russian since the revolution, and only a few hundred were ever distributed.

When the old woman found out I was an American, she called some of her friends in the gallery to see me. I overheard one woman's whispered query, "Is she a Communist?" Someone said angrily, "Would she be here if she were?"

The women asked many questions. Is there as much antisemitism in America as there is here? Are there Yiddish theaters, Yiddish newspapers and Yiddish books in America? (None is allowed in Russia but the United States has a continuing Yiddish language culture.) Would I take messages to their relatives? What could I tell them about Israel?

I was told many personal histories of Jews under Communism. Jews spoke about the black years between 1948 and 1953 when they were terrorized by mass arrests, deportations and executions. One young man told me that at the time of the "doctors' plot" in 1953, when a group of Jewish doctors—later exonerated—was accused of trying to kill high government officials, Jews in Moscow were afraid to go out in the streets for fear of being beaten up. "My wife and I had a little bag packed with a few things for ourselves and our baby standing by our door. We all expected to be arrested and deported to Siberia. Things have got better since then for us Jews. It's been like moving from the death house to a common cell."

A middle-aged Jewish teacher in a small Russian town provided a description of life in this common cell.

"Before the war I had a lot of close friends who were gentiles. Anti-Semitism was taboo in this country and just unthinkable among educated people. But when the Nazis brought their racial theories with them into Russia, they fired up a lot of latent anti-Semitic feeling in all kinds of peoples—peasants, workers, even intellectuals. Although Jews received the third highest proportion of decorations for bravery among the many Soviet peoples who fought in the Red army, we were always accused of malingering or of bribing our way out of threatened areas. Practically everything that went wrong was blamed on the Jews. I think it was then that Stalin first caught on to what fine scapegoats Jews made for the horrors of war—and the horrors of peace in the Soviet Union.

"Afterward," he continued, "the anti-Semitic myths that sprang up during the war just stuck with people. Hardly a month goes by now that I don't hear some crack about how the Jews shirked the war effort. Jews have even been arrested and tried for trying to sell eastern Siberia to the Americans. Since the Government treats us as if we were security risks, it follows that we shouldn't be educated too much, or serve as officers in the army or as officials in the government.

"I've been lucky. I didn't get arrested or even fired from my job during the 'Black Years' because I live in a small town where mathematics teachers are hard to come by. But my son has been beating on the door of a university for 3 years now, even though he had the second highest marks in his school graduating class, and he isn't any more religious—I'm sorry to say—than Khrushchev himself. The only way I could get him in would be to slip the head of the university examining board 10,000 rubles [$1,000]. Even if I could afford it, I wouldn't want to demean myself and my son that way.

"You see," he said, "although we Jews walk the same streets, live in the same apartment houses and shop in the same market places as other people, we are confined to a social and professional ghetto. It's been years since I've had a real friend among the gentiles in this town. Maybe some of them would like to be friends again with the Jews, now that Stalin is dead. But what have we got in common any more? Sure, they've had their troubles with the Government too, but I, as a Jew, have an ache in my heart that only other Jews have shared."

The story of a 22-year-old Jewish student in Leningrad reveals much about how his people have managed to survive 25 centuries of persecution. "I'm a half-Jew," he said. "My Jewish mother married my father in the early thirties when a lot of Jews thought the Revolution had finally put an end to anti-Semitism. In fact, both my parents were party members, and neither of them was religious. I was never brought up to speak Yiddish, and I didn't know a thing about Jews—their history, their culture, their religion. I'd never even been to a synagogue.

"My father, who was a party official in Leningrad, was arrested during the purge of 1937 and never returned from Siberia. In 1950 my mother lost her job as a bookkeeper just because she was Jewish, and she never got it back. She died last year. When I entered the university, my friends told me how lucky I was: I probably wouldn't have been accepted if my passport hadn't stated I was Russian."

(Every Soviet citizen must carry a passport, even inside the country, and this passport states the nationality of the owner: Ukrainian, Armenian, Georgian, Russian, Jew, etc. The only nationality that carries an onus is that of Jew. A half-Jew, however, is often permitted to choose the nationality of his gentile parent.)

"I 'lost' my passport last year," the young man explained, "and when I applied for a new one, I put myself down as a Jew. This means that my chance of getting into graduate school has practically evaporated, but I don't care. Why shouldn't I be like other Jews, for better or for worse? I feel like a Jew and I'm going to find out what that means. I often go to the synagogue now, and I'm learning Hebrew from Radio Israel. Maybe one day they'll let us go to Israel." He paused thoughtfully. "No matter how they beat us down here, I know one thing: we Jews will survive only if we stick together."

In Kiev, the capital of the Ukraine, the Jews have long and bitter memories. There in the 17th and 18th centuries the Cossacks slaughtered hundreds of thousands of Jews. The Russian czars imprisoned Jews in the Pale of Settlement, a huge ghetto. Government-inspired progroms in the 1880's and in 1905 drove millions of Jews to settle in the United States. And, as Jews can hardly forget, the Nazis were able to murder 2 million of their people in the U.S.S.R. partly because the Soviet Government made practically no attempt to evacuate them from the path of the advancing German armies.

It is in this historical context that 180,000 Jews now live in Kiev. Recently the Ukraine has again been the scene of pogroms. Synagogues have been broken into and worshipers beaten up. "The Government isn't exactly responsible for the pogroms," said a young Kiev Jew. "The police puts a stop to the violence before it goes too far. Maybe the local authorities don't even know about the pogroms before they start. But on the other hand, very little is accidental in a police state. After all," he added bitterly, "Ukrainians have always hated the Jews. The Russians are smart enough to turn local anti-Semitism to their own advantage. Pogroms give the Ukrainians a chance to let off some of the hatred they might otherwise turn against Moscow."

In Kiev itself the central synagogue has not been subject to violence. The Government has merely turned it into a state puppet theater. Only one synagogue remains, an old ramshackle structure where this year the authorities forbade the baking of matzos, the unleavened bread eaten by Jews on Passover, and arrested many people who took a day off from work to celebrate the festival. No matzos, no kosher butcher shops, no Jewish life of any kind is permitted in Kiev, except that which is contained in the hearts of the people.

But Kiev has a monument—of sorts—to the Jews of the Ukraine. It is Babi Yar ("Grandmother's Ravine"), the place where the worst wartime massacre of the Jews occurred.

It is difficult for a visitor to get to Babi Yar. Intourist officials have "never heard of it," Ukrainians shake their heads and profess ignorance of its whereabouts. Finally, I persuaded a taxi driver to take me to it.

At Babi Yar I found a garbage dump and a few scruffy trees on the edge of a ravine. I walked for a while among tin cans and pop bottles until I found an elderly man who was dumping refuse from a truck.

Did he know where the massacre had taken place? He stopped working and led me to an open space. "Here," he said, gesturing vaguely, "the Germans and the Ukrainian collaborators set up desks. When they had taken the Jews' papers and clothes, they lined them up on the edge of the ravine and shot them. They killed 96,000 in 3 days."

As for a monument, the old man said that Khrushchev, who was Communist party chief in the Ukraine after the war, had made a speech promising to build one to the dead of Babi Yar. "But you see, the only monument we have out here is garbage." "What happened to the bodies?" I asked. "They were left here to rot. But there's a Jewish cemetery nearby. It might be worth your while to go there."

The road to the cemetery was a stream of mud. I asked the driver to wait and waded a quarter mile to the entrance. Although Jews take great care of their cemeteries, this place was wild and untended. Tombstones had fallen over, the low metal fences surrounding plots were flat on the ground, high grass and weeds grew everywhere. There were no fresh graves: the newest tombstone was dated 1938. Some young girls were seated on a bench, talking quietly. "Are any of the victims of Babi Yar buried here?" I asked. They rose to leave without answering. I followed them, repeating my question. One girl dropped back and said diffidently, "Nobody is buried here any more. Jews are buried along with everybody else now."

"Why is the cemetery so run down?" I asked.

She gave me a look of utter panic. "We've had some trouble here," she said. She would say nothing more.

But later on I learned what the trouble was: a mob of Ukrainians had desecrated the cemetery last year, knocking down tombstones and chalking messages such as "We are starting with the dead and we will continue with the living." The day they picked for this desecration was September 29, the anniversary of the massacre of Babi Yar.

Space Vehicle Speedup Likely To Double Outlays

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, January 11, 1960

Mr. RANDOLPH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Space Vehicle Speedup Likely To Double Outlays," which was published in the New York Sunday Herald Tribune on January 10, 1960.

The author, Allen M. Smythe, is a financial writer who has specialized on defense subjects. He points out the large sums which are scheduled to be spent by the Department of Defense and the National Aeronautics and Space

Agency for the development of spaceships and satellites under present plans.

It is my belief, Mr. President, that citizens of this country should become increasingly aware of the costs of the space program and of the facts concerning this development.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SPACE VEHICLE SPEEDUP LIKELY TO DOUBLE OUTLAYS

(By Allen M. Smythe)

President Eisenhower's statement in his state of the Union message to Congress that he would ask that funds for space exploration be doubled could mean that the National Aeronautics and Space Agency and the Pentagon each would spend on their space efforts an additional $500 million over the present fiscal year 1960 budgets.

The present NASA budget is slightly over $500 million, with a strong probability of a deficiency appropriation appeal to the Congress in order to expedite some of its space-age programs. Projects under way have convinced NASA officials that the 1961 budget should be at least $1,050 milion. Some scientists urge greater efforts and even more funds to narow the 3-year Soviet lead in space explorations.

The Pentagon has 14 projects which have a slight military value but are primarily space projects. Congress established the Advanced Research Projects Agency within the Department of Defense to handle these projects. They will cost nearly $550 million this year. ARPA officials recently have distributed most of these projects to the separate services.

NASA funds and top priority efforts over the next 5 years will center mainly on the development of large rocket engines which serve as the first stage of any launching program. The three most important projects in their order of completion are the Centaur, Saturn, and Nova.

TO OUTDO SOVIETS

The Centaur, expected to cost $400 million, will be operative late in 1961 and should enable this Nation greatly to exceed any of the Soviet exploits. It will use an Atlas ICBM rocket as its first stage. A pair of 15,000-pound-thrust liquid hydrogen propelled engines, built by Pratt & Whitney, will serve as second stage. For light weight, air vehicles as third stage could be used.

The Centaur should launch an 8,000-pound vehicle in orbit about 300 miles high. It could push 3,000 pounds of metal and instruments into deep space or for interplanetary exploration. It could soft-land 750 pounds of instruments on the moon.

The Saturn, which ultimately will cost $800 million, recently was transferred from the Army to NASA by the President. It is a first-stage booster engine to be made from a cluster of eight improved Jupiter type rockets. This 1,500,000-pound-thrust booster should be completed late in 1961. A year or so later, the three additional stages, all probably liquid hydrogen propelled, will be able to launch 35,000 pounds of air vehicle in low orbit around the earth.

The Saturn could also be the first stage for placing 12,000 pounds on another planet; 4,000 pounds of instruments could be soft-landed on the moon. Some $54 million was spent by the Pentagon on this project last year. NASA has $70 million to spend this year.

The Nova will require at least $1 billion, and should dwarf all Soviet capabilities. NASA has issued a $102 million contract to North American Aviation to build a 1,500,000-pound-thrust rocket by July 1963. A cluster of six of these will form the first stage of a five- to seven-stage launching of air vehicles.

The final program should be completed in 1965 and should easily launch a 40,000-pound platform 22,000 miles high in orbit at the same revolution of the earth. This permanent and apparently stationary platform above the earth could serve a variety of scientific space programs.

The Nova also could serve to soft-land 30,000 pounds on the moon and return 3,200 pounds to the earth.

The ARPA unit in the Pentagon started many space projects that the armed services considered to be valuable aids to their military ICBM and other strictly military weapons. These included such projects as detection devices for nuclear explosions, weather observations, photographic satellites, missile and spaceships warning satellites.

Details on these projects are classified. One called Transit, a navigational satellite, has been transferred to the Navy. The Notus has been given to the Army. The Discoverer, Tribe, Longsight, Samos, and Midas are now under the Air Force. ARPA officials still retain the Pontius, Susano, Defender, Principia, Shepard, and Vela.

At least two of these projects have cost nearly $100 million each this year. Pentagon officials believe this military space effort may require nearly $1 billion to fiscal 1961.

The Federation of Business and Professional Women's Clubs

EXTENSION OF REMARKS

OF

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. BROOMFIELD. Mr. Speaker, I would like to call the attention of my colleagues to an organization which is performing a very valuable service to our Nation. I am speaking of the Federation of Business and Professional Women's Clubs, founded 51 years ago this year. This organization has expanded to include 170,000 members of more than 3,400 clubs who are dedicated to community service, to helping those who are in need, and to improve the working conditions and opportunities in the business world for womankind.

In my own home State of Michigan, the federation has conducted numerous research projects which have proved of great value to some of our Nation's leading universities and to research agencies of our Federal Government.

The efforts of the federation in my own congressional district of Oakland County, Mich., have been outstanding. Many civic projects would never have come to pass if it had not been for the dedication, the hard work and the ability of the members of this group of business and professional women's clubs. In every worthy cause, these ladies are in the forefront.

It is well for all of us to pay tribute to the Federation of Business and Professional Women's Clubs, to recognize the valuable contribution which these clubs and their respective members have made to our society, and to let them know that we appreciate their efforts.

The Panama Canal Crisis

EXTENSION OF REMARKS

OF

HON. RICHARD B. RUSSELL

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, January 11, 1960

Mr. RUSSELL. Mr. President, I have received, as perhaps have other Members of the Senate, a letter from a Mr. Arthur Wynne, chairman of the Canal Zone Committee for the U.S. Retention of the Panama Canal, regarding the growing crisis over the Panama Canal Zone.

I do not know Mr. Wynne or the committee he heads, but it appears to me that Mr. Wynne and his committee have some interesting views and comments to make on the Canal Zone crisis, and deserve to be heard.

I believe that these views will be of interest to many people in the country, and I therefore ask unanimous consent that Mr. Wynne's letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BALBOA HEIGHTS, C.Z.,
December 9, 1959.

The Honorable RICHARD B. RUSSELL,
U.S. Senator,
Winder, Ga.

DEAR SIR: We Americans living on the Canal Zone do not feel that the average U.S. taxpayer is aware of the real story on the Panama situation or realizes what is at stake. Therefore, we believe the best way to get this story to them is through you who represent them in Congress.

It appears that the United States is going to pay off in one of the most fantastic and bizarre blackmail plots ever perpetrated. The basis for this plot is our State Department's consistent policy of appeasement and its mortal fear that a policy of firmness would be propagandized to the world as aggression.

To cover all the background of United States-Panama relations would be voluminous. But the treaty under which the canal was constructed at an investment of more than $1 billion is the foundation. Under the treaty, Panama granted all rights in the zone to the United States as if the United States were sovereign to the entire exclusion of the exercise of any sovereign rights by Panama. Thus, the United States has exercised jurisdiction and the U.S. flag has flown alone for 50 years. Peacefully negotiated amendments to the treaty, conceding financial advantages to Panama, have been concluded in the interim.

Panama is controlled financially and politically by no more than 50 families (the oligarchy). The gist of the political game is strictly that to the winner of government control belongs the spoils—unlimited graft and corruption. One 4-year term in a key office is enough to set a man up for life. But these 50 families never get enough—although all are millionaires in their own rights through control of the country's industry. There is a constant struggle between them for political power—the key to more money. There has never been a strong government and the "outs" are continuously striving to overthrow the "ins".

It was an "out"—Aquilino Boyd—who plotted the incident of November 3. For months he had been arousing the people, particularly the students, on the theme that Panama is sovereign over the Canal

Zone. He did not generate much public support, however, it being recognized as a political scheme.

His clever plot was to deliberately instigate an incident with the United States—he advertised his planned march to the Canal Zone months in advance. He wanted trouble. He succeeded. The choice of the Canal Zone Government was to permit Boyd's lawless mob of thugs and hoodlums to overrun the zone or to stop the mob with force.

Why did the Canal Zone have to use the U.S. Army to protect lives and property? This was because of the twist which foiled Boyd's plans. Boyd calculated that the Panamanian Guardia Nacional would attempt to quell the mob and thus the Panama Government would be put in the position of fighting its own people and protecting the Americans. For this, the present Panamanian Government was to be overthrown. But the Government, weak and shaky, did not fall into the Boyd trap. The Guardia Nacional was not called out and the incident of November 3 developed as it did, with the Americans being forced to defend the zone and the U.S. Embassy being attacked and the flag desecrated.

The oligarchy in Panama immediately saw dollar signs aplenty from Boyd's frustrated ambitions. They also own the newspapers and radio stations. An unbelievable avalanche or anti-U.S. propaganda continued for days on the Panamanian radios and in its press. Outright lies—horrible cartoons, distorted reports, charges of employment discrimination, treaty violations—all that would put Pravda to shame—were ground out continuously. All of this was to whip up a violent solid front anti-American hatred among the populace. The purpose—to lay a foundation for blackmail in demanding huge concessions from the United States. These concessions would be in the form of (1) granting monopoly rights, at their price, to the oligarchy for supplies required by the Canal Zone and its employees, (2) outright monetary payments, and (3) conceding to Panama sovereign rights in the Canal Zone. The Panamanian Government climbed right on the bandwagon and stole the leadership right away from Boyd and his clique who had instigated it all.

This terrific denunciation of the United State calls for another march on the Canal Zone, abuse against the Governor, and so forth, continued for days. The United States lowered itself by sending Under Secretary of State Merchant to discuss matters. He announced that the United States would grant no concessions until normalcy was restored and obtained a promise that the Panama Government would protect American lives and property. This was not quite the result the oligarchy anticipated. Also, business was hurting because no Americans were buying anything in the Panama stores. Immediately the radio and press changed—conciliation, not violence, became the word.

But it was too late to prevent further violence. For days the populace had been bombarded with cries to rise to the call of their nation. A mass sovereignty demonstration had been set for November 28. The Communists, Cubans, and rabble rousers were not going to lose such a golden opportunity. Again, on November 28, a mob of hoodlums marched. After several U.S. soldiers had been injured by thrown rocks and glass and had taken all the abuse that any human could be expected to take, the U.S. Commander advised the Guardia Nacional that if they couldn't break up the demonstration themselves, he was going to order his troops to open fire. Almost immediately, adequate Guardia Nacional troops arrived on the scene and turned the mob back from the border—to protect them from American bayonets and bullets. The grand patriotic demonstrators then proceeded to loot and vandalize the business section of Panama City.

Summation: Uncle Sam has let a bunch of money-mad demagogs and business barons kick him in the teeth—he turns his back and they kick him in the pants. Apparently it is State Department creed that no matter what happens, the United States shall not get mad.

Result: Blithely ignoring the views of the Canal Zone administration and the Department of Defense, Ike and the State Department are going to give substantial concessions to the oligarchy—and most likely will let the Panamanian flag fly. If that ever happens, the United States is doomed in its control of the Panama Canal—for the flag stands for sovereignty—and sovereignty means jurisdiction.

The moral is, be as nasty to the United States as you can, and the State Department will pay you off to be quiet. When you want more, just be nasty again. Panamanian demagogs have learned this—presumably their kind all over the world knows it.

Irony: To fan up the poor average Panamanian, the oligarchy charged discrimination in employment and wages in the Canal Zone. Last week—the timing was coincidence—the Panamanian Congress on its last day in session passed a 40-cents (repeat, 40 cents)-an-hour minimum wage law. The same people who caused all the furor against the United States have denounced this as unconstitutional, say that it will ruin the country, and are fighting it with all their power. The current Government had to do some little something for the people because elections come up in about 3 months.

That's the story in a nutshell. We Americans here in the Canal Zone are disillusioned and discouraged. The State Department's attitude is beyond our comprehension. If the United States capitulates to Panama for this political blackmail, it will forfeit all right to respect from any nation in the world. The United States will certainly have become such a laughingstock in Panama that it will be unbearably embarrassing to be an American in the Canal Zone.

Sincerely yours,

ARTHUR J. WYNNE,
Chairman, Canal Zone Committee for United States Retention of the Panama Canal.

Farm Program

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD the third of a series of five articles on the farm subsidy and surplus problem which appeared in the Los Angeles Mirror-News during November 1959.

The article follows:

COTTON PRICE SUPPORT BIG TAX BURDEN

(This is the third in a series of five articles illustrating the wanton waste of taxpayer funds through farm price support subsidy. It is of prime importance to you—the city dweller—the taxpayer who pays the largest part of the bill.)

(By Jack Tobin)

Cotton is the king of California farming.

It's the most profitable major crop in one of the Nation's richest farm States.

It's also a protected parity price crop.

Today, thanks to congressional boondoggling, it's California's big problem in the wasteful, inflationary price support program.

Scores of experts have said so. Government officials know this to be true. Taxpayers—all of us—groan under the burden of perpetuating the program. And still it goes on.

On August 1, the Federal Government took title to 666,319 bales of prime California cotton.

Why?

UNITED STATES HANDED CROP TO REPAY LOAN

Because California cottongrowers decided to take advantage of the peculiar provisions of the price support program. They simply decided to let Uncle Sam take over the crop, rather than pay off the crop loans made to them under the price support program.

Nationwide, 6,039,117 bales of cotton became Federal property.

California's 666,319 bales of forfeited cotton represents about 40 percent of the State's crop for the season. It represents almost $120 million in forfeited crop loans.

But more than that, it means the taxpayer, through his agents, must chunk in dollar after dollar to store the surplus cotton, to finance some kind of marketing operation that will dispose of the glut.

The dismal record on the 1958 crop stems, to a large degree, from a political-administrative foul-up in Washington that openly encouraged cotton buyers to hold back, depress the market price, and then pick up the crop at distressed rates.

According to the New York Cotton Exchange, the net effect was "a guaranteed loss to the Government of up to $15 on every bale it purchases."

And that, fellow taxpayers, runs into millions of dollars.

The cold, hard fact is that the price support program, an outright subsidy of one segment of agriculture, really doesn't solve the cotton problem in California—and probably not in any other State.

The problem, experts contend, is that a lot of cotton farmers are trying to make a living with uneconomic farm units. Too small, too marginal, too underfinanced.

MANY DON'T BELONG IN BUSINESS

The fact is, they say, a lot of small cotton farmers—notably in the South—don't belong in the business and should get out.

The parity program merely perpetuates uneconomic farming.

Perhaps intended to help the little farmer, the parity program works to the greatest benefit of the big farmer, the corporate farmer.

These farmers, cotton producers with gross sales over $5,000 a year, produce 66 percent of the Nation's crop. If it weren't for acreage limitations within the program, they might produce much more.

And yet consider these figures:

From 1954 through the first 8 months of this year, the Government sustained a net loss of $1,008,741,231 on its cotton program.

And that isn't the entire loss. Because we don't know yet how much we'll have to pay in additional storage and disposition charges.

For instance, the Government proposes to offer this cotton for export about $55 a bale below the actual cost of Government acquisition.

This could add another $385 million to the taxpayers' burden.

And so it goes.

Why does this fiscal farce continue?

OUTPUT KEEPS RISING

If we assume it is to control production as well as market prices, look at the figures on yields per harvested acre for the Nation's Cotton Belt:

	Pounds
1938	235.8
1948	311.3
1958	469.0

To combat this startling increase in yield per acre, the price support boys tried clamping on severe acreage restrictions. Here's the national picture:

	Acres
1938	25,018,000
1948	23,253,000
1958	12,375,000

And so we have acreage cut in half, but the yield per acre climbs steadily. And so do the thousands of bales of surplus cotton. The 1958 California cotton crop was big. But the current crop is going to be the granddaddy of them all. A real smasher.

Who profits?

BIG BOYS GAIN

Not the city dweller, the taxpayer. He's stuck with the tab.

Not the small farmer. He doesn't produce enough to benefit substantially.

But the big boys really come in for some heavy money.

Don't get the idea the dollar figures shown in the table indicate, however, net profit to the farmer. Nothing of the kind. The figures show only the crop loan totals. They show only the amount of money the taxpayers—all of us—have invested in the farmer's cotton crops.

Some of the large cotton growers assail the price support program—but most of them take advantage of it. Very few refuse to have anything to do with it—mostly because they're big enough to get the financing they need from private sources.

But up in the rich San Joaquin Valley, the litle man fights to stay alive.

PLIGHT VOICED

Walter Munday of Caruthers, whose 40-acre ranch certainly qualifies him as a small farmer in a big field, says: "I don't see how we can get along without supports.

"The little man's fighting to stay alive now. He'd die for sure without them."

The question is: At what point does the little man become big enough to join the group of economic, profitable farmers?

Mrs. W. L. Clayton, Widely Respected Philanthropist and Wife of Former Under Secretary of State, Will Clayton, Made Remarkable Contributions to Charity and to Government

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, January 11, 1960

Mr. YARBOROUGH. Mr. President, Texans everywhere are mourning the loss of one of their great Democratic leaders of bygone years, Mrs. W. L. Clayton, of Houston. A noted philanthropist and the wife of the distinguished former Undersecretary of State Will Clayton, Mrs. Clayton distinguished herself through outstanding Democratic Party leadership in Texas, in Washington, and throughout the Nation.

Mrs. Clayton, an ardent supporter of President Franklin Roosevelt, was our Democratic National Committeewoman from Texas in 1940. When she and Secretary Clayton moved here she was soon elected president of the Women's National Democratic Clubs. She devoted a great part of her life to enriching and improving the lives of less fortunate people. Her passing is a genuine loss to Texans and all freedom-loving people everywhere.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the following news reports and editorials:

From the Houston Post of January 8, 1960, the story, "Mrs. W. L. Clayton Dies After Illness," and an editorial "Mrs. William L. Clayton's Contributions Many."

From the Houston Press of January 8, 1960, an editorial, "Mrs. W. L. Clayton."

And from the Houston Chronicle of January 8, 1960, an article entitled, "Private Rites Conducted for Mrs. Clayton."

There being no objection, the articles and editorials were ordered to be printed in the RECORD, as follows:

[From the Houston Post, Jan. 8, 1960]

MRS. W. L. CLAYTON DIES AFTER ILLNESS

Mrs. William L. Clayton, a descendant of the old South who helped mold the new South, died shortly before noon Thursday.

She was the wife of the cofounder of Anderson, Clayton & Co., the world's largest cotton marketers. Her husband also is a former Under Secretary of State.

Mrs. Clayton, who would have been 79 on January 23, died at the family home at 5300 Caroline Street after a yearlong illness. The cause of death was a respiratory ailment.

As her husband grew to world stature in business and government, Mrs. Clayton made her own mark in politics and philanthropy.

She was a militant supporter of President Franklin D. Roosevelt.

While she retired from active politics in her later years, Mrs. Clayton followed to the end her other great cause—helping those who needed it.

Once a friend asked Mrs. Clayton why she, a Methodist, worked so hard for a Baptist hospital.

"I'd work for the Hottentots if I thought they needed help," Mrs. Clayton replied.

To her friends, the Kentucky-born Mrs. Clayton epitomized the grace and wit of the old South.

To the residents of the now-destroyed Houston slum known as Schrimpf Alley, Mrs. Clayton was the woman who in 1951 provided them with decent housing.

She purchased and donated land for the project that was named the Susan V. Clayton Homes.

More recently, in 1957, she and her husband gave the city 184 acres of land along Halls Bayou for a new park. It was the largest such grant since Hermann Park was deeded to the city in 1914.

Mrs. Clayton also found time to work as a director of the Houston Museum of Fine Arts. She was a zealous worker in raising money for the museum's present building.

Yet in 1944, while her husband was in Washington, Mrs. Clayton once told a reporter:

"I'm a complete homebody. It's a struggle to pull myself away from my own four walls."

While the Claytons lived in Washington from 1940 to 1948, Mrs. Clayton spent many hours working for the Home for Incurables and the Children's Hospital there.

Mrs. Clayton was born Susan Vaughan in Clinton, Ky.

She was 1 of 10 children of Columbus Montgomery Vaughan who as a State senator revised Kentucky's revenue system.

Mrs. Clayton was educated in her home town at Marvin College—where she was a schoolmate of Alben Barkley—and later at Washington College in Washington.

At the age of 18, she became engaged to Will Clayton, whom she met on a trip to Jackson, Tenn.

Clayton had started his career by studying shorthand and becoming a court reporter at Jackson when he was only 15.

They were married on August 14, 1902, at the bride's home, Bellwood, near Clinton.

Mrs. Clayton through the years became the mother of four daughters and a son, William L. Clayton, Jr., who died in 1910 at the age of 15 months.

Inheriting her father's penchant for politics, she fought for the woman's suffrage movement and in later years was treasurer of the Harris County Suffrage Association.

In 1936, in recognition of her work for President Roosevelt, Mrs. Clayton was chosen a Texas delegate at large to the Democratic National Convention.

After 4 successful years in organizing women's Democratic clubs throughout the South, she was elected State Democratic executive committeewoman in 1940.

After the Claytons moved to Washington that same year, she became president of the Women's Democratic Club.

She proceeded to astound the club's members by raising enough money to wipe out the club's perennial indebtedness.

Out of respect to Mrs. Clayton, the offices of Anderson, Clayton & Co. will close at noon Friday.

Private funeral services will be held for Mrs. Clayton Friday morning under the direction of Settegast-Kopf. Burial will be in Glenwood Cemetery.

The pallbearers will be St. John Garwood, of Austin, J. M. Johnson, S. M. McAshan, Jr., St. John Garwood, Jr., William L. Garwood, Dr. L. M. Vaughan and Jerrold D. O'Bryant.

In addition to her husband, Mrs. Clayton is survived by four daughters: Mrs. St. John Garwood, of Austin, Mrs. S. M. McAshan, Jr., Mrs. J. M. Johnson, both of Houston, and Mrs. Ben M. Baker, Jr., of Baltimore.

MRS. WILLIAM L. CLAYTON'S CONTRIBUTIONS MANY

In the death of Mrs. William L. Clayton, Houston lost a distinguished citizen whose contributions toward its betterment were substantial.

With her husband, the former Under Secretary of State and chairman of the board of Anderson, Clayton & Co., Mrs. Clayton made many gifts of a philanthropic nature. Among recent gifts to the city of Houston were 184 acres for a park in the northeastern part of the city and the Clayton home at 5003 Caroline, which eventually will become the Cultural Center Branch of the Houston Public Library. Mrs. Clayton at one time also took an active interest in national politics.

Her friends were many and all who knew her mourn her death.

MRS. W. L. CLAYTON

Houston has lost one of its truly great citizens, Susan Vaughn Clayton.

She, with her husband, W. L. Clayton, the cotton king, many times proved their devotion to their city and their Nation.

Together they not only donated the land off East Texas Freeway for Clayton Homes. They also planned for convenience and service to its occupants that low-rent public housing development on the close-in, handy location they furnished.

Together they gave to Houston a 184-acre tract off Green's Bayou at Green River Drive known as Brock Park which, when developed by the city, will serve Northeast Houston.

Together, Mr. and Mrs. Clayton have arranged for their magnificent home at 5300 Caroline in Southwest Houston to go to the City Library Department after they both have passed away.

But these were only the material manifestations of Mrs. Clayton's interest in and concern for those she tried to help. Her life was a consistent record of one whose thoughts and actions were always outward—toward others and for the benefit of others.

Whether here in Houston amid their friends and neighbors, or in various corners of the world where Anderson, Clayton & Co. deals in cotton, or in Washington while Mr. Clayton served his Nation in vital wartime roles, Mr. and Mrs. Clayton worked as a team. And so it was also with their many other activities and interests.

With their other many, many friends, we extend to Mr. Clayton and their children our sympathy in the passing of Mrs. Clayton.

[From the Houston Chronicle, Jan. 8, 1960]

PRIVATE RITES CONDUCTED FOR MRS. CLAYTON

Private funeral services for Mrs. W. L. Clayton, wife of the cofounder of the world's largest cotton marketing firm, were held Friday in Houston.

Mrs. Clayton died Thursday at her home, 5300 Caroline, after a long illness.

She would have been 79 on January 23.

Mrs. Clayton's husband, a director of Anderson, Clayton & Co., is a former Undersecretary of State and a former Assistant Secretary of Commerce. He retired in 1951 after serving as board chairman of the firm, but returned to the board last year.

FIGHTER FOR SOUTH

Born in Clinton, Ky., Mrs. Clayton was a model of the charm and grace of the old South and a fighter for progress of the new South.

She inherited an interest in politics from her father, who was a member of the Kentucky Senate.

She was educated at Marvin College in Clinton, Ky., and at Washington College, Washington, D.C. At Marvin, she was a classmate of Alben Barkley, who became a U.S. Senator and Vice President of the United States.

Talented and known for wit and repartee, Mrs. Clayton, the former Miss Sue Vaughan, was interested particularly in drama in her college days.

She and Clayton were married August 14, 1902, at her home, Bellwood, near Clinton.

MADE OWN MARK

As her husband, who had started as a stenographer, rose in his business and Government service career, she also made her own mark in politics and philanthropy.

She early fought for women's suffrage and was treasurer of the Harris County Suffrage Association.

Later, she was known for her work for the poor and unfortunate. She fought for slum clearance. She and her husband purchased and donated the land for the Susan V. Clayton Homes in Houston.

An ardent Democrat and supporter of President Franklin D. Roosevelt, she organized a national women's movement for Roosevelt in 1936.

CONVENTION DELEGATE

She was a delegate to the Democratic National Convention in 1936 and was elected State Democratic executive committeewoman in 1940.

After the Claytons moved to Washington in 1940, she became president of the Women's National Democratic Club.

While in Washington, she served on the board of directors of the Home for Incurables.

In Houston she supported a variety of activities to make the lives of her fellow citizens richer and happier. She was a director of the Houston Museum of Fine Arts and did much work to raise money for its present building.

Once asked why she, a Methodist, worked so hard for a Baptist hospital, she replied, "I'd work for the Hottentots if I thought they needed help."

DONATED PARK SITE

Recently she and her husband gave Houston 184 acres of land along Halls Bayou for a park and arranged that their palatial old home should be used for library purposes.

In addition to her husband, Mrs. Clayton is survived by four daughters, Mrs. St. John Garwood, Austin; Mrs. S. M. McAshan, Jr., and Mrs. J. M. Johnson, both of Houston; and Mrs. Ben M. Baker, Baltimore.

Pallbearers were St. John Garwood, J. M. Johnson, S. M. McAshan, Jr., St. John Garwood, Jr., William L. Garwood, Dr. L. M. Vaughan, and Jerrold D. O'Bryant.

Warsaw: Scene of the 48th Interparliamentary Union Conference

---

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mrs. ST. GEORGE. Mr. Speaker, the following article by Dr. Franklin Dunham, Permanent Executive Secretary of the U.S. Group of the Interparliamentary Union, is informative and accurate as Dr. Dunham attended the recent conference in Warsaw, the first conference ever held behind the Iron Curtain.

The Interparliamentary Union is the oldest organization dedicated to the promotion of peace in the world. It is also the only organization that consists of elected representatives of the peoples of the world.

At this time in the world's history it is a matter of vital importance that the elected representatives be informed on international politics and policies, and that they sit down and discuss these questions with their opposite numbers from the parliaments of the world.

The U.S. Group is fortunate in having a Permanent Secretary of Dr. Dunham's experience and knowledge to follow the deliberations and often to guide them through many complicated international problems and personalities.

WARSAW: SCENE OF THE 48TH INTERPARLIAMENTARY UNION CONFERENCE

(By Franklin Dunham, permanent executive secretary, U.S. Group, executive secretary American Peace Society)

Meeting for the first time behind the Iron Curtain, the Interparliamentary Union held its 48th conference in Warsaw, ancient city of the pomp and glory of medieval splendor now crowned with an incongruous skyscraper devoted to education and culture, copied from one of the seven almost identical structures erected by the Soviet in Moscow. Yet the ancient quarter of the city, with the beautiful Roman Catholic Cathedral, has been bravely and solidly rebuilt with loving hands and represents the true spirit of the city and indeed of Poland. No one can visit Warsaw without feeling the effect of this impact—its many churches crowded at all services, its splendid educational institutions overtaxed with students and its lovely parks and winding avenues filled with a hopeful people caught in the vise of East and West.

The meetings were held in the new, modern Sjem Building, a superb, well-appointed structure with all proper meeting rooms for efficient conduct of business. The Parliament Room itself was just the proper size for a gathering of some 400 delegates. The building itself actually incorporates some of the curved walls of the previous structure and is just across the park from the American Embassy.

The 48th Conference opened with a meeting of the Executive Committee on August 25, followed by a meeting of the Council on August 26 and the official convening of the Conference sessions on August 27.

The Honorable HAROLD D. COOLEY represents the United States on the Executive Committee. However, both Congressman COOLEY and Senator A. S. MIKE MONRONEY serve on the Council. The Hon. EDWARD J. DERWINSKI represented Congressman COOLEY at the executive sessions and Congressman DERWINSKI and former Senator Homer Ferguson were U.S. representatives on the Council, until the arrival of the regular delegation. At the executive meeting, applications for membership in the union came from Venezuela, New Zealand, North Viet Nam, and North Korea. Action on North Viet Nam was delayed for further investigation. Its current attack upon Laos, a member of the Interparliamentary Union, was, of course, a mitigating circumstance and its claims of qualifications were strongly opposed by Viet Nam, already a loyal member of the union. The North Korea application was never officially received since it did not meet the rules of the union in either form or substance. Therefore, Venezuela and New Zealand were unanimously recommended and were subsequently elected next day by the Council. The Venezuela and New Zealand delegations took their seats at the convening of the congress on August 27, thus bringing the membership of sovereign nations to 59.

Representing the United States, the official delegation included: The Honorable HAROLD D. COOLEY of North Carolina, Chairman and President of the group, the following members of the U.S. Senate: FRANCIS CASE, of South Dakota, FRANK CHURCH of Idaho, the Honorable J. ALLEN FREAR, Jr., of Delaware, and the Honorable A. S. MIKE MONRONEY, of Oklahoma. Former Senator Homer Ferguson of Michigan, honorary member of the Interparliamentary Union and former President of the U.S. group, served also with the delegation. Members of the House of Representatives included the Honorable W. ROBERT POAGE, of Texas, Treasurer of the U.S. group and alternate on the Council; Mrs. KATHARINE ST. GEORGE, of New York, Chairman of the Committee on Non-Self-Governing Territories; Hon. E. ROSS ADAIR, of Indiana; Hon. HALE BOGGS, of Louisiana; Hon. GERALD R. FORD, of Michigan, Hon. EDWARD J. DERWINSKI, of Illinois, Hon. PAUL C. JONES of Missouri; Hon. GORDON L. MCDONOUGH, of California; Hon. THADDEUS M. MACHROWICZ, of Michigan; Hon. JOSEPH

M. MONTOYA, of New Mexico, Hon. D. S. SAUND, of California, and Hon. ROBERT L. SIKES, of Florida. This was a total delegation of 17 Members, representing both House and Senate. Dr. Franklin Dunham, Permanent Executive Secretary, accompanied the group and acted as liaison officer with the U.S. Embassy and Ambassador Jacob Beam. Mr. William Magistretti of the Department of State and Hon. Michael Francis Doyle, former Justice of the International Court at The Hague, acted as observers. Dr. Charles J. Zinn represented the Clerk of the House of Representatives at the meetings of the Association of Secretaries General of Parliaments held concurrently during the conference meetings. Dr. Zinn is Law Revision Counsel of the House Judiciary Committee and is a permanent member of the Association.

The President of the Interparliamentary Union is Dr. G. Codacci Pisanelli of Italy. He is technically President of the Council, which has as its Vice President or second in command, Senhor Sáturnino Braga of Brazil. The Secretary General is André de Bionay of Geneva, head of the Interparliamentary Bureau at 6 Rue Constantine in that beautiful city where headquarters are located. Dr. Bionay brought his entire staff of 21 people to Warsaw for the Conference.

The Conference opened with President Pisanelli in the chair. After the election of Vice Presidents of the Conference, M. Ostap Dluski of the Polish Parliament took the chair as President of the 48th Conference. The Honorable HAROLD D. COOLEY was elected as Vice President to represent the United States and the Honorable W. ROBERT POAGE to serve as his alternate.

The inaugural ceremony included a speech of welcome by the President of the Polish Republic and after a short interval, the general debate opened on the subject of the Secretary General's report. This report which now covers the principal developments in international affairs over the period of the past year is, at once, one of the most prodigious reports made in summarized form existing in the world. Secretary General Bionay inaugurated this type of report in 1955 on his accession to office and it was first made at the Washington, D.C. Conference of that year. Speaking to this report was Congressman THADDEUS M. MATHROWICZ, who opened his address in English but continued in Polish, since he lived in Poland. Congressman MACHROMICZ was interrupted by the President in the chair when he referred to the Molotov-Ribbentrop Pact before World War II which had been followed so quickly by the invasion of Poland. The Chairman said these remarks would not be favorably received in Poland today but allowed Congressman MACHROWICZ to continue without further interruption. Later, Congressman COOLEY, U.S. Chairman, accompanied by Congressmen MACHROWICZ, DERWINSKI, and Poage laid a wreath on the graves of those Polish heroes who had bravely resisted that invasion. This was on the 20th Anniversary of this tragic event, the anniversary occuring during the days of the Conference.

Congressman W. ROBERT POAGE, as acting head of the Delegation at the opening, also spoke to the Secretary General's Report, commending the report and praising Poland's resistance to arbitrary rule from beyond her borders.

After the general debate, the resolutions[1] prepared by the study committees were introduced. The first resolution approving talks between President Eisenhower and Chairman Khrushchev was passed unanimously, looking forward to exchange of visits between these Chiefs of State this year.

The second resolution on "The Removal of Obstacles to World Trade" was debated by Senator MONRONEY, who had served as Chairman of the Economic Committee at Nice, as well as by Congressman BOGGS. The final resolution as passed, called for "multinational assistance, specifically by means of long-run, low-interest loans, as well as by schemes leading to greater contributions of currencies and multilateral trade." This is the Monroney plan now known as the International Development Association which is being currently organized under the World Bank.

The third resolution in "Problems of International Security and Disarmament" was discussed by Senator CASE, who has long been a member of the Disarmament Committee, and who helped frame the resolution at Nice. It reinforces the principle of collective security and calls for strict adherence to the United Nations Charter. This resolution was also discussed by Congressman FORD in a glowing speech advocating the elimination of antagonisms among nations and the right of every nation to remain neutral if it so desires, in any dispute between its fellow nations.

The fourth resolution on "The Role of Parliament in Protecting the Rights of the Individual" was presented and the United States was represented in the debate by Senator CHURCH and Congresswoman ST. GEORGE. Senator CHURCH effectively supported the resolution calling for the continued adherence to human rights as laid down in our Bill of Rights and Mrs. ST. GEORGE in a short and pointed speech captured the audience with her appeal to resist lipservice to those principles we all hold dear and to which we all subscribe.

The fifth and sixth resolutions on "Universal Education of Youth" and the "Problem of Education in Non-Self-Governing Territories" originally presented by the United States, and worked over at Nice, were presented without debate, as was the resolution on "Methods of Developing International Tourism." The last resolution embodied the ideas of customs exchange and visits between peoples and was heartily approved.

The Conference also approved the idea of setting up a steering committee for all future Conferences consisting of the President of the Conference, the President of the Council, and the vice president of the Executive Committee with the Secretary General ex officio. It also passed an amendment to the rules which provides explicitly that all applications for membership in the Union once reviewed by the Executive Committee shall be submitted to the Council, who will have complete responsibility for their election to the Union. This amendment clarifies previous language in the rules and makes it adamant that election to membership is the sole responsibility of the Council in which all member groups are represented by two delegates.

The Conference, which was admirably arranged by the Polish group, then proceeded to elect six new members to the Executive Committee. The following were elected to serve 4 years: Hon. Harold D. Cooley, of the United States, and Hon. Stefan Zolkieviski, of Poland; for the 3-year term, Hon. Finn Moe, of Norway, and Pandit Kunzru, of India; for the 1-year term, Hon. David Hacohen, of Israel. The Honorable M. P. Brasseau, of Belgium, was elected to serve out the unexpired term of Mr. Zarroug, of Sudan, for a 2-year period.

It is contemplated that the Conference will be held in Brussels in 1961, after the Tokyo Conference which is now set for September 26–October 3, 1960. The next meeting, however, of the Council is in Athens, April 19–24, 1960. After the conclusion of the 48th Conference in Warsaw, the new Executive Committee was guest of the Soviet group and the Supreme Soviet in Moscow. The Soviet Government furnished transportation to Moscow and invited a large number of delegates to accompany the Executive Committee, as guests to stay various lengths of time in the Soviet Union. The Warsaw Conference was resplendent with many social events provided by the Polish group. Receptions and luncheons by U.S. Ambassador Jacob Beam, trips to Krakow and Czestochowa, visits to ancient shrines of Poland, and a visit to the home of Frederic Chopin, one of the greatest musicians of the 19th century, where a concert of Chopin compositions was given, were also included.

The U.S. delegation returned to Washington via Berlin and Paris, where meetings were held with Willy Brandt, famous mayor of Berlin and at NATO headquarters in Paris, as guests of NATO Ambassador Randolph Burgess.

[1] Copies of all resolutions obtainable by writing: Interparliamentary Union, 1307 New Hampshire Avenue NW., Washington 6, D.C.

The Supreme Court Decision in the School Cases

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, January 11, 1960

Mr. RUSSELL. Mr. President, for the past several years, many of us from the South have been critical of the 1954 decision of the Supreme Court that undertook to strike down the right of the States to control their own tax-supported schools. We believe this decision to be an outrageous misconstruction and a monstrous distortion of the Constitution.

Because we have dared to exercise our right—nay, our sacred duty—to speak out against a decision that we believe to be unwise, unjust, and unconstitutional, we have been subjected to all sorts of vilification and abuse.

More than 5 years have now elapsed since the Supreme Court undertook to rewrite the Constitution in terms not of established law and legal precedent but on the basis of psychological factors. During that time, many nonsoutherners have taken a closer look at a decision that at first appeared to involve only one section of the country. They have discovered that the implication of this and other decisions goes to the heart of the Constitution and applies to every area and every person in the Nation.

As a result, more and more responsible persons and publications are joining the rising tide of criticism of the recent trend of Supreme Court decisions.

Mr. President, on last November 21 the Los Angeles Times, one of the Nation's leading and most respected papers, published as its lead editorial a discussion of a recent critical article about the Court written by Prof. Henry M. Hart, Jr., of the Harvard Law School. His article was published in the Harvard Law Review.

The Times not only indicated general agreement with Professor Hart's erudite and scholarly criticism of the Court, but went on to supply some blunt points of its own. Referring to the school decision, the Times said:

A classic example of the Court's meandering into obscure reasoning was its reliance, in part, on the viewpoint of a European, hostile to our way of life, in making its school desegregation decision.

The newspaper then cited the Court's incredible use of a Swedish Socialist, Gunnar Myrdal, as one of the authorities for its school decision. Myrdal, the Times points out, holds the Constitution of the United States in "open contempt."

Mr. President, this editorial is all the more significant because it was published by a major newspaper in the home State of the Chief Justice who wrote the school decision shortly after going on the Court.

Because of the importance and significance of this editorial, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Los Angeles Times, Nov. 21, 1959]

THE JUSTICES AND JUSTICE

The U.S. Supreme Court, long a target for criticism by concerned laymen who fear some of its decisions endanger our Constitution, is now charged by one of the Court's most respected students with serious inadequacies.

TALKS WITH AUTHORITY

The latest critic to speak out is Prof. Henry M. Hart, Jr., of the Harvard Law School. Once clerk to Justice Louis D. Brandeis, Professor Hart is considered an authority on the Supreme Court's work.

His criticism, just published in the Harvard Law Review, is described in a New York Times report as constituting "what is likely the toughest intellectual criticism the Court has had from one of its friends in years."

"Few of the Court's opinions, far too few," wrote Professor Hart, "genuinely illumine the area of the law with which they deal. Other opinions fall even by much more elementary standards.

"Issues are ducked which in good lawyership and good conscience ought not to be ducked. Technical mistakes are made which ought not to be made in decisions of the Supreme Court of the United States."

THE COURT INDULGES

Agreeing with two Yale law professors, Alexander M. Bickel and Harry H. Wellington, who said the Court is indulging too much in "the sweeping dogmatic statement—the formulation of results accompanied by little or no effort to support them in reason," Professor Hart warned:

"It needs to be said with all possible gravity, because it is a grave thing to say, that these failures are threatening to undermine the professional respect of first-rate lawyers for the incumbent Justices of the Court, and this at the very time when the Court, as an institution and the Justices who sit on it are especially in need of the bar's confidence and support."

Professor Hart believes that the legal profession shares responsibility for the quality of the Supreme Court's work. "Neither at the bar nor among the faculties of the law schools," he said, "is there an adequate tradition of sustained, disinterested, and competent criticism of the professional quality of the Court's opinions."

The problem which Professor Hart analyzed in particular is the burden of work on the Court. His conclusion is that the workload is far too large and that the Court contributes to its own difficulty by agreeing to review too many cases.

Looking beyond the problem of time and the large number of cases, Professor Hart said he believes that there must be other reasons for inadequacy in the Court's opinions. In discussing a particular case, he concluded that the majority deliberately obscured what it was deciding.

MENTAL ATTITUDE

The "attitude of mind which permits this kind of obscuration," he wrote, is a pressing reason for reappraising "the standards which the Court is setting for itself."

A classic example of the Court's meandering into obscure reasoning was its reliance, in part, on the viewpoint of a European, hostile to our way of life, in making its school desegregation decision.

Cited as one of the Supreme Court's foremost authorities for the historic desegregation decision of May 17, 1954, was a book compiled and partly written by a Swedish Socialist, Gunnar Myrdal, who holds the United States and its Constitution in open contempt.

We find it more than difficult to grasp the pertinence of Myrdal's dogma in deciding a question of American constitutional law.

Municipal Interest in an Adequate Civil Defense System

EXTENSION OF REMARKS

OF

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. RAINS. Mr. Speaker, last week my good friend, Mr. Ed E. Reid, executive director of the Alabama League of Municipalities, addressed a statewide conference of local civil defense directors and coordinators in Montgomery. Mr. Reid is well known in municipal circles throughout the Nation, and I believe that his remarks concerning the civil defense picture will prove most interesting to my colleagues.

I submit the following address:

THE MUNICIPAL INTEREST IN AN ADEQUATE CIVIL DEFENSE PROGRAM

(By Ed E. Reid, executive director, Alabama League of Municipalities)

In behalf of the municipal interests in our State, let me say that we appreciate the opportunity to take part in this annual meeting of civil defense directors and coordinators. For myself, I am delighted to have been chosen to bring you some municipal viewpoints on the subect of civil defense. It has been asked that I speak to you briefly upon "The Municipal Interest in an Adequate Civil Defense Program." Upon my arrival at this auditorium I noticed the number of municipal officials in attendance and wondered but what my message had not already been demonstrated more forcibly than I could present it in words.

THE YEAR 1959 AGAIN BROUGHT DISAPPOINTMENTS

It seems only a very short while since our officials gathered here last January with high hopes of finally getting down to grips with civil-defense needs. Only 6 months before that time Congress had shown a realistic and practical interest in civil defense when it adopted Public Law 85–606. Unfortunately, this law was not adopted early enough in the 85th Congress to receive the appropriation necessary to implement its aims. You came together 1 year ago trusting that in 1959 Congress would provide the funds necessary to make the Federal Government a full partner with the States and their local governments in the civil-defense program. Unfortunately, our hopes, however justified, were shattered by drastic congressional slashes in the civil-defense budget. After working so hard, and coming so close to the first really workable civil-defense alliance between the three layers of Government, our cities and towns found 1959 to be another disappointing year.

OUR MUNICIPALITIES WORKED HARD

Following World War II, the cities and towns across the Nation realized the vital importance of civil defense. The terrifying examples of the great conflict impressed upon them that isolation is to be forgotten and that our urban centers, the prime targets of war, must have preparations for the survival of their populations in the event of future hostilities and, incidentially, they became more aware of their need for preparedness to meet natural disasters. With this in mind, organizations such as the American Municipal Association, the U.S. Conference of Mayors, and the individual State municipal associations, such as our League of Municipalities, have year in and year out placed this need before the Congress and the various State legislatures.

Since your meeting here last year, a delegation of municipal officials from our League of Municipalities appeared before the Alabama congressional delegation in Washington and outlined the league's stand on civil defense. I would like to call your attention to excerpts from the policy backed by your Alabama cities and towns:

"We agree with present policies which place the responsibility for civil defense jointly in the Federal Government, the several states and their political subdivisions, which call for Federal sharing in the administrative and personnel costs of state and local civil defense organization. * * *

"We urge you to support legislation providing the funds needed to implement these programs.

"We endorse the National Plan for Civil Defense Mobilization establishing national nonmilitary courses of action both to deter aggression and for national survival in event of attack. * * *

"We hope that attention continues to be given to all aspects of civil defense as they affect our national preparedness including, among others the broad training program of OCDM staff college, assistance to all elements of local training programs and the public information program. * * *

"We urge you members of the Alabama Congressional Delegation to do all in your power to immediately vote the appropriations needed for the complete and proper implementation of the provisions of Public Law 85–606 to provide for the full and proper assistance of our State and local civil defense efforts.

"We commend to you the following specific policy recommendations:

"That a much more complete and adequate financial program of civil defense which recognizes the urgent importance of protecting and defending our homeland be approved by the Congress. To this end we recommend funds under the Federal Civil Defense Act which will assume 75 percent of the administrative costs of recognized local civil defense agencies. We further recommend that the Federal Government

assume full financial responsibility for the purchase and maintenance of all equipment primarily purchased to further the civil defense effort.

"That the Congress of the United States continue laws which give to all civil defense agencies a high priority in the procurement of such Federal surplus properties as are necessary to the organization, maintenance, and operation of an effective civil defense and disaster program.

"That the President of the United States and the Secretary of Defense adopt and enforce policies relating to the military and manpower recruitment of municipal personnel which will preserve the capacity of municipal government to protect its citizens and to discharge its national obligations for civil defense in case of national emergency.

"That the Federal Government establish a system of issuing priorities for critical items in times of national emergency. A single agency should determine these priorities and the essential needs of municipalities should be given a preference at least equal to that afforded private industry.

"That the Federal Government raise sufficient funds to finance the construction of shelters in cooperation with State and local governments, including schools and other districts. A program of blast, heat and radiation shelters within target areas is a necessary addition to the present work toward fallout shelters.

"We recommend also that the shelter program give proper consideration to multiple public uses that may be obtained so as to make them as self-liquidating as possible. We urge that adequate shelters be included in all new public construction and that standards for construction of buildings under all federally aided programs include requirements for adequate shelter spaces."

In addition to adopting this policy on the Federal scene in 1959, our league lent its support to the passage of legislation in the 1959 session of our State legislature to provide for the continuity of government in times of disaster or hostile attack. This action which we took has been taken by other municipal leagues and cities and towns over the Nation. Gentlemen, civil defense has definitely had the interest of our municipal officials since its conception, and indications lead me to believe that this interest is becoming more intense with the passage of time.

CONTINUING NEED FOR CIVIL DEFENSE

There is a continuing need for civil defense. To put it more frankly, there is a growing need for civil defense. The problems of civil defense are multiplied by the rapid urbanization of our Nation. When our people gather together and voluntarily create our cities and towns for a better and more abundant life, in doing so they create a more complex life. Vast networks of utilities and municipal services are necessary to make this life possible—each phase of municipal life being dependent upon the other, and upon the proper functioning of each rests the life and safety of thousands and thousands of our State's people. This complexity demands preparation for emergency and preparedness for natural and hostile disaster. However much we might like to believe it, we are really no further from nor any closer to hostilities today than we were 12 years ago. The possibility remains with us, and I dare say that not one man in this room is truly satisfied that we are prepared and ready for such an unhoped for catastrophe.

In the last decade we have learned much about civil defense—both good and bad. We have seen civil defense organizations operate with precision and effectiveness in meeting numerous natural disasters. On the other hand, we have seen apathy and frustration displayed at practice alerts and civil defense drills. We must use these examples for the good purpose of building a civil defense organization that will function under all circumstances, for it is through our mistakes that we learn the most. I would advocate putting forth more and more effort—with more mistakes if necessary—for through such activity strength will grow. Until civil defense is accepted by our people as a part of their daily lives, and recognized as a medium of security rather than a reminder of doom, we shall still be on the first rung of the ladder.

HOW DO WE STAND ON CIVIL DEFENSE?

This leads us to the question, "How do our cities and towns across the Nation stand with regard to civil defense preparedness, capability of preparedness, and attitude?" In 1958 the American Municipal Association made a survey of some 250 of the largest cities in the country touching on these questions. As I am sure you can predict, the answer generally given to preparedness for hostile attack was negative. Apparently, the larger cities are more aware of their need for preparation against hostilities than the smaller cities, but generally speaking, satisfaction was not a keynote.

On the question of capability of preparedness for hostile attack, again we find a negative answer. The survey made it abundantly clear that our cities and towns are financially unable to meet the demands required to establish and maintain the organization required to properly carry out the civil defense objectives. This is partially due to the tremendous outlays of capital funds which have been required to provide needed facilities for their expanding populations. At the present time our cities and towns across the Nation are 5 to 10 years behind their needs for water, sewage and sanitation facilities. These facilities are of first priority merely to provide a safe place in which to live under no attack or disaster conditions. The survey revealed that there has been a deplorable lack of money interest shown by the State legislatures and that without funds from the State and Federal Governments the local governmental units alone cannot supply the answer.

On the matter of attitude toward civil defense, there was a variety of description but the summary would indicate that local officials and the public generally are much more concerned over civil defense than their congressional and State legislative delegations.

Quite ironical was the questionnaire answer made by the No. 1 target of the Nation—Washington, D.C. It stated: "Volunteer organization nonexistent; civil defense plans in process of revision; city employees not adequately trained; Congress' financial support inadequate; city lacks legislative power to deal with civil defense emergency." Since this answer was made Congress has acted to enact Public Law 85-606, and we hope that the city of Washington is going to be better prepared—certainly when funds needed to implement the statute are voted by Congress.

To summarize our position, (1) we are not prepared; (2) we have learned much; (3) we need legislative leadership that recognizes civil defense to be a factor of vital importance to our Nation, just as foreign aid is of vital importance to the free world.

FACTORS OPPOSING ADEQUATE CIVIL DEFENSE

Proceeding upon the premise that our civil defense program is not adequate at this time, and that we want an adequate civil defense organization, we come face to face with the question, "How are we going to get it?" While the answer is not simple, we know first hand that we must single out the opposing factors and meet them head on. Civil defense is faced with opposing factors in two categories: First, there is the negative attitude of apathy, frustration, and wishful thinking on the part of those who really want civil defense; and, second, there are the positive opponents who very strongly and ably present the viewpoint that our best civil defense lies in a strong offensive—a powerful military force of retaliatory striking power coupled with unlimited foreign aid.

It would be useless to expect legislative response to action requested by half-hearted proponents of any measure. Therefore, the first job lies in kindling a fire under the public to recognize the problem for what it is and to demand positive action. Much has been done to accomplish this through mediums of public information. However, more has been done toward this end by the launching of the first sputnik than by any other factor. In addition to firing the people with enthusiasm for civil defense, it is essential that definite minimums be established as necessary to meet the job. With these minimum requirements backed by public enthusiasm, civil defense will then be in a position to more skillfully meet positive policymakers of opposing conviction in the middle of the arena.

Civil defense has this very strong point in its favor: Our Nation was not founded upon a fatalistic philosophy. Our people are resourceful, independent, and defiant in the protection of their rights. They have survived under many hardships by virtue of a tough spirit and a tenacious desire to stay alive. Any person who opposes civil defense as futile denies the American heritage. Moreover, there is no need for those of us interested in a civil defense program to deny the value of foreign aid, or oppose it. Certainly there should be a place for a practical meeting ground for the viewpoints of all factions in these fields. Likewise, there should be a meeting ground for intelligent consideration of the demands made for more offensive weapons.

PROPER ANSWER IS THROUGH ACTION

The achievement of an adequate civil defense program can be had only through action which will stimulate legislative response. Unless we want a "caretaker" type of civil defense we must be interested enough to act to make it otherwise. Every effort must be made to correct situations described as apathetic, confused, fatalistic, indifferent, lackadaisical, passive, and inert. These tabs have on occasion been ascribed to civil defense efforts. Often they have not been true. Nevertheless, they hurt just the same. No Congressman or State legislator wishes to sponsor legislation which results in a fizzle—and every Congressman and every State legislator wishes to place his name upon legislation which the public recognizes as the suitable answer to its problem. However simple these truths may be, we often lose sight of them.

We of the League of Municipalities intend to continue our support of the policy declaration which we made last year. Our interest has not waned because of any disappointments. We have enough municipal officials present here who know that disappointments happen quite frequently in public life. If anything, the interest of our cities and towns increases as they become more certain of their civil defense objectives.

It has been a pleasure to be with you today. I sincerely hope that from this meeting, and from the many others held throughout our Nation, we shall find the wise and appropriate answer to our pressing civil defense needs.

Retirement of Lee Wooden as President of Oregon State Rural Electric Cooperative Association

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, January 11, 1960

Mr. NEUBERGER. Mr. President, one of the most useful and outstanding citizens of my native State is Lee Wooden, of Jewell, Oreg., who has recently retired after many years as president of the Oregon State Rural Electric Cooperative Association. Countless farm families in Oregon enjoy the blessings and comforts of electricity because of the effective leadership of Lee Wooden, who is a man of warm human friendliness and humanitarian instincts. I salute him for his accomplishments and for his personal popularity.

In the Northwest Ruralite for January 1960, Mr. Henry Alderman, editor of that monthly publication, has paid tribute to Lee Wooden and to Mr. Wooden's able successor, A. R. Teater, of Post, Oreg. At the annual meeting which elected Mr. Teater, Lee Wooden was accorded a standing ovation for his long and tireless service.

Mr. President, I ask unanimous consent that the editorial from Northwest Ruralite, entitled "Wooden Takes Bow," be published in the Appendix of the RECORD for the information of my colleagues.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WOODEN TAKES BOW

For the first time in 8 years, the Oregon Rural Electric Cooperative Association has a new president.

At the association's annual meeting a couple of weeks ago, he told the group's nominating committee not to select him again.

His friends made him honorary president for life, gave him a standing ovation and gave him a valuable gift.

Mr. Wooden got to his feet and said: "I'm not sure I can say much now except thanks."

Later he apologized for "losing my self control."

A day or two later he dropped into the Ruralite office. "I think," he said, "that a State association is stronger if many of its members participate in its affairs. I like to see turnover in governing boards. We have often been handicapped by not having enough people who can devote a lot of time to such things as legislation. The answer is to split the work up as much as possible."

In age, Mr. Wooden is well into his seventies. He has been a pioneer in Oregon rural electrification. He has held many unpaid positions of public trust in his home county and he deserves the thanks of all cooperators for having faithfully done the very best he knew how.

Oregon statewide's new president is A. R. Teater, a highly successful central Oregon rancher and businessman. Mr. Teater has been president of his own local electric cooperative for a number of years. His judgment and ability have been well demonstrated.

Oregon cooperatives are fortunate in having two such men available for leadership.

Nixon Meets the Challenge

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks, I would like to include three editorials of recent publication, from different areas of the Nation, the continuity of which point out that the Vice President has boldly cut the Gordian knots of each situation which have confronted him in recent months.

We can expect him to meet each challenge during the coming year with equal vigor and tact, culminating in his securing the nomination and eventually vanquishing any foe for the Presidency.

The editorials follow:

[From the Chicago Tribune, Dec. 27, 1959]

ROCKEFELLER WITHDRAWS

Gov. Nelson Rockefeller of New York, who has been very busy acting like a presidential candidate, has announced his withdrawal from a race he never formally entered. He says that his swings around the country have convinced him that those who will control the Republican national convention do not want a fight made against Vice President RICHARD NIXON.

In the interests of party harmony, Rockefeller stated, he will abandon the "massive struggle" which would result if he were to enter presidential preference primaries. Nor, he added, would he consider nomination as Vice President.

Thus the governor has left the field to NIXON, and his decision seems to be final and irrevocable. He says that it is, and the only thing that could possibly change it—a spontaneous and overwhelming draft by the party—seems out of the question.

We believe that Mr. Rockefeller has read the political portents correctly and has discovered that there was no broad popular sentiment in support of his candidacy. He was the only possible challenger to Mr. NIXON and his withdrawal makes the nomination, and election, of the Vice President as close to a certainty as the uncertain world of politics provides.

The Democrats have a sorry crew of candidates, most of whom would be plausible as nominees for Vice President in an off year but they have no one who looks and acts like a possible President. Nor has the Democratic party any issue which would carry conviction. Its spokesmen admit that the Eisenhower record on peace and prosperity is virtually unassailable, and whoever rides the donkey into next year's election will be restricted to trying to make the best of fringe issues, such as farm discontent and easy money.

No one in our political history has been better trained for the task of serving as President than Mr. NIXON. He has been the most active Vice President the country has known. He has had legislative experience in both House and Senate, has filled in for Mr. Eisenhower during the President's illnesses, and, through extensive travel and participation in all the high councils of the administration, is intimately acquainted with world affairs and all the workings of government. His preparation is unique and the people are fortunate that he is available.

Mr. NIXON will have behind him a united party. Mr. Rockefeller promises that he will give what assistance he can to the party, its nominees, and its program. In these circumstances, Mr. NIXON can look forward confidently to next November's decision.

[From the Peoria Journal Star, Jan. 5, 1960]

NIXON'S STATURE GROWS

(By C. L. Dancey)

The steel settlement, with Vice President NIXON playing a prominent role, is bound to strengthen NIXON as the Republican presidential candidate, and to increase the growing public picture of him as a man of real weight and substance—right or wrong.

The real pressures on both industry and the union existed before Mr. NIXON entered the scene. As we pointed out when Taft-Hartley was invoked, neither the steel companies nor the union could afford another industrywide shutdown in January.

To do so would be to throw the whole principle of collective bargaining on the counter before a jittery election-year Congress sitting in short term. The only possible result would have been some form of Government control. This would supplant collective bargaining, the union mainstay, and might have become the beginning of the end of unions as we know them now.

At the same time, Government control would be the worst thing that could happen to the private steel industry as well. So both sides had powerful reasons to settle.

This was so plain that we did not hesitate to say they would settle early in the new year, and there would never be a renewal of that strike.

Now that it has come to pass with Mr. NIXON playing a big part, we must still, in all honesty, recognize that the forces existed with or without NIXON.

Whether he was responsible or not—and whether this proves to have been a wise settlement or not—the fact remains that NIXON took part in using these forces to get the settlement and that he won the praise and obvious respect in the process of both the steel bosses and the steelworkers' president.

That doesn't hurt him as a candidate for President.

KENNEDY and others may try hard to ridicule and downgrade the job of Vice President, saying, in effect, they wouldn't take it on a bet. But they are swimming against the tide and trying to minimize the job for obvious reasons, and facts are facts. In the past few months the Vice President's actions have been turning points in both the biggest international crisis and the biggest domestic crisis.

A new dimension has most certainly been added to this job. It has become the key job, short of the White House, in the United States and it is going to become increasingly hard to ignore that fact—or pretend it isn't so.

[From the Washington Evening Star, Jan. 7, 1960]

NIXON AND THE LABOR VOTE

(By Gould Lincoln)

A month ago Democrats would have laughed in your face if you had been so brash as to suggest that Vice President RICHARD M. NIXON, as a Republican presi-

dential nominee, would have any material labor support. Within that month, however, two things of major importance to the Vice President and his presidential chances have come to pass. The first was the withdrawal of Gov. Nelson A. Rockefeller of New York from the contest for the Republican presidential nomination of 1960. A second was the settlement of the long-drawn-out and costly steel strike, largely through the leadership of the Vice President. This settlement has been acclaimed by President David J. McDonald of the Steelworkers Union as the best the workers have ever achieved, which would be no small boost for Mr. NIXON in itself. But aside from that the half-million steelworkers, by the settlement, have been spared the agony of going on strike again, which they might have done had there been no strike settlement by January 26, when the injunction under the Taft-Hartley Act was to have expired. Now the workers have a contract covering the next 2½ years. The workers and their wives are not likely to forget that fact when next November rolls around. Nor are they likely to forget that Mr. NIXON played a full part in bringing about the agreement.

As a matter of fact, some of the labor leaders, as well as the rank-and-file workers, are taking a second look at the political scene. Many of them see labor employed at higher wages than ever before under the present Republican administration, with prospects for plenty of work during the coming year.

In addition, many of them have not been satisfied with the work of the Democratic Congress. Some of them still resent bitterly the passage of the Kennedy-Griffin-Landrum labor bill in its final form in the past session of this Democratic-controlled Congress. They also are not satisfied with the Democratic Congress because it has failed to put through other legislation which they had considered promised to them when they helped to roll up a sweeping Democratic victory in the 1958 congressional elections.

DEMOCRATS CAN'T ATTACK

The Nixon coup arising from the settlement of the steel strike, which removes from the list of probabilities and possibilities a recurrence of heavy unemployment and another serious recession during 1960 cannot be attacked by the Democrats directly if they wish to retain the good will of the steelworkers and other unionists. Senator LYNDON JOHNSON, of Texas, majority leader of the Senate, has taken one line of attack, however—that the settlement of the strike should have been brought about by strong Government pressures long before and that the steelworkers thus would have escaped many payless weeks. But in view of the adamant attitude of both sides, labor and management, it is doubtful that such a compromise could have been effected sooner.

Also from anti-Nixon and pro-Democratic camps come predictions that under the so-called NIXON settlement steel prices will rise, causing inflation and further increase in the cost of living and devaluation of the dollar. It still remains to be seen, however, whether steel prices will be increased—certainly before the election this year. The actual wage increases provided in the new steel contracts do not begin until December 1 next, although the so-called fringe benefits, including the payment by the companies of the whole cost of insurance for the workers, become effective immediately.

The steel companies may find it possible to withhold price increases. Certainly, they will be wise to do so. For if they rush into price increases, starting another wage-price spiral, they may find themselves in hot water. And they, as well as labor, must be aware that if prices go too high, the general public will not buy steel products, and also foreign competition will take much of their market away, not only abroad but also in this country.

ACTED AGAINST DANGER

It seems unlikely that Vice President NIXON would have been brought into any program that was likely to bring about greatly increased inflation. It is certain, however, that he could easily grasp the great danger to the country and its economy if another prolonged battle between the steel companies and workers had arisen. And he acted accordingly.

It appears at present that it is the Democrats, not the Republicans, who must make their peace with organized labor. A continuation of the steel strike might have wrecked any chance of the GOP winning the presidential election next November. If the Congress had been forced to take drastic action to halt a resumed steel strike, even though the control of Congress is lodged in Democratic hands, the workers probably would have placed the blame for such action on the shoulders of the Republicans who control the executive branch of Government. That branch—with the President at its head—is usually the target of disgruntled voters.

It is being suggested that Governor Rockefeller is still angling for a draft by the Republicans as their presidential nominee next July. The present added strength in the hands of Mr. NIXON pushes any such possibility further into the background. It will be recalled that the New York Governor, as soon as President Eisenhower left the country on his 22,000-mile trip to three continents in December, came forward with a suggestion that the Vice President should use his influence to settle the steel strike. That Mr. NIXON has done—and indeed, at the time of Mr. Rockefeller's suggestion, Mr. NIXON was already at work on the problem.

As things now stand, it will be difficult for the Democrats to convince the voters that Mr. NIXON is antilabor.

Resolution of the Mayors' Association of Southern Illinois, Inc., Relative to Area Redevelopment

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, January 11, 1960

Mr. DOUGLAS. Mr. President, the mayors of southern Illinois recently met at Mt. Vernon, Ill., and passed a resolution endorsing the principle of the area redevelopment bill which I had the honor of introducing last year, which was passed by this body, and which is now pending before the House of Representatives. I ask unanimous consent that the body of the resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

"RESOLUTION OF THE MAYORS' ASSOCIATION OF SOUTHERN ILLINOIS, INC.

"Whereas the mayors of southern Illinois are in convention assembled at Mount Vernon, Ill., on this 22d day of December 1959 for the purpose of discussing problems of mutual interest to the cities and communities which form the southern Illinois area; and

"Whereas the said mayors are deeply concerned with the economic conditions in their various cities and communities and in the southern Illinois area; and

"Whereas it has come to the attention of said mayors that approximately 30,000 employable persons are now unemployed in the southern Illinois area, and that the cost to government by way of unemployment compensation, township relief, and other governmental aid amounts to approximately $45 million per year, this sum for the southern Illinois area alone; and

"Whereas the southern Illinois area is considered an area of chronic unemployment by the U.S. Government; and

"Whereas the southern Illinois area is not in a good competitive position with the wealthier cities and communities elsewhere and with better economic conditions; and

"Whereas inquiries are made from time to time by industrial concerns with reference to locating in southern Illinois, and although every effort is exerted by local communities and individuals, the lack of financial aid to those concerns prevents location in southern Illinois; and

"Whereas the mayors of southern Illinois believe that they have a solution to this depressed economic situation, the solution, however, not being one of drastic proportions, but a reasonable progressive and economically sound solution to the problem; and

"Whereas the mayors of southern Illinois believe that if new industry could be located in southern Illinois, that the economic burden to government would be practically eliminated or greatly reduced, in that the aforesaid 30,000 unemployed persons would be employed and would, therefore, in fact, contribute to government at all levels by way of taxes, thus creating a new source of governmental revenue, heretofore not existing; Now, therefore, be it

"Resolved by the Mayors' Association of Southern Illinois, Inc., in convention assembled, at Mount Vernon, Ill., this 22d day of December A.D. 1959, as follows:

1. That the United States, through its agency or agencies or other appropriate means provide for loans to the extent of 100 percent or insure such loans made by private financial institutions to persons or corporations with approved credit risks, for the purpose of establishing new industry by way of new construction or by way of existing facilities, said loans to be for a duration of at least 20 years and to bear a reasonable rate of interest.

"2. That the approval of credit risks in this behalf be determined by the United States Government.

"3. That persons or corporations receiving said loans and responsible for the establishment of new industry be allowed to depreciate their real estate investment within a period of 5 years.

"4. That privtae financial institutions may be encouraged to make the aforesaid loans as may be established and insured by the United States, but, that in the alternative, if private capital is not available, that provision be made for obtaining loans directly from the United States.

"5. That industry be otherwise encouraged to establish in the southern Illinois area, and that the aforesaid system and plan for making loans be continued for so long a time as the various cities and communities in the southern Illinois area are considered to be areas of chronic unemployment.

"6. That the Secretary is instructed to mail copies of this resolution to Senators EUGENE MCCARTY, VANCE HARTKE, Senators DOUGLAS and DIRKSEN, of Illinois, and Congressmen GRAY and SHIPLEY, of Illinois.

"Passed by the Mayors' Association of Southern Illinois, Inc., at Mount Vernon, Ill., this 22d day of December, A.D. 1959.

"Approved by the president of the Mayors' Association of Southern Illinois, Inc., and by other mayors whose signatures are hereinbelow subscribed, at Mount Vernon, Ill., this 22d day of December, A.D. 1959.

"Approved:

"K. NEIL THURMOND,
"President.

"Attest:

"FRED HENDERSON,
"Secretary."

Otis Lamar, Rosiclare, Ill.; O. D. Flatt, Buckner, Ill.; Wm. Cunningham, Pinckneyville, Ill.; Curtis Taylor, Mounds, Ill.; Carl Streuter, Okawville, Ill.; Harold Stephenson, Sesser, Ill.; E. A. Prudent, Zeigler, Ill.; Walter Shipp, Centralia, Ill.; Russell M. Parkinson, Coulterville, Ill.; R. E. Vermillion, Sparta, Ill.; Ronald Hampton, Christopher, Ill.; Virgil T. Baily, Mount Vernon, Ill.; Detrich Helmers, Chester, Ill.; Howard Lewis, Benton, Ill.; K. Neil Thurmond, Johnston City, Ill.

The foregoing resolution also approved, individually, by the undersigned chambers of commerce:

Goffrey Hughes, Southern Illinois, Inc.; E. J. Gregory, Benton, Ill.; James Parker, Johnston City, Ill.; Buford L. Mabery, Sparta, Ill.; J. R. Miles, Chamber Indian Commission, Coulterville, Ill.; H. B. Brayfield, Sesser, Ill.; M. Huie, Christopher Area Betterment Association, Christopher, Ill.; Leo. J. McLean, Chester, Ill.

Mr. DOUGLAS. Mr. President, it will be noted that the mayors suggest certain amendments to the bill, which I commend to the attention of the House of Representatives.

It is interesting to observe that the resolution was signed, apparently, by every member of the conference of mayors, of both political parties, and that it was also approved, individually, by a number of chambers of commerce.

I may add that in a hearing which the Senate Committee on Unemployment held in West Frankfort, Ill., on December 17, 1959, the chambers of commerce of Cairo and of Herrin also expressed their endorsement of the specific bill on area redevelopment.

The Late Richard M. Simpson

SPEECH
OF
HON. PAGE BELCHER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. BELCHER. Mr. Speaker, the death of RICHARD M. SIMPSON comes as a great shock to all of us who have had the privilege through the years to enjoy his warm and loyal friendship.

I met DICK SIMPSON when I first came to Congress at the beginning of 82d Congress. We became very close and warm friends.

DICK was a man of stalwart character, high integrity, and strong convictions. He had the courage of his convictions and would fight for what he thought was right. Yet, he was always kind and courteous and accorded those who disagreed with him the right of their convictions.

He was an able Congressman, and had the respect and love of his colleagues on both sides of the aisle. He was never narrowminded or petty. He was devoted to the service of his community, State and Nation. Perhaps it was his zeal in trying to serve his constituents to the best of his ability that hastened his death. The better you knew DICK SIMPSON, the better you loved him; he was indeed a wise and sympathetic counselor.

My life has been enriched, and I am eternally grateful for having known DICK SIMPSON.

Opposition to High Interest Rate Policy

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, January 11, 1960

Mr. PROXMIRE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a lucid and persuasive argument against present high interest rate policies that is carried in the current issue of Rural Electrification.

There being no objection, the article was ordered printed in the RECORD as follows:

RURAL ELECTRIFICATION

REA AND TIGHT MONEY POLICY

For months now we have been besieged with warnings that the high-interest, tight-money policy must be imposed on REA.

President Eisenhower, himself, came to our annual meeting last February to tell us this. Since then, the Director of the Budget, the Secretary of Agriculture and the Administrator of REA have been bringing up reinforcements.

To date each of the battles against the high-interest, tight-money policy has been lost, one by one—veterans, Farmers Home, Farm Credit, housing, and so on.

At some point we as consumers must make a stand. We need a call to arms to rally all those who are hurt by the usurious high interest.

Such a call was sounded at the recent region IX meeting when the rural electric systems' delegates resolved: "That we, as a segment of the population concerned with the welfare of the entire population, recognize that these unsound money policies are a threat not only to our rural electrification program, but to the economic stability of the communities we serve and to the whole country, and must be corrected before our program and the economy are more seriously hurt."

Similar resolutions were adopted in regions III and VII.

The drive to raise REA interest rates is no isolated undertaking. It's part of a deliberate, carefully calculated national policy. It is part of the Government-sponsored, high-interest, tight-money policy.

If this national policy continues to sweep the country unchallenged, we can be almost certain that it will be imposed upon REA no matter what the effects, and no matter how the rural electrification program may be hampered or damaged as a result.

What do we want to do about this situation.

We can see all around us the harm that high-interest rates are having upon consumers generally, and that includes all of us along with the farmer, the laboring man, the housewife, the small businessman, the homebuilder, the student, the car buyer, and, in fact, everyone who has to buy or borrow. We are being forced to pay billions a year extra in interest costs for goods and services without getting any extra goods and services. In other words, we are forced to pay billions in tribute to persons unknown to most of us.

INTEREST ON U.S. DEBT

Let's look at the extra interest cost of running the Federal Government. In 1959, the high-interest, tight-money policy increased the cost of carrying the Federal debt by $1.4 billion over 1958. Compared to 1952, the increase is $4 billion.

Imagine what might have been done with these extra billions in the way of reduced taxes, new resource projects, space vehicles, or better education for our children.

The total amount required in this year's Federal budget for interest on the debt has grown to $9 billion. This is greater than the entire Federal budget prior to World War II. It is the second largest item in the budget; only the huge national defense expenditures come higher. It is larger than the combined total for aid to housing and business plus spending or investment on labor, welfare, education, dams, rivers and harbors.

It is startling that in 1 year we are paying nearly three times as much in interest as we lent under REA in a quarter of a century. Put it another way. The annual interest cost is big enough to build two TVA's a year.

The cost is growing. In the next year, Uncle Sam is going to have to borrow about $100 billion, most of it refinancing. Under the high-interest policy, we will be replacing low-interest obligations with high-interest obligations. And every time we raise the interest rate one-quarter of 1 percent, we will add another quarter of a billion dollars to our tax bill.

INTEREST ON PRIVATE DEBT

The Federal debt, of course, is only a part of the picture. Consumers, business concerns, farmers, States, municipalities, schools, and many other private institutions need loans to function, and the interest rates they have to pay are strongly affected by whatever rates Uncle Sam establishes.

Because of the Federal Government's high-interest, tight-money policy, these borrowers are having to pay this year a total of $8 to $10 billion more in annual interest charges than they would have had to pay at rates in effect previously.

Everyone has to help pay this toll, directly or indirectly. This includes rural electric cooperatives which have to buy wholesale power and other supplies and services. Also included are those rural electric consumers who have to finance purchases of electrical appliances and equipment.

Rural electric consumers who plan to build homes will find they have to pay higher interest rates. A homebuilder prior to the tight-money policy could have obtained a $10,000 FHA loan at 4 percent for a 25-year period. Today the same loan calls for an interest rate of at least 5¾ percent and the potential electric consumer is also likely to have to pay finder's fees or discounts in addition—all of them interest costs under other names.

Farmers on your lines are finding they have to put more of their shrinking income into

higher interest charges. Most of the land banks have raised their rates on loans to farmers to 6 percent, the legal limit. Many PCA's are now charging 7 percent or more on new loans. Farmers Home loans have higher rates than previously.

UP AND UP IT GOES

The Wall Street Journal recently described the vicious cycle in this way: "A 5-percent interest rate on U.S. Government obligations cannot exist in a vacuum; it will have its effect on interest rates for all other types of borrowing, from the capital investment of business to the personal borrowings of individuals to buy homes, cars and household goods.

If the tight-money and high-interest rate issue were an uncontrollable natural phenomenon, there would be little we could do but bear it. This is not the case. These monetary policies are manmade. And they are made deliberately by the Government's top command, including the Secretary of the Treasury and the Federal Reserve Board.

Representative WRIGHT PATMAN, vice chairman of the Joint Economic Committee, has this to say: "The Fed (Federal Reserve Board) controls the amount of money and credit in the banking system—and controls the level of interest rates in the whole economic system—mainly by buying or selling Government securities."

Just what is this high-interest program accomplishing? Are we heading into another 1929, or are we avoiding one?

The tight-money policy has been heralded as a defense against inflation, but the cost of living is right now at the highest point in history.

The November cost-of-living index just made public is one in a series of 7 monthly increases recorded in the last 8 months—seven increases in 8 months. As inflation medicine, this policy is poison.

In any case, how can higher interest rates combat inflation? We know that higher interest rates increase costs without in any way increasing output. Nothing could be more inflationary.

WHO BENEFITS?

So, what are the benefits from this high-interest, tight-money policy which appears to be so bankrupt from the standpoint of the taxpayer, the consumer, the farmer, and most other citizens?

The Wall Street Journal reports that New York City banks expect to realize a 25–30 percent increase in net operating earnings for the third quarter of 1959, compared to the year before. Why? A "climbing volume of loans at higher interest rates."

Most of the Government's $9-billion interest payments will go to the Nation's banks. They are the largest single group holding Government securities.

Bank profits, reports the Federal Reserve, have jumped 135 percent in the past 10 years.

HOW WILL AN REA RATE INCREASE HELP?

The foregoing outlines the high-interest, tight-money policy that the Administration now wants to impose on REA. The rural electrics, they say, should ask for the opportunity to join the high-interest club as a public relations gesture.

But is this a good course from the viewpoint of either the rural electric member or the consumer generally?

Would not the rural electrics perform a greater service to their own members, farmers, veterans and all consumers by leading a backs-against-the-wall fight—which it is—to reverse the whole confiscatory policy? Wouldn't we be doing more for our public relations, and ourselves, by helping replace the Big Bankers Monetary Policy with a People's Monetary Policy?

All of us in the rural electrification program have a big stake in finding the solution to the inflationary high-interest, tight-money problem.

We must urge Congress to take positive action to stop any more interest rate increases and to roll back the increases the tight-money policy has already made.

We must urge Congress to do something about the monetary policy-makers in the Government. For example, the Federal Reserve Board which has such trenmendous power over money and credit is completely banker-dominated. There ought to be representatives of agriculture, small business, labor and consumers on this Board. They are not there now.

We must plan an all-out mobilization of our own members and likeminded consumers in each of our communities. There are many who want policies keyed to the needs of the consumer rather than the money lender. We have helped to stem tides before and, together, we can help stop this one.

Raising the Philippine Quota in the Next Revision of the Sugar Act

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. FLOOD. Mr. Speaker, in the 1956 amendments of the Sugar Act the Philippines alone received no increase in quota. It is hoped that in the present Congress when consideration is given to a further extension of the act more equitable provision for the Philippine sugar producers will be made.

Indeed such action in behalf of the Philippines has been promised. When the President signed the law in 1956 extending the Sugar Act for 4 years, he expressly indicated that when new amendments were being prepared at the conclusion of the present act, consideration should be given to increasing the Philippine share of U.S. sugar consumption. A press release to this effect was issued on May 29, 1956, which I take the liberty of quoting in full:

MAY 29, 1956.

STATEMENT BY THE PRESIDENT

I have today approved H.R. 7030, to amend and extend the Sugar Act of 1948, as amended, and for other purposes.

In addition to extending the Sugar Act for 4 years, the bill restores to the domestic areas the right to supply 55 percent of this country's increased requirements of sugar. The amendments also permit foreign countries to supply as much as they have been, plus 45 percent of the increases in our requirements. These increases will be most important relatively for the countries that heretofore have been minor suppliers.

It was not considered feasible to recommend an increase in the Philippine quota at this time. I believe, therefore, that when new amendments are being prepared at the conclusion of the present act, consideration should be given to allowing the Philippines to share in increased consumption, as is now provided for other foreign countries by this bill.

The New Look in Agriculture

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, January 11, 1960

Mr. DIRKSEN. Mr. President, I asked unanimous consent to have printed in the Appendix of the RECORD, a talk by Earl L. Butz, dean of agriculture, Purdue University, Lafayette, Ind. His subject was "The New Look in Agriculture."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE NEW LOOK IN AGRICULTURE

(By Earl L. Butz, dean of agriculture, Purdue University, Lafayette, Ind.)

The most constant thing about our society is change. Ours is a dynamic society. Change is the law of progress. This is especially true of modern American agriculture. Those who process our food and fiber are also swept along in the same swift current of change.

Adjustments which have occurred in agricultural production and marketing during the past 10 years have been phenomenal. Still greater changes lie ahead.

The advances we will experience in the next decade will be unparalleled in American agriculture. It is possible that a generation hence agricultural historians will refer to the 1950's as the "decade of the scientific breakthrough."

Never before in history has the future been so near as now. Research and education are shortening the time span of progress. We shall occupy rinkside seats in scientific and technological developments during the next decade equivalent to changes which our fathers took a generation to accomplish.

Adjustments have always had to be made in American agriculture. But because these adjustments in previous generations were spread through several decades, farm families were able pretty well to take them in their stride. Today the agricultural revolution is advancing with such rapidity that farm families and rural communities often find it difficult to make the kind of economic and sociological adjustments that are required. This is equally true for agricultural businesses.

Growth is always painful. Economic and sociological changes in our way of living have always been difficult. The present adjustment is no exception. It is not easy for farm families to change their methods of production, their scale of operation, or even to shift vocations. It is more difficult for a farm family to shift vocations than for an industrial worker. However, farm sons and daughters, as well as farmers themselves, have been shifting to non-farm vocations in this country for generations. It was in this manner that industrial America grew. Only the rapidity of the present shift is new.

The impact of these agricultural developments on farming itself, on community life, and on food processing and distribtuion is tremendous. These are days when farmers and businessmen alike, like Alice in Wonderland, have to "run like the dickens just to stay where they are."

WHAT WILL BE THE IMPACT OF THESE CHANGES?

For purposes of the present discussion, we may group the impact of these technological changes under five headings.

1. Capital requirements for agriculture will grow, in total, per farm, and per man. This trend has been particularly pronounced during the past two decades. Its continuance is inevitable.

Our agricultural plant now has total assets in excess of $200 billion. This is a record high figure. About 89 percent of this represents owners' equities, as total debt is now around $22 billion or about 11 percent of total assets. This is a conservative figure, and is probably a healthy minimum, considering the necessity to refinance most farms each generation when ownership changes to younger hands.

Total investment per farm in the United States now averages more than $40,000. This includes a lot of small part-time or subsistence farms. Investment per commercial farm is much higher. It is not uncommon for family commercial farms in the Corn Belt, for example, to have a total investment in excess of $100,000.

Investment per worker is growing rapidly. Only 15 years ago, the average U.S. farm had about $3,500 invested in land and equipment for each farm worker. Today that figure is over $16,000 per worker. On many commercial family farms the investment per worker runs up to $50,000 or higher. This compares with an average investment per industrial worker of around $14,000. This means it takes three to four times as much capital investment to create one agricultural job on many of our family commercial farms as it does to create a typical industrial job in our cities.

As agricultural science continues to advance, it is inevitable that the business units in agriculture will get bigger and bigger with still larger amounts of capital required. This trend cannot be stopped. Nor should it be. We must adjust our farm institutions and our farm programs to it, so as to capture such benefits as will flow from it.

Machines will continue to displace men on our farms. We will produce more with fewer farms and with fewer workers than at present.

This is not a new trend. It has been going on for decades.

2. The number of farms will decrease. At the present time we have about 4.6 million farm units in the United States. Slightly less than 2 million of these are what we commonly call commercial family farms. The remainder are in effect part-time or quasi-subsistence farms. They contribute relatively little to the commercial flow of food and fiber in this country. Indeed, the top 2 million of our farms produce approximately 90 percent of all food and fiber entering into commercial trade.

The other 2 million plus farm units, although classified in agriculture, are operated by farm people who really need more opportunity to improve their situation either through enlargement of the individual farm business or through additional employment off the farm. Many of these people are so situated that the solution to their problem must ultimately be found outside of agriculture.

We must help the marginal farmer and the operator of an undersized acreage to become a better and more efficient farmer, or to find opportunity in other fields where he is better suited and where his income opportunities are larger.

There are some people who just weren't cut out to be farmers, just as other people don't make successful machinists, carpenters, or salesmen.

It is not at all coldblooded to suggest to a farmer that he seek other employment or that he supplement his farm income with an off-the-farm job if he can't make a good living in farming. It is really coldblooded to attempt through legislative programs to keep him tied to a farm which everyone knows is inadequate to provide a decent living for himself and his family. People in other jobs and in other professions take this kind of healthy competition in their stride. And they usually improve their lot in life. Many low income farmers can and will do the same if they are given the opportunity, and if the politicians will stay out of their hair.

In many areas of the country, there is a job waiting in industry, a job with good pay, for the farmer who finds that farming is not his long suit. And if his children want to go into engineering, into medicine, into teaching, or into the skilled crafts in the city, they can be sure that a position awaits them when they finish school. There is nothing dishonorable about this kind of vocational shift. It's been taking place ever since the founding of the nation. Without it, our high level of living would have been impossible. We would have been a nation of peasants, with each family tied to its small acreage of land. We would have advanced little beyond the current status of major agrarian populations in the Near East and the Far East.

In 1910 we had 32 million people on farms, representing 35 percent of our total population. In 1940 we had 30 million people on farms, but only 23 percent of our total population. At the present time the number of people on farms is down to about 21 million, or 11 percent of our total population. It has been predicted that by 1975, farm population may be around 17 million, or about 7.5 percent of the total of around 228 million.

This will mean that production per worker on our farms two decades hence must be more than twice as high as it is now. And it's now twice as high as it was less than two decades ago. This kind of development must inevitably mean higher living standards for those who man our farms and produce our food and fiber.

These commercial family farms will increasingly take on the characteristics of a business organization. The percentage of gross receipts consumed by production expenses will rise even higher than today. At the present time about 65 cents of each dollar the farmer receives is spent for goods and services which he requires to run his business. This does not include his wages to himself. In earlier periods, expenses consumed less than 50 cents out of the dollar. A decade or two hence expenses will consume more than 65 cents of the dollar. The farm will operate on a narrower margin per unit of output. This means that volume must increase in order to increase profits.

This trend suggests that farms are becoming more like other businesses in that they acquire more and more of their goods and services rather than having them produced on the farm or consumed there. In a sense, therefore, the farmer becomes the manager of a manufacturing operation, as he puts together packages of technology which have been processed on a custom basis by others. One of the best illustrations of this is, of course, the highly integrated broiler industry.

3. The trend toward integration will spread. We have heard so much about vertical integration in agriculture in recent months that many of us are frightened by it. We should not be. Vertical integration in agriculture is the result of fundamental economic and technological changes occurring in the agricultural industry—not the cause of them. It is a manifest effort by individual sectors of the "agribusiness" assembly line to survive in the swift competitive current of our modern dynamic food and fiber industry.

Agriculture is in the midst of a far-reaching scientific and technological revolution which is shaking the very foundations of its traditional institutional patterns.

Agriculture is changing from a way of living to a way of making a living. It is changing from a business of arts and crafts to a business undergirded with large amounts of science and technology.

The present agricultural revolution, resting on basic science and closely allied with the widespread advance of automation in both production and distribution, is threatening the traditional pattern of owner-manager-operator all wrapped up in a single person.

This is the very basic of much of today's social and political unrest in agriculture.

The fact that vertical integration is one of the stage properties being used by science, by technology, and by automation places it under political suspicion as the villain in the act.

Nearly everyone is familiar with the industrial integration which characterizes production of poultry meat in this country. But poultry is not alone in this field. It's just led the procession. We find similar illustrations in some of our canning and freezing vegetable crops. Large animal production in this country is by no means immune from the possibility of integration. Indeed, the pressure is in that direction. Production of meat animals to market specification is just around the corner. Advances in genetics and nutrition, both for plants and animals, and advances in environmental physiology will make this possible. This means that we will have predetermined performance built into breeding animals just as is now the case with crops.

If and when this kind of integration begins to hit the large animal field, it will precipitate sociological and economic adjustments that will be difficult. We will need to study the organization of our production units carefully and steer our farm policy course wisely in order both to minimize the adverse impacts, and to maximize the favorable aspects of this development.

4. Our countryside will be "rurbanized." A transformation is taking place among us which is changing the thinking and actions of a vast segment of our population. The "country hick" and the "city slicker" have virtually disappeared as prototypes on the American scene. The line of demarcation between people living in rural areas and those in urban areas is fast becoming obliterated.

Cultural and social patterns are being changed in every section of our country by the population shifts that are taking place. Our modern science and technology have made it possible for the city to move to the country and for the country to move to the city. Our countryside is becoming "rurbanized." Farm and city folk live alongside each other in our newly "rurbanized" communities. The effect of the resulting intermingling has been that there is no longer a farm population and an industrial population, especially within 40 or 50 miles driving distance of our big industrial centers, and that includes practically the whole eastern and central parts of the country.

Today the commercial farmer not only takes on the financial aspects of a big businessman, but because he now associates with businessmen and laborers who live nearby him in the country and whose children go to the same school, increasingly this farmer is beginning to think like they do.

The city-limit sign at the edge of your county-seat town doesn't mean the same thing it did a generation ago. It's now just a tax boundary. It's no longer a cultural boundary, an educational boundary, a recreational boundary, an economic boundary, or a social boundary. The same kind of people live on one side of that city-limit sign as on the other side. They have the same literature, the same radio and TV programs, the same recreational opportunities, the

same educational opportunities, the same social and cultural opportunities.

In this process of "rurbanization," the elements of rural and urban living are being blended together. The "rurbanization" of America has long been in the making. Only in recent years has it come to the fore as a powerful influence reflecting a great change taking place in our way of life.

A new agriculture in America is emerging with breathtaking rapidity. The transformation is taking place so quickly that we are experiencing great difficulty in adjusting to it economically, sociologically, and politically.

For many years in our city communities the doctor has lived beside the lawyer, beside the machine operator, beside the bricklayer, beside the schoolteacher, and each has lost his vocational identity as a member of his community. So it will tend to be with our commercial farmers in the newly "rurbanized" communities. The farmer-businessman will live beside the urban businessman, the urban industrial worker, and the urban professional man, with a decreasing emphasis on vocational differences among them.

Ultimately they will lose their vocational identity as members of the community. At this point farming will no longer be a way of life, but will be a way of making a living, just the same as other business enterprises.

5. Agriculture is an expanding industry. American agriculture is an expanding industry in every important respect except one—the number of people required to run our farms. Only in this single respect can it be said that agriculture is a declining industry.

Our agricultural plant uses each year more capital, more science and technology, more managerial capacity, more purchased production inputs, and more science and research than the year before. It is obvious, therefore, that those writers and analysts who refer to agriculture as a "declining industry" look only at a single phase of this growing and important American industry.

The declining trend in farm population, although viewed with alarm by some politicians and rural fundamentalists, is itself a sign of a strong agriculture. This is the age of science and technology in American agriculture. Brainpower has replaced horsepower as the central ingredient of success on our farms.

We have already seen how total capital and capital per worker in agriculture greatly exceeds that in American industry. Total capital assets on our farms now exceed $200 billion. If you add to this the investment in agricultural businesses, the total investment in what has commonly come to be called "agribusiness" exceeds the total industrial assets in America.

When we consider the agricultural industry, we need to include in our thinking those businesses that supply our farmers with items used in production, as well as the processing and distributive concerns that handle the food and fiber produced on our farms. For every worker on American farms, there is approximately seven-tenths worker engaged in supplying farmers with goods and services used in production, and approximately another worker engaged in processing and marketing the food and fiber produced on our farms. This entire group comprises approximately 37 percent of our labor force. This figure hasn't changed much the last decade or so. We've had a trend toward fewer workers on farms, but increasing numbers of workers in the agriculturally related businesses.

When the total Agribusiness is taken into consideration, approximately one-third of the workers are on farms and two-thirds off. Approximately two-thirds of the capital is on farms and one-third off. Approximately one-sixth of the value added is on farms and approximately five-sixths off the farm.

The farm plant in America purchases approximately $17 billion worth of goods and services used in farm production. To this it adds a value of about $17 billion, which means that total farm produce leaves the farm gates at about $34 billion. Processing and distribution add another $45 billion to this, which makes a total value of output in Agribusiness of approximately $80 billion.

These figures point out the growing importance of agriculture as a market. Industry depends upon agriculture as a customer to a greater extent than most people realize. In contrast to 40 or 50 years ago, when farmers were producing most of their own fuel, power, and fertilizer, industry is now furnishing farmers each year:

Six and one-half million tons of finished steel—more than is used for a year's output of passenger cars; 45 million tons of chemical materials—nearly 5 times the amount they used in 1935; 17½ billion gallons of crude petroleum—more than is used by any other industry; 285 million pounds of raw rubber—enough to make tires for 6 million automobiles; 22 billion kilowatt hours of electrical power—more than enough to serve the cities of Chicago, Detroit, Baltimore, and Houston for a year.

I could go on citing other evidences of the tremendous importance of agriculture in our national life, but I think I've made the point. Whatever happens to agriculture has a direct and major impact upon industry—and industry, by the same token, has a very great interest in the welfare of agriculture.

Those of us who work in agricultural education and research have a responsibility to service the whole broad area of agribusiness. The mere fact that functions once performed on the farm have now been transferred off the farm does not mean that our responsibility to them has diminished. Indeed, it may have increased.

THE JOB AHEAD

It is not the purpose of this discussion to detail our job in the difficult days ahead. Suffice it to point out that the job will be a challenging one, and a difficult one.

We must all combat the philosophy that sometimes rears its ugly head and asserts that because of current agricultural surpluses we should "declare a moratorium on research and education".

This is a false and dangerous doctrine. It was preached in 1920 when post-World War I surpluses developed. Think where we would be today if that philosophy had prevailed 25 years ago. It was preached again in 1940, just before World War II, when surpluses again plagued us. Think for a moment where we would be today if we had listened to that just 19 years ago. The best way today to stop the steady march toward fulfillment of the American dream would be to pull the rein on research and education. This we must never do.

We talk a lot in America about horsepower. However, our greatest national resource today is brainpower. This complex scientific and social environment in which we live demands increasingly competent men and women to manage it effectively. We must develop the brainpower of young America in such a way that the generation ahead can enjoy fully the technological and social developments which await us. Not to train to its highest capacity the brainpower of our young men and women in America is just as wasteful of one of our great natural resources as not to exploit a new pit of iron ore, a new bed of uranium, or our fertile fields.

Those of us in adult educational work must not be frightened by the economic and sociological changes which agriculture is undergoing.

Change is the law of progress. The challenge which faces us is to direct the change along constructive and beneficial channels.

Our problem, therefore, becomes one of intelligent analysis and direction of the future—not cowering fear of it.

None of us would want to live under the economic institutions which prevailed just a short 20 years ago. Yet I am confident that some of us in this room, 20 years ago, vigorously resisted changes which were then occurring in the patterns of production, processing, and distribution. As we look back now, we wonder why.

Likewise, 20 years from now we'll look back on 1958 and be a little amused that we were so fearful of change, rather than directing our energies toward channeling change down beneficial pathways.

It has been said that the proponents of the status quo are often the villains of history.

Those who resist inevitable change frequently perish in the process.

Those who manage our agricultural production, processing, and distribution firms are challenged to give intelligent direction to the changes ahead, so that our great food and fiber industry will function even better than now.

The future belongs to those who prepare for it.

Lyndon Johnson Best Choice for Democrats

EXTENSION OF REMARKS

OF

HON. JIM WRIGHT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. WRIGHT. Mr. Speaker, under leave to extend my remarks, I am including a very well reasoned editorial which appeared on the front page of the Fort Worth Star Telegram on the evening of Tuesday, December 29 and on the morning of Wednesday, December 30.

This editorial so well expresses what many of us have thought concerning the unique qualifications of LYNDON B. JOHNSON for President of the United States that I thought it would be well for our colleagues to have the opportunity of reading it and for it to be given the general distribution of the CONGRESSIONAL RECORD:

LYNDON JOHNSON BEST CHOICE FOR DEMOCRATS

Texas can take pride in having, for the first time in a good many years, a native son who potentially is a formidable contender for the Democratic presidential nomination and who, if nominated, would be a formidable contender for election to the White House. So far, however, though he must be counted among the leading Democratic prospects for the nomination in 1960, the candidacy of Senator LYNDON JOHNSON remains potential rather than actual.

As a master of political strategy, the Senate majority leader has few peers. That being the case, it is likely that he has his course skillfully charted in the direction he wishes to go. Nonetheless, we hope that he soon will see fit to become an avowed and open candidate for the nomination, throwing into the ring the broad hat of a Texan who has made himself an outstanding figure on the national scene.

Only in this way, we believe, can a standard be raised to which JOHNSON followers in

Texas and the Senator's numerous admirers in other States can rally with enthusiasm and effectiveness. Only in this way can support for him be crystallized and the movement for his nomination be given the momentum it must have for success.

Under the astute guidance of Speaker SAM RAYBURN, Johnson-for-President clubs have sprung up in many parts of the State and show signs of taking root beyond Texas borders. But these are handicapped, and their fervor is somewhat curbed, by the fact that as yet they do not have a declared and eager candidate to champion. Until they do, they can not do their zealous best in furthering the chances of a Texas presidential prospect.

Among all those prominently mentioned for the Democratic nomination, whether they are coyly or brashly "available," in our view none is as preeminently qualified to be the party's standard bearer as Senator JOHNSON. And certainly, if he openly entered the fray, Senator JOHNSON would be far more than a native son candidate in the frequent sense of that term. He could not be considered a mere temporary resting place for the votes of the Texas delegation until it could be ascertained at the nominating convention how the tides are running. In the true Texas spirit, he and his followers would go into the convention with a determination to win and a good prospect of doing so.

If the banner of his candidacy is boldly raised, help from other States could be expected to flock to it, for the remarkable quality of the Johnson leadership is as well recognized and his prestige is as great in other States as in Texas. Non-Texans are well aware of the qualities that have made him an almost uniquely effective political and legislative technician—one so adroit in his handling of men and issues as to get results in a divided government and a divided party. They have not missed the fact that by sheer force of personality he has become the dominant member of his party and the man second only to the President in national power.

Like President Eisenhower, Senator JOHNSON has suffered and recovered from a severe heart attack. The strenous work schedule to which he has adhered in recent months is evidence of the completeness of his recovery. So broadly national has he made his interests, and so many Northern leaders of both parties has he brought into his debt, that he is in good position to shatter the doubtful tradition that no one from south of the Mason and Dixon line can win the nomination.

By exercise of great skill and responsibility, Senator JOHNSON has been the chief builder of the record upon which the Democratic nominee, whoever he might be, must run. The Texas Senator deserves to be the presidential candidate who is given a chance a run on that record.

American Flag Stamp

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, January 11, 1960

Mr. YOUNG of North Dakota. Mr. President, the Minot Daily News of Minot, N. Dak., under date of January 2, 1960, contained a very interesting editorial concerning the new American flag stamp.

I share its proposal to extend the American flag stamp to other postage denominations and believe it is something that might well be considered.

Mr. President, I ask that this very interesting editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A STAMP FOR ALL TIME

Some of the season's geeting cards that came to the News office carried in the upper right corner of the envelope that bright red, white and blue postage stamp with the American flag on it.

New Year's cards are welcomed, we appreciate, not primarily for the postage stamps they bear, whether regular issue or commemorative.

But we will make a confession that when a large bunch of mail dropped onto the desk, those few envelopes which had the American flag stamp on them sort of stood out before our eye. That 4-cent stamp is a beauty.

It would please us if every letter we mailed, to everyone far or near, could have the Stars and Stripes on it. And we have nothing against the face of Abraham Lincoln, which appears on the regular 4-cent issue.

Yes, we know the flag stamp, which was issued July 4, 1959, after Alaskan statehood became official, has only 49 stars on it. It is not the number of stars which makes the design and colors of this stamp so striking. It ought to be possible for the postal department to redo that stamp with the 50 stars it should carry, with Hawaii's statehood taken into account. Then it could be reissued.

Our thought about this particular stamp is more than three cheers for the Red, White and Blue. It stems from the fact that the designer, whoever he was, made the flag come alive in remarkable fashion. This prompts us to think that the symbol of the Stars and Stripes, brought up to date with all the stars, would be an inspiring one to every person who mailed, or received, a first-class letter. Faces of our great statesmen of the past are fine, and they would continue to adorn the stamps of other denominations in every series we issue. But there is something about the face of the flag that represents all of us in the United States as we are today.

The Late Richard M. Simpson

SPEECH
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. UTT. Mr. Speaker, it was with profound sorrow that I learned of the passing of my friend and colleague, DICK SIMPSON. The true measure of life is not its duration, but rather it is found in its contributions of dedicated service. Our Saviour lived upon this earth for only 35 years, and in this brief time contributed more than we can ever appreciate.

So it was with DICK, a man of faith and a man of works. His death may seem untimely, but who can measure time, in years, as God in His infinite wisdom stretches forth His hand and gathers into His arms His little children, and no one knows the time or the place.

With the inexorable passage of time, each of us will be gathered into His kingdom.

DICK'S friendly help and counsel left nothing to be desired. His memory and influence will long be felt in these Halls of Congress where he served the ideals of Americanism and of Christian faith. He did all that was required of him. He loved mercy, he did justly, and he walked humbly before God. Man can ask no more.

To his wife and family, Mrs. Utt joins me in expressing our deep sympathy.

The Lady From Missouri

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. GEORGE. Mr. Speaker, one of the real privileges of being a Member of Congress is having the opportunity to meet so many wonderful people from all parts of the United States.

One of the very rare privileges is knowing the Congresswoman from the Third District of Missouri, LEONOR KRETZER SULLIVAN. Especially is this true when one had the honor and pleasure of meeting her distinguished husband, the Honorable John B. Sullivan, whom she succeeded in the House of Representatives.

It was my good fortune, Mr. Speaker, to read the Sunday St. Louis Globe-Democrat of January 3, 1960. On the editorial page appeared a feature article written by Marguerite Shepard, staff writer. Miss Shepard recognizes the strong and continuous fight the Honorable LEONOR K. SULLIVAN has made and is making to require that only pure, wholesome, and nonpoisonous drugs, food, and cosmetics are produced and made available to the American public.

During the 1st session of the 86th Congress, the battle of Mrs. SULLIVAN to have her food stamp plan enacted brought about the first clear sign of unity among the Democratic Members in the House of Representatives. Her charm, her personality and her perseverance succeeded in having her plan to feed the poor enacted into law.

Although her legislative victory was complete, a cold, callous, and heartless administration has refused to put the statute sponsored by Mrs. SULLIVAN into operation and the people of America who do not have enough to eat remain hungry, and starving children continue to cry themselves to sleep.

Because of its timeliness and because each Member of both bodies should have an opportunity to read it, I ask that under unanimous consent, the article by Miss Shepard be included in the extension of my remarks:

[From the St. Louis Globe-Democrat, Jan. 3, 1960]

THE LADY FROM MISSOURI IS CONSUMER'S FRIEND—PURE FOOD AND DRUGS HER BABIES

(By Marguerite Shepard)

The battle of the lipsticks will soon be joined in the Congress, and, fittingly, one of the most determined fighters in that battle will be the lady from Missouri, Representative LEONOR K. SULLIVAN.

Like most women, lipstick is one of the first things she puts on when she gets up in the morning.

But some of the yellow, red, and orange colors in lipstick come from coal tar dyes. The Food and Drug Administration recently fed the dyes to rats and the rats got sick.

"Everybody says, 'You don't eat lipstick,'" Mrs. SULLIVAN points out.

"But ask any woman how many times a day she has to apply lipstick. It goes somewhere.

"And perhaps the amount of the chemical ingested is very, very small, yet year after year they devise new means of testing, and perhaps next year or the year after that they will find the tolerance they said wasn't harmful does prove harmful under the new testing. * * * That's what happened with the coloring used in Florida oranges."

FINE REPUTATION

Congress reconvenes next Wednesday. Mrs. SULLIVAN, who is driving back to Washington this weekend, has been home since mid-November. But it has been no vacation.

If anything, she has been working harder at home than when in Washington—and that's saying a good deal. She has the reputation of being one of the hardest workers in the Congress.

There's a male tendency to adopt a condescending attitude toward female ability in fields outside the home. Men may readily admit a woman is charming, attractive, and all that.

Men who know Mrs. SULLIVAN apply those adjectives to her, all right. But they add others.

Things like "independent and resourceful," "has the courage of her conviction," "never opens her mouth until she's sure of her facts and she's far from the quietest Member of Congress."

One male associate says of her, "She can do anything a man can do and do it better." From him, that's the most.

Yet LEE SULLIVAN is not the flat-heeled, tailored-suit type. She believes a woman should be feminine.

"A woman with a woman's viewpoint is of more value than when she forgets she's a woman and begins to act like a man," she says.

ASTUTE POLITICIAN

The day we spent with her she was, as usual, dressed most femininely. High heels, a red wool jersey dress ("First thing red I've had in ages," she said), and pearl earrings.

That was also the day that she had lunch at her desk. A hamburger with lettuce and mayonnaise, no onion, and a paper cup of milk that her secretary brought up from the corner drugstore. Such a lunch is not unusual for her.

Representative SULLIVAN keeps an office open in St. Louis (in the Old Federal Building at Eighth and Olive Streets) the year round. Until recently, she was the only representative from St. Louis who did so.

During congressional recesses, she's in her St. Louis office only by appointment, but that, and keeping up with her mail, means a good part of every day spent in the office.

Says one Democratic power here: "She's a very astute politician in the most constructive sense. That is, she keeps in touch with her district and the people in it."

Her ear is nearly always available for those who want it. That doesn't necessarily mean she does as she is asked.

Another Democratic power here puts it this way: "You can always come in and tell her your story. She's never argumentative. If she disagrees, she says 'No' and that's the end of it."

WROTE IMPORTANT BILL

(We got a firsthand sample of that when a Globe-Democrat photographer, who happens to live in Illinois, harangued her at length about the injustice of an out-of-state resident's having to pay the city earnings tax and three Missouri income tax. She disagreed with him on the earnings tax, agreed he had a point on the State income tax.)

Many Congressmen have an executive assistant who acts as their right hand. Mrs. SULLIVAN was that for her husband, the late John B. Sullivan—though she never held the title—but she is the executive in her office. She has a staff of seven, a man who stays in the St. Louis office year round, two secretaries who are wherever she is, and four more who stay in Washington all the time.

She runs her own campaigns and does her own publicity. She seldom seeks reporters out to say she's going to do thus and so. She goes ahead and does it, waits for them to seek her out. Some of her colleagues regard her as rather self-effacing, though she's not the timid type.

In fact the first bill she introduced in Congress didn't bear her name (it carried the name of the committee chairman, as is customary) but she wrote it, down to the last comma.

That bill revised the FDA factory inspection law to give inspectors the right to go into any food, drug or cosmetic plant at any time during regular working hours, without previous notification.

CONSUMER'S CHAMP

Her reasoning was typically feminine: "If anybody knows company is coming, they're certainly going to clean up and be ready."

She wrote the bill herself because she wanted to be sure it said "exactly what it meant, with no chance for interpretation two or three ways according to which lawyer interpreted it."

Mrs. SULLIVAN is one of only 16 women in the Congress (15 in the House, 1 in the Senate).

"As long as women marry and have babies and run the home, I don't think Congress will ever have too many women in it, but I think it's good to have a good sprinkling of women in every legislative body," she says.

She firmly believes the woman's viewpoint is of great value in her work.

"Why do you think I spend so much of my time fighting for the FDA and for the consumer's interests?" she asks. "I could probably get by with my own committees, just handling my own work.

"But I think this is a natural for a woman. We understand it. Women do most of the buying, women use most of the products made for the home."

And so the lady from Missouri has come, over the Nation as well as from her own State, to be known as the champion of the consumer.

READY FOR BATTLE

She is on committees having to do with banking, currency, housing, the merchant marine, fishing, and the Panama Canal. But she spends a lot of her time, appearing at her own request, as a witness before committees dealing with the regulation of food, drugs, and cosmetics.

Consistently she has fought for more money to allow the Food and Drug Administration enough inspectors to do an adequate job of protecting the public.

One of the first fights she expects in the House after it reconvenes is the one on the coal tar coloring bill.

As the law now stands, coal tar colors have to be taken off the market, even though, as in lipsticks, they're used in such small amounts the tolerances are so far believed safe.

Secretary of Health Flemming, enforcing the law as it stands, has ordered lipstick makers to stop using those colors by January. They've demanded a public hearing, which has the effect of postponing the ban.

Meantime there'll be concerted pressure to pass an amendment to the FDA Act which slipped through the Senate just before it adjourned without any public notice, without even public hearing or debate on the floor.

That bill would allow the questionable dyes to be used in so-called "safe" tolerances—that is, in very minute amounts considered presently to be harmless. The same dyes are also used in some foods.

HELP FROM HOME

"If there is any danger, should those colors be used?" asks Mrs. SULLIVAN. "Let's find another way of coloring.

"I think it's important to point out that here in the United States cancer is much more prevalent than it is in European countries, where they are much more strict about chemicals that can be added to food," she declared.

She expects the whole food and drug law to come under strong industry attack in this coming session of the Congress. But she also thinks the public will be more alert, because of the recent to-do over cranberries.

It was the St. Louis Consumer Federation that first got Mrs. SULLIVAN interested in the FDA. In December, 1952 shortly after she was first elected to Congress, the federation asked her to talk to it about food and drug laws.

"I went to the public library to study up on it and the more I read the less I knew, so when I made my speech to them I admitted I knew very little about the FDA outside of what I'd learned years ago from reading 'Twenty Million Guinea Pigs'," Mrs. SULLIVAN recalled.

"I turned the meeting back to them and asked them to tell me what was needed," she said. "And I've been meeting with them and having them keep me informed ever since."

That sort of think explains a remark one of the Democratic pros here said about Mrs. SULLIVAN:

FOOD STAMP PLAN

"It's surprising how many women's organizations, nonpartisan ones, will do a great deal of work for her that normally we'd have to pay for."

Quite frankly, the Democrats don't spend a great deal on Mrs. SULLIVAN's campaigns. Fortunately, they don't have to.

Her district (the third) is pretty solidly Democratic. It takes in nearly half the city's population and is bordered roughly by Cass and Maple on the north to Meramec and Fyler on the south, the Mississippi River on the east and the city limits on the west.

A stanch Democrat, and an outspoken one, Mrs. SULLIVAN nevertheless leaves partisan politics at the office in most of the speeches she makes. She keeps her Democratic fireworks for party rallies, talks about things like the FDA and her food stamp plan before most clubs.

Not a "joker" herself (she belongs only to the St. Louis League of Women Voters and the American Legion Auxiliary), she gets a lot of invitations from both men's and women's clubs to talk about her work.

What she is perhaps proudest of is passage of her food stamp plan in the last session of Congress.

She had tried to get it through—to "outlaw hunger" by providing for distribution of surplus foods to the needy through food stamps usable at food stores—since she first went to Congress in 1953.

HER COMING PLANS

Her attitude toward the food stamp bill pretty well sums up her attitude toward her job: "You can't take 'No' for an answer. If you believe in a thing, you have just got to keep pushing till you win or you're convinced you're wrong."

She has her plans laid for the coming session.

As she puts it, these are the "things I've got my teeth into":

1. The grading of lamb, suspended this month, so that consumers can no longer tell what grade they're buying. She calls it an opening wedge to stop grading beef and pork too.

2. Getting sufficient funds for FDA to protect the public properly.

3. Keeping the Delaney amendment and the chemical additives bill, which safeguard the public against potentially dangerous chemicals.

4. Trying to force Secretary of Agriculture Benson into putting into effect the food stamp plan. As passed, it was left to his discretion whether he uses it.

"I've yet to get an answer from Mr. Benson on anything I ever wrote him about," she says.

But it's a safe bet she's not going to take "No" for an answer.

The Legal Aspects of Space

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. McCORMACK. Mr. Speaker, space law is a technical and difficult subject to discuss. It is a new and challenging field of law. It will be the subject of study, discussion, and on the international level, negotiations for many decades to come.

One of the best versed and qualified persons to discuss this delicate subject is George J. Feldman, of New York City, prominent lawyer and outstanding student and practitioner of the law, former director and chief counsel of the House Select Committee on Astronautics and Space Exploration of the 85th Congress, and currently a member of the U.S. delegation to the United Nations.

On December 11, 1959, Mr. Feldman was a member of a panel at the Harvard Law School forum, in Cambridge, Mass., discussing "The Legal Aspects of Space."

In my extension I include the able and constructive address made by Mr. Feldman on that occasion:

THE LEGAL ASPECTS OF SPACE

My subject this evening is certainly not lacking in scope. In fact, to speak on so broad a subject as "the legal aspects of space" would seem little more capable of resolution than a topic like "how to make order out of chaos—and what is it?" It is true, as I shall take up in a moment, that as yet no one has produced a satisfactory legal definition of what space is—that is, what boundary can be set between outer space and what we earthbound people think of as the air around and over us. Nonetheless, the problems of sovereignty, authority and claims involved with exploration and residence of outer space are rushing on the legal profession with the speed of a missile. They are not fanciful problems. On the contrary, some of them have a frightening immediacy. If any of you are disposed to think of them as visionary, or farfetched, or beyond the needs of our time, I might remind you of that famous lonely piece of metal resting in a dry crater on the surface of the moon, with the Soviet emblem on its dusty face. The piece of metal from the successful Soviet Lunik very adequately symbolizes not only a new legal problem, but a tremendous area of opportunity to insure the rule of law as a governing principle of international relations in outer space.

At the moment experts in this field are by no means confident that the rule of law will prove equal to the task—even to the extent of setting up preliminary permanent ground rules governing space exploration. Dr. Wernher von Braun, the man most responsible for putting the first American satellite into orbit, stated the dilemma well when he said: "One of the most crucial problems of our times lies in the fact that the very nature of technology is dynamic, while the forms of political law and order which mankind needs for a peaceful coexistence are fundamentally static." A British legal publication has dotted the i's on Von Braun's statement with the conclusion that "these problems will provide international jurists with years of detailed study and, such being the case, the big powers can ignore the whole thing until it is time to appoint another Commission to amend the laws of the last, which were, of course, so out of date as to be inapplicable. The giddy cycle of law chasing power but never quite catching up will thus be perpetuated."

We need not, and we must not accept such unrelieved pessimism, even when it seems justified by the relative inaction of governments, conspicuously including our own, to take any but the most cautious, hesitant steps toward a space law formulation. But we will achieve little unless we first understand the peculiar problems of legislating for this medium, which in many ways is justly called the new "fourth dimension" of our time.

First, let us look at the precedents or—in the case of such a new field—at least at the analogies. I am aware of Justice Frankfurter's notable warning on this subject: "One of the most treacherous tendencies in legal reasoning is the transfer of generalizations developed for one set of situations to seemingly analogous, yet essentially very different situations." It is well to bear this warning in mind, when we consider the two analogous bodies of law we are accustomed to deal with: the law of the air and the law of the sea.

In Anglo-American law at least, the doctrine of air sovereignty has its apparent roots in the old principle cuius est solum, eius est usque ad coeleum (he who owns the land owns it up to the sky). Although this has been cited frequently in space law discussions, it is of very limited use to us. Professor Cooper, one of the few authorities on space law, has concluded that the maxim referred merely to private real estate rights with no wider meaning. The U.S. Supreme Court has rejected the principle as a doctrine of air law. "It is ancient doctrine," the Court has said, "that, at common law, ownership of the land extended to the periphery of the universe. * * * But that doctrine has no place in the modern world."

Nevertheless the international law governing the sovereignty of air space and flights over national territory is based on a similar principle. Both the Paris Convention of 1919 and the Chicago Convention of 1944 made firm the principle of national rule over air space. As the Chicago convention put it: "Every State has complete and exclusive jurisdiction over the air space above its territory."

It is clear from the language of these pacts, however, that their signers intended them to apply only to aircraft and that limited portion of the airspace where aircraft can fly. This is, at its very broadest interpretation, the airspace extending upwards to a height of 52 miles, the point beyond which it is impossible to fly a vehicle which derives its support from the air.

It is clear from simple scientific fact that such a simple rule could not apply to travel in outer space. The earth moves. So do the other heavenly bodies. A system of cones of sovereignty—measured from the center of the earth through each nation's national boundaries out into space would be patently ridiculous. For one thing, as the earth and the other bodies moved, the content of each country's area of sovereignty would be constantly shifting. A space vehicle could not go from a point in the United States to the moon, for example, without trespassing on the air sovereignty of many nations.

Sovereignty over airspace is a fact of international law but it is a static jurisdiction wholly unsuited to the new fourth dimension of space. The only sane thing to do is to delimit airspace and outerspace—probably by some kind of imaginary line. One such proposal is the 52 mile figure I have just mentioned. (This is called, incidentally, the von Karman line, after Dr. Theodore von Karman, one of the scientific pioneers of space exploration and its problems.) So much for the limits of sovereignty over airspace. There is no further relevance for us in the comparison of air law and space law. They must inevitably be separate.

The law of the sea offers a more promising analogy. This is founded on Hugo Grotius' idea of mare liberum, the idea that the open sea is by its nature free, because it is not susceptible of dominion by any nation or force. On its face, this would seem to be the solution to a legal principle for outer space. Where so many conflicting sovereignties may exist, why not eliminate the factor of national sovereignty all together.

Grotius' principle is an important one, and with some qualifications it could be a basic rule-of-thumb principle for space law. But these qualifications also are important and too often forgotten. To regard the high seas of space as absolutely free is to grant the right of use to any vehicle—whether it has aggressive or peaceful intent—as long as it remains above the limit of conventional air space. This may not be a very comforting thought to a country, say, which is being watched by a Soviet military reconnaissance satellite. A more reasonable qualification might be the right of innocent passage, by which ships on peaceful missions may pass through the territorial waters of any nation.

Going further, what are the origins of the high seas concept, as opposed to that of definite territorial waters? I think we shall find that they are military. The original 3-mile limit was determined by the range of a cannon shot. Grotius himself, in his De Jure Bello ac Pace, conceded that dominion could be gained over portions of the sea by armed fleets as well as by coast artillery. So the fact that we had a mare liberum idea at all was due to the inability of the weaponry of that time to cover the high seas.

This is not true of outer space. The amazing ingenuity of missile and space technology—and they are inseparable parts of the same science—make it apparent that there will be no protected sanctuary of the high seas in outer space. Any satellite or space craft can be detected from this planet—and

from the progress of the art we can safely assume that any object in space will soon be subject to interception.

So we see that space is unique. The same scientific strides which put the world at the mercy of instruments and vehicles that traverse outer space have made of the space medium itself a high seas which is also a no man's land.

Other factors have underlined the uniqueness of this medium, all of them—as it happens—fit subjects for law. It is unfortunate that the question of national sovereignty in space, the thorniest of all possible problems, has taken up the vast proportion of the thought and discussion thus far given to the entire subject. For there are other problems of more pressing concern. To exclude them in favor of the debate over national sovereignty and the limits of space is like arguing about how to slice an apple, but doing nothing about some obvious wormholes in it.

In the first place, what happens to a space craft or satellite when it comes down? International law is strict about the treatment of off-course commercial aircraft or ships. Once they enter the territory of another state, they come within that state's jurisdiction. But space vehicles, at least in this early stage of their development, are far more difficult to control than surface or conventional aircraft—at least as far as their destination is concerned. There are explosive possibilities inherent in the fall of a U.S. satellite on Soviet territory or vice versa. Only some kind of agreement in advance can obviate or at least sanitize these possibilities.

Already regulations of the International Telecommunications Union have been violated by the Soviet sputniks broadcasting on the 20- and 40-megacycle frequency. Signals from space vehicles can interfere with navigational aids on earth, time signals, and instrument calibration. To regulate and assign satellite frequencies is thus an imminent problem, and one which will worsen if no international agreement is reached on the subject.

Then there is the question of liability for damages in the event of a space vehicle's untimely return to earth. This is no laughing matter. The carrier of Sputnik III, which fell into the South Pacific, was about the size of a pullman car, weighing somewhere between 2 and 5 tons. Suppose one or several pieces of a similar rocket stage were to fall on a densely populated area? This is apt to occur, not only with uncontrolled spent parts of rockets, but guided or controlled components out of control—witness the famous case of the Air Force Snark missile which fell in Brazil in 1956, far off course and, fortunately, deep in the jungle. Under Anglo-Saxon law the old theory of liability-without-fault would probably apply. But what of other nations' views on this subject? Also, since all the rocketry thus far attempted and envisioned will be done under Government auspices, there would probably be special immunities involved. Even in this country, suppose a citizen, injured by a space vehicle, brought suit against the Government under the Federal Tort Claims Act. We have no assurance that his cause would be successful.

There is a pressing need for filing flight plans of satellites—even in advance of any general inspection scheme, which we can imagine will be difficult to work out.

What about the registration and identification of spacecraft, or the surrender of downed spacecraft to the country of their origin?

Perhaps some of our citizens are in advance of the Government on such questions. The Office of Public Lands in the Interior Department has recently, believe it or not, been receiving a heavy number of sober inquiries about the legal forms for staking out land claims on the surface of the moon. "P.S.," wrote one letter writer, "Do you furnish free transportation for settlers?"

Seriously, space law is no longer an academic study. As with most departments of science, knowledge in this field—both in scientific discovery and engineering technique—is increasing by geometrical progression. What was hypothetical yesterday is a matter of today's urgen concern. Yet the only regulation we have at the moment for any space travel, the only waiver of sovereignty among nations—even for the passage of satellites hundreds of miles above them in space—is the temporary agreement for the International Geophysical Year. The International Geophysical Year has been extended once. It cannot be extended indefinitely.

But when we look around to see what has been done about working out agreements, the field of accomplishment is very bare. Neither the United States nor the Soviet Union has come up with anything remotely resembling a coherent body of proposals for regulation of space craft and the like—except to declare that space should be devoted to peaceful uses—an ambiguous phrase, as we shall see. The Soviet Union has even refused to join our Legal Committee of the United Nations on the Peaceful Uses of Outer Space, and Soviet representatives have made it clear they will participate in any international rulemaking on the subject only if both the veto principle and a virtual parity of Communist-bloc nations with those of the West is observed.

On similar occasions in the past other nations have acted without the Soviet Union. But here, obviously influenced by the Soviet lead in space achievements, they have all been reluctant to move—including the United States. And so the most we have been allowed to draw up is an agenda of the problems to be discussed—hardly a beginning of decision.

We may now justly ask: (1) What are the chances that some basic elements of space law can be laid down?; (2) Is there any hope of establishing a working rule of law to govern the exploration of this fourth dimension?

As you may have gathered, I think the chances for the first are good, if for no other reason that there is here a mutuality of interest among nations facing certain common problems—the radio frequencies, for example. Perhaps a system of law may evolve organically from these first few concrete steps. As I have already suggested, the very nature of the medium makes all our previous notions of national sovereignty outmoded—or at the very least highly difficult to apply.

The second question is not so readily answered. Its solution is in the long term. It is possible, and I believe that we must solve it satisfactorily if we are to avoid mutual annihilation on this planet. But we cannot solve it unless we observe closely the nature of the Soviet space effort and correct a fundamental misconception about our own space effort.

You have heard much made of the distinction between the peaceful exploration of outer space and certain military aspects. The entire structure of our national space program—incorporating the new National Aeronautics and Space Administration and the various space agencies of the armed services—is based on the assumption that you can draw a line right through the entire art with military projects on the one hand and civilian or peaceful projects on the other—as easily as you can separate a soldier from a civilian. This assumption unfortunately has become a pet idea of a great many people.

I say "unfortunately," because the assumption is incorrect. The same research that goes into bigger and better missiles makes possible bigger and better boosters for space travel. The same satellite that can put the world under military reconnaissance could revolutionize our civilian communications industry and other things like jet age air traffic control. The same manned space platform that will form a base for space probes to other planets could also dominate the world below it. Indeed, the first men to reach the moon will be availing themselves and their country of a military advantage as well as accomplishing a purely scientific research feat.

Most of our military men and our best scientists are aware of this inseparable duality. They may not like it or wish it this way, but they know that the two functions are inseparable as long as we live side by side in our world with an implacable enemy. The Congress was aware of this dual function when it drafted the space legislation. It was a noteworthy fact that none of the expert witnesses before our committee in the House had been able to suggest a satisfactory separation of peaceful and military uses in this sense. That is why the word "peaceful," as used by the Congress in the original Space Act of 1958, had the sense of "nonaggressive," rather than nonmilitary. The same meaning of "peaceful" is found in international law; and the American Bar Association, discussing the Space Act in its 1959 convention, took this interpretation also.

Nonetheless, the administration's wishful thinking about this separation between civilian and military has thus far prevailed in many quarters. Not only has it resulted in a harmful and, to say the least, wasteful duplication of effort by NASA and the services, but it has obfuscated the whole attempt to make a beginning at a workable—and I underline workable—space law. On one hand, we cling to the idea that any and all space exploration must be neutral and completely nonmilitary. On the other hand, judging from our past experience, we conclude that the Soviet Union may not have exactly the same idealism as President Eisenhower when talking about the peaceful uses of space.

The result is a complete standstill, a caution so great that for want of a sweeping general disarmament agreement with controls—what controls we will have in space I wouldn't want to predict—we are inclined to hedge even at preliminary definitions. There is no need for this to be. After all, maritime law has operated successfully for centuries without total disarmament of the world's navies. If some applications of space travel could be military, we had better recognize this fact now and deal with it—not ignore it.

This brings me to the nature of the Soviet space effort. There we have no distinction between so-called peaceful or civilian and so-called military usages. The Soviet space scientists are understandably puzzled when we mention our own distinction of this sort, although predictably they always tell us that all Soviet space exploration is peaceful. Their space effort has been a mixed civilian and military endeavor from the beginning. This is in line with the unitary Soviet concept of politics as something in which you attain a goal one day by force, another day by diplomacy, another day by scientific prestige. The original director of the Soviet program typically was a general working for the Soviet Academy of Science. At the moment both military men and civilian scientists sit on the same governing board, with most of the logistical support being furnished by the former.

We can safely presume that the military applications of space travel have long been in the consciousness of Soviet planners—whatever their spokesmen say about peace and friendship. Let us not take everything

the Soviet scientists say at face value, or we will regret it. While Khrushchev assures us that the moon belongs, in effect, to the world; other Soviet spokesmen, speaking to Soviet audiences, sing another tune. There is no speculation in the U.S.S.R. about how many miles we should set as the outer limit of state sovereignty. On the contrary, Soviet legal experts insist that "the outer altitude limit of state sovereignty must be established in such a manner as to protect the state against encroachments on its territorial sovereignty." Where this sovereignty stops is conveniently left out of the question. Again, a Soviet judge, addressing the Soviet Association of International Law, said flatly that logic of space law would have to be based on "state sovereignty. The principle of respect of sovereignty is the most important and universally recognized principle of international law."

To be forewarned is to be forearmed. And I think such statements give us ample warning. This is not to say that we should abandon hope of establishing the rule of law in space exploration. The radical new character of the space medium is in our favor here—it is not a comfortable field for reasserting national sovereignties, but it will be a hard and possibly a rough struggle to assert the rule of law, and one which we are only beginning. If we approach it watchfully, we may win it. But we should not approach it either by deliberately shutting our eyes to the dual potential—civilian and military of the space medium—or by neglecting the first patient steps which can be taken now in the direction of law and order.

I mentioned at the beginning of this talk the dour comment of the British legal editorialist on the space law problem as possibly perpetuating "the giddy cycle of law chasing power but never quite catching up." We can stick to our lawbooks all we want, but if we abdicate the power in this field to the Russians we and our children will know for a good many years what it feels like to be a perennial second runner.

The Late Richard M. Simpson

SPEECH
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. ROONEY. Mr. Speaker, I was indeed saddened this morning to receive news of the passing of our friend and distinguished colleague, the Honorable RICHARD M. SIMPSON, of Pennsylvania.

While I was of course aware of Congressman SIMPSON's recent serious illness and operation, I somehow felt that he might have a normal recovery since he always appeared to be very rugged and healthy. His rapid decline and passing was a great shock to all of us.

I always considered DICK SIMPSON to be a most capable and conscientious public servant. During his long career as a Member of this Body he left a profound imprint on his colleagues and friends. He will be greatly missed by the people of his district, the Commonwealth of Pennsylvania and the entire Nation.

I extend my sincere and deepest sympathy to his wife and family.

Address by Archbishop Bernard J. Sheil About Israel

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. PUCINSKI. Mr. Speaker, it gives me great pleasure to call to the attention of my colleagues today a brilliant speech delivered recently on the subject of Israel by the Most Reverend Bernard J. Sheil, D.D., titular archbishop of Selge, auxiliary Roman Catholic bishop of Chicago.

These remarks were delivered by His Excellency Archbishop Sheil in Chicago on November 11, 1959, at a dinner sponsored by the Greater Chicago Committee for State of Israel Bonds.

Archbishop Sheil had been named 1959 Man of the Year by this organization, and the dinner was held in tribute to His Excellency.

I trust we can all find a new source of inspiration from Archbishop Sheil's remarks about the real significance of Israel in the world complex of freedom and progress.

I wish to take this opportunity to congratulate the Chicago Committee for State of Israel Bonds for selecting Archbishop Sheil as its 1959 Man of the Year. His Excellency Archbishop Sheil has indeed made an indelible mark on the entire Chicago community among the people of all creeds, for in his heroic struggle against bigotry, in his determination to preserve the full principles of equality and justice, Archbishop Sheil has brought light to many corners which too long have remained in total darkness.

Archbishop Sheil's remarks follow:

ISRAEL

The return of the Jewish people to their homeland, after centuries of exile, is an event of prophetic importance to the history of man. These immigrants to their own country are much like the early settlers of America. For they possess, as these did, the ideals, the knowledge, and the skills necessary to bring about a social revolution in a large area of the world. Like the founders of America, their achievement may serve as a model for other peoples who seek an escape from the oppressive past.

The establishment of the State of Israel is an indispensable step toward this larger goal. Its creation, like most human endeavors, meant much bitter sacrifice and suffering. But, these have been transcended in that satisfaction which comes only from good accomplished. There are thousands of children in Israel today who have been given a second chance at life. For years their world was one bounded by barbed wire. Now, their lost childhood has been restored to them. Their happiness is, in itself, a sufficient reward for the struggle endured.

After 10 years, Israel stands as the living, concrete embodiment of two traditional Jewish ideals, namely, human freedom and social justice. Moreover, Israel proves that both are requisite to the founding of a genuinely human community. It is only in a climate of freedom and justice that man's knowledge and skills can be used for the true betterment of man. To change a desert into a garden, to harness the powers of nature, to build factories—these are high achievements. But, they must always serve the enlargement of human freedom and the promotion of justice. Otherwise, they may become subtle instruments for the enslavement of man. Israel has laid her foundations deep in the soil of freedom and justice. That is why her accomplishments carry such an important lesson for the world.

It is of crucial moment that we grasp the full meaning of this lesson. We are witnessing a far-flung attempt by the Communist world to place science and technology at the service of politics. The philosophy underlying this type of politics either denies or distorts the common concepts of freedom and justice. That is why the attempt is of such immediate danger to us.

The world is fully aware that science and technology are one of the keys to the future. For they have the power to transform the world. They can do strong battle against poverty, ignorance, and disease. They can leap across centuries and bring to people everywhere a standard of living undreamed of in a primitive yesterday. They are capable of answering the aspirations of man for a physical existence compatible with his spiritual dignity.

These are tempting prospects for all men. Moreover, the people of the world are becoming more conscious of the fact that a better life is within their reach. It is no longer a distant possibility. It is a present opportunity.

These people shall not be denied their legitimate desires for a better existence. Even now, the surface of the world is stirring, continents are surging, time itself is being telescoped. Everywhere there is movement, agitation, awakened hopes, new horizons. And all of this springs from the knowledge, no longer liable to suppression, that human life can mean more than a deadening subsistence. The time bomb of human expectancy is loudly ticking. Those who close their ears to it shall have them rudely opened by its explosion.

To help all people in their struggle for human integrity is our obligation. It is a moral duty, because it is the application of that belief in human freedom and social justice which we publicly profess. These are ends to be sought after for their own value, independently of any advantage to us. Too often they are being used merely as strategic defenses against Communist expansion.

This reversal of means and ends, perhaps, explains our partial failure to inspire much hope and confidence in the oppressed and dispossessed people of the world. In spite of a good deal of talk about our own idealism, these people think that our objective is not to help them achieve freedom and justice. They suspect, rather, that we are primarily concerned with our own security. And this suspicion, well founded or not, may explain much of the cynicism and pessimism that exists among them.

It is time, I think, for the West to return to the practice of its traditional faith in the truth of human freedom and justice. And this should be done according to our own convictions and moral standards. There is grave danger in allowing our actions to become mere countermoves against Communist policies. In so doing we not only lose the initiative in world affairs. We also sacrifice the moral leadership so necessary if freedom and justice are to be achieved.

We are sometimes told that peace is maintained by such means. We might answer that this kind of peace is a precarious one. It rests upon our acceptance of the enslavement of hundreds of millions of people by a regime of legalized terror. Furthermore it is

a peace secured at the point of a gun. For, it is obvious that the constant threat of nuclear destruction has become a form of political blackmail. Finally, one might question the ultimate value of a peace, if it is purchased at the cost of compromising our ideals and convictions. Peace can only be built upon justice. And, neither the niceties of protocol nor the delicacies of diplomacy are capable of clouding this truth.

Let us, I say, discover again our own historic path. Let us, on our own initiative and out of our own convictions, rededicate ourselves to the task of bringing the hope of freedom and justice to all mankind. This is the way of truth. It alone can lead to genuine peace. Only it can be the foundation of a truly human society in which men may find their real fulfillment.

You may well ask what all this has to do with Israel. And I answer: a great deal. The founders of modern Israel carved it out of a wasteland. Today, it is literally an oasis in a desert. For, Israel stands in a barren land of human oppression and destitution. Millions of her neighbors exist in an outmoded society built upon ignorance and exploitation. Trapped in a dead end of history, these people have had no choice but to submit to serfdom.

Here precisely lies the importance of Israel in the wider context of history. For, Israel can become for all the people of the Middle East the model and symbol of a more humanly satisfying life. She opens up the prospect of a community founded, not on ignorance but on knowledge; not on exploitation but on opportunity. Israel proves that human freedom, anchored in justice, is the only lasting foundation upon which the city of man can be erected.

To be this model and symbol of hope for millions of dispossessed people is the mission of Israel. To accomplish it, she herself must be made strong and impregnable. Otherwise, she becomes an easy target for those who see in her a threat to their selfish privileges. Those who benefit from the past, fear the future. To them the future may destroy these benefits. That is the reason that every weapon of passion and propaganda is being used against Israel. It is her enemies who are most aware of the real meaning of modern Israel. That is why they fear her.

If Israel is to remain strong, if she is to carry out her historical destiny she must have the support of all who recognize her importance to the cause of human freedom. The meaning of Israel extends far beyond her national borders. She is part of the free world. She is an embattled outpost of all who believe that God has endowed man with the right to life, freedom and justice.

We who profess this belief have the serious obligation to help all those who protect and propagate its truth. To do this is more than a duty. It is a privilege. For, to serve the cause of freedom is to serve the cause of man. Man, without the dignity of his liberty, is less than man. And it is precisely this dignity of freedom which is at stake today. What we do now for the cause of human freedom shall determine in large measure the whole future of mankind.

Israel, against heavy odds, is doing her part in this struggle for man. To help her is to help the cause of human freedom everywhere. There is no endeavor more worthy of our support. Nor could there be any more satisfying return than the knowledge of having shared in the defense of man, his dignity and his freedom. Israel offers us the privilege of participating in this effort on behalf of man. I am certain that we shall accept the offer and respond to it generously.

Massachusetts Farm Bureau Protests National Milk Act

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. CONTE. Mr. Speaker, under leave to extend my remarks, I include an excellent statement by the distinguished executive secretary of the Massachusetts Farm Bureau Federation, Carleton I. Pickett, expressing serious objections to the proposed National Milk Sanitation Act (H.R. 3840).

The statement follows:

COMMENTS BY CARLETON I. PICKETT, EXECUTIVE SECRETARY, MASSACHUSETTS FARM BUREAU FEDERATION, INC., ON NATIONAL MILK SANITATION ACT

The Johnson bill (H.R. 3840) proposes national milk sanitation laws to replace State and local laws. It is an obvious special purpose bill to try to capture distant markets, such as Massachusetts, for Wisconsin.

It has two appeals to the public: it promises to break down barriers to the free movement of milk and to give the consumer cheaper milk.

This is the essence of Senator HUMPHREY's remarks.

Neither conclusion is true.

1. For local inspection and State inspection it substitutes a new experiment in Federal bureaucracy by giving the Surgeon General of the Public Health Service unlimited authority over the Nation's milk supply and, if enacted, the Federal law would preempt all town, city or State regulation—not by less regulation necessarily but with more administrative labyrinths into an already complicated industry's productive, processing, and distribution methods.

2. The unsupported statement that "Mrs. Housewife is paying from 1 to 3 cents more per quart for milk than she would pay if the market was open and competitive" can not be substantiated by sound economics. Instead this harmful assumption just is not true. In a market like our Massachusetts markets, where surplus exists at all times, and where competition is such that an extra cent a quart is often enough for new out-of-State sevices to come into the market, price depends on supply, demand, the state of unemployment earnings, and public wants. This last is a tricky thing and can be promoted by giving milk an image of deliciousness, healthfulness, purity and economical food value. Federal or State officials may affect the quantity of milk consumed by their statements just as legislators may, by incautious statements about any one of the factors that affect buying. But government has not yet found a way to raise the price of farm products above what people want to pay considering supply, demand, earnings, and taste. And neither has the farmer nor the distributor.

If you will examine the statements such as the recorded brief of the Governor of Wisconsin, you will find that there is an assumption that "in every other field, freedom of commerce is the rule; perishable products of every nature—meat, eggs, vegetables, fruits, manufactured products, and raw materials of the earth move freely and without manmade restraint." We have no time for the gigantic compilation of health barriers or of self-protection against plant pest, fungi, and other disease that have become historical. Let the good Governor fill the back of his car with a few items of nursery stock, some oranges, apples, and drive from Maine to Florida to California for an education in the untruth of this common slander against milk regulation. The cow cannot travel unimpeded across State lines nor the pig.

The perishability of milk makes it especially the subject of local standards and State regulation. If this has led to local barriers for the purpose of a sort of protective tariff it is a shortsighted policy which cannot long persist. Milk flows into the market where the need and the price create conditions attractive to such flow.

Now to turn a moment to the proposed uniform system of milk sanitation and a Federal code of standards. We already have the code which has had to be revised 12 times in its lifetime but we do not have and do not want the Federal preemption of State regulation. Just as surely as the Congress enacts H.R. 3940 they provide a stepping stone to future disaster to the milk industry of the whole Atlantic seaboard.

How it will come or when I do not know but historically I am on safe ground in the prediction. If any doubt, let them study the cause and effect of Federal power on the cranberry industry.

H.R. 3840 proposes the most vicious invasion by Federal Government into powers best exercised by States that I have seen proposed in the agricultural field in three decades.

It would be possible for me to take the entire recorded testimony of the proponents and refute it line by line but Congressmen would never read it all.

Let us take one more general argument.

Proponents point to the growth of a large number of different rules and regulations of sanitation. The conclusion always is that this is bad and the Federal Government must wipe them all out and establish one utopian set of rules. Have you considered the carrying of this theory to its ultimate possible conclusion?

Would it not be so much more efficient to run our zoning, our planning, our public health, our police systems, and everything else from Washington? Let's not try it in our day.

Menace of Obscenity

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by J. Edgar Hoover:

MENACE OF OBSCENITY
(By J. Edgar Hoover)

The morals of America are besieged today by an unprincipled force which will spare no home or community in its quest for illicit profits.

I am speaking of the unquestionably base individuals who spread obscene literature across our land through the means of films, decks of playing cards, photographs, comic books, salacious magazines, paperbacked books, and other pornographic products. These forms of obscenity indeed threaten the morality of our Nation and its richest treasure—our young people.

While our schools, churches and youth organizations conscientiously strive to improve the morals and thinking of our juvenile citizens, forces of evil are working on the other side of the fence to contaminate all that we hold decent. The most disgusting part of this assault is that our youth is subjected to lurid exhibitions of obscenity in many of the places where they seek clean entertainment.

Despite the splendid service rendered daily by the overwhelming majority of advertising and entertainment executives, a small group of opportunists in these industries are degrading America and its youth. Our young people are literally bombarded with vulgar motion picture advertisements in some newspapers; certain movies have too often made good on the provocative promises in the advertisements; and profanity and rapacity are the main ingredients of more and more screen offerings. A few television producers, too, sometimes break through the veil of decency as if some of them were trying to see just how much the public will stand. Recently, we have seen considerable publicity concerning certain elements in this medium who have sacrificed scruples on the altar of monetary gain.

It is also a grevious fact that drugstores and "sweetshops," pleasant meeting places for past generations, now display publications which a few years ago would have a place in only the bawdiest of gathering places. These signs of moral decay, tolerated by adults, cannot help but debase the thinking of our impressionable teenagers. Yet, while they are impressionable, American youths are remarkably wise in recognizing pseudo-piety in adults and the sham of a society which condones declining morality.

In 1957 there were nearly eight forcible rapes per 100,000 inhabitants in the United States. In 1958 this figure increased 10½ percent, a forcible rape occurring every 36 minutes. This truly shocking and shameful state of affairs is made even more deplorable by the knowledge that sex crimes and obscene and vulgar literature often go hand in hand.

The time for half-hearted, oblique action against dealers in depravity is past. Although their despicable trade reaps $500 million a year, this diabolical business is costing the Nation much more than money. It is robbing our country and particularly our younger generation of decency—it is a seedbed for delinquency among juveniles and depravity among all ages. If we are to survive morally, Americans must search within themselves for the answers to these questions: Have local governing authorities investigated to insure that laws against smut salesmen in their communities are strong enough? Is the public outcry of sufficient strength to impress local judges with the need of defending morality by sentencing filth purveyors to maximum terms? Are community and civic groups cooperating with law enforcement authorities in fighting this debasing blight?

And—above all—are good citizens teaching their youngsters habits and beliefs which will be an armor against the tainted temptations of muck merchants?

The Late Richard M. Simpson

SPEECH
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. KILBURN. Mr. Speaker, I was awfully sorry to hear of the serious illness and then the death of my dear friend, DICK SIMPSON. Over the years we have talked over many problems before the House and he was always so sound and so kind and considerate to me.

I shall miss him and I extend my deepest sympathy to Mrs. Simpson.

A Slow Pace to the Summit Is Fast Enough

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. PUCINSKI. Mr. Speaker, I should like to call the attention of my colleagues to a very penetrating editorial entitled "A Slow Pace to the Summit Is Fast Enough," which appeared in the January 9, 1960, issue of the Saturday Evening Post.

I believe this is one of the most intelligent analyses of the clamor for a summit conference that I have seen published in any American publication.

I should like to call particular attention to that part of the editorial which points out so convincingly that international communism is in no position to move in on anybody, unless tempted by indications of weakness, irresolution, and a fatuous aim to please.

I hope that after reading this editorial, we here in Congress will have a better understanding of what our approach should be toward the Soviet Union and its false peace propaganda.

The editorial follows:

A SLOW PACE TO THE SUMMIT IS FAST ENOUGH

People are apt to take their blessings sourly, or we should be hearing widespread expressions of gratitude to President de Gaulle, of France, for at least postponing the embarrassments of another summit conference. President Eisenhower is hardly free to express such views but, now that even some British public figures are beginning to take a dim view of the summit idea, we suspect he secretly shares them.

Khrushchev, of course, still insists that a summit conference is necessary, but there have been hints that the "chairman" is content for the present to rest on the laurels won on his American tour, making mysterious references to the "spirit of Camp David" whenever any Communist outrage or aggression is mentioned. Ambassador Henry Cabot Lodge assured the world that nothing was done at Camp David to condone murder and aggression. But in Sovietland the chairman can probably get considerable mileage out of the "spirit of Camp David" argument on the general assumption that heads of states do not retreat into the woods just to swap golf scores. Soviet propaganda can make a little go a long way.

It is predictable that a new summit conference would result in some equally useful propaganda advantage to the Communists. Although former Secretary of State Dean Acheson in his time was not distinguished for recognizing Communist purposes—at any rate, in Asia—he was right in his recent statement that Khrushchev is "inviting us to confer with an idea of coming to terms about our own existence." In discussing the argument that we might agree to some new solution on Berlin, Mr. Acheson asked this question, "What conditions more in the interest of the West can he think of than now exist?" What concessions could we make that would satisfy Khrushchev and at the same time protect the security of the West? Nobody seems to have given more than the vaguest answers to these questions.

To purchase security by withdrawing troops from Germany, Mr. Acheson pointed out, would mean withdrawing our troops from Europe altogether. Of course, as Secretary of State Herter said in replying to Mr. Acheson, there is no indication that any such result would come of a summit conference. Nevertheless, Mr. Herter agrees that, however long a way Khrushchev may have come to meet certain procedural demands of this country, his objective is still that he is going to get us out of Berlin. That being the case, was there ever any legitimate reason, beyond helping Prime Minister Macmillan with his election, why we should have agreed to go into a summit conference at all, except on the terms originally set by President Eisenhower—namely, convincing evidence of progress toward some honest agreement?

Returning to General de Gaulle, one might point out that his tough rejection of Khrushchev's desires, besides maybe pulling the Eisenhower-Macmillan chestnuts out of the fire, has paid off for France as well. While statesmen who appease Big K get nothing for their pains, De Gaulle got from Khrushchev a most important concession in an agreement to cease sending arms to the previously Red-supported Algerian rebels. All of this suggests that international communism is in no position to move in on anybody, unless tempted by indications of weakness, irresolution and a fatuous aim to please.

The lesson of De Gaulle should be more widely appreciated in this country. Already there are too many indications of quite contrary conclusions. C. L. Sulzberger pointed out in the New York Times recently that the Khrushchev visit, the exchange of cultural and other missions, and fear of atomic war have resulted in a popular attitude toward the Soviet Union so affable and trusting that State Department officials feel themselves deprived of a base from which to negotiate realistically. In the meantime the Soviet program remains substantially the same. It could be tragic if, after all our efforts to ease tensions, the only tensions relieved were our own—relieved before the putative enemy had given any indication of justifying such relaxation.

The Late Honorable Charles A. Boyle

SPEECH
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 6, 1960

Mr. EVINS. Mr. Speaker, I should like to pay a brief but sincere tribute to the memory of the late CHARLES A. BOYLE, Congressman from Illinois who passed away on November 4 during the recess of the Congress.

I was privileged to serve on the Appropriations Committee with CHARLIE BOYLE and learned to admire and respect him greatly. He was an extremely active, capable and forceful legislator. He served on our committee and in the House with distinction and honor. The news of his sudden and tragic death while the Congress was in adjournment came as a shock and we

were all saddened to learn of his passing and his presence will be missed.

To Mrs. Boyle and the members of his family I extend an expression of genuine sympathy in their bereavement.

Body and Soul

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. MOORE. Mr. Speaker, for quite a long time I have been very interested in the attitude of the Congress with respect to the income limitations that have been placed in the law regarding veterans.

I have introduced H.R. 7240, which has as its specific purpose to increase the annual income limitation governing the payment of pensions to certain veterans and their dependents. I am hopeful of favorable action on this measure during this session of the Congress.

Yesterday while reading the National Tribune and Stars and Stripes, an editorial came to my attention on this particular matter. I ask that it be included in my remarks at this point in the RECORD and I commend it to the reading of my colleagues. Also, I commend the editor of this newspaper for writing on this problem so vividly.

BODY AND SOUL

The caption which we have chosen for this editorial was not picked at random. It it directed to all the Members of the U.S. Senate and the House of Representatives, and more particularly, to the members of the House Committee on Veterans' Affairs and its chairman, Representative OLIN E. TEAGUE, of Texas. The subject of this editorial is the income limitation called for under present pension law for World War I veterans and the new pension law, Public Law 86-211, which goes into effect on July 1, 1960.

First, let us say frankly that we are opposed to income limitations when it comes to the question of payment of pensions to veterans of the First World War, or, to veterans of any war when the time comes where they may need some extra aid from the country for which they fought.

However, we do try to be practical in seeking aid for our war veterans and if some income limitation must be imposed we are ready to understand the situation and recognize it and agree that, for the benefit of those who oppose all war pensions, some concession must be made to keep them happy. We refer here to big business which apparently hates to put out for those who, by their courage, have made big business so big.

Of course we could offer generalities in an attempt to prove our point that there should be no income limitation when it comes to payment of pensions to war veterans who need this extra help.

But we believe, if we are to impress our legislators we should offer them something concrete to consider when it comes to the possibility of amending the present pension law or the new law known as the Veterans Pension Act of 1959.

First of all we are firmly convinced that no war veteran should be penalized for whatever income he may have been able to acquire during his years of employment. By this we mean such benefits as social security, railroad retirement, and other pensions, annuities, and retirement benefit, whether payable by law, contract, or otherwise.

We are willing to go along with the proposal that any income earned by a World War I veteran—and we mean by this "earned from actual employment"—should be considered in determining the eligibility of the veteran for pension, but we cannot admit that any benefits for which the veteran has paid during his working period, such as those listed above, should be considered as earned income.

True, these benefits were bought and paid for by the veteran and by a far stretch of the imagination they could be considered as earned income, the veteran having made them possible during his employment period, but in a more liberal sense we do not believe they should be considered as earned income once the time has come when he can no longer contribute toward such benefits.

If we face the situation honestly we should admit that earned income is something which the veteran might earn when he is actually employed—not something that he had earned before his full employability ceased.

In our editorial of October 15, 1959, we printed a résumé of figures compiled by the General Accounting Office at the request of Congress as of July 31, 1957, dealing with the income of World War I veterans. These figures show that there are few veterans of the First World War who had excessive income and it follows that 3 years after the figures were put together there are many more veterans of World War I whose incomes have diminished.

While we may have indulged in some generalities in the foregoing these generalities are backed up by Government figures which show that there are few veterans of World War I with bloated incomes at the present time.

Now let us take up a specific case. Under present law a World War I veteran, without dependents, 65 years of age, with sufficient disabilities may be paid a pension of $78.75 a month, provided his income does not exceed $1,400 a year.

Let us consider this particular veteran. He has worked steadily for many years. During that time he has held down a good job which required him to pay for social security benefits at the highest rate the law demanded. He now reaches a period of unemployment. He may be paid as high as $120 to $127 a month from social security. Now 12 times $120 or $127 a month puts him over the $1,400 income limitation prescribed under present law.

Thus, he may not receive the $78.75 monthly pension because of the income limitation. As a consequence his ability to enjoy the few years which are left to him is curtailed since, in all reason, a man accustomed to the decent things of life is bound to feel the pinch when he has to exist on his social security payments alone.

All this applies of course to the single veteran under Public Law 86-211 which becomes even more vicious when we come to the veteran with a dependent.

Under the new law not only does his own income earned from previous employment come into consideration in determining his eligibility to pension but any income which his wife might be able to earn, as well as any little nest egg which he and his wife have acquired over the years is also counted as is any property of which he and his wife may be possessed.

Under the new law this is known as the "corpus of the estate." We would venture to say that very few World War I veterans know what is meant by "corpus of the estate." It is a neat legal term which the smart boys have inserted in the law. It sounds good when you roll it off the tongue but it amounts only to penalizing a man and his wife for being thrifty.

Now, "corpus" is the Latin word for body—in other words the body of the veteran's estate. With the introduction of the veteran's body we may look eventually for the inclusion of the word "anima" which is Latin for soul.

Having made the veteran pay for having a "corpus" we may look for some other legal phrase which would include his "anima."

Now this veteran might have in his soul some precious memories of the past—memories which to him are priceless. Should the Veterans' Administration and the Government attempt to put an estimated price on these memories the veterans, after having paid for his "corpus" would find his soul included with the result that he would wind up using as this theme song when he applied for Government aid the title of a one-time popular song, "I'm Yours, Body and Soul."

South Carolina's "Firsts"

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Camden Chronicle, Camden, S.C., January 6, 1960:

Nothing ruffles our fur more than to hear some know-it-all visitor or tourist belittle South Carolina as one of the "backward, less progressive" States of the Union. This sort of erroneous observation usually comes from someone whose knowledge of the South and South Carolina is gleaned from some "educational survey" or some history books which touch only briefly on the Palmetto State.

If persons with this sort of impression of South Carolina would but care to read on, we believe they'll find that this State has more firsts than any other in the Nation.

Here's a list of South Carolina firsts:

Oldest museum in America in Charleston.

First chamber of commerce, Charleston.

First statue to Confederate soldier.

First man to pilot steamship across the Atlantic was a South Carolinian.

First long railroad in America, Charleston to Hamburg.

First train to carry mail.

Branchville, oldest railroad junction in the world.

First submarine was built in South Carolina.

First musical society, St. Cecelia, Charleston, 1762.

First State hospital for insane.

First orphan home.

First monument to women.

First agricultural society, Charleston, 1785; second, Philadelphia; third, Pendleton, S.C.

First Bible society, Charleston, 1810.

First YMCA in industrial plant, Monoghan Mills, Greenville, S.C.

First girls' 4-H Club work, Aiken County.

First Negro school, Charleston, 1749.

First public library, Charleston, 1743.

First building used solely for library, University of South Carolina.

Memorial Day had its beginning in South Carolina.

De La Howe, in McCormick County, first normal training school.

First decisive victory of Revolution fought in South Carolina.

First inoculation given for smallpox.

First native American to receive degree as doctor of medicine was South Carolinian.

First monument erected to slaves.

First high school with military feature.

First botanical gardens were in Charleston area.

First to erect statue to Indian.

In World War I, South Carolina had six Congressional Medal of Honor men, largest number of any State except New York, which had same number.

South Carolina ships more fresh peaches than any other State.

Spartanburg County produces more peaches than any other county in the United States.

Barnwell County produces more watermelons.

Pedigreed Seed Co., Hartsville, most outstanding in America.

Leads in Nation in finished cotton and woven goods with 2 percent of population of the United States, produces 28 percent of cloth.

In 1950 South Carolina had lowest percentage of business failures in the Nation.

Santee River empties more water in Atlantic than any other river on the Atlantic seaboard.

South Carolina rivers empty more water in Atlantic than the rivers of any other State.

First hydroelectric plant.

In last 3 years greatest progress in school system.

In 1951 had highest percentage of motor-vehicle gains.

In 1951 percentage of per capita income gains greatest in the Nation.

Highest percentage of native-born Americans, 99.7 percent.

History's mightiest industrial enterprise, Savannah River project.

The Chronicle concludes that South Carolina, generally speaking, is one of the most progressive States in the Nation, judging by the foregoing facts.

A Bill To Increase Social Security Benefits, Improve Trust Fund Earnings

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. REUSS. Mr. Speaker, on the opening day of the 2d session of the 86th Congress, I introduced H.R. 9372, a bill making a number of important changes in the Social Security Act, including improving the earnings of the social security trust funds, and increasing social security benefits.

I am confident that the Congress will make social security improvements in 1960. I hope that the improvements will be comprehensive, rather than piecemeal, and will correct not just one but many of the shortcomings of the present law. I believe that H.R. 9372 fits that description.

Of vital importance is that provision of my bill which will increase the earnings of the social security trust funds, to permit payment of more realistic benefits and to insure soundness and fairness in the social security system.

In the CONGRESSIONAL RECORD of July 27, 1959, at page A6484, I pointed out that the social security trust funds were being short changed by some 260 million a year, and introduced H.R. 8407, a bill to insure an adequate return on the social security trust funds by removing the Secretary of the Treasury as managing trustee of the social security trust funds, substituting for him a person without conflicting interests, and requiring a return on the trust funds as near as possible to the return being realized by regular investors in U.S. Government securities.

The situation which I describe last July has not changed. I have therefore incorporated the provisions of H.R. 8407 in the new bill.

The Treasury is still depriving the social security trust funds of interest earnings amounting to about $260 million a year.

While private investors average more than 4 percent interest on Government securities, the Treasury Secretary, who manages the trust funds, has invested virtually all of the $20 billion in social security funds in Government securities earning only 2½ percent.

We can correct this situation by reconstituting the Board of Trustees of the social security funds and requiring the new board to take all needed steps, including proposing legislation if necessary, to bring the interest yield on the social security funds up to the level of earnings from Government securities of other investors.

In addition, H.R. 9372 will improve social security in the following ways:

First. A 10 percent across-the-board increase in old-age, survivors and disability insurance benefits, with a minimum increase of $5 a month.

Such an increase is needed to restore the dollar power which steady inflation has taken from our elderly citizens and others dependent on social security payments as their financial base.

Although Congress has several times raised benefits, they have never caught up to overall cost increases in our economy. A 10-percent increase will put social security payments back in a fair, realistic relationship to the cost of living in 1960 and, we can hope, long after that.

Second. An increase in future benefits by raising the earnings ceiling for contribution and benefit purposes from the present $4,800 to $6,000 a year.

No matter what a person earns in any year, only the first $4,800 of income is counted for social security purposes. This means that social security benefits are limited by that figure.

In 1939, the earnings limit was $3,000. That was fine then, because 97 percent of all workers covered by social security earned $3,000 or less. Today, however, more than 25 percent of covered workers earn more than the present earnings ceiling of $4,800. Unless that ceiling is raised, the future benefits of millions of retired workers will be considerably less than realistic in relation to the actual wages they had been earning. Raising the earnings ceiling to $6,000 will produce realistic future benefits for more than 90 percent of covered workers.

Third. Repeal the existing requirement that a disabled person must be at least 50 years old before he can qualify for disability insurance benefits.

As an army of experts has testified to congressional committees, there is absolutely no justification for denying disability benefits to persons under 50, who otherwise meet the requirements of the law. The younger disabled man needs help just as much, and sometimes more, than the older. For example, the disabled person of 35 or 40 is less likely to have children old enough to help support the family than is the man over 50. This arbitrary disability age should definitely be removed.

Fourth. Permit persons receiving benefits to earn up to $1,800 a year, instead of the present $1,200, from outside sources without a reduction in benefits.

Many older men and women are able and eager to work part time and feel they are contributing to society in a productive way. The present limit on outside earnings penalizes many such persons unduly. I believe that a modest increase, letting a person earn up to $150 a month without a cut in social security payments, is justified.

Fifth. Increase the maximum family benefit by removing the present arbitrary ceiling of $254 a month. The bill would increase the maximum family benefit to 80 percent of average earnings. This would mean a maximum of $320 a month under the present earnings ceiling—$4,800—and $400 a month under the proposed $6,000 ceiling. The existing $254 ceiling deprives large families of the full survivorship benefits to which they are entitled.

According to figures supplied by the Social Security Administration, the proposed additional benefits, offset by the increased earnings of the social security trust funds, would require an increase in the social security tax of only one-half of 1 percent in the employer's and employee's respective contributions.

The Late Charles A. Boyle

SPEECH

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 6, 1960

Mr. FLOOD. Mr. Speaker, our early meetings of this session are saddened as we think of old friends who are no longer with us. One loss comes home to me personally with particular force, that of the jovial, the energetic, the eloquent CHARLES A. BOYLE. We shall long miss and deeply mourn the loss of that forceful mind, that great heart.

As a legislator, CHARLIE BOYLE was noted for his mastery of some particular fields of interest, growing out of his life experience, such as labor and transportation and housing; but it was for his human qualities that he was most notable. CHARLIE BOYLE loved people, individually, in illimitable numbers. He could not stand to see anybody pushed around, and he would not stand for anybody being pushed around, whether by other individuals, by organized groups, or by governments. He was a one-man task force, doing battle against injustice and tyranny and prejudice wherever he found them. May his soul rest in peace. Our hearts go out to his wife and eight fine children in their great loss. May the heritage of courage and vigor, of love and religious faith, which is their legacy from that good husband and father, console them in their affliction, and strengthen them for the hard tasks ahead.

Hon. Alvin R. Bush

SPEECH
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 6, 1959

Mr. GAVIN. Mr. Speaker, it is with great sorrow we record the passing of our very good friend and colleague, ALVIN R. BUSH—one of Pennsylvania's outstanding Representatives. His loss will be keenly felt by the Pennsylvania delegation and our State.

AL, as we called him, was a man who loved his district, State, and Nation; and served them well. He was intensely devoted to the interests of the people he represented.

He was always calm, and strong, and self-confident, and treated everyone with great courtesy. AL was always congenial and affable and by his kind deeds and many useful services he evidenced a great love of people.

He was a humble and kindly man whom one admired as companion and friend; always considerate of everyone; a man who added much to our daily lives with a kind word for everybody.

He was an honest, conscientious, and loyal legislator, always looking after the welfare of his district and State. He was a firm believer in the principles of liberty and our American way of life, with the highest concepts of citizenship.

His devotion to and love of country was something to be admired; always ambitious to uphod and defend the fine ideals and traditions of our Nation. He strove mightily to attain those objectives which he thought were for the best interests of all our people and his work in the House of Representatives was useful and constructive.

In a life such as his perhaps the thing most to be admired was the fact he was a good citizen and a devoted American; a man who contributed much to the building of his community, State, and Nation.

We will miss his fine friendship and companionship and it is with great sorrow we record his passing. To his family I extend my deepest and heartfelt sympathy.

The Late Richard M. Simpson

SPEECH
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. FLOOD. Mr. Speaker, it is hard to realize that the able and devoted Representative, RICHARD M. SIMPSON, will no longer be with us. For all our difference of religious affiliation and political loyalties, I have felt very close to DICK SIMPSON, as I have been priviliged to work with him for many years in a common devotion to the welfare of the Commonwealth of Pennsylvania and of the United States of America. Much has been said on this floor, and in the other body, in exalted praise of DICK SIMPSON's conscientious dedication to the service of his country, of his sincerity and energy and ability. I shall not attempt to repeat what has been so ably and eloquently said in honor of the memory of DICK SIMPSON, but I should like to comment simply that, to one who knew DICK SIMPSON well, not one word in all this chorus of eulogy has rung false. Nothing but good has been said of him, because there was nothing but good to be said. He was a man who would not condone a wrong or serve a falsehood, whether by act, by speech, or by silence.

Typical of DICK SIMPSON's driving ambition to serve his country to the best of his magnificent ability is the story of his early years in Congress, when, finding that he was assigned to the House Committee on Ways and Means, and that a knowledge of law would contribute significantly to the value of his work on that committee, he immediately enrolled in the Georgetown Law School, taking night courses in law, while carrying out his legislative duties with undiminished energy, for the 4 years necessary for the achievement of his degree. That is the spirit in which DICK SIMPSON, throughout his life, undertook and carried out all the duties that circumstances laid upon him, and all the duties that he himself perceived and chose to perform. For no personal advantage, for no political loyalty, for no lofty cause, would he do or permit any unfair act, but drove always with resolute determination at the accomplishment of great results by fair and honest means.

I wish to join my friends, and DICK SIMPSON's friends, in the Congress, in expressing to his wife and their daughter, Kay Josephine, to his two older daughters, Susan, and Barbara, and to his three stepsons, our heartfelt sorrow and sympathy.

Greeks in America

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. ALLEN. Mr. Speaker, May I have the pleasure of inviting the attention of the Congress to a most enlightening article entitled "Greeks in America," giving us a bird's-eye view of the flesh and bone contribution of the Hellenic race from Greece proper and the Diaspora to the American commonwealth.

It has been prepared by my good friend, George C. Vournas, of Washington, D.C., for publication in the Greek World Encyclopedia and the Twentieth-Century Publications of Athens, Greece.

The author of the survey brings to the task preeminent qualifications. He was born in Greece and came to the United States at a tender age; attained U.S. citizenship and became a member of the legal profession; was commissioned as captain in the Army of the United States and elevated to the rank of major prior to his separation from the service; he is a past supreme president of the Order of Ahepa; one of the founders of Saints Constantine and Helen Greek Orthodox Church in Washington; and served as personal attorney for the late Metropolitan Vassilios during his tenure of office as Greek Orthodox Archbishop of the United States and Canada.

I feel that Mr. Vournas' interesting and impressive treatise will prove rewarding to students, educators, Government officials and the public in general.

GREEKS IN AMERICA

(By George C. Vournas)

In writing about "Greeks in America" it is necessary that one define his terms. Who is a Greek? I think it was Socrates who said that "A Greek is a person who received Greek education." Venizelos' definition given at the Versailles Peace Conference was different. Said he, "A Greek is a person who wants to be a Greek, feels he is a Greek and says he is a Greek." Neither definition meets the problem here. Nationality in the New World is not based on racial grounds—the De Sanguinis principle—but on the United States evolved principle of de Soi—of the soil. Thus, all children born in the United States become U.S. nationals irrespective of the nationality of the parents. (Children of diplomats excepted.) In addition, an alien legally residing in the United States may, after the lapse of a number of years, apply for and be vested with U.S. citizenship, placing himself on a par with native-born persons in all aspects with the exception of his ineligibility to be elected President or Vice President of the United States.

By operation of U.S. law, one may be a Greek as far as Greece is concerned and an American for the United States and the rest of the world in general, since all other nations recognize U.S. nationality acquired either through birth or naturalization.

The question is a complex one and has at times confused politicians, journalists,[1] and even diplomats.[2] Our short survey will be concerned with erstwhile immigrants, now Americans of Hellenic ancestry, whether hail-

Footnotes at end of speech.

ing from Greece proper or Diaspora, and their progeny in the United States.

APPEARANCE OF GREEKS IN THE NEW WORLD

Greeks appeared in the New World shortly after the voyage of Columbus. Indeed, according to Mr. S. Canoutas,[3] Columbus was what the title of Mr. Canoutas' book said he was, "A Greek Nobleman," finding his way to France, Portugal, and Spain after the fall of Constantinople to the Turks. There were other Greek seafarers. Particular mention should be made of the Cephalonian Juan De Fuca, who explored the Pacific shores of the Northern Continent as a leader of a Spanish expedition—the channel and straits lying between Vancouver Island and British Columbia bearing his name. There were still others. Their names appear here and there as "Greek," "Grecian," or "Greco" (the Spanish equivalent).

The first organized immigration from Greece proper, however, occurred around the year 1767, when the Scot physician, Dr. Andrew Turnbull, who was married to a Greek girl from Smyrna (Maria Gracia), gathered a few hundred Peloponnesians—he operated from Methoni—and brought them to the New World, founding the colony of New Smyrna in southern Florida, in honor of the birthplace of his wife.[4] When the colony disbanded, a number of the Greek colonists found their way to St. Augustine, Fla., as it was evidenced by the recording of baptismals of children born of Greek parentage—Katherina Mavromati, baptised March 1785; her sister, Margarita, baptised in 1787; and another sister, Mariana, baptised in January 1790.

GREEKS IN NEW ORLEANS

One of the first recorded Greeks in New Orleans appeared prior to 1764. His name, Michael Dracos (Michael Dragon, in its French translation). He was survived by a daughter named Marianni Celeste Dragon (born March 1, 1777). She was married to Andrew Dimitri, obviously another Greek resident of the same city, and from this union 10 children were born.[5]

The rise of cotton, both in importance and production, attracted the cotton and produce merchants (Ralli, Rodochanaki, Benaki, et al.). They, in turn, became a magnet for other Greeks. The first Greek Orthodox community and church was founded in this city. It was used by the local community until a few years ago.

GREEKS ARRIVING AFTER U.S. INDEPENDENCE

The early arrivals in the New World at the turn of the 19th century were young children or war orphans brought by Americans who went to Greece at the outbreak of the Greek revolution in 1821 either with medical or relief committees. A number of these children became prominent, such as George Colvocoressis, who, after graduating from the U.S. Naval Academy at Annapolis, took part in an exploration mission under Wilkes (1838–42) and wrote a book entitled "Four Years in a Government Exploring Expedition to the Island of Madeira, Cape Verde Islands, Brazil, Coast of Patagonia, Chile, Peru, Paumato Group, Society Islands, Navigator Group, Australia, Antarctic Continent, New Zealand, Friendly Island, Fijee Group, Sandwich Islands, Northwest Coast of America, Oregon, California, East Indies, St. Helena, Etc."; and Gregory Perdicaris, the father of John Perdicaris, who became famous by virtue of his capture by the Moroccan brigand, Raissuli. In the United States even schoolchildren are familiar with the picturesque demand made by President Theodore Roosevelt on the Sultan of Morocco: "Either John Perdicaris alive or Raissuli dead."

Particular mention should be made at this juncture of Michael Anagnostopoulos—known in America as Michael Anagnos—who first arrived in the United States in 1867 in company with Dr. Samuel Gridley Howe, whose daughter he married in 1870, and whom he succeeded as director of the Perkins Institute (school for the deaf, dumb, and blind). The importance of the institute may be gaged from the fact that Helen Keller is one of the graduates.

MASS IMMIGRATION

Greek immigration to the United States, as the term is commonly understood, did not begin until late in the 19th century. In 1889, 158 immigrants arrived from Greece; in 1896, 2,175—the number reaching 36,580 for the year 1907. The statistics: 1820–80, 398; 1881–1946, 431,650. To this number, however, must be added a great proportion of the immigrants arriving from European Turkey, statistically given for the period as 156,000, plus proportional numbers of those from Egypt, Albania, Rumania (total for the period, 157,345), Bulgaria (66,026), Russia (3,340,611), Austria, Hungary (4,444,556), and Asiatic Turkey (205,473). Thus, on the basis of these statistics, it would not be an exaggeration to state that immigrants to the United States up to 1946 meeting the Venizelos' definition of a "Greek"—without its political connotation—would number between 750,000 and 800,000. (Cyprus, Dodecanese Islands, no statistics available.)

THE FIRST STEPS IN THE NEW WORLD

The early immigrants to the United States were roughly divided into two categories: (a) Common laborers who were attracted to the Western States—mines and railroad construction; and (b) those who remained in the cities and worked in hotels, restaurants, and candy shops.

Not knowing the language, customs or the laws of the country, they were the subject of continuous exploitation by the employment agencies, interpreters, and advisers. Long hours, unhygienic living conditions—it has been reported that early immigrants were sleeping as many as 10 in a room—and the eventual development of contract labor (young boys contracted by their parents to work as bootblacks for fixed terms at ridiculously low wages), a practice which, fortunately, was outlawed—accented their daily lives.

While such was the lot of those in the city, the ones working in the mines had to contend with the excesses of the mining companies' private police, as the record testifies at Trinidad and Ludlow, Colorado even as late as 1913.

Soon after World War I, and by 1922, the major portion of the Greek industrial workers drifted to town and city, their greatest number entering the small business field—restaurants, flower shops, delicatessens, fruit stores, groceries, etc.—in which many of their kinsmen were established after their early apprenticeships.

GEOGRAPHICAL DISTRIBUTION

By the end of the First World War Greek immigrants were established in every major city or town of the United States, from New York to San Francisco, and from Canada to the Gulf of Mexico. New York and Chicago were vying with each other as to which had the most numerous Greek inhabitants. The communities built churches and they practically doubled by division into Venizelists and Royalists, duplicating the home pattern following the revolution of 1916. Over the years, beginning with the turn of the century, the busboys became waiters, restaurateurs, and owners of hotels. Theater ushers became motion-picture exhibitors, and then producers. Laborers skilled in the art of cigarette rolling by hand in Egypt or Greece became cigarette manufacturers. One may truthfully say that there isn't a single known occupation in the United States which did not become a host to the Greek immigrant. A supreme president of the Ahepa, on tour during World War II (1943), was surprised to find the secretary of an Ahepa chapter in Arizona to be a junk dealer, an occupation traditionally preempted by Jews.

The immigrant who, until the end of World War I, came to the United States with the intention to remain long enough to earn money to marry off a sister, or to pay off the mortgage on the paternal property and return home to carry on, following the inexorable law of American development, painfully at first, but steadily afterwards, resolved to make the United States his home.

ORGANIZATIONS

The post-World War I change in thought on the part of the Greek immigrant opened new vistas and pointed to new horizons. These, in turn, brought forth new instrumentalities. Organizations and societies anchored on the old country lost their charm. Thus, the Ahepa came into being (American Hellenic Educational Progressive Association). Its declared objective: To help the immigrant acclimate himself in his new environment and assume his proper place in the civic life of the nation. It is a truly pan-Hellenic organization. (Its auxilliaries: Daughters of Penelope for women, Maids of Athens for girls, and Sons of Pericles for young boys.) There are more than 400 chapters of the Ahepa, divided into 24 districts. Twenty-four district conventions and one national convention are held annually. The last one attracts thousands of persons as visitors in addition to the official delegates.

Since the Ahepa opened new horizons for the Greek immigrant and greatly influenced his development and acclimatization direction and through other organizations that followed its example, a closer look into the organization may prove rewarding.

It was founded on July 26, 1922, in Atlanta, Ga. The founders: Nicholas D. Chotas, supreme president; James Campbell, supreme vice president; S. J. Stamos, supreme secretary (deceased); Harry Angelopoulos, supreme treasurer; George A. Polos, supreme governor; John Angelopoulos, supreme governor; George Campbell, supreme governor; James Vlass, supreme governor (deceased).

Its first constitution, bylaws, and internal direction was influenced by societies with secret rituals, such as the Masons, Elks, Woodmen of the World, and, in certain minor aspects even the KKK.[6] The response of the slogan of "Unity"—practically all Greek Orthodox communities in the United States were rent asunder by the division into Venizelists and Royalists—and Americanism—"America is our home"—hit a most sensitive and appealing chord, and the growth of the fraternity was phenomenal. In harmony with this, the faternity's ritual was in English, the meetings were conducted in English, and the organization as such did not assume any obligation to foster or promote the Greek Orthodox religion, but was—and still is—truly an interdenominational one.[7]

Chapters mushroomed all over the country, and multiplied faster than they could be absorbed into a unified whole—a fact which plagued the organization in subsequent years.

A reaction was not long in coming. Greek newspapers, a number of clergymen, and well-known Greek personages of the day—generally alluded to as "professional Greeks"—registered decided opposition upon being unable to either change it, restrict its growth, or channel its activities. The opposition traveled two paths. One resolved upon working from within, and the other upon the founding of a rival organization.[8]

Footnotes at end of speech.

That the Ahepa is a truly pan-Hellenic organization is borne out by an examination of the birthplaces or places of origin of its supreme presidents since the day of its founding up to the present time: 1922, Nich. olas D. Chotas, Greece; 1923, George Demeter, Greece (Arcadia); 1924–26, V. I. Chebithes, Greece (Island of Icaria); 1927–28, Dean Alfange, Turkey (Constantinople); 1929–30, George E. Phillies, Greece (Corinthia); 1931–33, Harris J. Booras, Greece (Arcadia); 1934, Achilles Catsonis, Turkey (Island of Lemnos); 1935–39, V. I. Chebithes, Greece (Island of Icaria); 1940–41, Van A. Nomikos (deceased), Greece (Island of Amorgos); 1942–44, George C. Vournas, Greece (Messinia); 1945–46, Harris J. Booras, Greece (Arcadia); 1947–48, William G. Helis (deceased), Greece (Arcadia); 1949–50, John G. Thevos, United States; 1951–52, Peter L. Bell, United States; 1953, Leo J. Lamberson, United States; 1954–55, Stephen S. Scopas, Greece (Messinia); 1956, John L. Manta, Greece (Island of Icaria); 1957–59, C. P. Verinis, United States; 1960, George E. Loucas, Asia Minor Turkey (elected August 1959).

As the years passed, the attention of the organization, heretofore centered on Greece and Greek problems—developed a broader outlook.[9]

It was but natural for the Ahepa to play a leading role in the United States during the years beginning with the attack of Mussolini on Greece until the final collapse of Japan. It is an incontestible fact that the success of the Greek War Relief Association in both its aspects—fund raising and actual administration of aid to Greece—is due to a major extent to the Order of Ahepa. Practically overnight Greek war relief societies were organized by the Ahepa chapters and its auxiliaries all over the nation, drawing into the activity the best element of their respective communities. The United States of America, thanks to the bravery of the Greek armies and to the dissemination of information regarding their heroic deeds, became Greek conscious. The crisis hammered the transition of the Ahepa to a truly national American organization.

The emergence of this mature outlook was not lost either on the public or public officials. Notice of it was taken by official Washington and the molders of public opinion. The President of the United States issued a memorable statement committing the Government of the United States to the liberation and restitution of Greek territorial integrity on the occasion of a call at the White House of the supreme lodge of the Ahepa on April 25, 1941.

"The heroic struggle of the Hellenic people to defend their liberties and their homes against the aggression of Germany after they had so signally defeated the Italian attempt at invasion has stirred the hearts and aroused the sympathy of the whole American people.

"During the Hellenic war of independence more than a century ago, our young nation, prizing its own lately won independence, expressed its ardent sympathy for the Greeks and hoped for Hellenic victory. That victory was achieved.

"Today, at a far more perilous period in the history of Hellas, we intend to give full effect to our settled policy of extending all available material aid to free peoples defending themselves against aggression. Such aid has been and will continue to be extended to Greece.

"Whatever may be the temporary outcome of the present phase of the war in Greece, I believe that the Greek people will once more ultimately achieve their victory and regain their political independence and the territorial integrity of their country. In that high objective, the people of Greece can count on the help and support of the Government and the people of the United States."

The Ahepa, in addition, was honored with the distinction of being authorized to issue war bonds, series E, under the signature of its supreme lodge and seal.[10]

To better discharge this trust and more effectively support the war effort, the supreme lodge established the Ahepa War Service Units as a distinct agency. (The objectives of the Ahepa War Service Units: war-bond selling, Greek War Relief Association, raising funds for the American Red Cross, visitation to hospitals caring for service personnel.)

The acceptance of a bust of himself (executed by Sculptor Walter Russell) on the part of President Franklin Delano Roosevelt was an act of further expression of good will toward the Ahepa. The bronze bust, of heroic size, is now adorning the front of the Roosevelt Library at Hyde Park, New York.

The Ahepa was further honored by being named a consulting organization to the American delegation at the San Francisco organizational conference of the United Nations in 1945.[11]

GREEK PRESS

It appears that the first newspaper printed in the Greek language in the United States was the New World, first appearing in 1692 in Boston, Mass. It was short lived. After that, many have been the newspapers that have been published in many sections of the United States—some living weeks; others, months; and others for years. The major portion of them were weekly newspapers. The best known newspaper is the Alantis, which first saw the light in New York on March 3, 1884, as a weekly, then biweekly, and a daily subsequent to 1905. Its founder was Solon I. Vlastos. He edited and directed its policies to the end of his days.

Another newspaper is the National Herald, founded as a daily by Peter Tatanis on April 2, 1915. It is still published in New York, the present editor and publisher being Babis J. Marketos.

Chicago, in the early days, had many weekly newspapers, the best known ones being the Greek Star, the Greek Press, and Salonika. Many weekly, biweekly, or monthly magazines have appeared here and there from time to time in Chicago, New York, Detroit, Boston, and San Francisco. Only the weeklies Greek Star and Greek Press survive in Chicago, the New California in San Francisco, edited by Mr. N. S. Dallas, and the Campana of New York City, edited and published by N. J. Stellakis for the past 40 years.

Writers who have left their mark: Adamandios Polyzoides, editor of the Alantis for years and now editor of the Los Angeles Times for Far Eastern affairs. Dr. Demetrios Callimachos, editor of the National Herald for a number of years, and Demetrios Christoforides, who edited the National Herald for a time and then became the editor of the Greek-American Tribune, a leftwing workers' weekly.

The one writer, however, who best reflected and interpreted the Greek immigrant was the editor and publisher of the satyrical weekly, Satyros, 1911–54—the late Constantine Zambounis. He was a gifted writer of both verse and prose; a moralist and a philosopher, to boot. His newspaper was written in verse, prose, and in a wholly new dialect under the caption: "Letters of Marigoula Farfalia." His lines reflected the American environment as truly as those of "Romios" of George Souris reflected Athens. In addition, Mr. Zambounis authorized more serious works.[12] His devastating satire—in verse, prose, and through cartoons[13]—was directed mercilessly against all pretense and exploitation. No one was feared or favored, and no one was exempt—be it a church dignitary, Government official, or private individual. The Greek of America and his welfare claimed his undivided loyalty, and woe to the person who would do him harm or seek to exploit him. Yet, beneath it and through it all, he never ceased to be a "Greek"—and of the heroic variety, at that[14]—to the end of his days. When, on April 6, 1954, the heart of Constantine Zambounis ceased to beat, Americans of Greek ancestry lost their most effective shield and wisest counsellor, and the Greek race one who added his bit to our Hellenic inheritance.

CHURCHES

There are 355 Greek Orthodox Churches in the United States, and the Greek Orthodox Archdiocese collected the sum of $585,698 from 58,000 recorded members in 1958. (The membership must be multiplied at least by 3, as the annual $10 fee to the archdiocese is paid usually by the head of families. Each church has now its Philoptochos Society, operated by women members, and the Goya Society for young girls and boys.) In the early days the churches were staffed by clergymen either from the Church of Greece or from the Greek Orthodox Patriarchates, principally that of Constantinople and Alexandria. Since the official establishment of the archdiocese, or to be more exact, since the pacification of the Greek Orthodox communities in the United States, brought about in 1930 through the dispatch of the late archbishop of Athens, Damaskinos, as exarch and the designation of the present patriarch of Constantinople as archbishop of North and South America, the churches are generally staffed by graduates of a theological seminary established and maintained by the archdiocese in Pomfret, Conn. This seminary has thus far graduated 218 persons, most of whom has been ordained priests and assigned to parishes.

In the case of churches, again New York and Chicago vie with each other. There are 11 Greek Orthodox Churches in Chicago, Ill., supported by an equal number of communities. A similar number serves the New York area. Most other cities, such as Philadelphia, Baltimore, and Washington, have two each.

After World War II a number of new church edifices have been erected, the total cost running into millions of dollars. Particular mention may be made of the church in Los Angeles, erected under the driving force of the late Charles P. Skouras (Constantine P. Skouras). Into this building were incorporated many features of the motion picture industry—accoustically, visually, and in lighting. Also, the church services have been keyed to advanced standards and the split-minute timing of the theater.[15] As a result, this temple of worship attracts people of all faiths, and denominations, and is a great tourist attraction.

GREEK SCHOOLS

Many have been the attempts to establish and operate schools in the United States with the Greek language as the principal medium of learning. A Greek educational institute was organized in New York City about 40 years ago, supported by the local community at first, and then laying claim to support by all Greeks in the United States.

Other Greek schools were organized privately, with a decidedly limited capacity either for boarders or day students. All, or nearly all, succumbed to the inexorable economic law. Very few families were financially able to send their children to be educated at the Greek schools, which were no wise equal academically to public schools, and the limitations in accommodations were such that even if more were financially able, no facilities were available.

Footnotes at end of speech.

The problem of Greek education—or rather, of the teaching of the modern Greek—is now in the hands of the church. Because all children are required by law to attend school up to a certain age, and children of Greek parentage do attend public schools in their respective cities and neighborhoods, the various Greek communities have organized afternoon classes in their church buildings devoted to the teaching of modern Greek and religion. This noble endeavor cannot be termed a "success." Only a small percentage of the children attend, and of that percentage, very few stick it out during the years. The result is that the "graduates" of the afternoon schools learn just enough Greek to barely converse with their aged grandmothers and to follow the high points of church liturgies. The reasons, of course, are not too elusive. First, there is the question of capacity; then, time. A young creature that reports to his regular school at 9 a.m. is not overenthusiastic to attend another school at the expense of his hours of play or preparation of his assigned homework. In addition, no child is being won over by being closeted in the basement of the church to listen to random "pedagogues"—in most instances, either the choir leader (psaltis) or the priest—extolling the virtues of the Greek language and religion, when his public school friends play baseball. The contrast in the physical environment—public school versus the church basement—is so marked that not infrequently the children are either embarrassed or out-and-out ashamed to admit attendance.

Many public-spirited persons have pointed out the error of the solution to the problem, but in vain. Improvements have been instituted from time to time, such as the division of the children into classes—all classes in most instances being taught by the same teacher. One can readily imagine what happens when children of ages from 8 to 16 are assembled either in one room or in an imperfectly subdivided room, to reluctantly imbibe knowledge.

It is not strange, therefore, that the results of this noble effort have fallen far short of both expectation and toil. In fact, there are many who maintain that the afternoon classes project, plus its Sunday School appendage, accomplishes the very opposite of their objective: Instead of instilling love and affection for the Greek language or the Greek Orthodox religion, it provokes antagonism. Such being the facts, it is sad but not unreasonable to expect that with the passing of time, Greek Orthodox Churches and communities in the United States, with the exception of a few centers—New York, Chicago, Boston, and San Francisco—will suffer an eclipse.

DEMOGRAPHIC ASPECTS

Practically all Greek immigrants to the United States are now permanently established. All who could qualify for American citizenship—and this includes practically everybody with the exception of the recent arrivals who have not resided in the country long enough to comply with the requirements of the naturalization law—are citizens of the United States. They are participating—like all other Americans—in the civic affairs of their communities, and some of them have been rewarded with positions of leadership both in their respective fields and some through election to political office. The mayor of San Francisco—a major city in the United States—is an American of Greek ancestry (born in Leonidion, Arcadia, Greece), and brought to the United States at a tender age. Then there are others in small towns here and there, who have been elected mayors, city councilors or members of their State legislative—both house and senate.

The first person of Greek ancestry to serve in the U.S. Congress was Miltiades Lucas Miller. He was born in Levadia, Greece, on September 15, 1824, and brought to the United States as an adopted child by Col. Jonathan P. Miller. He was educated in Montpelier, Vt., and subsequently moved to the State of Wisconsin. From there he was elected to the 52d Congress (March 4, 1891, to March 3, 1893).

The second, in terms of Greek ancestry, but the first really coming within the purview of this examination, is the Honorable JOHN BRADEMAS, from South Bend, Ind.—the son of a Greek immigrant from Messinia. He was elected to the 86th Congress (1959–60) and is currently serving. A Rhodes scholar, professor of political science, with a distinguished service in the U.S. Navy during the last war, he can hold his head high in any company.

Americans of Hellenic ancestry are well represented in appointive positions in all branches: Federal, State, and municipal governments, as well as in the Armed Forces of the Nation.

FAMILY AND EDUCATION

The early immigrants were young men in search of fortune, and traveled alone. Only a few women appear to have made the trip to the United States up to the Balkan wars. Thereafter, the number of women increased considerably. While there are no statistics available as to the percentage of Greek immigrants who married within their own racial or religious group, an inquiry conducted on the occasion of the first Ahepa national banquet in 1930 indicated that about 40 percent of all married Greek immigrants were married outside their own racial or church group. It is believed that the same percentage holds true today.

Unlike the early settlers in the United States—particularly those from Sweden and Ireland—Greek families have not been noted for many children—the average number being about three. Again, unlike the early Italian, Polish, German, and Jewish immigrants, and the "Little Italies" or "Little Polands" they created by congregating in fixed neighborhoods, Greek families are spread in residential neighborhoods according to their economic and social status.

EDUCATION

The Greek thirst for knowledge has had an open field in the United States. It is doubtful whether any other racial group of the many that make up the United States as a nation, could match the educational record of the Greek immigrant and his descendants. They are literally everywhere—in every educational institution in the country and in the arts—as students, teachers, professors, artists.

They started as soon as they set foot in their new environment and they are at it to this day. Many are the men who worked their way through colleges and Universities who occupy positions of trust and responsibility in their chosen professions today.

While a few years ago the names of Raphael Demos, assistant professor of philosophy at Harvard, Dr. Michael Dorizas*, of the University of Pennsylvania, Nicholas Kaltchas,* of Sarah Lawrence College, Dr. George Papanicolaou, of Cornell University and Dr. George E. Mylonas, of Washington University at St. Louis, Mo.—to mention the better known—were bywords and referred to with pride, today a comprehensive list would run into many pages.

A few figures pertaining to lawyers. According to Lamberson's directory there were 673 lawyers of Greek descent in the U.S. in 1958. Chicago led with 104. While the figure appears impressive, it is nowhere nearly complete. The figure given for Washington, D.C. (15) is manifestly erroneous. In addition, there are a number of persons, graduates of law, in the service of the Federal Government. A law degree is practically a requirement in the Patent Office,[16] Department of Justice, Bureau of Internal Revenue, Federal Bureau of Investigation, to mention a few, and persons of Greek descent are to be found in all these departments.

The profession of Hippocrates attracted the next greatest number to that of the law. Then engineering, accountancy, chemistry and the teaching profession. No accurate statistics are possible because of the change of names,[17] a practice quite common until World War II when the exploits of the Greek armies in Albania reaccented the inherent racial pride in all—the Greek from Greece, Diaspora and even in the American-born.

ECONOMIC STATUS

Americans of Greek ancestry are everywhere—in all businesses and professions. Although no statistics are available to pinpoint their position in the great U.S. economic strata, they are generally referred to as being a part of the small business group. This view, however, has little more to support it than general conjecture. The only reliable figures are those provided by the relief rolls of cities, municipalities and charitable organizations. It has been noted that very few persons giving Greece as their birthplace appear on these rolls. No statistical breakdown is available for American-born.

Unlike other industrially less-developed nations where the role of the individual is more pronounced, the economic life of the United States rests on corporate activity. There are corporate giants in every field—American Telephone & Telegraph Co. (communications), General Motors, Ford and Chrysler (automobile manufacturers), Dupont de Nemours Co. (chemical products), General Electric and Westinghouse (electrical companies), etc. These companies have millions of shares of stock outstanding, and hundreds of thousands (if not millions) of stockholders. Out of 1,605,046 holders of American Telephone & Telegraph Co. stock—total shares issued and outstanding, 213 million; assets more than $20 billion—not a single person owns more than one-half of 1 percent. While this is an extreme case, it is a fact of life that corporate ownership rests with the people. The board of directors of large corporations usually own a small percentage of the stock of those companies.[18] Since the expense of communicating with the many stockholders outside the channels of management is quite inordinate and not readily risked by individuals, the board of directors of large corporations have become a self-perpetuating managerial class.

Investment in stocks of large corporations, heretofore reserved only for the rich, is widespread in the United States among persons with middle-class incomes, a group that claims most Americans of Greek ancestry.

Today there are no Greek names associated with wealth,[19] and none is likely to be in the future, owing to the heavy U.S. taxation—both Federal and State.[20]

It is estimated that the national economy of Greece benefited to the extent of $25 million per year from immigrant remittance alone for the past 40 years.

Many of the early Greek immigrants—particularly those who had their eyes fixed on their eventual return to Greece—deposited their savings in the National Bank of Greece, with catastrophic results. Thrice in a lifetime these unfortunate people who had

Footnotes at end of speech.

boundless faith in the financial institutions of their birthplace, were defrauded out of their savings through the forced conversion of their dollar deposits into drachmas—in 1923, 1935, and, of course, during the last world war.

This unsavory historic occurrence could very well have gone unmentioned were it not for the fact that due to this bitter experience, very few indeed are the Americans of Greek ancestry who are inclined to invest in Greek enterprises today.

FUTURE PROSPECTS

"Oversea Greeks" were a very important asset to mother Greece throughout the ages. The outlying Greek communities constituted a source of wealth for the mother country. In ancient times Athens was looked upon as the Alma Mater of all educated Greeks, whether they were born in Ionia or as far west as Magna Gracia. After the fall of Constantinople the "oversea Greeks" were succeeded by Greeks in Diaspora. Most Greek communities, however, which were established in Western Europe came to an end by assimilation. Only in countries where the religious division was sharp and distinct—that is to say, in countries where Mohammedanism was the offical religion—did the Greek communities survive.

The immigration to the United States is now two generations old. What are the prospects? Will the Greek communities in the United States keep their identities and withstand assimilation? What is the outlook in view of the special conditions prevailing in the United States?

The United States of America is not just a state, as some European writers have maliciously alluded from time to time. It is a nation. Each war that has been fought over a century and a half, plus the public schools, plus the political parties, plus freedom, have acted as catalytic agents for nationhood. Why should a person be an Irishman, German, or Greek when his personal interest, the road to distinction, riches, and the pursuit of happiness lies through his unqualified loyalty to the American Constitution, law, and tradition—what, at times, is slightingly referred to as "100 percent Americanism"?

There are no minorities nourishing racial wounds or grievances in the United States because no minority is suppressed. Freedom of speech, of thought, and of worship have provided an effective shield against occasional demagogues and purveyors of hate. (The United States has no state religion and no religious instruction is permited in public schools.)

Equality before the law is not a dead letter nor equality of opportunity. The American way of life, a product of education, and Government institutions based on Greek patterns, is such that Greek immigrants and their descendants could and do cheerfully claim as their own and are anxious to defend it with their lives, as they effectively demonstrated it during the two world wars.

The church, which as an institution has a stake in the Greek language, fights a rearguard action against the inevitable eclipse of Greek consciousness. The Greek church, however, is itself losing the battle of survival. Unlike U.S. catholicism, which is progress incarnate compared to the Catholic Church of Spain, the Greek Orthodox Church in the United States is the same as in Greece[21] or Istanbul, and its rites and rituals take as much time as in the days of St. John Chrysostom.[22]

It has been observed that many turn away from the Greek church, joining other Christian denominations,[23] because in addition to all other factors, the question of the Greek language enters the picture. Then again, in many isolated communities, the nearest Greek Orthodox Church is 50 or 100 miles away, a factor that dictates contacts with local Christian churches. Prof. Raphael Demos is a Protestant. So is Congressman BRADEMAS (Methodist). With each year the number of persons who were born in the Greek Orthodox Church joining other churches is growing greater. The Greek Orthodox Church has always addressed its appeal to the old folks and the old mentality and not the 20th century Christian. As a result, it is not an exaggeration to say that it is a question of time when the recently built Greek Orthodox temples—like those built in other countries in earlier times—will become museums or yield to other institutions better suited to serve man in the atomic age.

---

[*] Deceased.

[1] A Washington audience of a visiting Greek theatrical group, composed entirely of Americans, juridically speaking, either native-born or naturalized, were addressed by a well-known playwright who accompanied the troupe as "Xenitemena Adelphia".

[2] The late Mr. Cimon Diamantopoulos, Ambassador of Greece to the United States during World War II clashed with the Ahepa on this very question. He had failed to comprehend that the Ahepans were Americans and not Greeks.

[3] "Christopher Columbus, a Greek Nobleman", published in New York, N.Y. in 1936.

[4] "The Greeks of America, 1528–1948", by Mpampi Malafouris, New York, 1948.

[5] Malafouris, ibid., p. 57.

[6] The early constitutional provision on separation of church and state and the preservation of the American public schools free of all religious influences, is traced to the influence of the KKK.

[7] A number of distinguished Americans of non-Greek ancestry have joined the Order of Ahepa as dues-paying members. Former Senator William H. King, of Utah, a well-known Philhellene, was among the first to join. So was former President Franklin Delano Roosevelt, who joined while Governor of the State of New York, paying dues to the day he died. There are scores of others.

[8] GAPA (Greek-American Progressive Association).

[9] See appendix.

[10] More than $500,000,000 war bonds, series E, were sold in a 5-year period.

[11] See appendix.

[12] "Moments of Melancholy" and "When I Died," written both in verse, are classics in their field. He also wrote short stories and four volumes of essays, entitled "On the Wings of Thought."

[13] Published when the present Patriarch of Constantinople, then Archbishop of North and South America, treated a National Convention of the Greek Orthodox Churches of the United States as if it were a gathering of Boy Scout clubs.

[14] See his ode "To the Greeks" of May 20, 1941.

[15] Early liturgy: 9 a.m. to 10:15 a.m. (sermon delivered in Greek). Sunday school classes: 10:15 to 15:45 a.m. Memorial services: 10:45 a.m. to 11 a.m. Second liturgy: 11 a.m. to 12:15 p.m. (sermon delivered in English).

[16] The Board of Appeals, the highest tribunal within the Patent Office, has as one of its regular members today a former Greek immigrant who graduated from Yale University (engineering) and Georgetown University (law).

[17] How could one determine, statistically, that a Mr. Collins is a former Kallymenopoulos; a Mr. Taylor is a Mr. Tavoularis; a Mr. Bell is a former Belloyanis, etc.?

[18] The case of Spyros P. Skouras, president of 20th Century Fox Corp., might be taken to illustrate the point. Of 2,293,186 shares issued and outstanding in the hands of the public, Mr. Skouras is the owner of but 22,800 shares.

[19] It was commonly accepted that the late William G. Helis, of New Orleans, La. (oil producer) was in the millionaire class. Also, the late Constantino and Stephen Stephano, of Philadelphia, Pa. (cigarettes). Present Greek names in the millionaire class are restricted to the ship-owning group who are not subjected to the steep U.S. income and other Federal and State taxes.

[20] Federal income and inheritance taxes follow a graduating scale. Income taxes start at 4 percent and go as high as 91 percent. Inheritance taxes start at 3 percent and go as high as 77 percent. An unmarried person earning $10,000 annually is subject to a Federal income tax of $2,095. In addition, there is a 2 percent or 4 percent State tax, depending upon the State in which he lives. An unmarried person earning $100,000 would pay $65,928 in Federal taxes alone. A $600 exemption is allowed for each child under 18 years old and $2,000 marital deduction. For a person earning half a million dollars, the tax would be $428,364.

[21] The younger generation, which has been taught at public school and college to venerate the age and the names of the classical era who contributed so much to the wealth of human knowledge and civilization in general, were shocked at the recent edict of the Holy Synod of Greece prohibiting the naming of Orthodox children at baptismals with classical Greek names.

[22] While Sunday services in all churches of other denominations are limited to 50 minutes, Greek Orthodox services (with the exception of the church in Los Angeles) are eternity itself. Services lasting from 10 a.m. to 1 p.m. or even 2 p.m. are not uncommon.

APPENDIX

(a) The Order of Ahepa has contributed to many worthy causes during its 37 years of existence, on a national and international level. These contributions do not take into account the various local activities of the 400 chapters within their respective communities. These include:

1. Relief of Florida hurricane victims.
2. Relief of Mississippi flood victims.
3. Relief of earthquake victims of Corinth, Greece.
4. War orphans of Hellas.
5. Fatherless children from Asia Minor through the Near East Relief.
6. Earthquake victims of the Dodecanese.
7. Hellenic Museum.
8. National scholarships to students.
9. Theological seminary (Pomfret and Brookline).
10. Franklin Delano Roosevelt Memorial at Hyde Park, N.Y.
11. Memorials to Demetrios Ypsilanti (presented to the city of Ypsilanti, Mich.) and George Dilboy (a Congressional Medal of Honor, posthumous, awarded to the city of Haverhill, Mass., from which he was conscripted into the U.S. Army).
12. Philhellenes Memorial in Missolonghi, Greece, by the Sons of Pericles to the memory of American Philhellenes of 1821.
13. Earthquake victims in Turkey.
14. Patriarchate of Jerusalem.
15. Ecuadorian relief.
16. Kansas City flood relief.
17. Greek war relief during and after World War II.
18. Ahepa hospitals and health clinics in Greece.
19. Agricultural college in Greece.
20. Ahepa Tuberculosis Sanatorium in Albuquerque, N. Mex.

21. Ionian Islands earthquake relief.
22. Ahepa Preventorium in Volos.
23. Shelter home in Athens, by the Daughters of Penelope.
24. Ahepa Hall for Boys at St. Basil's Academy, Garrison, N.Y.
25. Ahepa school for boys and girls at St. Basil's Academy (now under construction).

(b) Ahepa resolution unanimously adopted by the New Orleans (La.) convention in August 1938 in re persecution of the Jews:

"Whereas it is a matter of common knowledge that the Hebrew race and religion, which contributed so much in philosophical, cultural, religious, and scientific thought to the world is, and has been, subject to merciless persecution by certain dictatorial governments of Europe, and

"Whereas there are millions of co-citizens of ours of the Hebrew race residing in every part of the United States who constitute a loyal, law-abiding and valuable element in the political, economic, cultural, and scientific fields of the Nation; and

"Whereas the members of the Order of Ahepa and American citizens of Greek descent in general are bound to their co-citizens of the Hebrew faith with manifold ties; and

"Whereas the American Government has officially participated in a world conference aiming to alleviate the condition of Hebrew refugees in many countries who have been unjustly and cruelly persecuted: Now, therefore, be it

"*Resolved*, by the delegates of the Order of Ahepa assembled at the 15th National Convention that the Order of Ahepa goes on record as condemning the unhuman and cruel persecution of a race and faith, which has given so much to the world;

Resolved further, That the American Government be congratulated for the humanitarian stand it has taken in the matter; and be it further

"*Resolved*, That copies of this resolution be forwarded to the Honorable Cordell Hull, Secretary of State, in Washington, the press, and Hebrew organizations and all the chapters of the Ahepa for their information.

"Done in the City of New Orleans, this 29th day of August 1938."

(Above resolution introduced by George C. Vournas on behalf of Chapter 236 of Washington, D.C.)

(C) Ahepa position expounded on January 23, 1941 by George C. Vournas, supreme vice president, on behalf of the Ahepa Supreme Lodge, Mayflower Hotel, Washington, D.C., regarding the twin objectives—protection of Americans of Italian descent and support of the Greek War Relief.

"While it is customary on occasions such as this to restrict messages to either congratulations or greetings, I feel that the times justify departure, for, as the old typewriter slogan goes: 'Now is the time for all good men to come to the aid of — Democracy.'

"An examination of events leading up to the present war will convince one that the struggle now being waged on the battlefields of Europe and Asia does not follow the old patterns of racial or national lines. It is not a war between Germany and England or Italy, and Greece or Japan and China. It is a death struggle between ideas and attitudes. It is civilization retrogressed to the days of the Dark Ages against the Bill of Rights.

"Fascism, and later nazism, and their dynamism first did violence to the progressive and democratic spirit of their own nations and races before entering the world arena. The first victims of fascism were, and still are, the Italians. The same holds true of nazism. Its barbarous exhibitions were first practiced upon the flower of the German race before the Czechs, the Poles, the Dutch, the Belgians, the French, and the Norwegians felt their sting. The Italian people not being the masters of their fate, the invasion of Greece constitutes solely a dastardly act of Fascist aggression. And this mental abberation known as fiascism claims adherents not only among Italians, but among persons of all races.

"Lovers of liberty and democracy everywhere rejoice at the bravery and heroism of the Greek soldiers and Evzones defending their motherland and this rejoicing is shared by all persons of free thought and democratic ideals everywhere. It is not restricted to the Greeks and their allies. It transcends national boundaries and races and is shared by the best elements of the Italian and German races who have contributed so much in enriching human knowledge. This is in keeping with the spirit of democracy everywhere, and more particularly with what has come to be known as the 'American' spirit—the product of every race and creed.

"The justifiable rejoicing, however, must not be permitted to go out of bounds and offend the sensibilities of the Italian race, to which civilization is so greatly indebted. The Ahepa, as an organization dedicated to good citizenship, must be on the alert not only to exert its influence to curb excesses but also to render positive assistance to Americans of Italian descent. The principle of racial interdependence, proclaimed by the national convention in New Orleans when the voice of the Ahepa was raised in protest against the persecution of the Jewish race and faith, applies with equal force to the Italian race.

"In every city of the United States one finds Italians and Greeks—I am using the term in its racial content and without political connotations—and their descendants living side by side maintaining close commercial and social contacts in their daily pursuits. There are thousands of intermarriages and out of those unions we have thousands of American children. Good citizenship, as well as good political sense in the common struggle against fascism and nazism, demands that the relationship of Americans of Greek descent with their fellow Americans of Italian descent remain close and cordial. The true American spirit can best be displayed by Americans of Greek descent by extending a helping hand to their fellow Americans of Italian descent against prejudices that may flow from Mussolini's action. One of the immediate tasks of the Ahepa should be the unmasking of the ways of fascism and nazism which seek to divide and destroy. Those who endeavor to turn the American of Greek descent against the American of Italian descent and divide America into antagonistic racial groups instead of a unified whole must be exposed.

"Another task of the hour is the marshaling of all forces in the Greek War Relief drive. Every member must not only enroll himself but must create the channels through which his friends, business associates, and every resident in the land will be given the opportunity to contribute. The need is so great as to be indescribable. We must help now."

(D) Protest against British excesses in the city of Athens, Greece, following its liberation from German occupation, in the form of a public advertisement published in the Washington Post on December 9, 1944: "Made by Americans—paid for by Americans."

TIME FOR REEXAMINATION OF LEND-LEASE

"No responsible person can for a moment entertain any consideration which would weaken the grand alliance against Hitler. But larger horizons are opening and must be considered.

"Every informed person knows that the Atlantic Charter has given way to power politics. London has not even dignified it with decent burial. Henceforth, states Foreign Minister Eden, Great Britain reserves the right to interfere with European governments.

"This means—for the chain is very direct—that U.S. lend-lease materials are to be used to hold peoples in subjection. Is this the postwar world we are fighting for? Is this the promise that the peoples of Europe were told, under sacred oath, they could rely upon? Is this the sacred covenant for which hundreds of thousands laid down their lives?

"The crisis is here—and it is an even larger one than Versailles. The Belgian deputies were covered by British tanks—the Italian free choice of Count Sforza was vetoed by London—and on direct orders of the Prime Minister—Greek patriots—the very men who fought Hitler for 4 years—not Communists—hailed for years as glorious allies and so addressed only a month ago—are being shot down daily by British colonial troops in the city of Athens. Brussels, Rome, and Addis Ababa all have been shown the hilt of Britain's imperialistic sword.

"The guns which are pointed at civilian populations in Europe by the British may bear the trademark—Made in U.S.A.

"But the policy for which they are used was not made here. That was made by a few reactionary men—contrary to the Atlantic Charter, contrary to sacred promises extended—and we believe—contrary to the will of the British people.

"What harm can there be in open truth? What honest man fears the light?

"Let Congress inquire now into lend-lease and its postwar purposes. Unless it is being used for democracy, it is only preparing the next war.

"Lend-lease constituted the implementation of the Atlantic Charter. If we must accede to the burial of the Atlantic Charter, must lend-lease continue?

"GEORGE C. VOURNAS,
"Supreme President, Order of Ahepa."

Coosa-Alabama River Story Told

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. ROBERTS. Mr. Speaker, in the slim chance that there may be some Member who is not completely familiar with the Coosa-Alabama River, one of the Nation's greatest undeveloped waterways, I wish to include in the RECORD today a series of newspaper stories.

These articles were written by Jim Lowrey, a staff writer for the Anniston (Ala.) Star. They present a comprehensive picture of this tremendous river, its potentialities, and the struggle for its development.

The articles referred to follow:

SOME BASIC FACTS REVEALED ABOUT COOSA-ALABAMA PLAN

(By Jim Lowrey)

If you live in Alabama, you have for years been hearing a great furor raised for the development of the Coosa-Alabama River.

But just what is the talk all about? Why all the shouting?

And why should the river be developed anyway? What difference would it make

to residents of the area if the Coosa-Alabama were developed?

Research reveals some startling answers to these questions.

Item: The Coosa-Alabama river system is one of the 10 great river systems in the entire country, according to a report by the Truman Water Resources Commission.

Item: The Alabama-Coosa River is the second largest and longest in the whole Southeast.

Item: While not particularly impressive appearing at first glance, the river carries an amazing amount of water. The minimum daily flow at Montgomery, far above the mouth of the river at Mobile, is almost equal to the over four billion gallons of the Tennessee River at Guntersville. And the average annual discharge of the Alabama is almost 27 million acre-feet, enough to cover all of Alabama with some 8 inches of water.

Item: The Corps of Engineers has for many years urged the development of the river for navigation, flood control power and other purposes.

Item: Development of the river has been certified by the Corps of Engineers as being economically justified.

Item: Alabama and Georgia delegations to Congress have for years urged the development of the Coosa-Alabama system.

Item: The 79th Congress in 1945 authorized the initial and ultimate development of the Alabama-Coosa River.

Item: The Alabama Power Company in 1954 agreed to develop the Coosa River with private capital, making provision in all their dams for navigational locks to be operated later by the Government. This agreement relieved the Government of much of the expense of developing this portion of the river system.

Item: This tremendous river, stretching across the State from the northeast to the southwest, would bolster the economy of virtually all of Alabama. The tributary basin comprises 26,000 square miles in the States of Alabama and Georgia, and has a population in excess of one and one-half million persons. Three additional large cities, with a combined population of one and one-quarter million persons are located within 35 to 60 miles of the river.

Item: President Eisenhower, in his State of the Union message to the 84th Congress in 1955, described the river as complying with the administration's "partnership policy" with private industry, and added: "Now, of course, the Federal Government must shoulder its own partnership obligations by undertaking projects of such complexity and size that their success requires Federal development."

Item: Despite repeated urging to do so, the Federal Government has refused to "shoulder its own partnership obligations," and development of the Coosa-Alabama for navigation has come to a complete halt.

This is indeed a surprising turn of affairs in the handling of this great river. The Coosa-Alabama appears to have everything in its favor, everyone is for its development—but it isn't being developed.

In the next story in this series, a few of the reasons why this development should take place will be examined and just what it can mean to residents of this area when this project gets underway will be discussed.

[From the Anniston Star, Nov. 9, 1959]

EXTENSIVE RESOURCES READY—MANY BENEFITS ARE SLATED IN COOSA DEVELOPMENT

(By Jim Lowrey)

In a previous story, a curious lack of governmental action in the development of the Coosa-Alabama River was explored. Today, some of the reason offered why this river should be fully developed and just who would be affected by such development will be examined.

A complete tabulation of the advantages of developing this great river would require more space than is available but even a partial list should certainly include the following:

Many mineral and nonmetallic resources abound in commercial quantities in the river basin. Many are being produced, others will be when the Coosa-Alabama River is more navigable.

There is already much industry along this river. Rome is a manufacturing and commercial center for northwestern Georgia.

GADSDEN, ANNISTON BUSY

Gadsden and Anniston have heavy industry, much of it producing commodities which seek economical barge transportation.

In Talladega County one of the largest deposits of marble in the world produces hundreds of thousands of tons of marble annually. Here also is a giant newsprint mill, its capacity doubled in 1958 by the installation of the largest newsprint machine in the world.

This plant alone uses more than a million tons of finished product.

Furthr down the river, Montgomery manufactures fertilizers in 10 large plants, receiving hundreds of thousands of tons of chemicals and other ingredients for these blending plants.

Montgomery is also a center of the lumber and milling industry, and has glass, furniture, chemical, and numerous other manufacturing industries. It is also an important distribution center for a large area.

Much of the same thing applies to every town and city along the entire route of the Coosa-Alabama River. This is a great area, already rapidly developing. The 22,800 square miles in the river basin make up one of the greatest river systems yet to be developed in America.

Its possibilities rival those of the Tennessee River which has made an industrial, agricultural, forest and recreation wonderland of that valley in northern Alabama.

And who will be affected by this development?

You will.

ALL WILL BENEFIT

No matter who you are, or where you live, you will benefit from the development of this rich valley.

Anything which improves the economic well-being of America helps every American. And anything which helps Alabama aids every resident of the State.

But it can be made much more specific than that.

If you are a farmer, you will benefit from better flood control. Irrigation will improve the productivity of your land. As the valley develops, the value of your property will increase. Many acres will be purchased for industrial sites. Increased industrial development and more payrolls mean a better market for your products.

If you are a manufacturer, you will benefit from economical river transportation, which will bring raw materials in and carry finished products out. You will benefit from a low power rate. As the valley develops, your markets, too, will expand.

If you are a businessman, you will benefit from a greater demand for the materials you sell. Increased industrial development will mean more customers, and increased standards of living will mean more purchases from your firm. Reduced transportation costs will mean better prices and more profits. As the valley grows, your firm will grow with it.

MORE FACTORIES SEEN

If you are an employee working for any of the above, you, too, will benefit. More factories mean more jobs and better wages. More stores mean more competition and better prices.

More demand for land and housing means an increase in the value of your house and your lot. And more people mean more income for the cities, counties, and the State, with resulting better schools for your children, better roads for your cars, and better fire and police protection for you and your family.

The entire State will enjoy the recreational wonderland that this development will create.

And the entire State will benefit from something else too—perhaps the most important thing of all.

Its young people will remain in Alabama. No longer will they be compelled to seek greener pastures elsewhere. They will be able to find the jobs they need and make their homes right here in their native State.

Next, what has been done and what still remains to be accomplished to bring this development into reality will be discussed briefly.

[From the Anniston Star, Nov. 10, 1959]

MUCH STILL TO BE DONE—RIVER WORK EYED FOR MANY YEARS

(By Jim Lowrey)

In previous articles the many advantages to be gained by the development of the Coosa-Alabama River were discussed. Today it will be pointed out what has been done so far and what still remains to be done to bring this development into being.

The development of this river has been under study by the Corps of Engineers for at least 80 years. Appropriations have been made heretofore for planning of the initial projects in the amount of approximately $1,261,985.

The 79th Congress in 1945 authorized the development of the river system. This was modified in 1955 when the Alabama Power Co was granted a license to develop the Coosa River for electric power, with the provision that they make provision in their dams for navigational locks, to be installed and operated later by the Federal Government.

SOME DAMS COMPLETED

Some of these dams have already been completed, and the power company has begun construction on others which will ultimately create a series of lakes extending for 275 miles from Wetumpka to Rome, Ga.

These lakes will assure a 9-foot navigation channel for this entire distance along the Coosa River.

But two essential things remain to be done before the full advantages of this river can be utilized. And both of these by law and for economic reasons, must be done by the Federal Government.

Before the lakes created by the Alabama Power Co. dams can be opened to navigation, the essential locks must be installed in the dam structures by the Corps of Engineers which must also operate the locks.

And three dams must be constructed on the Alabama River, below Montgomery. While these three dams will produce a certain amount of power, the output will not be sufficient to justify development by private capital. The primary purpose of these dams will be navigation.

HUGE LAKE IS SEEN

The Millers Ferry lock and dam, to be located near Camden in Wilcox County, will create a 22,000-acre lake and make the river navigable for barge tows for more than 100 miles to Jones Bluff.

The dam will contain modern locks, probably 600 by 100 feet in size, and will also have installed generating capacity of 57,000 kilowatts—to produce some 350 million kilowatt hours of energy per year.

Two additional dams will complete the development, opening the river all the way to the port of Mobile. These will be a smaller dam located at Claiborne and a power and navigation structure at Jones Mill.

As mentioned before, the power output will not be sufficient to justify the construction of the latter three dams by Alabama Power Co. or a like concern. Nor can the State or a private company develop the river as a waterway, charging a toll to users.

WATERS PUBLIC PROPERTY

Not only are navigable waters deemed public property of the United States, which reserves to itself the power to regulate and improve navigation, but a specific law enacted by Congress in 1823 (U.S.C. 33:8) declared that the Coosa River (along with other named rivers in the State of Alabama) "shall be forever free from toll for all property belonging to the United States, and for all persons within their service, and for all citizens of the United States, except as to such tolls as may be allowed by act of Congress."

But in spite of the urging of the Corps of Engineers and the Alabama and Georgia delegations in Congress, in spite of President Eisenhower's endorsement of the project in 1955 as a prime example of Government and private industry working together, and in spite of the fact that the project was authorized by Congress some 14 years ago, the Coosa-Alabama is not being developed.

In the next, and final, article in this series, the failure of Congress to provide the needed funds for this project and the manner in which the public can help will be examined.

[From the Anniston Star, Nov. 11, 1959]

HAS EXCELLENT CHANCE—ACTIVE SUPPORT NEEDED ON RIVER

(By Jim Lowrey)

In this final article on the development of the Coosa-Alabama River the Government's unwillingness to carry its share in the development of this great river and the manner in which an individual can assist in the campaign will be examined.

In previous articles it was pointed out that the development of the Coosa-Alabama had been proven economically practical in exhaustive studies conducted by the Corps of Engineers.

It was also pointed out that President Eisenhower in his state of the Union message in 1955 had singled out this project as an excellent example of Government and private industry working side-by-side.

It was noted that this project had obtained the approval of Congress 14 years ago. But there is a catch in this congressional approval.

NO FUNDS PROVIDED

Congress, in authorizing the project, did not make available the necessary funds to carry the development through.

In a letter to Congressman KENNETH ROBERTS of the Fourth District of Alabama, Brig. Gen. J. L. Persons, Assistant Chief of Engineers for civil works, stated that some $249,000 have been appropriated to date for preconstruction planning on the key Millers Ferrys project.

Planning is about 38 percent complete, General Persons reported, and an additional $401,000 will be required to permit the Corps of Engineers to complete preconstruction planning of the dam.

Congressman ROBERTS took the matter up with the Senate Appropriations Subcommittee on Public Works last May 7, but his appeal was turned down.

APPEAL WAS REJECTED

An appeal to President Eisenhower by ROBERTS and other members of the Alabama delegation reminding the President of his "partnership" statement, was also rejected by the Chief Executive who said he doubted that there is a "direct relationship" between the dams on the Coosa and those downstream on the Alabama River.

A second letter to the President pointing out the "direct relationship" is being prepared at present.

And on November 2 the Alabama Legislature unanimously passed and sent to the President a resolution prepared by the Coosa-Alabama River Improvement Association urging early action on the Government's share of this undertaking.

Congressman ROBERTS has also pledged to renew the fight for the needed funds when the Congress reconvenes for the January session.

That is what others are doing. What can you do? Perhaps more than you realize.

ACTION IS URGED

You can very possibly be the deciding factor in this program. You can sit down right now and write your Representatives in Congress expressing your support of the program.

You can write the President urging the Government to "shoulder their share of the burden" as promised. You can write other Members of the Congress, urging their support of this development.

Such letters, in quantity, have a great deal of influence.

PUSHING COOSA PROJECT

Appearing recently in our news columns was a series of stories outlining the history of the Coosa-Alabama River development, and mentioning a few of the advantages which will accrue to this area when the river is fully developed.

However, the series also pointed out that, in the opinion of close students of this great undertaking, enthusiastic public support must be demonstrated to bring the development into being.

This support can take many forms, but perhaps the most effective and certainly the most direct would be for interested persons to write personal letters to Members of the Alabama and Georgia delegations in Congress. Additional letters to the President and to congressional delegates from other sections of the country also might prove helpful.

On a more local level, persons desiring to aid the development of this river could urge their civic clubs, as well as city, county, and State officials, to adopt resolutions or otherwise express their support, and to work toward securing from Congress the funds necessary to carry the project through.

The full development of the Coosa-Alabama can aid immensely in the economic growth of this rich valley. Those who think the project is worthwhile should make themselves heard.

The Late Honorable Alvin R. Bush

SPEECH

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 6, 1960

Mr. EVINS. Mr. Speaker, permit me to take this means of paying a sincere tribute to the memory of our late colleague ALVIN R. BUSH of the 17th District of Pennsylvania who passed away last November 5 during adjournment of the Congress.

I was shocked and saddened to learn of his untimely passing.

For many months ALVIN BUSH and I had offices practically adjoining and I learned to know and love him greatly. He was a remarkable man in many ways—one of fine ability and dedication to his district, State, and Nation. He lived a rich and full life of unselfish service to his family, friends, constituents and country and will be sorely missed by all.

To Mrs. Bush and members of his family I extend an expression of genuine sympathy in their bereavement.

Wilderness Legislation

EXTENSION OF REMARKS

OF

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. WESTLAND. Mr. Speaker, as the representative of the people from the Second District of Washington State, I am concerned about any legislation concerning the management of our forest resources.

Other people and organizations are concerned, too. The Washington State Forestry Conference, as an example, at its 38th annual conference adopted a number of resolutions which clearly defines its concern. Under leave to extend my remarks I include in the RECORD a letter containing these resolutions.

Mr. Speaker, I hope Congress, before it acts on any wilderness legislation will wait until the National Outdoor Recreation Resources Review Commission can make its report.

The letter follows:

WASHINGTON STATE FORESTRY CONFERENCE,
Seattle, Wash., December 30, 1959.

Hon. JACK WESTLAND,
House of Representatives
House Office Building
Washington, D.C.

DEAR SIR: It is my honor as secretary to transmit to you the following resolutions regarding multiple use of Federal forest land, and the wilderness proposals which were adopted by this organization at its 38th annual conference:

"Resolved, That the U.S. Forest Service be highly commended for its unswerving application of the multiple-use concept to national forest lands as dictated by technically sound forest management principles; be it

"Resolved, That the Washington State Forestry Conference reaffirm its opposition to national wilderness legislation similar to S. 1123 or any legislation which would place areas that are under the administration of different Federal agencies together in a national wilderness preservation system. The conference notes that such legislation would jeopardize the forest land base supporting our State economy, restrict the ability of forest land managers to protect and manage forest resources for the greatest good of all the people, and would invite the establishment of another Federal agency to administer such a wilderness system;

"Resolved, That the Washington State Forestry Conference compliment the U.S. For-

est Service on soundness of establishing a wilderness area in the Glacier Peak country as a part of the multiple-use plan for the area, but urge that only those lands primarily valuable as wilderness be included; be it

"*Resolved*, That the Washington State Forestry Conference favors the continued management of the Glacier Peak area of the Northern Cascades as national forest land under the multiple-use principle of forest land management by the U.S. Forest Service, and opposes its establishment as a national park. The conference notes that over 1¼ million acres in Washington are now devoted to single use as national parks and feels that this acreage should be better developed for public use before need for additional national parks can be demonstrated."

The conference is seriously concerned with the steady reduction of this State's forest land base by nonforest influences, such as public works, urbanization, and other necessary single-use requirements of our expanding population. Each of these withdrawals must be balanced against the job-producing potential of the land if our forest-based economy is to expand with the population demands.

A panel of public works administrators and public and private foresters explored this subject in detail at our conference, and we will forward a copy of the proceedings immediately on publication.

Suffice it to say at this point, sir, that these reductions plus the single-use demands of the wilderness recreationists and national park proponents can be projected to show a definite restraining influence on the job potential of the forest lands in our State.

Yours very truly,

WILLIAM H. LARSON,
Secretary-Treasurer.

Farm Subsidy Program

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. WILSON. Mr. Speaker, one of the matters of vital concern to all of us is the matter of farm subsidies, particularly as to the question whether or not they should be continued. Perhaps those most qualified to speak on this subject are the members of the farming communities who are most affected by the actions of our Government instituting more controls or less controls on their daily activities.

Feeling as I do that our free enterprise system belongs not only in business and industry but on the farm, as well, it was most refreshing to receive the following statement from a member of the farming community in my congressional district.

Mr. Speaker, under leave to extend my remarks, I submit herewith a statement by Mr. Hart Dunham, from Lakeside, Calif., a city in San Diego County. Mr. Dunham is chairman of the board of the San Diego Cooperative Poultry Association. This statement was made before the Interim Committee on Agriculture of the Assembly of the State of California on December 2, 1959, in San Diego, Calif.:

My name is Hart Dunham. I am chairman of the board of directors of the San Diego Cooperative Poultry Association and have been delegated by my board to appear before your committee.

The San Diego Cooperative Poultry Association was founded in 1916 by a small group of poultrymen interested in securing a better price on feed by volume buying. As the years have gone by, other needs have developed in the industry. To meet these needs we have moved into the distribution of eggs, processing poultry, operation of a service station and the maintenance of a farm supply store. These services are provided for more than 1,300 members. Our gross business is more than $11 million and we employ about 100 people. Our contribution to the economy of San Diego County is sizable and I am sure that the directors, members, and employees are interested in maintaining the position of this business.

The current year has brought some hard times to the industry with the result that all operators have been hurt. But as is always true in such situations, some have been hurt worse than others. The tendency to panic in the face of adversity has brought about a great deal of pressure for somebody to do something. I know that the members of your committee are aware of this pressure. But a quick review of the farming process will show that this is merely a regular cycle in the process of food production. Many programs have been originated to alter the law of supply and demand, but not one has been found that has changed the situation for more than a short period. The national farm subsidy program has been in effect more than 20 years, with the net result of staggering surpluses and back breaking costs to the taxpayer. The excuse of political expediency would be the only justification for extending this program into other areas. The greatest help that could be extended to poultrymen today, would be the return of feed grains to a free market.

The present growth of vertical integration is neither new nor alarming. Good profits draw investors capital to any industry. The lack of profits will as quickly remove that competition. The surplus of eggs in San Diego County is not the result of integration. Every producer in the area has been a contributing factor. Before we crusade to destroy bigness we should be sure that we are not part of that bigness.

Our producer's cooperative was developed to enable farmers to band together to solve their problems. As a member of this cooperative, I believe we can still solve the situation ourselves. In the interest of economy, we should be given enough time to try. Our program can be flexible enough to amend as we see fit. Government programs become solid, sacred, unwieldy, and perpetual. To catapult the poultry industry into a regulated program, on the current evidence would not be wise in my opinion.

Any operation which is to continue in business will have to employ good management, careful attention to detail, aggressive selling, and the production of a good product at a reasonable price. The application of these principles to any business, large or small, will achieve about the same result.

It is an old axiom of agriculture "that you find your money where you lose it." The poultry industry needed aid in 1916. Fortunately the men who originated San Diego Cooperative Poultry Association were not aware that they were to raise chickens at Government expense. The personnel of our board has changed many times in the passing years, but I am sure I speak for the present directors when I say that we want to work out our salvation.

H.R. 9378—Requiring a Fair Return on Veterans' Life Insurance Trust Funds

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. TEAGUE of Texas. Mr. Speaker, on the opening day of the session I introduced H.R. 9378. This bill was introduced to make changes in the procedure for investing the national service life insurance trust fund and the U.S. Government life insurance trust fund.

The national service life insurance trust fund exceeds $5,625,000,000 and this fund is invested in special issues of the Treasury, with 5-year maturity periods, bearing 3 percent interest. The U.S. Government life insurance trust fund exceeds $1,120,000,000. This fund is invested in special issues of the Treasury, with 1-year maturity, and bearing interest rates of 3.5 percent. It is the responsibility of the Administrator of Veterans' Affairs and the Secretary of the Treasury to supervise investment of these funds. In my opinion, these officials have failed to discharge their obligation and are investing the veterans' life insurance trust funds at interest rates below the current market.

The investment policies of the Administrator of Veterans' Affairs and the Secretary of the Treasury have been reasonably satisfactory until recently, but the administration's hard-money policy has changed the situation. As a result of calculated policies of the administration, interest rates have risen steadily for the past few years. During 1959 the Treasury issued obligations for sale to the public throughout the year with maturities varying from 1 year to 21 years at interest rates varying from 3¼ percent to 5 percent. On June 30, 1959, $1,111,000,000 of the U.S. Government life insurance trust fund was invested by the Secretary of the Treasury in 1-year certificates at 3½ percent. On the same date, $2,689,000,000 of the national service life insurance trust fund was invested in 5-year certificates at 3 percent. About this same time the Treasury was offering securities to the public for sale at considerably higher interest rates. In May 1959, issues with 1-year maturity and interest rate of 4 percent were offered. In July 1959 the Treasury offered securities to the public with 4-year 10-month maturity at 4¾ percent. In October an issue with a 4-year 10-month maturity was offered at 5 percent.

Despite the fact that the interest rates have been rising steadily, the Administrator of Veterans' Affairs and the Secretary of the Treasury have shown no disposition to secure for the veterans' trust funds interest yields commensurate with the current market. Despite the lack of initiative demonstrated by the Administrator of Veterans' Affairs and the administration to secure for veteran

policyholders a fair return on their trust funds, the Administrator of Veterans' Affairs and the administration have been very aggressive in urging legislation to lift interest-rate ceilings on home loans for veterans. During the last session of Congress, when the Committee on Veterans' Affairs was considering legislation to raise interest rates on veterans' home loans, the Administrator of Veterans' Affairs insisted that the interest-rate ceiling on veterans' home loans be lifted because, according to the Administrator, such action "was urgently needed to insure an active and fully effective loan guaranty program. In other words, the administration has been keenly aware of the rising interest rates and has shown no hesitation in demanding high interest rates in instances where the veteran pays; however, the administration has shown a marked lack of interest in securing better interest returns where the veteran is on the receiving end.

In passing, Mr. Speaker, I must observe that this situation is not confined to veterans' programs. Comparatively speaking, the veterans' life insurance trust funds have faired better than some of the other similar trust funds. On November 30, 1959, the civil service retirement fund had $8,813,974,000 invested in special issues of the Treasury at an average interest rate of 2.58 percent; the Federal old-age and survivors insurance trust fund had $15,891,845,000 invested in special issues of the Treasury at an average interest rate of 2.56 percent; and the Railroad Retirement Fund had invested $3,428,174,000 at an average interest rate of 3 percent. In my opinion, there is cause for concern about the low interest yields being paid to these funds. It seems to me, Mr. Speaker, that the administration has shown a great determination in its program to lift the 4¼-percent ceiling on Government bonds, while on the other hand shows a considerable apathy for this side of the interest-rate picture.

It appears the administration is perfectly happy to see the bankers and private investment institutions of America receive high interest returns on their investments, but have little interest in securing equitable treatment for the trust funds which back up our social security program, Federal civil service retirement program, the veterans' life insurance program, and other similar retirement plans, which affect millions of ordinary Americans.

We all know that from time to time there has been considerable concern expressed for the actuarial soundness of the civil service retirement fund and the Federal old-age and survivors insurance fund. From time to time the administration has taken a negative position on proposed changes to these programs on the basis the changes would endanger the actuarial soundness of the funds. One of the best ways to improve the actuarial soundness of these funds, or any trust fund for that matter, is to see they are properly invested at the highest yield available.

As I pointed out, the Treasury is paying 3½ percent on the U.S. Government life insurance trust fund and 3 percent on the national service life insurance trust fund. At the same time, the Veterans' Administration is loaning money to veteran policyholders at 4 percent. This practice demonstrates the unfairness of the Administration's policy. In other words, if a veteran borrows his own money back from the Veterans' Administration, using his life insurance policy as security, he must pay 4 percent, yet the Secretary of the Treasury has the use of the bulk of these funds at a 3-percent interest rate.

Mr. Speaker, these trust funds which I have been describing are in the nature of captive funds. In the case of the veterans' insurance trust funds, these matters are left entirely to the discretion of the Secretary of the Treasury. There is no need for a change in legislation to insure the veterans' life insurance trust funds receiving fair treatment. Legislation has become necessary because the Administrator of Veterans Affairs and the Secretary of the Treasury have failed to act. It is for this reason I have introduced H.R. 9378. I have notified the Veterans' Administration and the Treasury I expect to begin hearings on this legislation on February 2.

The Chief of Army Engineers' Proposed Report on the Middle Snake River

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, January 11, 1960

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a press release I issued today criticizing the proposed report of the Chief of Army Engineers on the projects for the middle Snake River.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

MORSE CALLS ENGINEERS' REVIEW REPORT ON MIDDLE SNAKE RIVER MASTERPIECE OF DOUBLETALK

In commenting on the Chief of Engineers' proposed report on a review of the Columbia River and tributaries, Senator MORSE today stated:

"The Corps' recommendations for the middle Snake River in the proposed review report constitute masterpieces of doubletalk. The proposed report is merely a timid expedient. It does not take a firm stand in the interest of engineering findings.

"Once again, the Corps almost grudgingly concedes the vast superiority of Nez Perce for the development of the Middle Snake and Salmon Rivers, at a lower cost and with a higher benefit-cost ratio than even the new streamlined alternative High Mountain Sheep-Lower Canyon combination. The logical approach, the Corps indicates, would be to defer the choice between these alternatives until a satisfactory solution has been found to the fish passage problem.

"This same logic has prompted me to join with the other Pacific Northwest Democratic Senators to sponsor Senate Concurrent Resolution 35, which would leave the river clear of dams until an accelerated fish study would give us the answers to the problem of combining maximum uses of water resources with respect to power, flood control, navigation and fisheries. The Corps thinks we should have a sustained fishery research program but the Chief of Engineers does not recommend an accelerated fish study program. This is doubletalk.

"The Corps proceeds to reject that which it terms the logical approach of deferring a choice of dams and concludes that a decision must be reached now as to the development of the High Mountain Sheep-Nez Perce reach of the Middle Snake River. This decision is based on a number of political assumptions and conclusions which the Corps should leave to the Congress and not arrogate to itself.

"The timidity of the report is further illustrated by its statements even as to Mountain Sheep. The Engineers recommend the authorization by the Congress for Federal construction of a list of projects including High Mountain Sheep; but the report hints at the Corps' willingness to sit by and let the Federal Power Commission license the construction of High Mountain Sheep by the Pacific Northwest Power Co.

"Apparently, the Corps is willing to turn itself into a private engineering consulting service for the private utilities of the Pacific Northwest—at the taxpayers' expense.

"My position on development of the Middle Snake has not changed. I support construction of the Nez Perce project provided it can be built without endangering the fish runs that constitute a vital element of the economies of Oregon and of the region.

"Once again, as in 1948 and again in 1952, the Corps has admitted the superiority of Nez Perce project; the Federal Power Commission in 1958 rejected the Pacific Northwest Power Co.'s application to construct minimum projects in the Middle Snake because it found that optimum development required the inclusion of Nez Perce in any combination of projects.

"I cannot countenance this jettisoning of one of the most favorable economic projects in the Columbia Basin by the Engineers for nonengineering reasons. The first step must be to save the Middle Snake by the enactment of Senate Concurrent Resolution 35."

MORSE expressed satisfaction over the inclusion of Strube Reregulating Reservoir, Gate Creek, Fern Ridge, and Cascadia projects as additions to the Willamette Basin plan. "These projects are essential and, when completed, will add highly essential features to the river system of the Willamette Basin," the Oregon Senator stated.

Hon. Sam Rayburn

SPEECH
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 6, 1960

Mr. WOLF. Mr. Speaker, on this, your birthday, here in this Chamber a great many words are being spoken, by Members of both parties, in your honor and in praise of your long period of distinguished service in the House of Representatives. It is only natural that we

who have been fortunate enough to serve in the Congress, under your leadership, and who have benefited and profited by your help, guidance, and assistance, should love you and respect you.

Our Speaker, however, wins hearts wherever he goes. On December 12 we were highly honored when you paid us a visit in Cedar Rapids, Iowa. I would like to insert into the CONGRESSIONAL RECORD a "letter to the editor" which appeared in the Cedar Rapids Gazette on December 19. This letter was written by one of the people who attended the banquet at which you spoke. I think this letter mirrors a noble character—the kind of man our beloved Speaker is.

The letter follows:

[From the Cedar Rapids (Iowa) Gazette, December 19, 1959]

SAM RAYBURN TALKED PRINCIPLES

To the EDITOR: On December 12 Linn County and the city of Cedar Rapids were highly honored by the presence of one of the greatest living statesmen of these United States—the Honorable SAM RAYBURN, Speaker of the House of Representatives. Mr. RAYBURN has served the United States in Congress for 46 years. In Cedar Rapids he was the principal speaker at a fund-raising dinner for the Democratic Party. His speech was very broad and full of American principles—to anyone who is broadminded and has principles. He told how hard our forefathers worked, with far-reaching vision, to write the Constitution that has stood the tests of time, and serves the country today just as it did the Thirteen Colonies. Through all these years with their many changes, the Constitution has needed only 19 amendments, one of which has been repealed.

He talked about the youth of America and how they must be trained to take over and carry on and uphold the American heritage after we are gone.

He talked about an America so unified, brotherly, and happy that there would be no North and South or East and West.

He spoke about the ups and downs he has seen in this Nation since he first went to Washington, blaming the Republican administration for some of them and quoting statistics to support his viewpoint.

He reminded his fellow citizens that where there is need, there is opportunity; and where there is privilege, there is duty.

He told how the senior Congressmen help the Members who are newly elected to Congress. He told how so many Congressmen's wives help their husbands through thick and thin, and what a wonderful institution marriage is when its obligations are fulfilled.

On the whole, Mr. RAYBURN'S speech was almost nonpolitical; it was a speech of American principles and morals. With very little revision the same speech could very appropriately be delivered to a gathering of Masons, Knights of Columbus, parent-teacher association, chamber of commerce, or any other organization.

I am very glad that I attended the banquet and heard Mr. RAYBURN'S speech and saw him deliver it. I am very proud to be able to say I shook hands with Mr. RAYBURN.

Every citizen owes a debt of gratitude to Mr. RAYBURN or any other statesman who has served this Nation so many years. Let us be respectful to our senior statesmen, whether they are of this political party or that. This United States of America, in order to uphold democracy, must have more than one political party. Let's give credit where credit is due.

E. A. COULTAS.

MOUNT VERNON.

Citizens Natural Resources Association of Wisconsin Commends Congress and Secretary Flemming

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. REUSS. Mr. Speaker, the Citizens Natural Resources Association of Wisconsin, through its president, Mrs. Max J. Schmitt, has forwarded to me copies of a communication and resolution on herbicides and insecticides which I submit for the RECORD as a matter of interest to all Members of Congress.

The association commends the Congress and Secretary Flemming of the Department of Health, Education, and Welfare for having acted to control the use of chemical insecticides and herbicides, and its resolution urges Congress to conduct comprehensive investigations of the use of such chemicals so that human and animal life may be protected.

The association's letter and resolution are as follows:

CITIZENS NATURAL RESOURCES ASSOCIATION OF WISCONSIN,
Wauwatosa, Wis., December 1, 1959.

ARTHUR S. FLEMMING,
Secretary, Health, Education, and Welfare, Washington, D.C.

DEAR SECRETARY FLEMMING: Your action in regard to contaminated cranberries deserves the commendation and support of the people, not only of the United States, but of other countries as well. Human health and life is at stake. People must become aware that they, as individuals, have a stake in your enforcement of this and other laws which protect them against promiscuous use of poisonous substances.

The Citizens Natural Resources Association has made an extensive study on the effects of insecticides and herbicides. We are enclosing copies of our report, and those of qualified agencies, with this letter and resolution.

We find it difficult to understand the lack of responsibility on the part of many newspapers as shown in their reporting of your enforcement of the protective legislation provided by Congress. Many of them completely ignored the action taken in 1958 by your Department and the cranberry association. They chose to sympathize with a forewarned industry over a monetary loss, instead of expressing concern for human life. One wonders just how human life stacks up against the dollar in the minds of these reporters. They seem to forget that they, and their families, are the potential victims; especially if one of them happens to be hypersensitive to aminotriazole.

We wish to congratulate you and Congress, for making your action possible, and we offer encouragement in any further action you may take on this and other herbicides and insecticides.

Sincerely,

Mrs. MAX J. SCHMITT,
President.

RESOLUTION ON HERBICIDES AND INSECTICIDES

Whereas the highly poisonous effects on human life of the so-called wonder chemicals in cranberry and other food production have alarmed Federal and other officials, and alerted our citizens to their potential danger; and

Whereas the use of chemical herbicides and insecticides have become so common in their widespread use in food production; and

Whereas the secondary effects on human as well as animal life are so poorly understood because the time element has not been sufficient to determine their potential effect; and

Whereas the entire population is literally being bombarded with poisons, in the air they breath (mosquito and tree sprays), the food they eat, and the water they drink, without their consent and in spite of their protests; and

Whereas the individual has no recourse for his own protection; Now, therefore, be it

Resolved by the Citizens Natural Resources Association of Wisconsin, That the Agriculture Committees of both Houses of Congress immediately begin a widespread public investigation of the present uses of chemical herbicides and insecticides. The purpose of this investigattion would be to endeavor to determine the direct and side effects of these chemicals on human and animal life with the object of enacting legislation control of the use of such chemicals. The end result of this investigation is hoped to be that human and animal life shall be protected, not alone from individual chemicals, but from the cumulative effects of many chemical residues on all the different foods consumed by each single individual; be it further

Resolved, That copies of this resolution be sent to the Secretary of Health, Education, and Welfare; to each Member of Congress representing the people of Wisconsin, to the Committee on Insecticides and Herbicides of Wisconsin, to the newspapers, to the Director of the Wisconsin Conservation Department, and to Governor Nelson.

Address by Hon. Albert Conway

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the address by Hon. Albert Conway, chief judge of the Court of Appeals of New York, delivered at the Brooklyn-Manhattan Trial Counsel Association dinner held at the Waldorf-Astoria on October 1, 1959. The dinner was in honor of the chief judge and Associate Justices James T. Hallinan and Henry G. Wenzel, Jr., of the Supreme Court of the State of New York, second department, who retired on December 31, 1959, under the constitutional requirement. The dinner is an annual affair.

The address follows:

Mr. Chairman, Governor Wilson, and Excellencies the distinguished representatives of great and free nations, lady and gentlemen, the annual dinners of this association have always afforded me a triple source of pleasure—the pleasure of anticipation, the pleasure of attendance and, more lastingly, the pleasure of recollection of a delightful evening in pleasant company.

Our meeting tonight has a special significance. The lawyers of the greatest city in the world are meeting, breaking bread with a representative of the executive branch of our own State government, my friend Malcom Wilson, and with the representa-

tives of Greece and Turkey, stanch bastions of the free world, our great friends and allies. All here subscribe to a single doctrine—the rule of law reflecting the will of the Creator of us all.

As we meet, bound by ties of friendship and understanding, it is well to remember that there are forces abroad in the world which seek to destroy us and the institutions we revere and cherish. These forces seek to substitute for the rule of law the rule of man; they strive to replace constitutional government with that of personal, fluctuating whim.

Our single real defense in this ideological conflict is a reaffirmation of our belief, our trust in our own institutions, in our adherence to the rule of law. To the extent that we depart from that credo, we undermine the very structure we seek to preserve.

Lawyers have always been in the forefront of the struggle to preserve fundamental rights and freedoms. We should not abdicate that position, nor permit it to be usurped by others.

The history of this group is ample proof that, in the struggle that portends, you will be militant and alert in preserving the freedoms we hold so dear.

On behalf of Associate Justice Hallinan and Associate Justice Wenzel I wish to thank you all for the honor you have done us tonight. I merely state our unanimous sentiment when I say to you we are grateful and appreciative, not only for this wonderful evening, but for all the years of friendship, understanding and cooperation you have given to us without stint.

Ladies and gentlemen, our sincere thanks.

Memorial Sermon for Congressman Steven A. Carter, Late a Member From the Fourth Iowa District

EXTENSION OF REMARKS

OF

HON. WILLIAM J. RANDALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. RANDALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the text of the sermon delivered by Dr. Roy A. Cheville, professor of theology, Graceland College, Lamoni, Iowa, and a minister in the Reorganized Church of Jesus Christ of the Latter-day Saints.

The late STEVE CARTER was a member of the Latter-day Saints Church, whose world headquarters is at Independence, in the Fourth Missouri District. Some of the members of Mr. CARTER's family live in Independence, Mo.

When I heard this sermon delivered I was so impressed I then concluded that the thoughts expressed should be preserved in the RECORD.

The text of the sermon follows:

MOUNTAINS OF FAITH

Jesus talked to His followers about faith that would move mountains. In His own daily life He lived by ascending mountains. He never waved a wand to remove some obstructing hill in order to make life easy. He faced life honestly and seriously and recognized there were mountains before Him and at times around him. He climbed and from such vantage points saw in eternal perspective what could not have been seen so clearly in the valley. He surveyed life from the summits of mountains of faith. This day, we are reflecting on the life of a friend who faced the blockading effects of life's crags and peaks and climbed them to experience larger vision.

ON A MOUNTAIN

A few years ago a friend and I set out to climb Mount Tamalpais in California. At the foothills the fog hung low and mists seemed to enshroud us. We met a hiker coming who had turned around when halfway up the mountain. "It's wet and you can't see anything," was his warning. We pushed on and at the top, the sun broke through and we saw in glorious perspective the plains and hills. Beyond was the ocean, symbolical of the great unknown. The sun lightened the scene with cheerful warmth. We stood in silence for a while. There is little to say in the greatness of earth's wonders. There were only two of us. We do not take large companies when we climb up mountains of faith. Often we have to go alone. Many times we have to go in faith that the sun will break through.

Once I went with a company of youth to climb Mount Manitou in Colorado. The hurrying crowd called out, "Who'll get there first?" They scampered away without looking to the right or to the left. On reaching the top they called out, "Who'll get down first?" How little they saw. How much they missed. Some of us walked a while and then looked out over the valley. Then at the top the glorious picture stretched out before us. We have to get up high enough to see life in its totality and in its relationships. Close up to Notre Dame we may see only a gargoyle staring at us. At a distance we see the total historic cathedral in proportion and balance.

THE MOUNTAIN VIEW OF MOSES

In the sunset years of Moses' life, he climbed Mount Pisgah and saw the promised land. He had given his life to a people who did not understand him. He had dedicated himself to taking his people toward the country that he would never enter. A man of smaller spiritual stature might have complained and given up. Not Moses. He saw with God. This is the simple story.

"And Moses went up from the plains of Moab, unto the mountains of Nebo, to the top of Pisgah, * * *

"And the Lord showed him all the land of Gilead, unto Dan * * *.

"And the Lord said unto him, 'this is the land which I sware unto Abraham, and unto Jacob. * * *

"I have caused thee to see it with thine eyes, out thou shalt not go thither.' "

Here was faith of the first order. Moses saw his place in an outgoing purpose that was to last beyond his day. A measure of a man is in that to which he devotes his life, for which he gives all he has. Little souls want comforts and awards at the immediate moment. Great souls give themselves to things that may not be realized in their life-time. They believe the worthful will come to pass. They are happy in moving forward toward the goodly land.

The letter to the Hebrews refers to the roster of the faithful. It speaks of those who gave because they saw the distant scene that wold never be their homeland.

"These all died in the faith, not having received the promises but having seen them afar off, and were persuaded of them." (Hebrews 11:13.)

THE PISGAH VIEW

Once Sir John Adams used a term in a class on comparative education that has enriched my life. He spoke of "the Pisgah view." He urged us all to look at things from the mountain view. From this loftier height we would be able to see these ways:

(1) In relative importance. Sometimes we are too close to see relative worths. Life becomes as an archbishop of Cantebury told students of Oxford like a store window in which a prankster came in over night and changed the price tags. We get our values confused. With clearer perspective some things fade into insignificance.

(2) In long-time perspective. We see things so often in a 5-minute outlook. Reinhold Neibuhr, when accused of being pessimistic, told his friend that he would have a passimism about the decades but a faith in the aeons.

(3) With the procession of explorers. From Mount Pisgah we see with prophetic spirits who have seen with God. Up here we sense with Flaubert that "the principle thing in this world is to keep one's soul aloft."

BEYOND TIME MEASUREMENT

On the mountains of faith there are no timeclocks, no calendars. The eternal process and purpose move on. We see it moving on and on. We get into it and go forward. Recently I visited with a professional architect who had lost his eyesight. Day and night meant nothing to him. He was touching reality without these limitations. Still he was dreaming big things. He was climbing the mountains of faith. I say to such as he:

We live in deeds, not years,
In feelings, not in figures on the dial;
We count time by heartthrobs,
He lives most who thinks most,
Feels the noblest, acts the best.

Today I am not concerned about how long my friend lived in calendar years. I am not interested in recording mileage. Rather am I interested in what he saw when he climbed his Mount Pisgah.

LIVES THAT IMPEL US

Lives of courageous faith stir us to climb. Recently I read the story of Rick Fox, who went from Colorado to Baylor University. He was to study medicine. He was the top man of his class the first year. In his second year recurrent pains in his stomach sent him to the doctor. The man of medicine was honest. "Rick, I've got to give it to you straight. You have terminal cancer and you can't live." Rick's reply, "Let me have 30 minutes alone with God." He came back ready for the future. "Use me as a laboratory specimen. I will memo my reactions." To his classmates came this injunction, "Be a good doctor." He wanted to go home to his loved ones in the mountains. Sixty students lined the way to the airport as he was wheeled to the plane. The silver plane was lost in the clouds. Two days later he was gone. These medical students could never forget his word from his mountain of faith, "Be a good doctor."

THESE EXPRESSIONS OF HOPE AND FAITH

Today I hold to the fore these expressions of hope and faith that showed up in the mountains of faith of Steven Carter:

(1) The intent to achieve education and professional life. He was not born in wealth and served on silver platters. There were no rich relatives to put his forward in school. There was dogged determination to make his own way. And this he did.

(2) The facing of reality. He knew quite well his health hazard. He did not indulge in neurotic escapism. He did not moan, "Why did this have to happen to me?" He did not turn to complaining. He saw things squarely and honestly. With him I associate these lines of Longfellow:

"Fear not in a world like this
And thou shalt know ere long,
Know how sublime a thing it is
To suffer and be strong."

(3) The last mountain of faith. In the closing days when departing came nearer, the serenity of faith stood out. There was

concern about what matters most in the family, in the political arena, in the personal commitment to God.

AFTER GRADUATION

Out of my educational background I have come to think of death as a graduation day when we move on into the University of Eternity. Only those have right to eternity who find life so full, so short, so that an eternity is needed. For others eternity would be a monstrous boredom with nothing to do. Steven Carter just got well started in the business of living. With his questing spirit he should find the University of Eternity appealing. From Mount Pisgah he sees the great stretches of the promised land yet to be explored.

It has been said that those fear death who have lived poorly here and that those who wish death are those who have weakened here. The healthy man neither fears death nor desires death. He lives meaningfully each day and wants more time, but when the trumpet sounds that his present mountain-climbing is over, he stands confidently on Mount Pisgah, with God at his side and says, "It is well."

THESE WORDS FROM THE MOUNTAIN

Today, let us climb our own mountains of faith. Here let us find release from the pressure of things of passing worth. Here let us see the wholeness of life. Here let us meet the God of Life, as Moses did, and be assured of his concern for us. Here let us dedicate ourselves to things that go beyond our time. We look ahead in hope that something we have done and are doing will be carrying our people on toward the land of promise.

In the quiet we hear what Moses said to Joshua. I hear Steven Carter saying it to his sons:

"The Lord thy God will go before thee."

"Fear not, neither be discouraged."

And we hear what Moses said to his people:

"The eternal God is thy refuge, and underneath on the everlasting arms."

"As thy days, so shall thy strength be."

This day from the mountain of faith we hear God pointing us to the land to be, to the life we shall make come to pass, through our common endeavor with God's guidance. We hear Moses' watchword from Joshua as the heritage of Steven Carter to us, "Be strong and of good courage."

Hon. Stephen V. Carter

SPEECH

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 6, 1960

Mr. TEAGUE of Texas. Mr. Speaker, along with others who have previously spoken, I want to add my word of tribute to the late STEPHEN V. CARTER, who, in the brief time he served in the House of Representatives, did so much to make his mark in this body and to cause us to remember him for many years to come.

It was my good fortune to have our late colleague assigned to the Committee on Veterans' Affairs as one of the newly elected Members of the 86th Congress. I named him to the Subcomittees on Administration and Insurance, and, also, he was a member of a special subcommittee, headed by the gentleman from Georgia [Mr. MITCHELL], which was appointed to specifically consider three important administrative proposals. Of the three proposals, House bill 6319 became Public Law 86-146 and established new safeguards relative to the acumulation and disposition of certain funds of incompetent veterans. This proposal will result in the saving of large amounts of money to the Federal Government, while, at the same time, protect the rights of all of those unfortunate veterans who have been declared incompetent.

The second proposal upon which the gentleman from Iowa worked was House bill 7106, which was enacted as Public Law 86-222, and which repealed the forfeiture procedure applicable to veterans' benefits and, in effect, ended the double penalty which has been applicable to veterans who made misstatements or gave false information concerning a claim before the Veterans' Administration.

The enactment of both of these proposals was aided by the advice and counsel of the Honorable STEPHEN V. CARTER, and we were looking forward to his same calm, judicial approach to the other matter pending before this subcommittee; namely, judicial review for veterans' claims.

Our colleague was held in the highest esteem, respect, and admiration by all of those who served with him on the committee and this was true regardless of party. His kind manner and his willingness to cooperate in any endeavor to which he was assigned will be cherished by all of us who knew him while he was a member of our committee. To his wife and children I extend my heartfelt sympathy and know that the ability and integrity of this servant of the people is a great source of comfort to his family in their hour of loss.

Tariff Commission Investigates Unfair Importation of Foreign Textiles

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. ROBERTS. Mr. Speaker, last August I joined other members of the Alabama congressional delegation in urging the Secretary of Agriculture to use that section of the Agricultural Adjustment Act which provides for relief against imports whenever they interfere with domestic industry.

The action we requested was in conjunction with the increasingly unfair situation in which the domestic textile industry finds itself.

We were therefore heartened in November when the President, acting on advice of the Secretary of Agriculture, directed the U.S. Tariff Commission to determine whether the Government should impose an equalization fee, in addition to existing duties, on imported cotton textile products.

An editorial on this subject was written for the Avondale (Ala.) Sun by J. Craig Smith, president of Avondale Mills, and I wish to conclude my remarks with this editorial.

The editorial referred to follows:

AN ENCOURAGING FIRST STEP

President Eisenhower has asked the Tariff Commission to make an investigation to determine whether or not the 8-cent export subsidy now in effect on American cotton is causing the importation of foreign textiles in an amount sufficient to interfere with, or threaten to interfere with, the Government's raw cotton price support program. It seems apparent to us in the textile industry that the answer to the question is yes before any further formal investigation is made. Nevertheless, the fact that the President has asked for this investigation is an important first step toward getting relief from our critical import problem.

Last June, the National Cotton Council, an organization representing the growers, ginners, warehousemen, merchants, seed crushers, and cotton mills, filed a petition with the Secretary of Agriculture. The mechanics of the law under which the council sought relief require that the Secretary of Agriculture must first inform the President that imports of cotton textiles are interfering, or threaten to interfere, with the Government's cotton price support program. The next step is for the President to ask the Tariff Commission to make an investigation. If the investigation bears out the facts in the petition, the Government then must take appropriate action to remedy the situation.

In his communication to the Tariff Commission, the President dealt only with the effect of the 8-cent subsidy on raw cotton. I am hopeful that the Tariff Commission will find that foreign textiles are entering this market in sufficient volume to interfere with the Government's cotton price support program, and that a limit should be placed on these imports regardless of whether they are caused by the 8-cent cotton subsidy or whether they are caused by coolie Asian wages. There would be ample precedent for making a broad rather than a limited finding of fact. At the present time, there are rigid quotas on how much foreign flour can enter the United States similar to the quotas we have on raw cotton and raw wheat. The quota on flour is enforced without regard to the difference in price between American wheat and foreign wheat. There is a quota on upland cotton of 29,000 bales, less than 1 day's supply for American mills. This quota, like the quota on wheat, is without reference to the difference in price between cotton here and cotton in Mexico, Brazil, or some other foreign country. The theory is that if this foreign cotton enters the United States in excess of 29,000 bales, for whatever reason, it will interfere with the Government's present cotton price support program.

Foreign textiles made from foreign cotton (and 70 percent of all foreign textiles imported into this country made from foreign cotton) entering the United States have exactly the same effect on the price support program as would entry of the cotton itself. The only difference is that in addition to displacing this American cotton, they also displace the jobs of those Americans in the textile industry.

The fact that the President has given any recognition to our problem at all is encouraging. We have high hopes that after the Tariff Commission has looked into it, the President will decide that a remedy will be applied which will effect a permanent and complete cure. It won't do too much good to bind up a wound in our hand and leave open a gash in our throat.

The Three Score Years and Ten Plateau

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Dr. Frank G. Dickinson of the National Bureau of Economic Research at the annual meeting of the Conference of Actuaries in Public Practice held at the Drake Hotel, Chicago, Ill., on October 12 and 13, 1959:

THE THREE SCORE YEARS AND TEN PLATEAU

(Address by Frank G. Dickinson)

Will average lifetime, which increased so rapidly in the first half of this century in the United States, continue to lengthen? Apparently the census of population of 1960 coupled with the deaths of 1959–61 will indicate clearly that we have come to the end of a glorious period of rapid increase in the average length of life. The forthcoming statistics will likely show that expectation of life at birth in the United States in 1960 was about 70, possibly 70.2 years, an increase of only 1.8 or 2 years above the level of 1950. In previous half century the gain was 21 years, better than 4 years a decade.

If the 1950's had been devoid of medical progress, this gain of only 2 years during the decade might not seem so indicative. But during the present decade we have had remarkable improvements in medical care, particularly in surgery and diagnosis. Also the development of the Salk vaccine has saved millions of children from the rigors of polio.

The forthcoming statistics on length of life will also probably indicate that if we could miraculously have no deaths in the United States among persons under 45 years of age, the expectation of life at birth would accordingly be increased by only 4 years. We have truly come to the end of an era and future prospects need to be examined with great care. We shall exclude atomic warfare implications because they are presently beyond measurement. Perhaps there is no better way to look at this future than to think of the biblical 3 score years and 10 as a gently rising plateau of length of life.

One already reads disturbing reports of slight increases in infant mortality. In the last 2 years the rate has risen slightly from 2.6 to 2.7 percent. The reduction of infant mortality rates from over 15 percent to about 2½ percent is one of the great triumphs of the 20th century and the cornerstone of the 21-year increase in length of life. The problem seems to be to keep it at that level and to prevent it from rising. It is perhaps reasonable to expect that the rate will be lowered irregularly to 2 percent; and in the distant future to 1½ percent. Maternal mortality is apparently stabilized at the very low level of four one-hundredths of 1 percent. Certainly there is little hope for increasing the average length of life by reducing mortality among infants. The curve of the expectation of life at birth is flattening out as it approaches 70 years.

BETTER, NOT MORE YEARS

We who enjoy much longer life than did our forebearers are likely to take future gains for granted without realizing how great the gains have been in this century. If social progress for the billions of men over the centuries means more and better years in which to grow and develop with more and better things, it is not too much to claim that we have had more social progress since 1900 than was attained in the previous 19 centuries of the Christian era. Social progress from now on will stress better years rather than more years, and growing and developing with more and better things. On the new plateau of 3 score years and 10, the focus of our insatiable demand for improvement will shift from living longer to living better—deepening our understanding that we belong to an infinite scheme of life, increasing our understanding of one another and, in general, lifting the human spirit.

SEVEN YEARS VERSUS TWENTY-ONE

The record itself is emphatic:

[In years]

	Expectation of life at birth	Increase
1900	47.3	
1910	50.0	2.7
1920	54.1	4.1
1930	59.7	5.6
1940	62.9	3.2
1950	68.2	[1] 5.3
Total		20.9
1960	[2] 70.2	[2] 2.0

[1] This great gain was largely due to the antibiotics and warrants calling the 1940's the decade of the antibiotics. This development interrupted the trend toward smaller decade gains in the length of life. T. N. E. Greville gives a mean estimate of 74.3 years for the year 2000 in his population projections ("Actuarial Study No. 46," Social Security Administration)—in the best study.
[2] Estimated.

This is a gain of 20.9 years in half a century and is unquestionably the most definitive description of the progress attained. It does not seem unreasonable to expect that the gain during the 1960's will also be under 2 years, with the total gain for the second half of the century probably not more than seven years—to 75 years, certainly well under four score years. For some nations, notably Norway, the figure is already well above 70 years. Considerable improvement in mortality can yet be attained in the United States among the nonwhite population who comprise about one-tenth of the total population. Moreover, the present six-year advantage of females may be lessened by future reductions in mortality among males. But considering all of these factors together, it would seem that unless there is a major breakthrough in the understanding of cancer and heart diseases and their causes and cures, we can expect a gain of about seven years for the second half of our century as compared with the gain of 21 years in length of life during the first half of our century. This prospective second-half gain of 7 years, since each year's gain will be harder and harder, will be more than one-third as important as the 21 year gain. Indeed, history might regard these 7 years as almost on a par with the 21 years.

Extrapolated straight line trends, excluding and including my estimate for 1960, for the year 2000 are 88.9 years and 87.4 years respectively. Since the first half of the 20th century was unique, these two straight line trends are too high. A more reasonable estimate of the probable expectation of life at birth for the calendar year 2000 would be 75 years instead of 88.9 or 87.4 years.

Why has this great measure of medical and social progress come almost to a standstill? After decades of substantial increases (except for the sharp decline during the influenza epidemic of World War I) why should this measure seem to waver as it approaches 70 years? Why shouldn't the former pace of rapid increase be continued? What would be necessary to maintain that pace?

EXPECTATION OF LIFE, AN AVERAGE

Before attempting to answer these questions, it is necessary to state precisely what is meant by the term expectation of life at birth. It is an average. In 1900, 1,000 babies selected at random from those born in the United States were expected to live a grand total of 47,300 years, an average of 47.3 years. In contrast, 1,000 babies selected at random among those born in 1960 will be expected to live a total of approximately 70,000 years (possibly 70,200 years), an average of 70.0 years; about 25 will die during the first year; some will live on to 80 and 90 and even 100 years of age. In order to achieve an average of 70 years, a considerable number of these babies must live at least 100 years. The word expectation in the term implies that these averages will be achieved provided the mortality rate at every age in the calendar year of their birth remains unchanged throughout their entire lifetimes. In other words, the term expectation of life assumes that the 1,000 babies chosen at randum will climb the mortality curve prevailing in the year of their birth. Of course, there have been improvements in mortality at all ages. The actual number of years the 1,000 babies born in 1900 will have lived—computed after the last survivor dies sometimes in the next century—should certainly exceed 47.3 years by a dozen years or more. We have no way of measuring accurately how long those born in a particular calendar year actually do live because of the prolonged record-keeping task. Such actual averages, if published sometime during the 21st century, would have slight historical significance. On the other hand, those born in 1960 will not actually exceed their expectation of life by very much because mortality rates at all ages generally throughout the balances of the 20th and well into the next century, cannot be expected to decline as rapidly as they have in the past.

Confusing the span of life with the expectation of life at birth obscures the plateau of three score years and ten. The term "the span of life" apparently refers to the longest life ever lived by a human being; the name, sex, age at death, country, and century, of this unique person are not known. He or she may have lived 150 years or more. But even if all the facts were known, the span of life would not afford a gage for measuring the steady progress of the people of a nation toward longer life. That this one unique person lived 150 years, does not promise that average length of life will reach 150 years. It is far better to use an average than a maximum in measuring this improvement.

Most of the great increase in length of life in this century has been due to the reductions in mortality among the young, especially among infants. Moreover, the saving of a life of an infant actually has more to do with the lengthening of average life than does the saving of a life of a person in middle age. The arithmetic here is a little tedious, but it must be stressed that the gains of recent decades cannot now be repeated from the same sources for the basic reason that infant mortality has already fallen to the extremely low level of 2½ percent. Much the same situation exists for preschool age children and young persons. Clearly, now in our attempts to increase the length of life, our frontier lies above the age of, say, 45.

LONG CLIMB TO THE PLATEAU

The extreme rapidity of the increase in the expectation of life at birth in earlier decades of this century may not become generally appreciated until long after the curve has flattened out on the three-score-years-and-ten plateau. In the heyday of the Roman Empire, the upper class Romans might have lived about a quarter of a century, on the average, despite the high percentage of deaths during infancy. A person of that era who lived a third of a century died old by the mortality standards of the times, though doubtless every large community in ancient times had a few men of three score years

and ten. Apparently little progress was made during the Middle Ages. It was not until around 1700 that some evidence appeared that the average length of life was approaching a third of a century in favored sections of Western Europe—a gain of something like 8 years in more than 1,700 years. During the 18th and 19th centuries, there were slow improvements in mortality, with the expectation of life at birth in the United States rising to an estimated 47.3 years in 1900. Then came great improvements in the prevention of contagious diseases, better food, better sanitation, better housing, and better medical care, producing this tremendous upward swing in the curve with a gain of 21 years in just half a century. This increase apparently equalled the gain of an untold number of previous centuries.

EVER MORE YEARS WANTED

Although the privilege of dying old is probably the greatest accomplishment of the 20th century, this accomplishment may not give much comfort to those of us who have been fortunate to attain 50, 60, 70, or 80 years of age. A normal person is never ready for the start of his last illness or the occurrence of his final accident, although his desire to live may diminish as the end approaches. If normal man ever got enough of life, we could, figuratively speaking, rest on our laurels and be satisfied with the remarkable and unpredecented progress toward lower mortality and longer life achieved thus far in the 20th century. Consider the fact that 92 percent of the babies born in the United States today should survive to age 45. Why shouldn't 92 percent survive to age 50, 60, or 70?

So the quest for longer life will continue, and the pressure on physicians and allied scientists to postpone death a little longer and still a little longer will continue. The great accomplishments in reducing mortality in this century will be accepted as fact, but whatever gratitude that might be expected may fade into resentment against the slowness of mortality improvements in the second half of this century. The possible effects of slowing down the upward surge in this measure of average length of life, and in the mortality situation which it reflects, are numerous. Persons at different ages will have different views on the subject. Many will resent the slowing down; for example, there may be public outcries against the baneful shortage of physicians and in favor of vast public spending to flood the country with many more physicians and research programs. The fact that the gain of only 2 years during the decade of the 1950's took place during a decade of substantial medical progress will be forgotten.

We have become so accustomed to progress that it is difficult for us to realize that we are not approaching an age of Methuselahs. Surely this is not the time for scientific leaders to tantalize thoughtful laymen with the promise of a continuation of the upward trend at the rapid pace attained during recent decades. Rather the reasonable prospect is for very small gains with great difficulty in holding those already attained.

CONQUEST OF THE OLDER CAUSES?

The challenge is to reduce mortality from diseases of the heart and cancer, thereby increasing the expectation of life at age 45 above the present level of 29 years. This task will be patently more difficult, if for no other reason than the fact that the efforts of physicians and fellow scientists to reduce mortality above age 45 will be concentrated on older bodies, aged 50, 60, 70, and 80. The prospects of small reductions in mortality are very bright. But reductions of the magnitude necessary to jump the expectation of life at birth from 70 to 80 years before the century ends are presently beyond the realm of reasonable speculation. Too many of our standard group of 1,000 babies would have to be scheduled to live more than 100 years.

During the past decades the great success in reducing infant mortality to the low level of 2½ percent as pointed out above, added greatly to the number of years in the grand total of years to be lived upon which these averages are based. Now, if we were, for examplie, to find a significant and important development in the field of cancer therapy, we would have to think of it as a means of extending life beyond 64 years, the present average age of death from cancer. The lives saved from cancer mortality, by some great and much-to-be-hoped-for discovery, would not continue a great many more years. Certainly, they would not live anything like as many additional years as those babies whose lives were saved by successive improvements in infant care during previous decades. If life is to remain finite, the gains that can come from the conquest of a disease where the average age at death is already high are very modest, if we know anything at all about human life. It is much more likely that these people saved from dying of cancer would live a few additional years, and add a few years to the totals from which expectation of life at birth is computed.

In the much larger field of diseases of the heart we face substantially the same prospects. There have been a number of minor breakthroughs during the 1950's but they have lengthened life very little. Persons in the remainder of this century who are saved from death through improvements in prevention, diagnosis, and treatment of heart diseases can be expected to live a few additional years on the average. All this is based upon a consideration of the modest hopes of research people who are working with these two great causes of death.

A MAJOR BREAKTHROUGH?

But what would be the magnitude of a breakthrough and what would be its effect upon expectation of life at birth if we could find complete cures for most of the diseases of the heart and of cancer? Such a breakthrough defies the imagination. Such complete cures would leave no important older cause of death except ill-defined senility. Man would pass from being a finite being, as we have thought of him over the centuries and in all recorded history, and become some new kind of a being.

But we know and hope that the quest for longer life will continue. We must expect more and more effort, and more and more funds to be spent on research work in the fields of cancer and heart disease. As individuals, we can only hope that the research will be successful. Nevertheless, a prudent man today must look to three score years and ten, the Biblical age of man, as a plateau above which length of life will not increase very much during the coming decades, unless some miraculous breakthrough is found which permits people to literally live on and on and on. When the accomplishments of this century in learning how to die old instead of dying young become more generally appreciated, it is likely that there will be more satisfaction with what has already been accomplished, and less resentment at the slow upward movement in the curve of life during the coming decades. We should be patient with the future slow progrees of scientific efforts to conquer the older causes of death, especially as that progress is reflected in small increases in the expected length of life of a new-born baby. We should realize the magnitude of the task that lies ahead.

Strange as it may seem, in the absence of a major breakthrough in the field of cancer and heart diseases we may, if the present high birth rate continues, approach a balanced age distribution of our population in a few decades. The present indications are that the proportion of adults 50 years of age and over will decline throughout the 1970's. If the high birth rate continues for another 10 years, this decline should also continue into the 1990's. Finally, while our national effort is concentrated on better years rather than more years, atomic discoveries could mean both more and better years; or, God forbid, fewer years.

Perhaps these conclusions should be related to the preceding paper this morning on the world population explosion. The coming explosion predicted for the United States (and for other nations on or approaching the three score years and ten plateau) would fare greater if the gain in expectation of life at birth during the second half of the century should be 21 years instead of (my) 7 years.

But They Don't Call It Payola

EXTENSION OF REMARKS
OF
HON. WILLIAM H. MEYER
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. MEYER. Mr. Speaker, the leadership of the distinguished gentleman from Connecticut [Mr. KOWALSKI] has been outstanding in an effort to promote efficiency in the Armed Forces. As a retired officer of long and distinguished service, he knowns what he is talking about when it comes to reducing waste and correcting injustices. FRANK KOWALSKI is my friend, but it is admiration rather than friendship which prompts me to say that here is a man who places patriotism and service to country far above old school ties. At the risk of being misunderstood by former associates, FRANK KOWALSKI has consistently spoken out to promote the proper defense of our country while at the same time seeking to correct abuses in the use of manpower and funds.

As further evidence of his continuing activity and foresight, I include in my extension of remarks a column written by Hy Gardner which appeared in the January 7, 1960, issue of the New York Herald Tribune:

BUT THEY DON'T CALL IT PAYOLA
(By Hy Gardner)

FRANK KOWALSKI, a retired West Point colonel and currently a Member of Congress from Connecticut, recently shocked the Nation with an expose in the January issue of Reader's Digest entitled "Let's Stop the Outrageous Use of GI's as Servants." We discussed the article on our television program the other Sunday and expressed incredulity that any one in the Armed Forces would dare to put on paper some of the material Representative KOWALSKI quoted. To prove how wrong we were, the Congressman sent us a copy of Air Force manual JP62450–S, printed at the taxpayers' expense by the U.S. Government Printing Office, and stating, in the foreword, that the purpose of the 130-page manual was to provide a guide for supervised training on-the-job for Air Force personnel, especially airman aides.

Studying the brazen contents of the 8 by 10 blue-covered booklet, some hard, cold facts make your eyes pop out. "As an airman aide," the introduction states, "you have a job of great responsibility and sensitivity.

* * * Your contribution to the overall mission of the Air Force can be even more important than that of an air crew member, a mechanic, or any other individual airman. * * * As an enlisted aide you will work for a general officer. Your duties will be those of a specific nature. These will include cooking, personal services and chauffeuring, and so forth."

Quoting out of context, since our space, unlike the manual, is limited, we find these instructions issued to those men Representative KOWALSKI describes as performing the duties of domestics and servants. "At times you will be called upon to prepare beverages such as cocktails and mixed drinks for the personnel of the household and their guests. * * * There are a wide variety of drinks, but generally it is only necessary for you to know how to mix a few of the most popular ones.

"There are several types of champagne glasses but the most popular one is the coup. It has a very shallow bowl on a tall stem flared at the foot and is often called a saucer glass. * * * Check with your hostess and obtain her views on serving procedures and her desires. Often people have individual whims on serving procedures that they will wish you to carry out. * * *

"Garbage cans should be washed and sterilized after each daily pickup. * * * Sofas and overstuffed chairs should be so arranged that occupants may sit and view each other comfortably without turning in the chair. * * *

"Window washing is best accomplished with cold water. * * * Cotton mattress should be turned daily. * * * Keep lawn free from dandelions and other weeds that may smother out grass. * * * Occasionally pets require baths. The best way to accomplish this is by using soap, water, and plenty of 'elbow grease.' The fingers are better than any mechanical device for applying soap. Rinse animal thoroughly by pouring water over him, then keep him warm until he is dry if the weather is cold or damp. * * *

"To prevent colds, a good way is to wash the pet at night and keep him in until the next morning. He will be dry by then. Exercise is a must for all pets, if they are to stay healthy. Dogs kept indoors should be exercised by walking or retrieving an object. Many good books pertaining to the health, care, and training of pets are available at your base library. Take advantage of this source of information.

"Answer telephone as promptly as possible. Try to answer before second ring. * * * Identify yourself as 'General Blank's quarters, Airman ——— ——— speaking.' * * * Answer the door promptly and invite the guests in. * * * Take any hats or wraps. * * * Don't be egotistical or a braggart about your job. * * * Included in your normal duties are such housekeeping tasks as sweeping, mopping, waxing and dusting."

Any questions? Then write to your Congressman and ask why, as FRANK KOWALSKI points out, we countenance three divisions of servicemen acting as servants.

Significant Events in Fourth Alabama District Journalism

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. ROBERTS. Mr. Speaker, I am very proud that in the Fourth Alabama District which I serve there are three fine daily newspapers, the Star, in Anniston; the Daily Home, in Talladega; and the Times-Journal, in Selma.

Each of these publications is a credit to the city and area it serves.

Evidence of the community-mindedness and aggressiveness of these newspapers is found in an editorial which appeared several weeks ago in the Selma Times-Journal.

Editor Edward B. Field points out that the editorial voices of these independent newspapers may sometimes disagree, but that each holds the unqualified respect of the others.

This is a healthy condition, Mr. Speaker, in any State's newspapers and I am delighted that it exists in the Fourth Congressional District of Alabama.

I wish to insert into the RECORD the editorial to which I have referred, which appeared in the Times-Journal:

OF JOURNALISTIC SIGNIFICANCE

Two events of high significance to Alabama journalism occurred during the first part of November.

One was celebration by the Talladega Daily Home of its golden anniversary, and the other was occupation by the Anniston Star of a new, million-dollar building, which reflects high confidence on the part of Publisher H. M. Ayers in the future of the State and his home city.

Both of these newspapers are outstanding stalwarts in the ranks of Alabama dailies still remaining free and independent, and both reflect credit upon the State and the fourth estate.

Although it is something of a coincidence that both of these newspapers are in the same congressional district as the Times-Journal, they represent people whose thinking often differs with that of ours, and we do not always see eye-to-eye with either of them.

Nevertheless, both of these newspapers hold unqualified respect of the Times-Journal, and we are confident that anything good which happens to them is good for the people of Alabama.

Challenges and Problems Facing the United States in the Sixties

EXTENSION OF REMARKS
OF
HON. JOSEPH W. BARR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. BARR. Mr. Speaker, in the past few days I have been attempting to define some of the issues facing the United States in the next decade—the sixties. Frankly, I am not certain what the answers will or should be. But certainly the first step is to define the problem.

Representing the 11th Congressional District of Indiana is not easy. We have one of the largest, richest, and most intelligent districts in the country. I have found that one very helpful way to represent this great district and to work through a problem is to ask for advice from my own people in Marion County, Ind.

Listed below are two challenges and 10 problems that concern me. I am inserting this statement in the CONGRESSIONAL RECORD with the hope that my voters will study it and then give me their advice on these issues.

CHALLENGES AND PROBLEMS FACING THE UNITED STATES IN THE SIXTIES—DOMESTIC

I believe that our domestic challenge is roughly this: "Can we establish an economic climate that will provide job opportunities and a chance for every worker to earn his fair share of his productive contribution to this Nation?"

Under the challenge I see these specific problems:

First. What can we do about an agricultural policy that is clearly a failure from the standpoint of the farmer, the taxpayer, and the consumer?

Second. What can we do to encourage the savings that must finance the approaching technical and population explosion? Both demand exorbitant amounts of new capital. A stable population and a technology that is not changing require very little savings or capital.

Third. What should we, or can we, do to soften the blows of industrial strife—management-labor conflicts?

Fourth. Is our tax structure just and equitable? Does it provide a reliable source of national revenue? Does it dampen out, or does it exaggerate the swing of the business cycle?

Fifth. Can we afford to react to foreign competition by crawling back into a high-tariff box?

Sixth. Are we getting our money's worth from the $45 billion a year defense expenditure? Is interservice rivalry getting out of hand and hampering our defense efforts?

INTERNATIONAL

In my opinion the international challenge is basically, "How can we achieve peace in the world without surrender-in our right and our dignity as freemen?"

The problems underlying the challenge seem to be:

First, Can the United States encourage the NATO nations to shoulder a more realistic share of the military burden?

Second. Can we shift to the World Bank, the Monetary Fund, the Inter-American Bank, and the International Development Association the burden of assisting the underdeveloped nations of the world attain a measure of economic sufficiency?

Third. Can this Nation somehow get its agricultural surpluses out of expensive storage and to the starving peoples of the world?

Fourth. In spite of a shortage of exportable dollars can this Nation step up its assistance in technical, agricultural, and medical counseling to the underprivileged peoples of the Middle East, Africa, and Asia?

CONCLUSION

These are the areas of policy that concern me. I know that there are probably other problems in which my constituents are also interested. Their opinion on these and other issues will be welcome.

Mr. Seapower: Rear Adm. John S. McCain, Jr.

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. THOMPSON of Texas. Mr. Speaker, in recent years the growth of our Federal establishment has reached gigantic proportions and growing with it has been an ever-increasing demand by our constituency for more and better service from their Government. To help us with this job the Congress has increasingly turned to the liaison officer of the various Federal departments and agencies. Their valuable and unselfish service is often overlooked, and, therefore, it was with deep pleasure that I read in the January 1960 edition of Navy, the magazine of seapower, a "Portrait of Rear Adm. John S. McCain, Jr.," a distinguished naval officer and presently Chief of Legislative Affairs in the Office of the Secretary of the Navy.

The article follows:

PORTRAITS: REAR ADM. JOHN S. MCCAIN, JR.
(By James C. Elliott)

If anyone ever handed out the title "Mr. Sea Power," Rear Adm. John S. McCain, Jr., certainly would be among the top candidates.

The short, dynamic admiral currently holds the imposing and challenging job of chief of legislative liaison for the Navy. But he has, since 1955, become recognized throughout the Nation as one of the leading spokesmen for sea power. He is, for example, the father of the sea power presentations which have been accepted so enthusiastically by the public and have become part and parcel of Navy League meetings everywhere.

Because of his dedication in bringing the Navy's story before the public he is often referred to as the chief apostle of sea power.

He, of course, modestly belittles his own efforts in the crusade. But friends and associates who have watched his untiring efforts believe he already has earned that title: "Mr. Sea Power."

"He lives and sleeps sea power 24 hours a day," one of his friends explained.

McCain began thinking about the need for a wider understanding of the Navy's position shortly after World War II. At the time, there was considerable talk that the Navy's role was diminishing what with atomic bombs and modern warfare and all; that its importance was on the decline.

This kind of talk bothered the fiery McCain, to say the least. The son of an admiral himself, pride alone—if nothing else—dictated some personal action on his part.

"The impact of the atomic bomb," he says, "in fact emphasized the need for true mobility, and the seas were becoming more important."

But the general public—impressed by Hiroshima, Nagasaki, and Bikini and satisfied with the concept of all-out nuclear exchange by air—was not fully aware of that increasing importance. It was not until 1955, however, that McCain really had an opportunity to launch his crusade. At that time, he was serving in the Pentagon in the progress analysis group.

His first significant seapower presentation was made before the House Appropriations Committee. And the presentation, outlining the Navy's mobility and calling for a balance to fight both small and large wars, won considerable attention, both inside and outside the Navy. One of the outstanding points of these McCain presentations was the incomplete objectivity. Although he is a submariner himself, he sang not only the song of the submarines but the tune of the surface men and a melody of the airdales. And it was sweet music, too.

McCain could speak objectively, however. From a variety of assignments, he could call on a vast reservoir of knowledge. And he knew the other side of the Navy through his father, the late Adm. John S. McCain, who had been an aviator.

The father had led the powerful Task Force 38 under Fleet Adm. William F. Halsey in the Pacific. The elder McCain witnessed the surrender of the Japanese aboard the *Missouri* only to die tragically of a heart attack 3 days later, just 1 day after he had arrived home from the memorable sea battles of World War II.

McCain and his father were very close, and the association generated so much admiration that the son's pride in his father, more than anything else, caused him to decide on a naval career. "Junior" admits today, however, that for a time both he and his father wondered whether or not the choice was proper. The younger McCain was only 16 years old when he entered the Naval Academy.

"And that's too damned young," he now scowls in reminiscence.

He weighed a mere 106 pounds, too, a fact that would hardly contribute to any athletic caliber. And by his own admission, he was in some sort of trouble most of the time.

"I just always seemed to be at odds with higher authority on matters of discipline," he laughed. "I was lucky to graduate I suppose."

As it was, he wound up near the bottom of the lower half of his class in 1931, and his father had reached the point where he was just darn happy to see me graduate at all.

Like everyone else in those days, McCain began his seagoing experience in battleships, where he remained for 2 years. He then went to submarine school and stayed in submarines until 1938, when, ironically, he went back to the Naval Academy as an instructor in physics.

In 1940, McCain went back to submarines and soon took command of his own sub. As skipper of the U.S.S. *Gunnel*, he led her into the waters off Morocco prior to the D-day bombardment to photograph the proposed beachhead and make general reconnaissance of the area. Later, during the actual North African landings, his sub served as the beacon ship for the ships taking the troops ashore.

Later, he took the *Gunnel* to the Pacific, where she sank considerable shipping, including one destroyer. During this period, McCain almost was sunk himself. Making an approach on a convoy, he fired his torpedoes, but they were faulty, as were many of those early in the war, and the enemy worked his sub over for 36 hours before they finally gave up.

After a tour in Washington, the admiral took command of the first submarine division to have guided-missile submarines—the *Carbanero* and *Cusk*. Later, in Korea, he served as executive officer aboard the cruiser *St. Paul*. He returned to Washington for duties as director of the Undersea Warfare Research and Development Branch of the Office of the Assistant Chief of Naval Operations. In 1953, he assumed command of Submarine Squadron 6 at Norfolk, and from that post, he became skipper of the attack transport *Monrovia*.

After duty with the Progress Analysis Group, he took command of the *Albany* and later came to the Office of the Chief of Naval Operations. He took over his present duties in June 1958.

The legislative liaison post is one designed for people with McCain's energy. His office, for instance, receives approximately 15,000 letters a year. Phone calls run about 130,000 a year. And the activity is growing all the time.

If energy is any criterion, however, McCain has his job in the bag. He is a picture of perpetual motion, virtually bubbling over with energy. He has so much of it, in fact, that he still walks to work even as an admiral. And from his home in Washington to the Pentagon is 4 miles.

But he likes the challenge that faces him. He likes people, and he finds people interesting. And people like Jack McCain. They are always bouncing in and out of his office to seek advice, talk over a problem or just visit. Yet, McCain is a man of action, and one who gets things done.

He is well-informed and has one of the best libraries in Washington, some say.

Although he can speak with emphasis and often calls upon some choice words to underscore the meaning, he is an extremely considerate person, both with his family and with his associates.

His wife, Roberta, is a bundle of energy herself. She has found interest in a wide variety of activities and currently takes in most of the congressional hearings as a spectator so she can keep up with her husband's work. They have three children: a daughter, married to a submariner; John S. III, a 1958 and third generation graduate of the Naval Academy who is finishing up flight training at Corpus Christi, and a younger son, 17.

In legislative liaison, Admiral McCain continues as a disciple of sea power. And upon that rock, the gospel is sure to spread.

Down on the Farm

EXTENSION OF REMARKS
OF
HON. ROBERT A. EVERETT
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. EVERETT. Mr. Speaker, Mr. Ed Jones, of Yorkville, Tenn., is one of the best informed men on agriculture in the Nation. He is agricultural agent for the Illinois Central Railroad in my district. I commend this article to the membership of the Congress and put it in the RECORD so that they might have the benefit of his column, "Down on the Farm":

[From the Lake County Banner, Tiptonville, Tenn., Dec. 31, 1959]

DOWN ON THE FARM
(By Ed Jones)

The efficiency and productivity of our farmers are basic to our Nation's progress and to our high standard of living. To this group, all Americans owe a special debt of gratitude.

I can think of no better time to be aware of such things than this season of the year. Our crops have almost all been harvested and our warehouses and storage facilities are running over with food and fiber.

Agriculturally, we are a Nation of plenty and as a whole are well fed. We are also providing much food and fiber to needy peoples elsewhere in order that their needs may be met and that our relations may be improved.

Our farmers have reached another milestone in their ability to exceed farmers of other nations in the production of food and fiber. Each farmworker in this country in 1959 has been able to produce, on the average, enough food and fiber for about 25 persons.

In contrast, a farmworker in the Soviet Union produces for only six or seven persons. Never have so few produced so much for so many as our farmers are now doing. The productive ability of our farmers has not only supplied abundant quantities of food and fiber and raw materials to industry; it has also released manpower for the needs of the total economy, which has given us the highest standard of living in all history.

This season of the year also makes an appropriate time to cause public attention to be focused on the debt of gratitude which all Americans owe to their neighbors on farms of this country.

The profession of agriculture and the American farmer is due a great debt of gratitude from all citizens who are recipients of their productivity and nothing could be more encouraging than to have many show a willingness by making an expression of appreciation visible.

In Steel, a Choice Between Two Evils

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. ROGERS of Colorado. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Denver Post of January 5, 1960:

IN STEEL, A CHOICE BETWEEN TWO EVILS

During 6 long months of bitter industrial warfare in steel, this Nation has been face to face with two equally destructive alternatives.

The first was a settlement that would feed the fires of inflation in the American economy.

The second was a prolongation of a devastating strike that would cripple American production.

In the settlement in Washington this week, the die has now been cast for the first alternative.

Vice President NIXON, Secretary of Labor Mitchell, and others encouraged an agreement on terms that are almost certain to lead to increases in the price of steel later in the year.

But they decided that the inflationary risk was less damaging than the risk of economic disasters and labor-management chaos inherent in a resumption of the strike.

The settlement of the dispute is a victory for the union and a defeat for the industry. There is no other way it can be construed.

Ever since last spring, steel men have insisted that they would not accept any settlement that could not be paid for by improvements in productivity.

But the cost of the new package is substantially higher than their productivity estimates.

And many observers are agreed that the industry could have had a settlement far less costly, if it had come to terms with the union before the strike began or any time last fall.

Secretary of Labor Mitchell has said that the new package will not require an increase in steel prices "immediately," but the handwriting is already on the wall.

Those observers, in and out of the industry, who regard an increase as inevitable have these factors to go on:

First, the industry has always passed on its wage and benefit costs in the form of higher prices sooner or later, even when it seemed to be in a position to absorb those costs.

Second, the smaller firms in the industry are probably not in a position to absorb the new costs at this time, even though some of the larger firms probably are.

The immediate cost increases—about 6 to 9 cents in fringe benefits—may not cause the price breakthrough.

But a wage increase of about 7 cents an hour—due December 1, 1 month after the election—may do the trick.

In any case, the Nation has traded a measure of industrial peace for a pronounced threat of inflation.

We hope the industry will make every effort to absorb the increase, but we see little chance that it will do so.

Whatever happens, at least one thing will be clear to a good many Americans as the $6 billion steel dispute comes to an end.

In the months ahead, the institution of free collective bargaining in the United States will be receiving its most serious test.

Unless labor and management in the railroad industry and in other potential trouble spots in 1960 can make collective bargaining work more swiftly and effectively than it did in steel, the freedom of unions and employers to settle their own affairs may have to be seriously abridged.

This sort of bargaining still seems to us the best and most effective way to deal with labor-management differences in a free society.

But it cannot endure, unless labor and management can make it succeed in the months ahead. It failed in steel. It cannot afford many failures more.

A Real Advance in Public Law 480

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. SPRINGER. Mr. Speaker, in the 1st session of the 86th Congress, we extended and expanded Public Law 480, the Agricultural Trade and Development Act of 1954.

As time passes, we are beginning to realize the importance of this law in gaining friends in our battle with communism. Nothing satisfies a hungry person so much as a decent meal. Hunger is the problem of hundreds of millions of people all over the world.

Public Law 480 is the first comprehensive step taken by this country to help other nations solve their food problem. It has more possibilities for peaceful use than anything designed yet by this Government.

We are spending billions all over the world on arms, and all of this is necessary in helping to keep the peace. However, as we all know, these are negative steps. The positive step now which this country can make in influencing people everywhere is to implement and use this law to its fullest capacity.

As the attached article from the Soybean Digest of October 1959, by George M. Strayer so well puts it, feeding hungry people through our great capacity to produce agricultural goods is a "weapon far greater than moon rockets or space weapons. We must use that weapon—food supplies—wisely."

A REAL ADVANCE IN PUBLIC LAW 480

(By Geo. M. Strayer)

The Public Law 480 bill passed by Congress in the closing days of the recent session, and now signed by the President, contains several provisions that are new and meaningful. The set-aside of funds for market development work is particularly significant, for it makes available for a 3-year period a specified percentage of all funds accrued from the sale of surplus agricultural commodities.

The new bill also gives some small recognition to the proper usage of U.S. stocks of food and fiber as a means of implementing our programs designed to assure world peace. If it is true that "communism is hunger articulate," then the United States has a weapon far greater than moon rockets or space weapons. We must use that weapon—food supplies—wisely.

Our Defense and State Departments have not yet recognized the potential value of the weapon which is characterized by our terminology of surpluses. They refuse to regard food as a weapon to be used in winning the battle for peace. Even Khrushchev recognized it in some of his speeches here in the United States, as he boasted about Russia's determination to surpass us in production of farm products.

The new Public Law 480 law, which becomes effective January 1, 1960, offers vast possibilities for furthering peace. And it also offers vast possibilities of developing markets for the products of American agriculture in countries where no markets have previously existed. As those markets become dollar markets—as the countries themselves become able to buy for dollars, as already happened in several countries—we see the vindication of Public Law 480. The funds set aside for market development work must be used in those countries which offer potential dollar sales.

Equal Economic and Political Rights

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mrs. ST. GEORGE. Mr. Speaker, I would like to point out at this time that House Joint Resolution 28, introduced in the 1st session of the 86th Congress by myself, still awaits action by the Congress.

I would therefore like to call the attention of this House to the following resolution passed by the National Association of Women Lawyers at their recent convention held in Miami Beach, Fla., on August 23, 1959.

RESOLUTION BY NATIONAL ASSOCIATION OF WOMEN LAWYERS

The convention body of the National Association of Women Lawyers meeting in

Miami Beach, Fla., on August 23, 1959, adopted by unanimous vote of its delegates from all States of the Union, the following resolutions:

"Believing that the Federal Congress should no longer blockade the States of the Union from having the opportunity to consider and to reach a decision whether equal economic and political rights should be the uniform and unequivocal law throughout the Nation by means of a constitutional amendment;

"*Resolved*, That the women lawyers from all States, speaking through their National Association of Women Lawyers in convention assembled, call upon the Members of Congress to forthwith vote for pending Resolutions (H.J. Res. 28 introduced by KATHERINE ST. GEORGE and S.J. Res. 69 introduced by Senator Langer) thus permitting submission of the question to the several States."

Together with the further and separate resolution:

"That copies of the resolution be transmitted to all Members of the 86th Congress and to the chairman of the Democratic and Republican Parties, and to the President of the United States who has declared himself in favor thereof; and that the resolution be printed in the Women Lawyers Journal and that copies be sent to the presidents and magazine editors of other national women's organizations."

Mr. Speaker, it is an interesting fact that at this time when we hear so much talk on civil rights, the Congress of the United States does not see fit to give women equal rights under the constitution.

A Possible Solution of the Farm Program

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. BETTS. Mr. Speaker, one of the most highly publicized issues facing this session of Congress is the ever present farm problem. Constant reference is made to the mounting surplus of grain and the tremendous cost to the taxpayers of the subsidies involved. Since none of the past or present programs have solved the problem, I have introduced a bill which I hope will be given consideration as a possible solution. Briefly it provides for living off the surplus rather than increasing it. It applies only to wheat, is purely voluntary, and would replace the present cash subsidies. Any farmer desiring to enter the program would agree to take out of wheat production a number of acres equal to the average number of acres planted to wheat by the producer for 1958, 1959, and 1960. In return he would receive a certificate entitling him to 50 percent of his average annual production of wheat during the years 1958, 1959, and 1960. He could accept the wheat, or he could endorse the certificate and deliver it to the Commodity Credit Corporation. The endorsement would authorize the Corporation to sell the wheat to which he is entitled at the market price and remit the proceeds to the farmer.

I have limited the provisions of the bill to wheat and for a period of 2 years, simply as an experiment to see if it works. It has a twofold purpose of reducing the surplus and relieving the taxpayers of the present burdensome subsidy. I have discussed it with some farmers in the district I represent and they believe it has some merit.

It is not intended to be the perfect answer or a cure-all. However, it has the virtue of being new and different and I hope it may serve as a contribution to the solution of the farm problem.

No Wing Clipping

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. DADDARIO. Mr. Speaker, each year, the issue of the Military Air Transport Service is subject to criticism. Some of it is self-serving, on the part of those who stand to gain if this military service is discontinued. Some of it is a genuine alarm at the uses to which a defense arm has been put. These charges and countercharges have been examined and are under continuing review in Congress.

One of the best statements I have seen recently concerning the MATS services appeared in the form of an editorial in the Hartford Courant recently. I should like to offer this editorial for the RECORD, so that its arguments may be given full consideration by Members of this body.

DON'T LET THEM CLIP THE WINGS OF MATS

Another effort will be made during the coming Congress by certain airlines to cripple our Military Air Transport Service, one of the vital arms of our worldwide defense system. These commercial interests will deny they want to cripple MATS. But if they have their way, this will almost certainly be the result.

MATS has the mission of moving troops, missiles, conventional weapons, and supplies to all parts of the world where we have military installations. It must keep its organization intact during the cold war, to have it ready for critical needs in event of a shooting war. And that includes even so limited an operation as the trouble in tiny Lebanon a year and a half ago.

The danger to MATS is posed by what many experts consider a shortsighted, selfish attitude on the part of a small but powerful group of airlines. They want to take over all the business of moving troops and military cargo themselves. Their barrage against MATS is based on the claim that they can do it better. There is evidence, however, that sometimes they can't even do it at all. During the Lebanon crisis MATS went looking for commercial airline support. But it was the tourist season for the airlines, and MATS couldn't place a bid. During airlines strike MATS had to do all its work with its own planes. The company that had already been awarded some MATS cargo and passenger business couldn't get off the ground.

MATS cannot be put in mothballs, and called up to operate only when an emergency arises. Its pilots must be kept flying, its global air routes and air bases maintained, its ground crews trained and alert. If it has to fly its planes empty to be ready for its wartime mission, our defense costs will rise. Meanwhile our commerical airlines have done well with the aid of Government subsidies, the adaptation of military aircraft, and their own initiative. But they cannot be expected to fulfill the wartime mission of MATS and they should cease interfering with it. And instead of paring MATS down, Congress might well take the long overdue step of modernizing it by replacing its obsolete piston engine planes with jets.

Federal Aid for School Construction

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mrs. GREEN of Oregon. Mr. Speaker, today I have had the pleasure of introducing a bill to establish an emergency 2-year program for Federal aid to the States and localities for school construction. This bill, it is no secret, is a companion measure to the bill which has been reported to the other body by that body's Committee on Labor and Public Welfare.

The fight for Federal aid to education is an old one, Mr. Speaker. As in so many other legislative areas, the friends of the schools have marched up many a hill, only to fall a vote or two short of the summit. In assessing causes for the defeat of previous school legislation, I believe no single factor can be given greater weight than the constant and well-publicized wilingness of the administration to give courageous and unstinting support to any school aid bill—any bill, that is, except the specific bill that happens to be before the House at any given moment. In past sessions, the House, having failed to pass a generous school aid bill sponsored by Democratic Members, has turned its efforts to inadequate bills offered by the administration. In most, if not all cases, the administration's ardor, even for its own "teeny-weeny" bills, suddenly cooled.

In this 2d session of the 86th Congress, in this closing year of the Eisenhower era, I hope the Congress will be able to enact some kind of legislation to assist our public elementary and high schools meet the desperate challenge which this age has thrust upon them.

There are those of us who believe that education is a sufficiently important and proper sphere of governmental activity to be federally supported in its own right. But there are many who will point, with some justice, to the titanic struggle for existence in which the free world is engaged, and suggest that all our energies should go into this struggle. In a sense I agree. All of our energies, developed to their highest degree, should go into the fight to maintain the future of freedom. I would differ completely with those sincere Members of this House who feel that only our military energies, or

only our military and propaganda, or even only our military, propaganda, and scientific energies ought to be put into the balance against the challenge and the threat that is communism. I say that unless we develop our full intellectual armory, our weapons stockpiles will be useless. Unless we utilize our resources, including our financial resources, to help men learn what it means to be free, what it means to be educated, what it means to be fully alive, then we have little left to defend. If our schools fail to meet the challenge which has been thrust upon them—and it is a different challenge than the challenge Soviet schools are meeting with success—unless they meet this challenge, then the free way of life is doomed. I believe this with all my heart. I hope and trust that my colleagues in the Congress agree. I trust that we will not let the "budget firsters" again frighten us away from our plain and inescapable duty to the future of the Nation.

In this context, I ask unanimous consent that a penetrating editorial recently printed in the Pendleton East Oregonian, be printed at the end of my remarks.

This editorial does not mince words or dodge issues. It points to the Federal control bugaboo as the phony issue it is. The editorial refutes this argument in telling and persuasive terms. It is a good text from which to begin this year's debate on Federal aid for education—the most important legislation before this Congress.

[From the Pendleton East-Oregonian, Dec. 8, 1959]

OF NATIONAL CONCERN

Whenever somebody tells us that Federal aid to education is as dangerous as the bubonic plague we suggest that he take a look at Hermiston High School, talk to teachers and administrators at Hermiston High School. That school received substantial Federal aid while McNary Dam was under construction and a lesser amount thereafter. There isn't a speck of evidence that anybody in Washington, D.C. has ever attempted to dictate to Hermiston High School.

The Oregon State Board of Education revealed this week that 31 of Oregon's 36 counties are getting Federal aid under the National Defense Education Act. In the current year, $711,000 will be spent in 133 Oregon school districts to improve teaching of science, mathematics and foreign languages. The act also offers Federal aid to districts that want to improve their counseling service to students, and several districts are accepting that aid.

We doubt that any school district that is particiapting in the National Defense Education Act program has had any unpleasant experiences with it. We doubt that any has lost control of its educational processes.

Education is a matter of national concern. If a school district is doing less than an adequate job the entire Nation suffers. If a school district is doing an above-average job the entire Nation benefits. It is as important to you that a boy in Mississippi who has a high IQ is properly prepared to go to college as it is to his school district in Mississippi.

The fight against Federal aid to education is phony. The opponents place their emotions ahead of good sense.

The Spirit of Camp David

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mrs. ST. GEORGE. Mr. Speaker, I ask unanimous consent to place in the Appendix of the RECORD Ambassador Lodge's masterly reply to the Soviet representative, made before the General Assembly of the United Nations on the question of Hungary.

This brief statement was made on November 23, 1959, and in its restrained and succinct appraisal of the situation seems worthy of the attention of all Members of the House of Representatives.

THE SPIRIT OF CAMP DAVID

(Your attention is invited to the statement below by Henry Cabot Lodge, U.S. Representative to the General Assembly of the United Nations, during debate on the question of Hungary, November 23, 1959.—THRUSTON B. MORTON, chairman of the Republican National Committee)

Mr. Chairman, before we adjourn this meeting there are certain fallacies which have been expressed here which I should like briefly to rectify. I took some notes during Mr. (V. V.) Kuznetsov's (Soviet representative) speech, and noted some of these phrases: "dirty work," "sordid assignment," "mouthpiece for slander," "puppet," "slanderous assertions and concoctions" in my letter.

Now, I am not fortunate enough to be familiar with the Russian language, and maybe these are ordinary, routine phrases in Russian. But I have some familiarity with English and with French, and I can say that in those two languages these are extremely violent words. If Mr. Kuznetsov is really interested in lessening the cold war, he could very easily prove that fact by using parliamentary language in a parliamentary assembly. I say that to him in as bland a tone as I can use.

Then he also referred in his speech to the conversations between Chairman Khrushchev and President Eisenhower which were held at Camp David and which in a press release the other day the Soviet delegation characterized as the "spirit of Camp David."

Now, Mr. Chairman, we prize—we in the United States prize—what was achieved at Camp David, and none are more opposed than we to doing anything which would destroy it. One way to live up to that spirit is to conform with United Nations resolutions.

I feel that perhaps I have some right to talk about Camp David for the simple reason that I was there. In fact, I was present at all the meetings which took place. These meetings were adequately summed up in the communique, which is well known, and I can assert that there is nothing in that communique or in what happened at Camp David to justify the declaration that the very modest action on Hungary which we are discussing today is against the spirit of Camp David.

What is against the spirit of Camp David, Mr. Chairman, is the subversion of small countries.

What is against the spirit of Camp David are acts which turn a brave little country into a moaning colonialist slum.

What is against the spirit of Camp David is any behavior which makes a veritable mockery of peaceful coexistence.

Mr. Chairman, nothing happened at Camp David which requires us to condone evil.

Nothing happened at Camp David which requires us to pass by in silence on the other side of the street when a brutality is being committed.

Nothing happened at Camp David to prevent us from acting like human beings made in the image of God when cruelty is being practiced.

The spirit of Camp David was not intended to be a soporific to peoples in the democracies, to put them to sleep in the belief that this dangerous world, which we all hope may someday be safe, has actually been made safe.

No one looks more eagerly than I do for the day when the United States and the Soviet Union can work regularly together for the peace of the world. This is an end devoutly to be wished, and I shall always work for it.

But we work against such a day when we distort the spirit of Camp David into something which was never meant at all and which no one present thought that it meant.

I realize that there may be colleagues of mine here in this room who think that in speaking as I am now doing I am striking a false note. But I do not agree.

We can only build a peaceful world on truth, and the spirit of Camp David never told us to close our eyes to the truth.

We can only build a peaceful world on deeds—deeds of justice—and the spirit of Camp David never told us not to do such deeds.

Instead of criticizing this proposal, why don't you do something to show that you really believe in the true spirit of Camp David? Why don't you take down the barbed wire and the observation towers which now divide the poor Hungarians from Austria and the free world and which have turned Hungary into a vast human cage? Why don't you chain up the savage dogs which roam along the border to catch the miserable human beings who are seeking freedom?

It is by deeds such as these that we can best live up to the spirit of Camp David.

Let me say in conclusion that the Camp David communique states that "all outstanding international questions should be settled not by the application of force but by peaceful means through negotiation." If therefore, we are really to live up to the spirit of Camp David, Sir Leslie Munro ought to be admitted into Hungary, the United Nations resolutions adopted by overwhelming votes should be carried out in Hungary, and the Soviet Union, instead of working against the United Nations, should work with the United Nations. That would be really carrying out the spirit of Camp David.

Indian Industry Bill

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. BERRY. Mr. Speaker, I ask unanimous consent to extend in the CONGRESSIONAL RECORD an editorial which appeared in the July 16, 1959, issue of the Farmington (N. Mex.) Daily Times, on

my bill entitled "Operation Bootstrap—Reservation Style."

The editorial is as follows:

INDIAN INDUSTRY BILL

The Four Corners country, as the homeland of the biggest Indian tribe in the Nation, should take more than a little interest in a bill introduced in Congress within recent days by Representative E. Y. BERRY, of South Dakota.

BERRY's bill is designed to induce private industry to establish manufacturing plants on Indian reservations. It would permit tribal groups to enter into contracts to build plants for lease or sale, to be financed by funds borrowed from commercial institutions or Indian revolving funds.

Industries moving to reservations would be exempt from Federal taxes for 10 years. On-the-job training programs for Indian workers are contemplated.

Provisions of the Berry bill indicate it is intended to expedite the comparatively new industrial development program of the Bureau of Indian Affairs, which was explained earlier this summer to Farmington and Gallup civic leaders. In any event, the South Dakota Congressman is striving for a quick and sensible solution to the Indian unemployment problem. Since that problem is growing every day, it's to be hoped that the Berry proposal gets a fast and favorable reception in the House Interior Committee.

The Late Charles A. Boyle

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. COLLIER. Mr. Speaker, I did not have an opportunity to take part in the eulogy of the late Charles A. Boyle on the floor of this House on January 6 only because I was called away in mid-afternoon.

Because Congressman Boyle and I became close personal friends during the years we served together in Congress, I feel deeply bound to offer these remarks on his passing.

Shortly before the 1st session of the 86th Congress adjourned, I played golf with Charlie and later joined him at his home as I had done previously. It was always a great pleasure for me to be with the late Congressman Boyle's family for it was truly a fine, typically American family. I shall never forget the pleasures of our association, socially and professionally. My late colleague from Illinois was one of the hardest working gentlemen I have known in my life; he was as direct and forthright in his approach to controversial issues as any man. I have never known him to lose sight of his basic objectives nor turn his back upon anyone who needed assistance. Nothing I can say at this time can add to what has already been said by so many others who knew and respected him as a person and a statesman. His untimely death was indeed a shock to all of us and his passing a loss to so many.

His achievements are a monument to his public service and his wonderful family, a reflection of his love for the Christian way of life that is the cornerstone of this great Nation.

Ike's Last Year in the White House

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Jay G. Hayden, veteran Washington news correspondent, which appeared in the December 27, 1959, issue of the Detroit News. Mr. Hayden covered his first presidential conventions in 1912 and has had the longest continuous Capital service with a single newspaper. From this background, Mr. Hayden presents an interesting analysis of President Eisenhower's last year in the White House.

The article follows:

IKE'S LAST YEAR IN THE WHITE HOUSE
(By Jay G. Hayden)

WASHINGTON, December 26.—Strangely contrary to past precedent, Dwight D. Eisenhower is close to beginning his last year as President definitely more popular and probably more influential, both at home and abroad, than at any time since he entered the White House in 1953.

It is not too much to say even that Mr. Eisenhower's personal prestige at this moment stands higher, is more all-embracing and vested with greater opportunities for benefit to mankind than that of any other American at any time.

Events in this year 1959 have inspired hope that history is approaching an epochal turning; that a world plagued ever since 1914 with wars and threats of wars, intensified by violent revolutions, including Russia and China, is beginning at least to yearn for change in direction toward peace.

And the crowning reason for that hope was the meeting at Camp David last September of President Eisenhower and Premier Khrushchev of Russia.

That event has produced no signed and sealed agreement between governments creative of the peaceful coexistence that those two called for. Rather, the symptoms so far are mainly of new internal bedlams in both camps. Quite definitely mainland China is greatly embarrassing Khrushchev, by both voluble disparagement of his peaceful professions and threatening war against India and other neighboring non-Communist nations. And the merest hint of decline in Russian belligerency was enough to set the NATO Western Powers each and all pulling and hauling for selfish advantage.

LESSENING OF TENSION SPARKS CRY FOR DEFENSE CUTS

President Eisenhower, in Paris last week, may have temporarily appeased the latter trend but it will be heard of much more, including hot debate in Congress over need for continuance of the now back-breaking burden of military defense in light of softening international outlook.

It is true, however, that up to this point both President Eisenhower and Premier Khrushchev are standing firm in support of their Camp David objective, and each in his own way has visibly worked for its realization.

Khrushchev, for example, hastened directly from the United States to Peiping to announce to his Chinese comrades the peaceful intent of his American visit. And despite a severe Chinese cold shoulder ever since, the Russian premier has praised President Eisenhower repeatedly. He did so in Hungary at a time when the U.S. delegation at the United Nations was exhorting in favor of a new condemnation of Russia's 1956 violent suppression of revolution in that country.

The jamming of American and other western broadcasts to Russia nearly all has been removed and there has been a marked step-up in cultural and sports exchanges over what is becoming less and less an impregnable Iron Curtain.

For President Eisenhower, the most important Camp David aftermath was his unparalleled tour through three continents, Asia, Africa, and Europe, preaching at every opportunity his doctrine of peaceful coexistence. Never before has any public figure been cheered by so many and such diverse people. This visitation in itself had built up a body of world opinion in favor of peace that must profoundly influence future events, possibly even in China.

True, times and the fortunes of men change suddenly and unpredictably.

WILSON'S PEACE CRUSADE MUCH LIKE EISENHOWER'S

Woodrow Wilson, another American President close to the end of two-term tenure, barnstormed through France, Great Britain, Italy, and Belgium during the first weeks of the World War I Peace Conference (1918–19) to popular acclaim relatively as great as was accorded President Eisenhower this month.

With his 14 points, including self-determination for all people and implication that the United States was ready to dig into its wealth to provide worldwide freedom from want, Wilson equally was a peace messiah.

But 5 months later President Wilson was close to being the most unpopular man in all of the countries he visited. Fellow members of the "Big Four" of that time—Lloyd George of Britain, Clemenceau of France, and Orlando of Italy—had ganged up, and so had the press of those countries, against Wilson, with their claim mainly that he was more interested in saving enemies than friends.

And beginning a speaking tour to sell to American voters "the treaty that nobody fully liked," Mr. Wilson suddenly was stricken with paralysis. He watched dimly as the Republican Senate rejected not only his League of Nations, but the whole Versailles Peace Treaty. It was 2 years later, under President Harding, before a separate peace between the United States and Germany was accomplished.

Formal peace agreement between the United States and Russia in time to precipitate a like struggle by President Eisenhower for ratification in the now heavily Democratic Senate appears unlikely.

But it could happen.

There is real hope, for example, that United States, British, and Russian representatives meeting at Geneva, before long will agree to permanent prohibition of atomic testing, at least above ground or sea. And if a treaty to that effect is signed, Mr. Eisenhower almost certainly would press for ratification by the 1960 Senate, even to the point of holding that body in session while the presidential campaign is in progress.

It needs no seer to prophesy that, in that event, the atomic treaty would provide an issue greatly affecting the election result.

Presidents Eisenhower and Wilson in another way are alike, namely in severe illnesses that affected their administrations.

On that score, however, Mr. Eisenhower has passed through shadow into light.

Where a little more than a year ago almost all newspapers abroad and at home were picturing him as an old man, physically weakened and mentally stagnant, today he is the picture of health and self-confident official energy.

Such reversal nowhere is better reflected than by the professional pollsters of political opinion. In November, 1958, just after the Democratic congressional landslide, one poll on the way Eisenhower is handling his job as President, sank to an all-time low of 52 percent that he was doing all right, to 48 percent either against or noncommital.

Last November 14, shortly before he started his world tour, the same poll found 66 percent approving his work, 19 percent disapproving and 15 percent no opinion.

IKE'S POPULARITY HELPS GOP OUTLOOK FOR 1960

The latter showing was Eisenhower's best since early 1957, close after his second presidential inauguration. And it is a fair guess that a comparable poll collected today, on the heels of his international go-around, would give him a still higher score.

More significant, perhaps, all recent straw votes have shown prospecive Republican nominees for President next year running substantially ahead of the leading Democratic aspirants whereas up till last summer Democratic possibilities were on top.

Up till a year ago there was widespread suggestion that the 22d constitutional amendment, restricting President Eisenhower and all of his White House successors to no more than eight-year tenure, would emasculate their influence in last months. In one of his press conferences Mr. Eisenhower seemed to agree with that prognosis.

But in actual fact, the President, approaching his last year, appears to be sitting completely topside, both internationally and at home.

All of which raises the question why Mr. Eisenhower could sink so low and then bound back just when most people thought he was all washed up.

Correctly or not, almost everybody felt that Mr. Eisenhower, following an operation for ileitis in mid-1956 and a mild cerebral occlusion in December 1957, lost something of both physical and mental vigor. His first speeches after the latter illness disclosed slight errors of pronunciation, some thought because he was nervously trying too hard.

CRITICS SWING HARD ON HIS GOLF GAME

Political opponents at home throughout 1958 constantly jibed that Mr. Eisenhower's supreme obsession was playing golf and that the Government was being run by subordinates, chiefly the domestic chief of staff, Sherman Adams, and Secretary of State Dulles. That theme was taken up by foreign newspapers to the extent of suggestion that the United States virtually had passed out as a factor in world affairs and would remain so until a new President took over.

The Goldfine scandal involving Adams accentuated those contentions with undoubted effect of contributing to the Democratic election sweep in 1958, even though Adams had passed from the scene.

Early in 1959 came the disclosure of Dulles' cancer, from which he died last May after giving way to Christian A. Herter as Secretary of State.

Why the great change in Mr. Eisenhower? One of his White House assistants first observed it at a White House conference in July 1958, called by the President to inform congressional leaders that U.S. Marines already had landed in Lebanon to ward off spread of the Iraq revolution.

As this functionary described it at the time:

"I think Ike has taken counsel from the sign Jim Hagerty (White House press secretary) has on his desk, reading: 'It isn't what you eat that gives you ulcers; it's what eats you.'"

Opening the meeting, Mr. Eisenhower spoke with grave reserve, but within 2 minutes everybody in the room knew that he regarded this as a major crisis and one which he, and he alone, faced with a harrowing decision, bordering between war and peace.

The crux of his statement was that the upheaval in Iraq was likely to lead to holocaust involving all of the Arab-Israeli Near East unless somebody moved to impose a dike.

With Great Britain sending troops into Jordan shortly after the United States entered friendly Lebanon, the whole area quickly quieted down.

Khrushchev first demanded that the United States and Britain both be hauled onto the United Nations mat for unwarranted aggression, but backed away swiftly when the Angle-Saxons said they would welcome a showdown.

It was shortly after that event that Sherman Adams resigned and was replaced as chief aide to the President for domestic affairs by Gen. Wilton B. Persons. A few weeks later came the first signs of Dulles' fatal illness.

All members of the White House staff agree that the idea that Mr. Eisenhower ever relinquished his constitutional functions to anybody is a complete myth. There never was a time, these attachés say, when any one of them did not feel fully free to go direct to Mr. Eisenhower with any problem they were charged with handling.

It is acknowledged on the other hand, however, that in months close after Mr. Eisenhower's several illnesses there was a tendency by all hands to spare him from work whenever possible.

On the home side, lesser White House functionaries tended to go first to Adams, who also acted as go-between on most telephone calls to the President.

Thus grew up the impression that Adams largely was running the presidential show.

Dulles' relationship always was different. True, he managed the State Department with an iron hand. Nobody from that branch dared to seek audience with the President personally without Dulles' consent.

But Dulles was meticulous in seeking the President's approval before acting on any issue that might seriously affect American foreign relations.

ONLY IKE'S ILLNESS GAVE DULLES WIDER POWERS

It is said, for example, that during Mr. Eisenhower's long hospitalization in 1955, during which virtually no one from the Government was allowed to see him, Dulles of all was the one most disturbed because he on occasion was compelled to act decisively without the President's explicit approval.

And very often Mr. Eisenhower overrode Dulles' advice. A notable instance in that line was the President's refusal in 1954 to consent to U.S. naval and air intervention to relieve the beleaguered French fortress of Dienbienphu, although Dulles and three out of four members of the military Joint Chiefs of Staff recommended that action.

The next tussle for Mr. Eisenhower, of course, will be with the Democratic Congress, assembling in the first week of the new year. But with that regard also, the President starts stronger than at any of the six previous congressional openings of his administration.

The time when the President's prospects looked darkest in that respect was last January following overwhelming Democratic victory in the 1958 congressional election.

Reading that return, nearly all commentators agreed that the Nation was in for a radical upsurge comparable with that which occurred during the first years of President Franklin D. Roosevelt. They felt that as a hopeless "lame duck" and reputed physically and mentally on the decline, Mr. Eisenhower could at most use his veto to ameliorate this trend.

TWO OPPOSITION SENATORS HELPED NIP THE REVOLT

That calculation was wrong two ways.

First, a pair of Democratic leaders from Texas, Speaker RAYBURN and Senator JOHNSON, put such stern brakes on the radical legislative cart as to render it immobile almost before it got started.

Second, the President's constitutional checkrein proved surprisingly successful. Of his vetoes, including housing, farm price fixing, rural electrification, only one, relating to public works, was overridden. And even the latter was approved only after being altered to approach some appeasement of the President.

Another bill authorizing expansion by the Tennessee Valley Authority into private enterprise was called back and revised to fit the President's specification after he had threatened a veto.

From a partisan standpoint, the most significant single event of the session was passage of the Landrum-Griffin labor union control bill, named respectively after a Democratic Representative from Georgia and a Republican Representative from Michigan and modeled to fit the President's request. Democratic leaders of both Houses were out of step with that development.

Next to the influence he will exercise in foreign affairs during his last year, the most talked-of question concerning Mr. Eisenhower is the part he and his policies will play in the presidential election.

He already has announced neutrality toward Republican contenders. But it remains to be seen whether that abstention will hold, should any of them take positions materially at odds with Eisenhower policies and actions, either past or future.

One thing on which all agree at this moment is that the President's international actions, especially the exchange of visits with Russia and his just completed 22,000-mile foreign tour, has given Republican prospects a big boost.

More important, perhaps, Mr. Eisenhower's high personal popularity is making it increasingly difficult for any candidate, Democrat or Republican, to come out against policies which he has already or soon will lay down.

The surest thing of all is that the President has gotten his second wind and he is going to sprint with all his might as he approaches the home stretch.

Senator Case of New Jersey Demands Highway Safety

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. ROBERTS. Mr. Speaker, as chairman of a subcommittee charged with investigations and recommendations in the field of highway traffic safety, I was pleased to read the following news story and editorial from the Atlanta (Ga.) Journal.

Under leave to extend my remarks, I wish to include these articles:

HIGHWAY SAFETY ACTION DEMANDED

WASHINGTON, October 18.—Senator CLIFFORD P. CASE, aroused by the deaths of nine coeds and a college professor in a flaming truck-bus collision, urged Congress today to make highway safety one of its first items of business next session.

The New Jersey Republican called the bus-truck accident a frightful reminder of a situation which demands urgent attention. He said Congress must do everything possible to help States develop minimum standards both for drivers and vehicles.

Case made clear that he favored, among other things, a nationwide clearinghouse which would enable State authorities to exchange information on drivers who repeatedly run afoul of the traffic laws and constitute a threat to other drivers.

SAFETY PRESSURE ON CONGRESS

The chances are growing that Congress, when it reconvenes, will have to take a hand in highway safety, partially because the States have failed to exercise the degree of responsibility that's demanded in this field.

A New Jersey Senator feels that the problem of highway deaths and injuries should constitute one of the first items of business of the next Congress.

It's understandable that Senator CASE should be aroused on this subject, because it was in his State than nine coeds and a college professor died recently in a flaming truck-bus collision.

But the situation isn't much different elsewhere in the country. Multiple deaths are occurring too frequently on highways everywhere and weekend tolls have become especially heavy.

Specificially Senator CASE recommends that the Federal Government set up a nationwide clearing house that would enable States to exchange information on drivers that repeatedly run afoul of the law.

This idea has been advanced before, but apparently it's getting to the stage of serious talk.

Perhaps if Congress would give strong indications of leadership on this critical problem, the States themselves would be more inclined to stop dragging their feet.

Resolutions of Young Democratic Clubs of America

EXTENSION OF REMARKS

OF

HON. NEAL SMITH

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. SMITH of Iowa. Mr. Speaker, sometimes we in America take democracy too much for granted and tend not to appreciate the great amount of training and thinking necessary to properly develop a young man or woman for participation in our Government either as an official, party worker, or voting citizen. The Young Democratic and Young Republican Clubs are of course designed to provide an apprenticeship for young people to work toward participation in Government through the party of their choice.

As chairman of the recent national convention of the Young Democratic Clubs of America, at Toledo, Ohio, November 17 through 20, I again witnessed this apprenticeship process at work when the 200 delegates settled down to working on resolutions and summarizing majority opinion among the delegates.

Among the resolutions reported and agreed upon by the convention were those dealing with education, taxation, human rights, and other matters. So that others may know the thinking of the younger generation of adults in the Democratic Party in this important national election year, I include the following resolutions on these subjects in the CONGRESSIONAL RECORD:

NATIONAL CHAIRMAN

Whereas the Young Democratic Clubs of America are greatly indebted to our national chairman, Paul M. Butler, for his aid and encouragement to the cause of young America, and do recognize his outstanding ability in ably serving the interests of Democrats across the Nation; and

Whereas Chairman Butler has articulated effectively the desires of the voters of America to broaden essential Democratic proposals on housing, civil rights, education, highways, labor and welfare benefits; and

Whereas his devotion to the party and his dedication to the continued expansion and liberalization of the platform of the Democratic Party deserves the highest commendations from Democrats throughout the Nation;

Now, therefore, we commend Chairman Paul M. Butler for his outstanding leadership and his loyal service to the cause of the Democratic Party, and we strongly urge the delegates to the Democratic National Convention in 1960 to elect Paul M. Butler permanent chairman of the convention in commendation of his loyal and outstanding service to the Democratic Party.

PARTY RESPONSIBILITY

In past presidential election years, certain officials of the Democratic Party have failed or refused to actively support and/or vote for the Democratic Party nominee. These officials have sometimes demonstrated their disenchantment with the Democratic nominees by using their positions of leadership and influence within the Democratic Party to aid in the election of members of other political parties in local, State, and national elections.

The Young Democratic Clubs of America strongly urge that officials of the Democratic Party who abuse the prestige of their offices by supporting nominees of the Republican Party or a third party be removed from office by the Democratic voters in their respective areas and replaced with responsible and enthusiastic officials to perform those duties leading toward a complete Democratic victory in 1960. We further urge that any Democratic Congressmen or U.S. Senators who fail to support the presidential nominees of the national Democratic Party or who participate in or aid in the formation of a third party in 1960 be relieved of any committee chairmanships and accumulated congressional committee seniority in the Congress.

GEN. GEORGE C. MARSHALL

Whereas Gen. George C. Marshall served his country with deep loyalty and dedication; and

Whereas this great soldier was one of the principal organizers in the allied victory in World War II; and

Whereas this beloved American was likewise the principal architect of the peace policy following World War II; and

Whereas America and the free world owe to his memory a debt which can never be fully paid: Therefore be it

Resolved, That the YDCA go on record in favor of a national memorial to be erected in Washington and dedicated to the end that Gen. George C. Marshall shall be forever remembered in the hearts of America.

HOME RULE FOR THE DISTRICT OF COLUMBIA

Whereas the residents of the District of Columbia are denied both a voice in their own local governmental affairs; and in the choice of a national government; and

Whereas this works an unfair denial of the basic rights of the citizenship to these residents and, furthermore, places an unfair burden on the whole United States by requiring an already burdened Congress to devote time to purely local legislation; and now: Therefore be it

Resolved, That the Young Democratic Clubs of America favor the granting of self-government and of voting in national elections to the residents of the District of Columbia; and be it further

Resolved, That the Young Democratic Clubs of America specifically urge the 86th Congress of the United States to enact in substance, the Multer bill (H.R. 4630) and companion bills introduced in the House of Representatives as the fulfillment of the first step in the full grant of the voting franchise to District of Columbia residents, though we prefer the Senate version of the bill; and be it further

Resolved, That the Young Democratic Clubs of America call upon each Democratic Representative to sign the discharge petition which would remove consideration of this bill from committee to the floor of the House of Representatives.

SUNDAY VOTING

Voter turnout in the United States is poor compared with other democratic countries. We should strive to give people the opportunity to vote. We urge the consideration by various States of Sunday voting laws in order to encourage more participation in election.

HUMAN RIGHTS

The fulfillment of man's free exercise of human rights requires civil order. This order depends upon respect for and obedience of laws, which to be just must treat all witout regard to race, color, creed, or national origin and without bias, prejudice, or partiality.

We believe, as is articulated in the Declaration of Independence, that "Man is endowed by his Creator with certain inalienable rights, among these are life, liberty, and the pursuit of happiness. To secure these rights, governments are instituted by men." We believe that the Federal Government has the duty to take affirmative action to guarantee the free exercise of all persons' human rights.

Commission on Civil Rights: We urge that the Congress enact legislation providing that the Commission on Civil Rights shall be a permanent Commission and that in accord with the Douglas-Javits-Celler bill the Attorney General shall have the duty and power to seek judicial protection for any person who is being denied the equal protection of the laws.

Voting rights: Recognizing our resolute conviction that the right to free exercise of suffrage is the true basis for a free society, and concurring in the findings of the Commission on Civil Rights that this right is now being denied some individuals because of racial reasons, we urge that Congress enact legislation requiring the preservation of all State and Federal voting records for a reasonable period; proscribing any action or inaction by individuals whereby persons may be deprived of their right to register and

vote freely in any election held solely or partly for the election of any preson to a national office; proscribing any levy, collection, or payment of any poll tax as a condition for voting or registering to vote in any such election; and providing for the appointment by the President (upon a finding that certain persons are being denied their rights to vote because of their race, color, religion, or national origin) of a local Federal employee as a registrar, in accordance with the recommendations of the Commission on Civil Rights, which registrar shall administer the relevant election laws without prejudice, partiality, or discrimination.

Education: We believe that all persons should willingly demonstrate their agreement with the 1954 U.S. Supreme Court education segregation decisions. We realize that these decisions have resulted in social problems on the local level, but with good will and timely effort these racial barriers will be removed. We propose that all Federal grants and aid be withheld from any school when that school refuses on racial grounds to admit students otherwise qualified for admission.

Housing: We urge Congress and the President to provide for the immediate cancellation of all Federal loans, loan insurance, or mortgage guarantees granted to any contractor, if the agency granting such loan, insurance, or guarantee makes a reasonable finding that the contractor is violating any ordinance or State or Federal law prohibiting discrimination based on race, color, religion, or national origin.

Congress should enact legislation that would require as a condition of every contract for Federal aid in the housing program, either private or public, that the property involved shall not be restricted against any person, on the grounds of race, color, religion, or national origin, with regard to sale, resale, lease, or occupancy.

Wiretapping: We urge State and Federal enactment of legislation proscribing the use or installation of surreptitious sound surveillance devices by any private persons or public officials and proscribing the admissibility of any evidence derived thereby in any criminal action.

Mallory rule: We believe that Congress should defeat all legislative attempts to make admissible as evidence in criminal proceedings any confessions elicited from an accused during periods of unnecessary delay following arrest of the accused and prior to his arraignment.

Antilynching law: Congress should manifest its concern for the racial minorities and their individual personal security by requiring immediate Federal investigation of every alleged lynching, and making it unlawful for any public official, of any local or State government, to participate in a lynching, to fail to protect persons in danger of being lynched, or to fail to prosecute persons guilty of lynching.

Fair Employment Practices Act: Racial, religious, and national origin discrimination in employment remains as a serious problem and requires the enactment by Congress of legislation prohibiting any such discrimination in employment practices by any employer in commerce or denial of admission to membership in any labor organization in commerce.

McCarran-Walter Immigration and Nationality Act: We again renew our desire that the McCarran-Walter Immigration and Nationality Act be amended to eliminate the discriminatory national origins quota system. This would enable the United States to resume its position as the haven for victims of persecution in its many forms.

Un-American Activities Committee: We believe that the necessary criterion for a valid legislative investigative committee is that it shall have a valid legislative purpose and shall not exist for the purpose of exposure of persons or their ideas or beliefs. By its irresponsibility, attacks on free speech, free thought, and free association, the Committee on Un-American Activities should either define its purposes and restrict its investigations to specific legislative proposals, or be dissolved.

Presidential responsibility on desegregation: We call upon the President of the United States to initiate affirmative proposals and concrete programs which shall have as their object the greater guarantee of the equal protection of the laws and the effective implementation of the desegregation decisions.

Governmental security program: We call upon Congress to recognize the immediate need for a program by which the Government can secure the employment of persons whose loyalty cannot reasonably be questioned. Such a program must include protection of the individual's rights of free speech and association, the procedural due process necessary in proving alleged disloyalty toward the Government, including the right to each such individual to demand a full and unbiased hearing, based upon reasonable notice of specific charges and complete confrontation of all adverse witnesses.

TAXATION

The Young Democratic Clubs of America demand the correction of abuses and special privileges in our taxing system, and we recommend the following:

1. Complete revision of the Internal Revenue Code with the goal of eliminating inequities, simplifying procedures and curtailing special interest advantages.

2. Elimination of favoritism to corporations and big business by—

(a) Restricting the use of accelerated or rapid depreciation schedules for capital investment;

(b) Repeal special tax depletion allowances for the oil, gas and allied industries, replacing present schedules with standard depreciation requirements; and

(c) Curtailment of deductible business expenses which permit unlimited charges for entertainment, travel and related expenses.

3. Complete overhauling of the wartime excise and luxury taxes with special attention to the elimination of taxes on automobiles and cosmetics.

4. Oppose with every means at our disposal any campaign to force the passage of regressive national sales taxes which have their impact upon our already overburdened small income families.

5. Increase the potential spending power of small income families and thereby the general national prosperity, by adjusting the personal tax exemption from $600 to $800 per person.

6. Oppose the channeling of gasoline excise taxes from road construction and maintenance programs to the general fund, and favor the use of all such taxes for the extension and improvement of our outdated and inadequate road system, both intrastate and interstate.

EDUCATION

Preamble: The Democratic Party has been committed continuously to the principle that every citizen, child, and adult, should be educated to the extent of his capacity. Only in this way can we guarantee that every individual can know and understand the values of freedom and learn to participate effectively in a democracy. Only in this way can an individual learn to make a decent living for himself and his family, to become a good parent, to be happy in his work and leisure, to become a creative person with all of the attendant satisfactions, to keep personally healthy, and to contribute to the health of others.

National Defense Education Act: Recipients of funds under the National Defense Education Act of 1958 are required to file a non-Communist affidavit. This affidavit requirement has been severely criticized by the American Association of University Professors, college presidents, and a growing number of outstanding universities and colleges. The affidavit requirement induces nonparticipation. The Young Democratic Clubs of America believe this requirement is tantamount to signing away a student's right to freedom of thought; and we, therefore, urge the deletion of the oath requirement in accordance with the proposals introduced in the U.S. Congress by Senators KENNEDY and CLARK.

Academic freedom: The Democratic Party must be ever vigilant in its defense against those who would subvert academic freedom. We must guarantee freedom of expression for both teachers and students. We must encourage students to make critical judgments.

We remind the public that teachers in their professional and personal lives have the same rights as other citizens in the community.

Federal aid: It is the inherent right of every child to have a complete opportunity for an adequate education through grade 12 at public expense and in modern schools staffed by competent and well-paid teachers. We recommend Federal aid to supplement local and State funds to carry out such programs in all parts of the Nation which follow the law of the land.

Scholarships: We recommend Federal and State scholarship programs based on ability and need without regard to race, religion, or place of residence, and applicable in any college or university, public or private.

Minimum safty standards: For the protection of all school children, we urge the Federal Government to establish a code of minimum health and safety standards for the building of school facilities wherever Federal funds are involved.

Foreign Service Academy: In order to provide the Nation with the means of training the specialized personnel needed in the foreign service, we recommend the establishment of a Foreign Service Academy.

Special education: The early discovery and treatment of mentally retarded children is necessary if many of these children are to lead useful lives and not be a burden on the community. Experience has also proven that crippled children may also be educated to be productive members of society. We, therefore, strongly urge that the Federal Government expand its program in this area so that potentially productive individuals will have the opportunity to contribute to the general welfare of the Nation.

Migratory workers: The children of migratory workers seldom receive even a basic primary education simply because of the necessity for their parents to follow the harvests. As these workers may criss-cross the entire Nation, a Federal program to provide educational opportunities for these children must be fully developed. We urge that no child be denied his right to an adequate education because of his parents' occupation, and that prompt Federal action be taken.

Research grants: The future progress of the Nation's social and economic growth is tied to expanding human knowledge in science and in other areas of research, including the humanities. We urge that appropriate institutions be supported financially so that the faculty and students will be able to explore the new frontiers of knowledge. Possibilities of specializations at different universities should be further encouraged.

Tax deduction: We recommend that a full tax deduction be granted to teachers, students, or parents of students, for the expenses of higher and continuing education.

GI bill: Numerous capable young people have been denied an opportunity to advance their academic status by the needless elimination of the educational provisions contained in the GI bill. We therefore urge that the educational policy of the GI bill be reinstated.

Educational TV: Existing national TV networks have failed to meet the demand for programing of a nature to induce creative thinking in the arts and sciences. Existing educational TV is not available in many communities and, in any case, such communities do not have the facilities for creating programs dealing with the classics and with the basic sciences. Therefore, we urge the Congress to study the feasibility of creating a publicly financed television network to make available programs of the arts and sciences, and where existing educational TV is available, such a network should cooperate with and supplement such local stations.

Cultural dissemination: An understanding throughout the world of the culture and philosophy of the United States with its consequent appreciation and acceptance can only be based on the knowledge of what we have established in our own land and an awareness of what we, as a people, now are. The means to disseminate the flavor of our culture has been provided the Administration by the International Cultural Exchange and Trade Fair Participation Act (the Humphrey-Thompson Act). We urge the Republican administration to utilize the power they have been given not only to send throughout the world our large artistic groups and universally accepted artists whose appeal is primarily to the sophisticated audiences of the world's caiptals, but also the groups with fine artistic merit who would represent our local creativity and to include in the exchange program, as was intended by the sponsors of this legislation, young artists of great merit (such as Van Cliburn who went to Moscow on private funds) so the world can come to understand our vitality and versatility. This program should be a true exchange program similar to the Fulbright, and all present programs should be administered by one agency.

Historic sites: The building of roads and housing need not deprive us of buildings of artistic and historic worth. The irresponsible despoliation by the Administration of historic sites and buildings must be halted. Legislation to preserve them must be passed. Of equal importance is the aspect of our Nation's Capital as representative of our national life. To this end we strongly urge support of a National Cultural Center in Washington, D.C., and the establishment of a Federal Advisory Council on the Arts so that our nation's capital will be a cultural mecca for ourselves and those who visit us.

Behind Khrushchev's Smile?

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. ROGERS of Colorado. Mr. Speaker, Mr. Keith A. Mitchell, a student at Adams State College, Alamosa, Colo., took first place at a five-State oratory contest. The prizewinning oration is as follows:

BEHIND KHRUSHCHEV'S SMILE?

(By Keith A. Mitchell)

The world's No. 1 Communist recently came to America in a blaze of nightmare portents, stained with blood, promising peace and shooting rockets toward the moon. As the nebulous personality was observed by many in our cities and relayed to others by newsmen, the American people complacently dismissed the most crucial question of our day: "What is behind Khrushchev's smile?"

We can interpret this spectral smile only by holding fast to the knowledge that world politics is serious and history is real. Our widespread dozing to the alarm of world communism may someday cause us to cry in the night of world domination that: "history is a nightmare from which I am trying to awake."

Most of us have failed to look beyond the smiles and promises of the taskmaster who holds one-half of the world's population in pharaohic bondage. We cannot see, behind the cavities of deceit, the monstrous subversive machinery being built in the United States with our own straw of ignorance, indifference and extreme optimism. The smiling countenance and beguiling words of Mr. Khrushchev have caused our people to place more faith in him than they would in his past record and his present motives. This, our national blind faith in the world's No. 1 Communist, was made verbal recently by a Denver housewife when she said: "The world situation did look bad," then continuing, she affirmed with utmost faith, "but Khrushchev is ready for peaceful coexistence now."

Mrs. America, if you alone had become a believer in Khrushchev's gospel of peaceful coexistence, there would be no problem. But you, Ma'am, speak for multiplied millions of loyal, yet blinded Americans.

To all Americans, men, women, and young alike, I warn you that the superficial good news of Khrushchev's coexistence gospel is not made sublime with a soon-approaching earthly paradise. The paradise Khrushchev desires is one in which 50, previously free and United States, are walled by curtains of ruby red.

It is high time that we, as Americans take a new and closer look at Nikita Khrushchev. But, as we look again, let us ponder with all gravity the most challenging and important question of our day: "What is behind Mr. Khrushchev's smile?"

Behind Khrushchev's disarming smirk, look to Marx and Engles who stated the objectives of the Communist movement: "The theory of communism may be summed up in a single phrase: Abolition of private property."

Now hear Lenin when he was the Pharaoh of world communism: "It is necessary to agree to any and every sacrifice, and even if need be, to resort to all sorts of strategisms, maneuvers and illegal methods, to evasion, and subterfuge." Lenin added further: "As long as capitalism remains we cannot live in peace. In the end one or the other will triumph—a funeral requiem will be sung over the Soviet Republic or over world capitalism."

The long-range design of international communism was put to blueprints 30 years ago in the Lenin School of Political Warfar in Moscow. But the most startling fact of today is the edification of a Communist world in every detail on those dusty blueprints. Dimitri Manuilsky, a professor at the school, taught his students that a war between communism and capitalism is inevitable. According to his prophecy, now is the time for the strongest surprise attack that the world has ever known. First the bourgeois would have to be put to sleep. Then the element of surprise would be a part of the most spectacular peace movement on record. There were to be electrifying overtures and unheard-of concessions. The capitalistic countries, stupid and decadent would cooperate in their own destruction. They would leap at another chance to be friends with the Soviets. As soon as their guard was down, the Communists would smash them with armored fists.

Especially today when the cold war appears to be thawing a bit with new strategy, we cannot afford to place confidence in a man representing the satanic diplomatic record of the Soviet Union. Yes; look behind Khrushchev's smile to March 1945 and June 1958, dates that can never be torn from the calendar of memory.

In March 1945, 16 top leaders of the Polish Government were invited to Moscow to participate in the conduct of negotiations. They were promised on the word of honor of the Soviet Government that they would be afforded safe conduct. All 16 were arrested and then vanished. Nothing further was heard of any of them until 10 years later when the wife of Gen. Leopold Okulicki was notified of his death 9 years before in a Soviet prison.

On June 17, 1958, when the Soviet news agency, Tass, announced the executions of former Hungarian Premier Imre Nagy, Gen. Pal Maleter, and the two other leaders of the anti-Communist rebellion of 1956, western leaders expressed shock and dismay. General Maleter, the hero of the rebellion had been seized by the Soviets when he met with them under a flag of truce to negotiate the withdrawal of the Red Army from Budapest. Nagy and his associates were executed, although they had received in advance a written guaranty of safe conduct when they left their asylum in the Yugoslav Embassy. Ever since the Katyn Forest Massacre, which came to light in 1943, it has been obvious that coexistence with communism is a contradiction in terms. International communism is a femme fatale, and this is she standing naked before the eyes of the world.

Our own internal security against communism has been weakened most by a lackadaisical attitude on the part of the public. It is unfortunately true that all too few people really understand what communism is. The greatest asset that the Communists have at present is not the hydrogen bomb, certainly not Soviet satellites, but world ignorance of Soviet tactics, strategy, and objectives.

We can no more save our Republic from communism merely by saying we are against communism, than parents can save their children from polio merely by saying they are against polio. To conquer any disease requires intelligent study to isolate the germ and discover the vaccine. As the No. 1 killer in the world today, communism is a disease which merits our urgent study.

We have looked beyond Khrushchev's smile. We have turned our vision back to Marx, Engles and Lenin. We have seen how their formulative way of life is at direct variance with everything we hold to be inalienable rights of every man under God: Life, liberty, and the pursuit of happiness. The objectives and goals of international communism are the same today as when they were penned by Karl Marx. The change is not in its ideology, only in its strategy used to proselytize. And the most effective method now is the abundant use of smiling promises. This new strategy is resulting in our biggest national problem, our apathetic attitude and the weakening of our resistance to communism. The only solution is to look beyond Krushchev's smile, both backward and forward. Do not accept my answer alone for the sinister motives behind Khrushchev's disarming smirk. Let the words of the No. 1 Communist himself offer the revealing answer as he did to an American television audience September 17, 1955:

"If anyone thinks that our smiles means the abandonment of the teachings of Marx, Engles, and Lenin, he is deceiving himself cruelly. Those who expect this to happen just as well wait for a shrimp to learn how to whistle."

Address of Gov. Robert B. Meyner, of New Jersey, 12th National Young Democratic Convention

EXTENSION OF REMARKS
OF

HON. NEAL SMITH

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. SMITH of Iowa. Mr. Speaker, the Young Democratic Clubs of America held their national convention in Toledo, Ohio, last November 17 through the 20th. Among the several great leaders in our country addressing the 200 delegates in attendance was the Honorable Robert B. Meyner, Governor of New Jersey. His speech was on a most timely and important subject matter, especially in view of the many walks of life now affected by the fourth branch of government, the administrative agencies and commissions. So that those who were not in attendance may have an opportunity to study these remarks, under unanimous consent I include excerpts of his speech in the Appendix of the RECORD.

The excerpts are as follows:

REMARKS OF GOV. ROBERT B. MEYNER OF NEW JERSEY, 12TH NATIONAL YOUNG DEMOCRATIC CONVENTION, TOLEDO, OHIO, NOVEMBER 20, 1959

Governor diSalle, Mrs. Louchheim, ladies and gentlemen, fellow Democrats, as a former member of this organization—I suppose you might call me a Young Democrat emeritus—I am proud and happy to appear before you for more than one reason. It gives me a chance to renew acquaintance with Young Democrats throughout the country—men and women who are not only potential leaders in the days to come, but men and women who already have attained positions of power and responsibility in the party and in public office.

Our party has young Governors, young U.S. Senators, young Members of Congress, young officials of every type who are serving the public with vigor, imagination, and that special kind of dedicated idealism that is the hallmark of the Democratic Party. In my own State of New Jersey since I took over as Governor in January, 1954, we have had a decided accent on youth in the filling of appointments. Many of my most valued aides are persons under 40, and they have brought to State government qualities of intelligence, energy, and unremitting zeal.

I am glad to be here, too, because you in this audience will play a vital part in the nominating convention of 1960 and in the ensuing election and—gathered here together—you personify the mighty force that will be set in motion next year to provide America with the kind of national leadership that it must have in the coming 4 years—the kind of national leadership that it is not getting now. Since 1953, we have had what might be called a passive custodian in the White House who takes action only when problems reach crisis proportions—but the times demand a far more positive, a more dynamic kind of action. Fortunately, our party is richly equipped with men who can furnish that kind of performance.

I do not know how many candidates the other party will have as the spring of 1960 warms into summer. At present, there is only one certain candidate, and one possible one. That adds up to two with a question mark. The question mark is my esteemed fellow-Governor, Nelson Rockefeller of New York, who is looked upon with a jaundiced eye by the old guard. He has the misfortune to belong to a party that has a weakness for monopoly—monopoly in politics as well as in business. It does not enjoy invoking the antitrust laws, but prefers to keep its eggs all carefully wrapped up in one basket. While the old guard pays frequent lipservice to the doctrine of free enterprise, it is often horrified when anyone seriously proposes to practice it. So it is possible there will be only one GOP candidate when spring rolls round again next year.

As for our side, it would be dangerous to throw a rock at this meeting for fear of hitting the next President. I do not know how many candidates the Democratic Party has and, if you count favorite sons, the number, let us say, is ample. Here is an example of free political enterprise, yes, and individual initiative, that would have delighted the heart of Adam Smith.

What it means is a strong confidence that the Democratic Party is going to win in 1960; and it means that the party is able to produce men of experience and stature who are highly qualified for the tasks that lie ahead. I notice some of the busy pollsters have not so sanguine a view as to our party's chances—but let me point out that these are the same gentlemen who figured in the election of 1948—when, in one of the most remarkable campaigns of all time—the Republican candidate succeeded in snatching defeat out of the jaws of victory.

Finally, I am glad to be here because I have a few things to say about a scandal of nationwide importance—a scandal that reaches into every home in America, and a scandal that involves the highest echelons of the national administration. I refer, of course, to the pollution and perversion of television while official Washington sat by dumb, stupid, and indifferent. Few things in recent years have shocked the American public as deeply. Thanks to a congressional hearing and following the strange suppression of a grand jury presentment in New York, the whole sordid story is coming to light. The closet door has been opened and the skeleton is plainly revealed. The Nation's airwaves, a great natural resource belonging to all the people, have been used to perpetrate a monstrous hoax, with the entire country as its victim. To paraphrase John Randolph, of Roanoke, we may say of TV today: "It is a thing of splendid abilities, but utterly corrupt. It shines and stinks like a rotten mackerel by moonlight."

But I am going to do more than to talk about the TV scandals. I am going to show that they represent but one phase of a clear pattern among the Big Six regulatory agencies that has afflicted our country since the present administration took over. In other words, the TV disclosures are merely symptomatic of a far more widespread disease. By the Big Six, I mean the Federal Communications Commission, Federal Aviation Agency, Federal Power Commission, Federal Trade Commission, Securities and Exchange Commission, and Interstate Commerce Commission.

These commissions were set up to exercise vast powers over some of the most significant aspects of the economic system. The FCC controls radio and television, as well as telephone and telegraph service; the FAA and ICC regulate all forms of transportation by air and land; the FPC regulates interstate gas and electric companies; the FTC, competitive and fair-trade practices throughout the economy; the SEC, the marketing and sale of securities. All of these commissions operate in fields of intimate concern to every citizen.

To put it another way, the business regulated by the big six constitute the very lifeblood of the economic system. The wheels of commerce, the power which enables it to function, the communications which constitute its nervous system, the financial markets which furnish necessary capital, the practices by which the products of commerce are distributed and sold—all these and many more are subject to the plenary power of the big six commissions. The decisions of these agencies may be of more immediate concern to the people than most decisions of the U.S. Supreme Court.

The big six are vested with prodigious regulatory powers. To them is delegated the authority to prescribe generally what shall or shall not be done in a given situation (just as legislatures do); to determine whether the law has been violated in particular cases and to proceed against the violators (just as courts do); to admit people and corporations (such as TV licensees) to privileges not otherwise open to members of the public (as the English crown once could do); and to render what amounts to money judgments. The right to grant or withhold a TV license amounts to the power of life and death over the industry.

Now, why have these big six commissions been created and vested with their awesome regulatory authority? There is no doubt the primary purpose behind the creation of all of them is the protection of the consuming public. The areas in which Congress has sought to regulate have had two principal characteristics. First, the businesses concerned tend to have monopolistic character or tendencies; second, the services provided by them are essential to the consuming public.

It is these two factors which have made regulation necessary. In its absence, monopolistic tactics lead to abuses before which the public is helpless. The lack of effective competition makes it a mere illusion to depend on the normal working of a free market. So Congress has given the big six their powers because this is the only way to correct the imbalance between these businesses and the consuming public—the only way the Government could deal with the enormous growth of corporations affected with a vital public interest. The challenge of big business—particularly business which has the potential of monopoly—inevitably called forth the response of big government.

Right here let me impress upon this audience of Young Democrats that it was the Democratic Party which established all of the agencies here mentioned. It did so over the bitter opposition of the Republican Party. The ICC came into being under President Cleveland; the FTC and FPC under Woodrow Wilson; and the remaining three under Franklin D. Roosevelt. Is it not highly significant that it was our party that acted in these important fields to protect the people? Sometimes I hear the silly remark that our two major parties are cut from the same cloth. Some people say they do not know the difference between them. Well, the creation of the regulatory agencies is an eloquent statement of the difference. It is not a historical accident that the Democrats acted to protect the consumer; it grows out of the very nature and the basic philosophy of our party.

Let's look now at the other side of the coin. It is not surprising that, under the present administration, the primary purpose of regulation has been all but relegated to bureaucratic limbo. All these agencies exist to restrict and police private enterprise, an endeavor hardly to the taste of a political party committed to the interests of big business. When the GOP took over in 1953, it was soon apparent it had little stomach for the job. Let me illustrate:

As head of the Federal Power Commission, a former power company lawyer—Jerome Kuykendall—was chosen. His task, among

other things, was to regulate interstate gas companies. At White House request, he drafted a bill in 1956 to exempt gas companies from FPC regulation. His philosophy: "I believe there should be a minimum of control."

George McConnaughey, a former telephone company lawyer, was picked to head the FCC. He, too, believed in "as few controls of business as possible." And he proved that he meant it. After he became chairman, FCC stopped an inquiry begun in 1948 of A.T. & T. charges for TV broadcast transmission—and this in face of the fact that the staff informed the Commission that it was ready and able to go to formal hearing.

Of course, you recall the appointment of Richard Mack to the FCC. The choice was incredible. He admitted to a congressional committee that he had no educational or professional qualifications to sit on that body. He left the post under a cloud. And it was shown that earlier he had used his position on a quasijudicial Florida commission to feather the nests of both himself and his sponsor.

The man chosen to head the Federal Trade Commission was an attorney who represented a company which had on a number of occasions been charged with antitrust practices. Men selected to head the FAA and SEC were from state commissions who were regarded as friendly to the very businesses they were supposed to regulate.

Effective regulatory power has been all but abrogated by the Federal Power Commission. You recall the notorious Hells Canyon case, where it discriminated against the public interest instead of acting in the public interest. The FPC adopted a tax amortization program resulting in windfalls of many millions to power companies under an accounting procedure contrary to that recommended by the National Association of Railroad and Utility Commissioners. The FPC permitted power companies to obtain what amounts to extensions of licenses far beyond the maximum 50-year period allowed by Congress. You recall the malodorous Dixon-Yates transaction of still another body, the Atomic Energy Commission. That case was so rotten that the administration was forced by facts and public opinion to abrogate the contract.

Such are some of the outlines of the dismal picture that has been unfolding since 1953. I could keep you here all afternoon giving you chapter and verse on all of the big six commissions, to show you that congressional purposes in their creation have been honored more in the breach than in the observance. The bumbling, inept, myopic John C. Doerfer, Chairman of the Federal Communications Commission, who let TV come to a pretty pass in the TV quiz cases, is no accident. He fits the pattern of other bix six appointments, which have been mediocre or worse. So does his behavior. The prevailing attitude of the big six is not to regulate, but laissez-faire, which, freely translated, means "let 'er rip."

Now we are told that no crime was actually committed—no, there has been no actual burglary, larceny, assault, or other such felony. Nothing is said by the responsible bureaucrats of the immense moral wrong done to the American public. We are told we need a law. Actually, we have had a comprehensive law in the field of broadcasting since Congress passed the Communications Act of 1934. Under it, no man can operate a TV channel without a license. To obtain a license, he must show that he will operate the channel in the public interest. He must show that the programing will serve more than his own pocketbook. He must promise to allocate time among different programs—so much for news, for public service, for local programs, and so on. Under the law, TV licenses are granted for only 3 years, and when the time comes for renewal, the FCC has ample chance to find out if the station has lived up to its promises.

A commission vigilant in its duties would have nipped in the bud the rigging of quiz shows. As far back as 1952—7 years ago—the FCC received a complaint of skulduggery on a major quiz program, from a contestant who said he had been coached. Do you know what the Commission did? It said the informant's "views were appreciated" and that the complaint would be "associated with the appropriate files" and that ended the matter. In other words, the informant was stymied by bureaucratic gobbledegook. The complaint of Stempler, who lost to Van Doren on "Twenty-One" and who finally broke the case open, was first made 2 years ago. He got in touch with the district attorney and sent his charges to the FCC. Presumably, his letter reposes in some never never land that has been the FCS wastebasket for other complaints.

It is hard to imagine where the FCC monitors and investigators have been all these years while TV sank lower and lower in its own welter of hucksterism, vapid entertainment, questionable advertising, canned laughter, rigged quizzes, phony commercials, under-the-counter purchase of TV plugs (known to the trade as the payola) and tear-soaked emotion put on tape today and shown tomorrow. It took a congressional committee to pry information out of the New York grand jury files, to bring the culprits to Washington, to wring the truth out of them, and to stir the FCC and FTC out of their torpor into belated—very belated—action. In the meantime, never a nudge from the Chief Executive, never a suggestion to FCC that direct action was in order. All we did get was an after-the-fact press conference, where the President finally gave voice to a pious hope that something should be done.

And may I remind you in passing that the congressional committee that acted is the same committee that unmasked Bernard Goldfine and that unhorsed the Great Stone Face of New Hampshire, Sherman Adams.

What is obviously needed in Washington is active and continuing direction from the top, an insistence that the departments of government carry out their appointed tasks, and that the regulatory commissions do just what Congress created them to do—protect and promote the public interest. There should be a renewed dedication to the tasks at hand, a large measure of initiative and imagination and renewed zeal, an unrelenting but fair carrying out of the letter and spirit of the statutes and regulations already on the books.

The pressure and inspiration must come from the very summit. As Governor, I know that the public expects me to be on top of every play, every day and every hour of the day. If commuter needs are pressing, I soon hear of it. If health standards are not maintained, there is a sudden volume of critical mail. If poultry and egg prices slide, farmers knock on my door. And so on. I am sure Governor DiSalle and other State executives know exactly what I mean. The public looks to the head man, and what is true of the governorship should be true of the Presidency. If the present policy of the regulatory commissions is minimum control of business and industry first, and the public interest second, then responsibility must be placed right at the door of the Republican administration.

Now, a glance at the future. Immense damage has been done to our Big Six administrative structure in the past few years, culminating with the TV explosion. But there is never such a thing in a democracy as a point of no return, for we have in our mechanism the cure for all evils. I refer to the massive power of an aroused public opinion, which can exorcise itself from evil men and evil policies. I have seen public opinion move mountains and perform seeming miracles. In the present instances, we have a guiding policy—the public interest, always. We have all the laws we need to produce not only legal but moral behavior among the great businesses subject to regulation.

What we need is superior leadership; the appointment of men of real merit and high principles to the Big Six commissions; a program of direct and zealous action that will breathe new life and vitality into existing law and administration. Perhaps I should say more explicitly that we need the kind of positive action which, under democratic auspices, created these agencies in the first place. If situations like Dixon-Yates and Hells Canyon, the Richard Mack case, the Adams-Goldfine mess, the gas industry exposé, the TV scandal are significant—they mean there must be a return to first principles and to simple copybook truths, an end to administrative hardening of the arteries, a new awareness of just what proper regulation of business and industry entails.

Mr. Justice Holmes—that great American—once said what we need is education in the obvious. Well, we have had that education in full measure in the last few years. What we need now is the courage and the will to act. As I look over this great audience, I know these qualities are here in high abundance.

Congressional Action Urged by Small Business

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from C. W. Harder, president of the National Federation of Independent Business, which was sent to the following individuals: Hon. Dwight D. Eisenhower, Hon. Lyndon Johnson, Hon. Everett Dirksen, Hon. John McCormack, and Hon. Charles Halleck.

Full text of Mr. Harder's message is as follows:

Independent businessmen nationwide are counting on you for leadership and support during this 2d session of the 86th Congress to make good fully on your 1956 platform promises.

We of the federation, the largest business organization in our country whose policies are set by direct vote of individual members, say you have a right to be proud of the progress made in the past three years in enactments that have, among other things: made Small Business Administration permanent, provided new sources of equity capital, $260 million in first-step tax revisions, legislated greater fairness into our labor laws, tightened up on antitrust supervision of chainstore giants, and provided speedier enforcement of orders assuring fairer competition, as well as provided progress payments on Federal contracts. Truly, you have helped do a big job, but there's unfinished business. Independents fur-

ther need action this year to provide, among other things:

1. Tax equality that will allow the Nation's more than 3 million self-employed businessmen to finance their private retirement programs on the same basis as their corporate brethren, and that will require cooperatives and their members to pay their taxes each year the same as their profit-making competitors are compelled to do.

2. Stronger antimerger laws by requiring big business to make advance disclosure of their merger intentions.

3. Further tax revisions that will provide allowances for increases in inventories and accounts receivable, and that will permit independents to finance estate tax payments through tax-free insurance policies or anticipation certificates.

4. Buying price equality for those forced to compete directly with factory-owned stores operated by their manufacturer-suppliers.

5. Further reduction in Government competition and Federal redtape reporting burdens.

All this can be done in the next 6 months before Congress closes for the conventions. One thing you can be sure. This Nation's 4 million small and independent enterprisers, their employees, families and friends will be watching all developments closely, and will use performance as a rule by which to measure the value of pledges that will be made in Los Angeles and Chicago this summer.

In short, you've helped to do a good job on the 1956 convention platform promises. Don't fumble the ball in the final quarter.

Education at the Collegiate Level

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, in order to meet the coeducational needs of its booming growth, the State of California found it necessary to establish two new State colleges, granting baccalaureate degrees, during the past year. One of these is the State College for Alameda County to be located in Hayward, Calif., in the heart of the Eighth Congressional District.

Dr. Fred F. Harcleroad, a distinguished scholar long identified with the San Jose State College, was called to the presidency of the new institution.

Dr. Harcleroad has a fine appreciation of what Congress has done in order to further stimulate education on the collegiate level under the National Defense Education Act and has so expressed himself in a letter to me that I take pleasure in making available to all of you through this medium:

STATE COLLEGE FOR ALAMEDA COUNTY,
Hayward, Calif., January 7, 1960.

Hon. GEORGE P. MILLER,
Congressman, Eighth District Alameda County, Calif., House of Representatives, Washington, D.C.

DEAR CONGRESSMAN MILLER: This past September 1959, the doors of the State College for Alameda County opened for the first time. As a tribute to the foresight of those who assisted in planning this new college, we had been granted the equivalent of $4,480 in funds under the terms of the National Defense Education Act.

As you may know, our college's primary mission in this inaugural year is the education of elementary school teachers. The terms of the National Defense Education Act student loan program are therefore peculiarly suited toward the needs of students in our elementary education curriculum.

During this first quarter the entire amount of our loan fund has been awarded to deserving students who intend to pursue a career in teaching. I want to take this opportunity to express to you and to your colleagues in Congress the appreciation of our college, students and faculty alike, for these readily available funds with which earnest young men and women may ease the financial burden of achieving the educational requirements for their careers in teaching. May I also add that I sincerely hope you will encourage your colleagues to continue their support of this most worthy Federal program.

Sincerely yours,
FRED F. HARCLEROAD,
President.

Nixon Weakness—A Democratic Thesis Examined

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. SPRINGER. Mr. Speaker, I append herewith a most interesting and thoughtful article by Roscoe Drummond, one of the outstanding independent political analysts on the American scene.

I cannot remember a writer who has better marshalled his facts and analyzed past results of Mr. NIXON as well as has Mr. Drummond in this article. These are not generalities, but facts and to the point. It bears reading by every person in America who is interested in the political situation in 1960.

NIXON WEAKNESS?—A DEMOCRATIC THESIS EXAMINED

(By Roscoe Drummond)

It is a good rule in political discussion to question everything. This means, I fear, that I am inviting you to question what I write in this column. But politics is not an exact science and everybody can be his own expert.

What I propose to do is to question the Democratic thesis that RICHARD M. NIXON is absolutely made to order for them to defeat next November, that he is the Republican nominee whom they can most easily measure and inter at the polls.

I am not predicting Mr. NIXON's election. I am simply questioning the Democratic fixation that the Republicans are going to do them a great favor by nominating Mr. NIXON, the man they can so assuredly bury.

The Democratic theories are:

That NIXON is the "darling" of the right wing of the Republican Party and will, therefore, be unable to attract the liberals in either party.

That no Republican can win the presidency without a large number of Democratic votes and since NIXON among Democrats is the "most hated" Republican, he can't get a large number of Democratic votes.

That since the Vice President played a sharp, hard-hitting partisan role in the 1954 and 1956 elections, when he was the administration's leading campaigner, he will have great difficulty making any effective appeal to the nonparty, floating vote.

There, as many Democratic professionals see it, you have it all wrapped up for the Democratic nominee whether he be Stevenson, SYMINGTON, or KENNEDY.

But is it all wrapped up with such tidy certainty? There are some Democratic leaders who see this kind of talk as wishful thinking. Here are the factors which caused them to see NIXON as a candidate hard to beat:

NIXON is no conservative in the right-wing sense. When he took up politics in 1946, he joined up with Harold Stassen, then the focus of many Republican progressives. He has always been nearer the middle of the party than on the right and his major service as a Member of the House was to help lay the foundation, through his service on the Herter committee, for the Marshall plan.

Does NIXON have a special talent for alienating Democrats? The record does not bear out the cliche. In 1948 NIXON won both the Democratic and the Republican nominations for Congressman in his district. In winning the Senate Republican nomination in California in 1950, he got so many Democratic votes that he nearly took the Democratic nomination away from Helen Douglas, whom he subsequently defeated in the election. Further, all the public opinion polls show NIXON taking some 20 percent of the Democratic votes in trial heats against different Democratic candidates; he gets a far higher percentage of the Democratic votes than the Democrats are able to attract from the Republicans.

Does NIXON repel the independent, nonparty voter? There is considerable evidence that he attracts them. All the signs point to the fact that he is stronger than his party—which he would have to be to win. In the latest trial heat in which NIXON leads Stevenson 56 to 44 percent, NIXON polls 60 percent of the independent vote to Stevenson's 40 percent. In leading KENNEDY 53 to 47 percent, NIXON wins the independent vote over KENNEDY in the same proportion.

I am not concluding that NIXON can win the Presidency easily or that he can win at all. Nobody knows. Even if the polls, which show NIXON leading both Stevenson and KENNEDY, are an accurate reflection of today's voter opinion, the state of voter opinion may well change by next fall—either way.

There is one further question which can be fairly raised. It is true that most Democrats say that NIXON is their favorite to defeat, but possibly they don't believe it. I suspect they count him a powerful and difficult opponent.

Alabama Legislature Supports Development of Coosa-Alabama River System on Partnership Basis

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. ROBERTS. Mr. Speaker, last fall the Legislature of the State of Alabama adopted the following resolution, urging Federal participation in development of the Coosa-Alabama River, one of the Nation's great undeveloped waterways.

In accordance with Corps of Engineers plans, navigational development must begin at Miller's Ferry on the Alabama River, and it is for planning funds at this point that the State legislature urges.

Under leave to extend my remarks, I include the resolution to which I have referred:

HOUSE JOINT RESOLUTION 75

Whereas for many years much has been said and written about the proposed development of the Alabama-Coosa River System in the States of Alabama and Georgia, and it has been the intent and purpose of the people of our State for a long period of time that the complete development of this great waterway would increase the economy of the river basin of approximately 26,000 square miles, the southeastern region, and the Nation; and

Whereas the Corps of Engineers, U.S. Army, has over the years conducted studies and surveys and has found the development of the Alabama-Coosa River System for navagation and other purposes to be economically justified, and did recommend the initial and ultimate comprehensive plan of development for this great waterway to the Congress of the United States; and

Whereas the 79th Congress by enactment of Public Law 14, approved March 2, 1945, did authorize the development of the Alabama-Coosa River System for navigation, flood control, power, and other purposes, including the initial plan of development of the river system consisting of one navigation and two multiple-purpose dams to be constructed on the Alabama River and one hydroelectric power dam on the Coosa River; and

Whereas the development of the Coosa River for the generation of hydroelectric power has suspended by enactment of Public Law 436 by the 84th Congress to permit a private utility, under certain conditions and requirements of a license later issued by the Federal Power Commission, to develop the Coosa River for hydroelectric power; and

Whereas the President of the United States did on January 6, 1955, in the address of the state of the Union delivered by him to the 84th Congress, specifically mention the Coosa River as complying with the administration's partnership policy, and did state in the address, quote: "Now, of course, the Federal Government must shoulder its own partnership obligations by undertaking projects of such complexity and size that their success requires Federal development"; and

Whereas the authorized projects on the Alabama River section of the waterway are of such size and complexity that in order to maintain the economic feasibility, the development must be accomplished by the Federal Government; and

Whereas during recent years there have been certain restrictions placed on the Corps of Engineers by the executive department of the Federal Government that have apparently prevented the Engineers from allocating funds to resume advanced planning of the Millers Ferry multiple-purpose dam, this being scheduled by the Corps of Engineers as the first of three dams to be constructed on the Alabama River; and

Whereas, a further postponement of the development of the river involves a continuing loss in the economic advancement of the States of Alabama and Georgia and the Nation, and further will continue to delay the Federal Government's responsibility in assuming its initial partnership obligations in the ultimate development of the Alabama-Coosa River system from the mouth of the Alabama River to Montgomery, Ala., then to Gadsden, Ala., and eventually to Rome, Ga.: Now, therefore, be it

Resolved by the House of Representatives of the State of Alabama (the senate concurring), That the executive department, Bureau of the Budget, remove any restrictions on the Corps of Engineers, U.S. Army, in the allocation of funds for development of the authorized projects on the Alabama River; and further, that the Congress of the United States is hereby requested to make available at the 2d session of the 86th Congress an appropriation for the resumption of advanced planning of the Millers Ferry multiple-purpose dam, Alabama River; and further, that the Corps of Engineers allocate funds to be included in the fiscal year 1961 budget for plans on the initial project in the ultimate development of the Alabama-Coosa River system; and further that a copy of this resolution be forwarded to each member of the Alabama Congressional Delegation, and that they be urged to exert their every effort to expedite the complete development of the river system, and that they do concentrate their efforts in securing an appropriation from the present Congress during the second session that convenes in January 1960; and further, that a copy of this resolution be transmitted to the President of the United States, to the Director of the Bureau of the Budget, and to the Chief of Engineers, Corps of Engineers, U.S. Army.

Adopted by the house of representatives, October 13, 1959.

Concurred in and adopted by the senate, October 30, 1959.

Approved by the Governor, November 2, 1959.

National Council of the Churches of Christ Condemns Right-To-Work Laws

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. METCALF. Mr. Speaker, I would like to call to the attention of the Congress the recent action by the National Council of the Churches of Christ in the United States of America in supporting the principles of collective bargaining between management and labor, and condemning so-called right-to-work laws which seek to subvert these democratic processes.

The general board of this great church group made its major policy pronouncement on December 2, 1959, declaring that the decision on the question of union security in labor-management contracts "should be left to agreement by management and labor through the processes of collective bargaining."

It is this tried and proved provision of our Federal labor-management law that the misnamed right-to-work proposal seeks to destroy, in ruthless disregard of the rights and wishes of 97.1 percent of our Nation's wage earners.

I believe it is pertinent to note that the National Council of the Churches of Christ is the voice of 35,500,000 members of 30 Protestant communions.

I am convinced that the position taken on the right-to-work issue by this eminent church body represents the best interests and welfare of all our citizens.

The National Council of Churches merits the commendation of Congress for its forthright and unequivocal stand against a type of punitive legislation that already has done great harm to working people and labor-management harmony in several States in which it has been enacted.

It is such fearless action as that taken by the National Council of the Churches of Christ, and a similar pronouncement last summer by the 171st general assembly of the United Presbyterian Church, which should help lift this oppressive law from the shoulders of working people, and prevent its imposition on States still free of its shackles.

I have that portion of the text of the policy pronouncement of the National Council of the Churches of Christ in the United States of America, as adopted by the general board, December 2, 1959, which deals with the right of management and labor to agree to union security through the democratic processes of collective bargaining.

Church policy on this important issue is enunciated in sections 4, 5, and 6 of the pronouncement by its general board. These sections follow:

A PRONOUNCEMENT: A STATEMENT OF THE NATIONAL COUNCIL OF THE CHURCHES OF CHRIST IN THE UNITED STATES OF AMERICA

Ethical issues in industrial relations of concern to Christians, adopted by the general board, December 2, 1959

(4) Freedom to bargain on issues of mutual concern: We believe that collective bargaining can be and has proved to be a social instrument of great worth in preserving vital freedoms in our economy. To the extent to which labor and management act with a high degree of social responsibility in the process of bargaining they should be given freedom to deal with issues of mutual interest. One such issue involving this freedom which has come to the forefront of public attention is the right of the two parties to include in a bargaining contract the element of union security, as represented by membership as a basis of continued employment. On this point it is the opinion of the general board of the National Council of Churches that union membership as a basis of continuing employment should be neither required nor forbidden by law: the decision should be left to agreement by management and labor through the processes of collective bargaining. Union membership as a condition of continued employment is not supported by this statement as a subject of collective bargaining unless the union concerned is recognized by established processes as representative of all employees in the bargaining unit.

(5) Democratic safeguards for employees: The following additional safeguards should also be required under any circumstances where union membership is established as one of the conditions of employment:

(a) That there should be a periodic review by the parties to the agreement of the provision requiring union membership as a condition of continued employment.

(b) That individual members should be protected against abuses by the union through provisions in union constitutions. If such constitutions are adopted the provisions should be made enforceable in the courts. Such protection should include such elements as:

1. Open membership without excessive initiatiton fees and dues, and freedom from discrimination of race, creed, color, national origin, and sex.

2. Free and regular elections of union officials with ample provision for free and secret expression of opinion on nominations, elections, and policy issues.

3. Adequate protection against arbitrary or discriminatory treatment of those who hold a minority opinion on union policy and practices.

4. Adequate protection for those individuals who, for reasons of religious belief, cannot participate in all conditions of membership.

5. The means whereby members may appeal the decisions of unions, of officers of unions, especially in those instances involving expulsion. Union provisions should be exhausted before turning to the courts.

(6) Moral responsibility and management power: In the above section we note some of the particular issues affecting organized labor, including the concentration of power. The changing position of management in the structure of industrial society has posed a similar problem of increasing importance. Formerly management and ownership were in the same individual or partnership; the interests and power of the one were identical with those of the other. But more and more management today does not coincide with ownership. Power without ownership and frequently not under the direct control of ownership carries the possibility that such power may be used apart from the welfare of the owners as well as of others in society affected by it. Collective bargaining should be recognized as one check on such power. The ethical dimensions of the problem posed by the power of management in this regard should be a growing concern of Christian people.

CONCLUSION

As Christians we recognize the vast temptations of pride and self-will in the wealth and power that have come to mankind in this technological age. Therefore, we beseech Gods' grace that we may have the humility and the sensitivity to use the gift of economic power for the glory of God and the welfare of all mankind. 73 for, 16 against, 12 abstentions.

Price Tags, No Values

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. DADDARIO. Mr. Speaker, the American people have been disappointed in recent months by the evidence uncovered by the Committee on Interstate and Foreign Commerce regarding the way in which producers of national television programs have cynically distorted the values in preparing entertainment programs.

The committee, under the distinguished chairman from Arkansas, has examined this question partly in the light of how well the Federal Communications and Federal Trade Commission have carried out their mandate to protect the American people. When the Congress established these regulatory commissions, it was intended that they should uphold those interests—not the interests of the industry they were empowered to regulate.

The record is clear, I believe, that vigorous regulation has not been attempted. It may be that further legislation will be necessary in this session to clean up this mess. The American people do not trust the cynicism and commercial self-seeking that has influenced the matter which is carried on the airwaves that ought to be kept clean of pollution. As an outstanding expression of this distrust, and the feeling that trade practices have gone to nauseous lengths, I offer for the record a column written by Thomas E. Murphy, a nationally known commentator of the Hartford Courant, which highlights some of the ridiculous claims put forth on television—claims that are discoloring, to say the least, our manners and morals:

So far in the discussions about TV rigging hardly anybody has said anything about the day-by-day erosion of our manners and morals that is being brought about by this medium of so-called entertainment and enlightenment. I am not talking about the rigged quiz shows. I never watched them anyway because I get no particular pleasure out of that kind of so-called entertainment. Even worse are those panels where people guess prices. To me that is symbolic of the whole thing—price tags but no values.

I am referring to the debauchery of the language, of the health, and of the morals of the country. TV is working hard in all three categories. In the first we are treated to a continuing sequence of yups and nopes by illiterate actors playing cowboys while Madison Avenue consciously distorts the language so that it will fit snugly into a commercial. It may taste good like a cigarette should, but to me it sounds like hell.

In the area of hypochondria TV is doing its swellest job. It is making the American housewife and her family more conscious of their internal workings than ever before. People have sick headaches, nagging backaches, sinus drip, and hacking coughs. There are pills that open gaskets in your stomach and there are others with three-way action. Night after night you can watch stomach acid eating cloth, or listen to the rival claims as to which cigarette is less carcinogenous than the other. Or if you wish you can be bemused by the five New York doctors whose identity I have been trying to learn for years. The trade says it would be unprofessional to reveal their names. Gad, what high ethics.

Currently my favorite is the dissertation on fat globules, which are regularly made to pass through the opening in a glass flask, by a pitchman who meanwhile tells you how the fat globules are made smaller. Fat globules from a fat slobule, I say. I have had fun in the past checking on some of these claims. Hospital-tested, I found, meant that an outpatient clinic in a New York hospital had once tried the stuff, but it had not been reported in a medical journal. A cigarette company, of which I inquired about the medical authority who said there was no damage to nose and throat, did not answer. Instead they tried to bring pressure to bear on me through a New York advertising agency.

In the wonderland of TV people don't get relief, they get fast relief or blessed relief. Sometimes it is both fast and blessed. You look better fast and you feel better fast, too. But believe me, Bud, if you keep listening to these patent-medicine pitchmen, you'll have nagging aches and pains from head to toe, your sinuses will drip, your hair will be unruly, people will say you look like you got the gray sickness or perhaps tired blood. Thus does TV help to sell us the idea of our own poor health.

The third area of debauchery is that of morals. TV has taught us that all human problems can be solved by gun, knife, or noose. It has taught us the humor of watching a human being go plummeting through a window to the street below, as the hero washes his hands and says, "Happy Landing." No man is wholly immune to the forces that shape his environment. If one does not react violently to TV's continued suggestion of sadism and violence, as the weak-minded and psychopathic do, there is still a blunting of sensitivity, because of the repetitive hangings, shootings, garrotings, and defenestrations.

And by the way, have you odor proofed your body today, or renewed your acquaintance with the miracle of liver bile?

Address by Hon. G. Mennen Williams

EXTENSION OF REMARKS
OF
HON. NEAL SMITH
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. SMITH of Iowa. Mr. Speaker, one of the young Governors in the United States is the oldest in point of service. He is the Governor of Michigan, Hon. G. Mennen Williams, now serving his sixth term. He was one of the principal speakers at the national convention of the Young Democratic Clubs of America and as chairman of the convention, I noted the enthusiasm with which his speech was delivered and received. So that those who were not among the 2,000 delegates in attendance may benefit from this address, under unanimous consent I include it in the Appendix of the RECORD.

The excerpts from the address on November 20, 1959, at Toledo, Ohio, are as follows:

EXCERPTS FROM AN ADDRESS BY THE HONORABLE G. MENNEN WILLIAMS, GOVERNOR OF MICHIGAN, DELIVERED AT THE 11TH BIENNIAL CONVENTION OF THE YOUNG DEMOCRATIC CLUBS OF AMERICA, CIVIC AUDITORIUM, TOLEDO, OHIO, NOVEMBER 20, 1959

Young people of the Democratic Party unite; if you don't, you have nothing to lose but your futures.

Today I come to you, not to praise you, but to challenge you. This meeting may well be the most important political meeting of 1959.

Why do I issue this challenge to you? Why do I say that a meeting of the Young Democrats may well be more important than all the meetings of seasoned and more influential veterans?

Because today's new problems and opportunities require a new vision and a new faith. You have the courage and the will of a new generation.

You can take the best of the New and Fair Deal programs and build. Naturally, I am proud that I had a part in shaping New Deal Washington, a small part, but a part, nonetheless. I was an attorney in the Social Security Board.

But we alumni of the New Deal are apt to forget we don't have all the answers. Sure, America needs to update its New Deal programs—increase social security coverage and the rest. Of course, we have to take the principles of the New Deal and apply them to new problems as they come up. For instance, we should consider applying the

social security concept to a national health insurance plan.

But these programs, necessary as they are, are not the ultimate answer to the new challenges before us.

There is an old Indian adage which says the secret of success is to copy someone else's original ideas, omitting only the mistakes. Well, that's not good enough for the Democratic Party. You must provide new perspectives—not just a patchwork job on the old policies.

Sputniks go up only after a myriad of unsuccessful experiments. We must keep experimenting—socially as well as scientifically. Experience limits mistakes, but it also limits the inclination to take chances. That is the great price of experience.

Well, the Democratic Party has plenty of solid experience: You can make this experience the launching pad for a glorious future. You can begin to shape the political ideas of the sixties—and they must be adventurous ideas, experimental ideas, taking-a-chance ideas.

The difference between the Democratic and the Republican Parties is that the Republican ideology really comes down to nothing more than a rationalization for the policies of the past. They even forget that, in the beginning, those policies were usually Democratic innovations—the Republicans don't realize their worth until they are out of date.

The Democratic Party, on the other hand, has always tried to provide the people with a sense of direction for the years ahead—a national purpose. The New Deal provided this direction, this sense of public values. Harry Truman's memorable civil rights report, "To Secure These Rights," provided this sense of direction. A national direction is part of the national tradition. It dates back to the proclamation in the Declaration of Independence of certain inalienable rights—for all time.

It was in the tradition of our belief in a manifest destiny—a belief which was current when we had what seemed like a perpetual frontier.

The Republicans would have us believe that we have come to a dead end; that, therefore, we should be happy with what we have, and enjoy it while we can.

We have not come to a dead end. We are on the frontier of a new era of possibilities. But the picture of this era has not yet crystallized. Instead of trying to capture this vision, the Republicans mope around like beatniks in Brooks Bros. suits. They have given up, but they try to camouflage their despair in Madison Avenue respectability.

Well, the job of the Democratic Party, when it wins in 1960, will be to provide this new vision, and to give this sense of national purpose, for which the people are so eager.

And you young Democrats must be pioneers of the new frontier. You can make the Democratic Party the party of the sixties by thinking and talking now of a platform for the sixties.

And when you do so, you can rest assured that you are not turning your backs on the alumni association; Franklin Delano Roosevelt and Harry S. Truman would be the first to remind us of the Biblical injunction to put new wine into new skins, for the pulsating life of tomorrow will not be contained in the programs of yesteryear.

As only one example of the new kind of problems you can push, I cite the newly recognized issue of economic growth. The Republicans are content to have our economy creep along at 2 percent or thereabouts.

They dismiss the need for new housing, schools, hospitals, highways, aid to depressed areas—they dismiss all of these in their own weary way, talk of financial irresponsibility, and call us visionaries.

This kind of defeatist and irresponsible talk, when are are on the threshold of an age of abundance, amounts, virtually, to the embezzlement of our future.

You must help identify the Democratic Party of the sixties as the party of economic growth. Responsible economists such as Kenneth Galbraith, Leon Keyserling, and many others, assure us that we can double our annual growth rate. But we need an administration with a negative program for explaining economic sloth.

A more rapidly growing economy is not growth for growth's sake.

It is growth for the sake of elevating our whole educational process. We must not sit by while 150,000 to 200,000 of the top quarter of our high school graduating classes don't go on to college.

The Republicans' answer to the need for growth is merely to wave the inflation flag. And the Republican answer to the inflation threat is to drive prices up with a tight-money policy which yields bankers better than 4 percent for school loans.

This shows a value chaos. It shows a lack of understanding of our economy. It shows an inability to look ahead. It shows a social myopia. In other words, it shows us that nobody except the bankers can afford 4 more years of republicanism.

When I was first elected, I was the third youngest Governor in the United States. Now, six terms later, I am the senior Governor in the United States. Thus I feel that, after many years of being advised, I must now shoulder the burden of doing some advising.

We have moved beyond the New Deal instruments of pump priming. Now we need new pumps, indeed, vastly conceived power projects. You must think in these new and challenging terms.

You must draft a program for the Democratic Party which grapples with the issues and problems of the future. And you must do so not with an eye to political stratagems; you must do so with an eye to the public hunger for a party with a sense of purpose—a truly liberal party, fearlessly fighting for a better future.

Where Is the First Mrs. Khrushchev?

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David E. Green and Henry Jordan which appeared in the October 4, 1959, issue of the American Weekly concerning the fate of the first Mrs. Khrushchev:

WHERE IS THE FIRST MRS. KHRUSHCHEV?—DEAD—OR IN A SOVIET SLAVE CAMP?

(By David E. Green and Henry Jordan)

Recent reports from Moscow ask us to believe that Nikita Khrushchev's former wife departed this world in 1938.

It is a lie that she died then. Her fate at this moment is uncertain. Only Khrushchev and his intimates know what has become of her. He had her doomed in the first place.

In lieu of a divorce, he engineered her arrest and deportation to slave camps. Over the years, prisoners since freed have met her and shared her misery. Two years ago she was still around—a tragic figure vegetating in filth and despair.

In America, Khrushchev worked hard to lull the public into complacency. Among his tricks was the fiction of being a devoted family man. The truth behind that reassuring facade has never been told. Here, for the first time, is the story, as drawn from many sources here and abroad.

The facts take us back to 1937, the year Stalin sent Khrushchev to the Ukraine as his special purger. Nikita roared into Kiev, the capital, aboard an armored train belonging to the railroad secret police. Khrushchev even then liked to stress his domestic side. Accompanying him on the trip were his first wife and their four small children.

On arrival, Stalin's special envoy cried, "I will root out the enemies of bolshevism and kill them off like roaches." Before long, 400,000 men and women had been murdered outright and several million sentenced to the slow death of the slave camps.

To relax from the day's work, Nikita often would join his comrades in dusk-to-dawn carousals. The climax would be a visit to the women's ward of a political prison. There the "devoted family man" would pick the prettiest girl from a lineup of prisoners.

Then came the night he first laid eyes on the woman who one day would join him on his trip to America. She was Nina, a singer and piano player, close to 30, blackeyed, darkhaired, overweight, and not much of a performer. Being the daughter of a former Czarist officer, she displayed a certain amount of breeding and education—and class was what Khrushchev hankered after at this point.

Finally, he talked her into marriage, although he still was a married man. A divorce would have been risky for political reasons. He owed much to his wife of 18 years. It was she who had taught him to read and write, had prodded him on, guided his steps.

Rejected, she might turn on him with the fury of a jilted woman.

Obliging pals from the railroad secret police provided a substitute plan. Framed on charges of harboring religious feelings and sympathizing with purge victims, Mrs. K. was arrested and sent off on the dead-weary rounds which are the lot of the Soviet slaves, a nightmare shuffle from camp to camp.

Among those who got to know her was an American, John Noble, himself a prisoner for nine and a half years. Noble's integrity is evidenced by the fact that Billy Graham wrote the introduction to his latest book, "I Found God in Soviet Russia," published by St. Martin's Press. He met Mrs. Khrushchev at Potma, a camp cluster some 300 miles southeast of Moscow. Among slaves who arrived from another camp one day was Mrs. Gorskaya, a haggard aged woman dressed in filth-stiffened rags. Within a few days, word had spread through the camp that Mrs. Gorskaya was the ex-Mrs. Khrushchev, known now by an assumed name.

This was toward the end of 1953, when Khrushchev was scrambling for the top spot. The cautious camp guards played it both ways, or as John Noble tells us, "Without seeming to, they were easier on her than on the other prisoners and she was very much in their eyes."

When Noble tried to talk to her about her life with Khrushchev, she just clamped her gray flabby lips together and stayed silent. However, once she did mention that she had been imprisoned on trumped-up charges.

The other Americans who met the ex-Mrs. Khrushchev at Camp Potma were U.S. Army privates Marchuk and Verdine, both grabbed by the Reds in Berlin. Still another campmate, somewhat later, was Mikics Kahllay, son of a former Hungarian foreign minister.

For years, people within reach of Soviet violence have known better than to bring up the subject of the vanished Mrs. Khrushchev. One mention of her led to a prompt,

almost ludicrous reaction. This happened when Dr. Bela Fabian, former judge and member of the Hungarian Parliament, picketed a New York reception which was attended by Soviet Ambassador Mikhail Menshikov.

Dr. Fabian's group displayed signs reading, "Relieve Mrs. Khrushchev from the Potma Concentration Camp."

When a newsman asked about the signs Menshikov screamed, "This whole thing is a damned lie!"

Khrushchev, by then struggling for respectability, appears to have been upset by the ghost come to haunt him. Within a couple of days, he had Mrs. Khrushchev parading up and down the promenade at Karlovy Vary, the renowned spa in Czechoslovakia.

But, as Dr. Fabian laughingly points out, "She was a later Mrs. Khrushchev and everyone knew it!"

The recent drumbeatings in Moscow informing the public of Mrs. Khrushchev's death in 1938 have a sinister ring. They sound very much like taps for Mrs. Gorskaya, the dictator's early helpmeet, who taught her the three R's and never protested a purge—even her own.

Antistrike Powers Are Needed

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. ROBISON. Mr. Speaker, it should be apparent to all of us that the settlement of the steel dispute, no matter how welcome, has actually only postponed the urgency with which Congress should consider the continuing threat to our economic strength posed by nationwide strikes. Under leave to extend my remarks, I include the following editorial from the Christian Science Monitor of January 6, 1960:

ANTISTRIKE POWERS ARE NEEDED

If the steel strike had been resumed instead of a settlement being reached, there is no question but that Congress would have been in an uproar to get something done. There would have been speeches on the inadequacy of laws which permit disputes between capital and labor to tie up nationwide industries against the public interest and safety.

The fact that one threat has passed—though not until after a 116-day strike by 500,000 men—does not alter the companion fact that a similar shutdown of employment, production, and services, with damage to the consumer and the general welfare, could take place almost any year in any of several industries: coal, automobiles, rubber, oil, aluminum, ocean shipping, truck transport, airlines, telephone service, and others.

Actually, the United States faces a serious prospect of a nationwide tieup of its most basic transportation, the railroads, within the year if deep-lying major differences between unions and management over working rules or "featherbedding" cannot be resolved by negotiation.

Any Government conciliation or mediation efforts in that contest will be governed not by the Taft-Hartley Act, under which an 80-day injunction was obtained in the steel strike, but by the Railway Labor Act of 1926. Should not the appropriate committees of the Senate and the House of Representatives inquire now whether the provisions of that law are equal to the tests ahead?

And should the stark lesson of the breakdown of the national emergency provisions of the Taft-Hartley Act be forgotten simply because two gentlemen in Washington have shaken hands over a contract that will cost the steel companies reportedly a billion dollars and the consumers of steel probably a great deal more?

Under the Taft-Hartley Act (passed in 1947) the President of the United States cannot intervene until a dispute, in his judgment, imperils the national health and safety. He then appoints a board of inquiry to determine the position of the parties, but the board is powerless under the law to announce recommendations for a settlement of the dispute on the basis of its findings.

Senator Taft, principal sponsor of the act, came to the conclusion only 2 years after its passage that boards of inquiry should have this authority to make recommendations. This was one of a number of amendments he proposed. Such a report by a presidential factfinding board might not end a dispute but it would have great effect by helping the public to form a judgment.

It is just as well that Congress will not be pressed to go to the extent of imposing compulsory arbitration on business and labor. But the lesson of the steel strike should be remembered to the extent of amending the Taft-Hartley Act so that a President could intervene earlier in a major dispute and could appoint a board with power to propose an outline of settlement.

Farm Program

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD the fourth of a series of five articles on the farm subsidy and surplus problem which appeared in the Los Angeles Mirror News during November 1959:

CITY TAXPAYERS FOOT HUGE BILLS—FARM SUBSIDY SYSTEM ENRICHES RICH

(By Jack Tobin, Mirror News staff writer)

When the first light of day spread over the rich San Joaquin Valley this morning, 35 mechanical monsters growled their cotton-picking way through 5,700 acres belonging to E. C. (Clarence) Salyer, near Corcoran.

Each one of these mechanical pickers cost Salyer more than two Cadillacs. But they indicate Salyer is, indeed, one of the big men in California agriculture.

By sundown today, each one of Salyer's doubleheaders (two-row pickers) will put an average of 10 bales of cotton in Salyer's own $300,000 gin for processing.

By sundown today, Salyer will have picked about $50,000 worth of cotton.

And by the time the entire harvest is in, he may have picked $2,700,000 worth of cotton. And by the time the production costs are counted, Salyer may wind up with from $275,000 to $300,000 net profit.

Clarence Salyer is worth studying because, in many ways, he epitomizes the big independent and even bigger corporate California farmer who can't lose for winning under the price support program.

CALLED COUNTY'S UNCROWNED KING

Some of the folks up the valley call Salyer the uncrowned king of Kings County. Some say he's a land-grabbing tyrant. All will say they believe Salyer has made a fortune from farming.

He won't deny it.

"I started in this valley working for wages," he said. "Now I'm farming 30,000 acres.

"Only, hell, we got more than that. We got grazing land, range land, but we're still small fry, believe me."

As you drive down the road from Hanford, towering grain elevators—Salyer's monuments—are visible for miles. But there isn't a sign on them to indicate ownership. You don't know you're on Salyer property until you're three-quarters of a mile south and an airport is off to the east.

Then you see it, a sign across the hangar: Salyer Farms Airport.

North and east is a grove of trees. Within this beautifully landscaped buffer is the ranch-style home of E. C. Salyer. It's commodious but not palatial. To the rear is a large swimming pool.

It's not until you go back to the grain elevators that you really learn of the Salyer empire. Emblazoned in gold letters on a glass door are the names of his companies: Salyer Grain & Milling Co., Salyer Farms, Salyer Land Co., Salyer Farms Airport, Salyer Water District, Lone Oak Canal Co., New Deal Ditch Co.

These are all part and parcel of Clarence Salyer, the man who rides herd over his domain in a radio-equipped, air-conditioned Cadillac or in his own personal airplane.

Clarence Salyer is a round-faced, bald-headed man, tanned by the wind and sun. His belly rolls over his western belt in a comfortable fashion.

He wears a worn plaid shirt, one pocket torn slightly from his bulging notes. Army-type suntans are his work-a-day pants. He wears a 10-gallon strawhat, frayed in front from his constant tug.

Clarence Salyer is sort of a Wallace Beery type—hard-nosed, gruff, yet gentle. One eye squints, the result of an accident during his muleskinner days as a youth.

I met him one hot, humid, dusty afternoon. We shook hands in front of a water-cooler in his outer office. Above it hung a framed certificate:

"The Boy Scouts of America awards this certificate to Salyer Farms as a guardian of scouting."

"Start talking, boy," Salyer growled. "What'cha want?"

I told him the Mirror News wants to dig out the story of the price support program.

MODEST OFFICE

"Come on, let's go upstairs where we can really chew on this," he said.

His office is small and modest. A steel desk and three chairs. A bank calendar and map of San Joaquin Valley. The desk top was clean, except for a telephone.

Salyer tilted back in his chair, took off his straw hat, pulled out a red bandanna and wiped his brow.

"Sure, I've used price support loans," he said. "Name me an independent farmer who doesn't.

"But I've paid 'em back. All of 'em. The Federal Government has never failed to make money off me yet."

BARLEY FORFEITED

Federal accounting records don't back Salyer up.

They show in 1956 that Salyer Land Co. forfeited 595,085 bushels of barley under loans totaling $968,312.

They show in 1957 the same Salyer Land Co. forfeited its entire barley loan of 1,452,716 bushels valued at $1,554,828. The same thing again in 1958 for 311,320 bushels of barley under $637,724 loan.

They also show that Salyer—among others—also catches them coming from the other direction. Federal records show the Salyer Grain & Milling Co. was paid storage fees for Government-owned grain totaling $604,517 in fiscal 1959. Total grain storage payments to Californians in fiscal 1959 were $8,144,000.

OTHERS DO IT

But Salyer doesn't stand alone in forfeiture of Government price support loans. Plenty of other big farm operators followed the same path.

In 1957, Giffen, Inc., of Huron, owned by Russel Giffen, forfeited barley valued at $1,393,764. Westlake Farms at Stratford turned back to Uncle Sam 1,183,475 bushels of barley worth $1,215,978 in 1957.

In 1958, Vista Del Llano Farms in Firebaugh, a division of the nationwide Anderson-Clayton Co. operation, forfeited barley worth $122,942 and wheat worth $190,111.

SMALL FARMER, TOO

These are the big boys. What about the smaller farmers?

H. D. (Dave) Bateman operates 200 acres near Kerman. He's an alternate member of the price support committee in his area.

"I feel we should have some price support loan in under us to make for even marketing," Bateman said.

"What we should avoid in support is the forced sale to people who can afford to hold the crop until after the glut of harvest, then sell it off and make big money."

Bateman is well aware of the voracious appetite of the big farmers for the little ones, the gobbling up of the marginal operator.

RIPS BIG OPERATOR

"I don't think those big operators who eat up little farmers are really United States," he said. "They want people to work for little, give them poor housing and bury them."

Dick Markarian operates a 600-acre spread near Fresno, where he attended Fresno State for 2 years.

"The farmer has had his acreage restricted, has had to sell at an artificial price to a market that is not based on supply and demand. Consequently, his economy is not equal to others."

But most farmers, big or small, readily concede the subsidies cost the taxpayer a tremendous amount of money. Many of them recognize there's a growing revolt from city folks, from the common taxpayer, against this continuing subsidy.

Amount of stored farm commodities

[Major items stored in the Federal surplus stockpile of farm-price supported commodities as of June 30, 1959, included]

Item	Quantity	Cost value
Wheat.....bushels..	1,146,576,168	$2,924,384,356
Corn.....do....	1,043,676,022	1,861,805,774
Grain sorghum hundredweight..	280,657,941	692,665,178
Cotton, Upland.....bales..	1,019,597	150,641,813
Soybeans.....bushels..	54,851,874	120,323,449
Barley.....do....	90,343,434	116,148,150

Uncle's Credit Card Spree

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks, there follows an article appearing in the New York World Telegram and Sun on December 7, 1959, and which speaks for itself.

Every American should heed the warning which it contains. That includes the Members of this Congress who are charged under the Constitution with preserving the financial integrity of the Nation.

UNCLE'S CREDIT CARD SPREE—UNITED STATES ALREADY $750 BILLION IN HOCK

(The following article, putting the Nation's financial troubles into clear and startling terms, is excerpted from a recent address by Maurice H. Stans, U.S. Budget Director, at the annual dinner of the Tax Foundation.)

(By Maurice H. Stans)

In many ways the Federal budget today is saddled with yesterday's priorities instead of anticipating tomorrow's. This situation has come about because of our proclivity to legislate benefits, services, and subsidies up to the hilt of our fiscal capacity—and then to hang on to them.

We spend great sums on interest charges on our national debt, but we do not reduce the principal.

We carry on massive Federal programs which State and local governments could do better.

We devote large amounts of money to farm price supports to reduce surpluses, with the opposite results.

We lend money to benefit special groups at rates below those which the Government must pay to its own creditors, when private sources could do the job.

We perpetuate Federal programs which have long since met the objectives for which they were created.

Whatever may be the merits of ancestor worship, I hardly think that the place to practice it is in the budget of the U.S. Government.

We are taxing current earnings to pay for many benefits and services legislated in past years, while we go on legislating new benefits and services without considering how we will pay for them when they come due.

Let me tell you something about the shape we're in.

Fact No. 1 is that the Federal Government is piling up c.o.d.'s for the future at an astounding pace. I'll mention just a few.

It will cost between $25 billion and $35 billion to complete the Interstate Highway System after this fiscal year. Federal civil public works projects already started will require expenditures of about $8 billion before they are completed. The Federal Government is committed to contribute $6 billion in the future for public housing. Merchant marine subsidies and ship replacement constitute a Federal liability of $4.4 billion.

These and a variety of other obligations, when added to huge unexpended balances in the defense program, total $98 billion of commitments for future Federal spending.

Fact No. 2 is this: Even if the next session of the Congress doesn't add any new programs, the level of Federal spending is going to go up. The reason is that there are built-in increases in existing programs such as outer space, civil aviation, merchant shipping, urban renewal, science education, medical research, public assistance, loans to underdeveloped countries, and veterans' pensions. Interest on the public debt will run higher, and the farm program will cost more and more until we get realistic legislation. Defense technology is putting increasing pressure on expenditures.

Now, for 1961 alone, these built-in increases amount to between $2 billion and $2.5 billion. Of course there are practically no built-in decreases, because Government programs are almost invulnerable to reduction or elimination. A year ago, in his budget message, the President nominated 18 programs as being due for revision in order to accomplish future downward adjustments in spending. Only three received attention by Congress, and that with the net result of increasing future expenditures rather than decreasing them.

Fact No. 3 is that our present national debt of $290 billion doesn't include present Federal liabilities for past services in even greater amounts. Our already accrued liability for military retirement is about $30 billion. Our unfunded present accrual for retirement benefits for civilian Government employees is $27.5 billion. On top of that, future pensions and compensation to veterans will cost about $300 billion. Now, the $290 billion of current public debt, plus $350 billion of future obligations for past services, plus $98 billion of c.o.d.'s add to the almost incredible total of $750 billion.

That is the Federal Government's mortgage on America's future, beyond the regular annual costs of defense, welfare, and commerce.

Fact No. 4 is that the pressures for new spending programs are increasing in intensity. If you are troubled by an $80 billion budget, I can tell you that unless we hold the line now the day is not too distant when the budget will rise to the $90 billion or $100 billion range.

In the absence of a genuine thaw in the cold war which could lead to a major reduction in military costs, the only way to cut back the level of the budget is to look to the Congress to modify laws that are already on the books.

The job is really up to you. The President will continue to put his full weight behind the goal of a balanced budget and a surplus which can be applied initially to reduce our enormous and costly debt. What happens to that goal will depend upon opinion and its ability to communicate with the Congress.

Are we ready to face up to the fact that Government has to stop living on credit cards and must pay its way?

The Late Richard M. Simpson

SPEECH
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. TABER. Mr. Speaker, this morning RICHARD SIMPSON, Representative

from the 18th District of Pennsylvania, passed away.

He had been a Member of this House for 23 years and had great ability. He was the ranking Republican member of the Ways and Means Committee, and was one of its ablest and most active members.

He stood for the things that he believed in and was one of the most courageous men in the House. He was always courteous. He was one of the best debaters we had on the floor of the House. He was always prepared on the bills that he had to deal with, and his thoughts on them were always forcefully expressed.

It seems too bad that one only 60 years of age should be taken away, yet we must be thankful that we had the benefit of his talents and his character and his devotion to his work for so long a time.

I wish to extend to his widow and his children my sincerest and deepest sympathy.

The Shrine of the Immaculate Conception—Award-Winning Essay by Barbara Brusate

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. RABAUT. Mr. Speaker, during the recent recess a very memorable event was gloriously inscribed on the pages of U.S. history. On the 20th of November 1959 the National Shrine of the Immaculate Conception was dedicated here in the Nation's Capital.

As we look back on 1959 America—on all the good and bad, great and little moments of the year just passed—we must surely mark the dedication of this magnificent structure as one of the truly big events of the year. This is the seventh largest religious edifice in the world. It is the second largest in this country. What is perhaps more impressive, it is the first national shrine ever erected by the Catholics in America. That is, it is the first Catholic edifice in this country to which people all over the Nation contributed.

In honor of this dedication the archdiocese of Detroit held an essay contest for over 3,000 schoolchildren in some 86 archdiocesan high schools. The young lady who was chosen winner of this contest is a resident of my district. She is Miss Barbara Brusate, a 15-year-old student of St. Ambrose High School in Grosse Pointe Park, Mich. The pastor of the Ambrose parish is Rev. Francis F. Van Antwerp, a friend of mine since boyhood days. Her essay on the national shrine was wonderfully done and touched upon the significance of the dedication. The good Adrian Dominican nuns, under whom she is studying, may well be proud of her accomplishment. Incidentally, the male winner is a young man from Deerfield, who also studies under Adrian Dominican Sisters at Catholic Central High School. The good Sisters have certainly done themselves proud in this competition.

The happy winners were rewarded for their splendid work in fine fashion. His Excellency John F. Dearden, archbishop of Detroit, extended his congratulations in person to the winning pair and presented each with a large-sized portrait of Pope John XXIII. In addition, the two young essayists were also rewarded with an all-expense plane trip to Washington accompanied by their mothers to be present at the dedication ceremony.

The winning composition which Barbara Brusate submitted is a deeply thoughtful and inspiring piece on the true meaning of the recently dedicated shrine. I found it so impressive and meaningful that I am happy to have her winning essay reprinted in the RECORD; as follows:

Mary, under the title of the Immaculate Conception, is patroness and protector of the people of the United States. It is for this reason that our people have constructed a national shrine in her honor.

The Shrine of the Immaculate Conception resembles in some aspects the Statue of Liberty. To the American people this figure in the New York Harbor is a symbol of security, freedom, and love. In times of hardships and war, the Americans turn to her image for hope and strength. Her shining torch blazes on a land of freeborn and freedom-seeking men. This statue is a monument to a democratic government.

In the same manner, the Shrine of the Immaculate Conception is a symbol of the American Catholic's love and faith in Mary. They, too, in time of trials and despair will turn to the Shrine of Mary for guidance and love. This shrine is a monument to a pure and holy woman whom God chose to be His spotless Mother.

When we honor the memory of Washington, we also give glory to the principles for which he stood. When we honor Mary, we give glory to her virtue and to the God who made her.

Under the title of the Immaculate Conception, Mary is glorified because she was freed from the stain of sin at birth and throughout her life. As the Mother of God, she was never tainted by sin. The Shrine of the Immaculate Conception will show the world that America is not purely materialistic; it will tell others that we are a God-loving and God-fearing people. To Mary, under the title of the Immaculate Conception, the American people dedicate this shrine with love and trust in her and her Son.

Young and Old Fogeys

EXTENSION OF REMARKS
OF
HON. NEAL SMITH
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. SMITH of Iowa. Mr. Speaker, the Honorable HUBERT H. HUMPHREY, senior Senator of Minnesota, was one of the principal speakers at the national convention of the Young Democratic Clubs of America in Toledo, Ohio, November 17 to 20, 1959. He addressed the convention on the subject of "Young and Old Fogeys." As chairman of the convention, I had an opportunity to witness the great enthusiasm with which his speech was received and given and so that those who were not among the 2,000 delegates at the convention may read his remarks, I under unanimous consent, include excerpts from his remarks in the Appendix of the RECORD:

YOUNG AND OLD FOGIES

(By Senator HUBERT H. HUMPHREY, of Minnesota)

I take particular pleasure in addressing this national convention of Young Democrats, for as far as I'm concerned, what America needs most today is to regain its youth.

America is showing distressing signs of middle age.

And there's a very simple reason for it: The Republican administration in Washington today is made up of old men.

As a matter of fact, some of us have been thinking of rechristening the Cabinet the "Ten Old Men."

Now when I say "old" I don't necessarily mean old in years. I mean old in spirit. All of us know men who are old at 30—and we also know lots of men who are still young at 75.

A great former President we all love has more youth in him at 75 than this whole administration put together—yes, I mean our own special young Democrat, Harry S. Truman.

When I say that America and this Republican administration are showing signs of middle age, this is what I have in mind:

It's a sign of middle age when the obstacles loom larger than the challenge of overcoming them.

It's a sign of middle age when you can think only of reasons for not doing things, instead of discovering ways to do them.

But that, unhappily, is the spirit of '59 in Washington today. And when that is the spirit in Washington—in the White House, if you will—it spreads through the country like an epidemic.

I find it sad to think of America, the richest Nation in the world, making excuses to the world and to her own people that she can't afford to help other nations build their economies and can't afford to build proper schools for her children or proper houses for her slum dwellers.

Incidentally, you may have heard a lot of talk about the anti-intellectual atmosphere in Washington. But you shouldn't believe everything you hear. It's no longer considered subversive to have an idea in Washington—so long as it doesn't cost any money.

I am ashamed when I think of the millions of people throughout the world, barely staving off starvation, while America complains of the burden and cost of storing huge surpluses of wheat and corn and cotton.

I am embarrassed to think that America, the Nation that led the technological revolution, the Nation that produced the atomic bomb in a brief 5 years, has been surpassed not just once but many times by a nation that 40 years ago had no science, had no technology, and had virtually no industry.

What has happened to America? What has happened to our muscle? What has happened to our will to achieve, to create, to progress?

What has happened, I ask, to the America of the 1930's—an America beset with problems that make today's difficulties pale by comparison?

Today Washington worries about a balanced budget. Twenty-five years ago Washington worried about an entire national economy out of balance, about 10 to 13 million people without jobs, about dust bowls and breadlines.

That was a time that cried out for leadership—and the leadership was there in the person of Franklin Delano Roosevelt.

That was a time that cried out for new ideas—answers to problems new and old. And the answers were found.

And why? Because there was a will to find them, a will to sweep aside obstacles and move on to get the job done.

Do you remember the CCC—the Civilian Conservation Corps? In the 1930's America needed the CCC and America got it, and thousands of young men went into our forests and parks and went to work conserving some of our greatest natural resources.

Well, America needs another CCC—and that's one of the things I have worked to get passed this year. But what does this Republican administration say to that? They say it costs too much. They say it will unbalance the budget.

Of course, this administration doesn't seem to mind giving billions to bankers by raising interest rates. That sort of spending it can afford. But it can't afford to spend a few million dollars to build human and natural resources through a Youth Conservation Corps.

The era of the 1930's, the era of the New Deal, was an era of youthfulness for America. We were challenged, and we rose to meet the challenge.

Today again we are challenged, but the youthfulness of our response is gone. This Republican administration is so beset by worries about bankrupting the country that it cannot even make the prudent investments that will add to the Nation's wealth. It is so beset by its concern over subversion at home—a leftover from the McCarthy days—that it throws a cloak of conformity over America and discourages new ideas.

The Republican Party has always been known as a party of old fogies.

But this, we are told, is the era of modern Republicanism. The Madison Avenue boys would like us to believe that the old guard is on the wane and that the young Turks are in the saddle.

Of course, all they're really saying is that the old fogies have been replaced by young fogies.

And there are some Republicans who are sounding these days more like Democrats than anything else. But let's not be taken in. It is still the party of the fogies, and if the GOP bosses pick someone who looks liberal, because they know it will take a liberal to win, they're not fooling anyone. You'll still have an administration of Republican fogies—the Republican Party will see to that.

My friends, we are not going to send rockets to the moon as long as we are led by a bunch of fogies—old or young.

And we're not going to close the science gap or the space gap or the missile gap with the Russians as long as we're led by fogies—young or old.

I have met with Mr. Khrushchev face to face, and I can tell you that whatever else he may be, he is young in spirit. No challenge is too great for him—whether it be the challenge of the free world or the challenge of his colleagues in the Kremlin for supremacy in the Soviet Union.

I shudder at the ruthlessness of the methods he uses to meet those challenges, and I do not propose for a moment that we imitate them.

I merely ask that we recognize that we are up against an adversary who is bound and determined to meet challenges and surmount obstacles and solve problems.

We can't meet Khrushchev's youthful spirit with America's middle age.

America had better begin thinking less about how we can't do this and can't afford that, and begin thinking more about how we can use our full powers and energy using the methods of free people, in the cause of freedom.

So I think America's hope lies in its young people. And I think the Democratic Party's hope lies in its young people, too— in every one of you young Democrats at this convention.

You know, a party can suffer from middle age, just as a nation can. And I sometimes wonder if our party hasn't lost some of the scrap and youthfulness that once characterized it.

Now I am not one to pick a fight solely for partisan advantage. No one gains from such a fight. The country suffers; our party suffers.

But I deeply believe that the Democratic Party has not only a right but a duty to draw issues. Our party is one of youth and controversy. Out of both we draw the vigor and the issues to go to the people and win elections.

Our job in the Democratic Party is to fight bad public policy wherever we see it, no matter how popular the man behind the policy; to fight for good public policy—for the people if you will—whenever we have a chance to do so; and to write a record, a Democratic record, that every voter in the country can recognize that has the stamp "Made by the Democratic Party" clearly written on it, for all to see.

For only on the basis of such a clear-cut record can we give the voters a clear-cut choice next year—a chance to express themselves so clearly that neither the next President of the United States, nor the 1961 Congress of the United States, can mistake the mandate.

Ike's Trip Abroad Best Way of Promoting Our Good Will

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. BROOMFIELD. Mr. Speaker, one of the leading newspapers in my congressional district, the Pontiac Press, ran a very interesting and informative analysis about our President's trip abroad. I believe it is well for all of my colleagues to take heed of the words in this editorial and to realize the magnificent victories which were achieved by this voyage to many lands.

The editorial follows:

[From the Pontiac Press, Dec. 19, 1959]

IKE'S TRIP ABROAD BEST WAY OF PROMOTING OUR GOOD WILL

President Dwight D. Eisenhower has done this country a magnificent service in his trip abroad.

It has been a "triumphal tour" and any lesser designation is inaccurate. The President has comported himself in the very best traditions of his country. That friendly smile was always on display. In spite of the exhausive schedule, he conducted himself just as 180 million Americans wanted.

He was a real star.

The man was terrific.

This Nation is fortunate to possess a titular ambassador that can spread good will so effectively. We have too much unjustified ill will. The world is filled with people that don't believe it is unwise to "bite the hand that feeds you."

Whenever he spoke, the President said the right things. He was never arrogant or pompous. And yet he never forgot that he was the head of the greatest nation on earth. A proper balance between these two is not always easy, but Eisenhower handled himself perfectly.

On a trip such as this, there are always many places where advance plans cannot cover unexpected situations. All the diplomats in the world can't foresee the incidents that arise spontaneously.

These separate the men from the boys.

And Eisenhower never failed.

Furthermore, the press accounts provided by the Associated Press, United Press International and Reuters are truthful and accurate. When Khrushchev traveled in the United States he received mixed receptions. Always the crowds were friendly and respectful, but at times they were notably lacking in great enthusiasm; and on occasions they were small. These facts were duly reported here.

But it was different in Russia. The government-controlled newspapers announced anew each day that their leader was "greeted by the greatest crowds in the history of the city." Always "enthusiasm was at white heat" and always ole Khrushy was "cheered to the echo."

We report the truth here.

The Government has no control.

When Richard Nixon was in Central and South America, the crowds in some countries were enthusiastic, some lukewarm, some quietly hostile and some actually bestial. The A.P. and U.P.I. reported precisely that. In a few instances natives actually spat on Nixon and this was immediately printed. That's one of the basic differences between capitalism and communism. Under our system, the people hear the truth. Under communism, they learn what the Communist leaders decide.

Eisenhower may well be the most popular man in the world. His receptions have been uniformly magnificent. Nation after nation has actually "gone wild" over Ike.

He's a great representative.

Our cause has been greatly advanced.

The Gang-Up Against Williams

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the New Republic of November 16, 1959, by a member of the editorial staff entitled "The Gang-Up Against Williams."

The editorial follows:

THE GANG-UP AGAINST WILLIAMS

(By T. R. B., from Washington)

The gang up against Mennen Williams in Michigan deserves to be studied. It is a classic example of political assassination by malapportionment.

By any normal standard, Williams should now be a leading Democratic Presidential contender. He has been elected Governor six times in a formerly Republican bailiwick. But he is on hardly anybody's Presidential list because a rotten borough State Senate—in which Republicans from malapportioned rural counties act like a petty House of Lords—have smeared him as a "New Deal spendthrift."

Why is he called spendthrift? Because the big State is near bankruptcy. It is near bankruptcy, all right, but this is because the same Republican-packed senate refuses to vote appropriate taxes.

Malapportionment is the rule in the State legislatures all over America. The target is the cities; the cities are the suckers. Michigan rural legislators have gleefully used the weapon to knock off a Presidential candidacy. Study Michigan and see how it works.

In Michigan, Democratic Wayne County (Detroit) has two-fifths of the State population; only one-fifth of the State senators. Other Michigan cities are massively short changed in the same way. The veto-wielding Republican senate is packed by conservative farm counties. The cows outvote the people. Michigan has plenty of money. It is the sixth wealthiest State. It ranked fourth in tax revenues in the 1959 fiscal year. In Williams' 10 years, expenditures have risen 88 percent—46th among 48 States. Only Maine and Illinois have risen less percentagewise. This is an impressive record. Yet Michigan chronically faces financial disaster. Why? When Williams took office, he found the rural-minded Republicans had cozily arranged to sluice five-sixths of the State's sales taxes back, by law, to local units of government. This aided farm counties, but threatened disaster to the State. The State had to have more funds. Michigan had no personal income tax and light corporate taxes (even today its citizens pay less taxes than 30 other States). Williams proposed fiscal reforms, including graduated State income and new corporate taxes. The rotten borough GOP senate yelled "Socialist" and "Spendthrift" and fought him every step of the way.

You must understand that you can have a Democratic landslide in Michigan and hardly touch the rigged senate. Republicans have controlled the senate with one exception since 1919. (New Jersey has a rotten borough senate, too, and Illinois, and State after State over the country, all wielding veto power and laughing at the big cities.) Finally, the Michigan Senate agreed to a so-called compromise. The constitution forbids raising the sales tax above 3 percent, but the Upper Peninsula House of Lords graciously proposed salvaging the near-bankrupt State by pushing through a use tax. Williams reluctantly went along, warning that the use tax, by whatever name called, was a patent subterfuge to violate the sales-tax 3-percent ceiling, and that the courts might object.

Well, the courts have objected. They have junked the GOP use tax. That is the latest chapter in Michigan. The State is right back to normal again—near bankruptcy. And once more over the country conservative editorial writers are clucking their tongues sanctimoniously at New Deal spender "Soapy" Williams and his inflationary finances. Ho-hum, maybe the people are suckers after all. Or maybe—just maybe—the Michigan Republicans have gone a step too far this time and given Governor Williams a boost upwards.

People Helping People

EXTENSION OF REMARKS
OF
HON. WILLIAM H. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. BATES. Mr. Speaker, Navy Chief Murray E. Chase, of Haverhill, Mass., was a man dedicated to the service of his country, and inspired by an ardent love for children and a strong desire to create greater friendship for the United States abroad.

Chief Murray passed on at Christmas time but his memory and that of the generous crew of the U.S.S. *Aucilla* will long live in the history of Barcelona, Spain, as the men who gave the Spanish children their first Christmas party.

Back in 1955, Chase got an idea and then passed it on the men abroad his ship. In no time, the servicemen had chipped in 70,000 pesetas to provide a Christmas party, toys, schoolbooks, and complete outfit of clothing for over 100 underprivileged children of the poor quarter of Barcelona. A dedicated man, Chase embarked on a more ambitious project—to raise funds for a new and badly needed school. His goal was $20,000 and only death halted his drive.

On December 30, 1959, the Haverhill Gazette published the following appropriate editorial and under leave to extend my remarks in the RECORD, I wish to include this article:

FOREIGN AID

Navy Chief Murray E. Chase believed in the kind of "foreign aid" that brought people together, working for one another in a common bond of interests.

His story is familiar to most people of Greater Haverhill. A a Navy man in Spain several years ago, he became interested in the plight of the children in a poor section of Barcelona. With his shipmates from the U.S.S. *Aucilla*, he set about raising money to build a new school.

As time passed and the school became a reality, the effort that had begun as just another charitable program became a personal crusade to the man from Haverhill.

The Spanish school was named the Stella Maris (Star of the Sea) and Chief Chase went on working in the children's behalf long after his original commitment was discharged. He literally devoted years to raising funds for the children and their school, carrying this endeavor all the way to Greater Haverhill.

Only last July, after his discharge from the Navy as one of the country's oldest chiefs, he returned to Barcelona at his own expense to turn over another $1,000 to the school. And when he died suddenly last week, at 64, he was planning still another trip to Spain.

Chief Chase's dedication to a project conceived to improve the lot of a group of children in a foreign land earned for him a tribute read into the CONGRESSIONAL RECORD by Congressman WILLIAM H. BATES.

And for all the rest of us, what he did, should stand as a rare example of people helping people, in a way all men can understand.

Forty-first Anniversary of the Independence of Latvia

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert herewith in the RECORD a statement issued by the Latvian Association in Detroit in commemoration of the 41st anniversary of the Independence of Latvia:

STATEMENT

The Latvian-Americans of Metropolitan Detroit, assembled at the Veterans' Memorial Building on 15th day of November 1959 to commemorate the 41st anniversary of independence of the Republic of Latvia unanimously agreed to issue the following statement:

"1. We wish to call to the attention of American people the continuance of the pattern of Communist obliteration of nations within the Soviet Union. Under the direction of Nikita Khrushchev special efforts are being made to liquidate the smaller nationalities. This is being done through a program of fiscal deportations, religious persecution, economic exploitation, and other forms of nondemocratic actions. This program of annihilation of the Latvians, Estonians, and Lithuanians was highlighted in the report of the House Committee on Un-American activities issued recently.

"2. In view of the continued official recognition of the Baltic States by the American people, the Latvian-Americans of Detroit vehemently urge the United States immediately to protest the continuance of this Communist policy of national liquidation.

"3. Regardless whether or not it is the intention of the American people to support or condone these Soviet actions, the Latvians and other subjugated people behind the Iron Curtain see in the increased Soviet and American cultural, economical and political exchanges a weakening of the American resolve to resist further infiltration by the Soviet-controlled Communists. Only a demoralization of the continued resistance of the Latvians and other enslaved people can be expected. Such a demoralization will lead to a strengthening of the Soviet Union as a world power and deprive Americans of a major source of support.

"4. In view of the impending Summit Conference, the Latvian-Americans of Detroit urge the President of the United States to broach the question of each nation of the world determining its own destiny. Permanent peace is possible only when each nation freely selects its own form of government.

"5. The Latvian-Americans know from personal experience that peace at any price, including 'life, liberty, and pursuit of happiness,' is a mirage. It is the permanent enslavement of the human soul.

"6. This statement is the expression of the entire Latvian-American community of Metropolitan Detroit and this assemblage directs that copies of this statement be sent to the President of the United States, Secretary of State, the U.S. delegation to the United Nations, Secretary General of the United Nations, Senators and Congressmen from Michigan, Governor of the State of Michigan, and mayor of the city of Detroit.

"Done in Detroit, Mich., this 15th day of November A.D. 1959."

Governor Harriman Reports on Russia

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. SANTANGELO. Mr. Speaker, recently I received from Averell Harriman, former Governor of the State of New York, with whom I worked as a State senator, a complimentary copy of his book entitled "Peace With Russia?"

With quizzical delight, I avidly read this stimulating report of Averell Harriman's observations and reactions of his visit to Russia in the late spring of 1959. I highly recommend this book to my colleagues and readers.

Having returned this December from the Far East, where I visited the Philippines, Singapore, Bangkok, Okinawa, Formosa, and Japan, to study our defense posture and to explore the effect of our Public Law 480 program and the effectiveness of our foreign-aid program, I took keen delight comparing Governor Harriman's observations of Russia with mine of the Far East. I could not help but compare the attitudes toward Communist China with those currently held concerning Russia. In addition, I compared the misery of the awakening Far East, the struggle of the exploding population to obtain its daily bread, and to develop and expand an agrarian economy, sometimes consisting of only a single commodity, with the struggle of the Russian people to achieve agricultural, industrial, technological, scientific, and educational skill as "Scoop" Harriman vividly reported.

Throughout the world there is a growing awareness that in this age of scientific achievement and agricultural plenty, that it is morally wrong for people to starve while bins are overflowing with food. While the Russian people indicated to Governor Harriman that they passionately desired peace and friendship, the policies of the Communist Party and its leaders consider any attempt to preserve freedom and to stop the onward drive of communism toward world domination as an act of aggression.

Mr. Harriman answers many perplexing questions whose answers are vital. In this book "Peace With Russia?" will be found Governor Harriman's answers and analyses of the following questions:

Does Russia want war or peace?

What public works lie beyond the Urals?

How far has Khrushchev swung Communist policy away from Stalin's goals?

Will the Soviets run short of manpower, food, or disciplined citizens?

Has Russia overtaken the United States in the scientific and educational field, and if so, why?

Why does the expansion of the Soviet educational system hold out great promise for us?

Are the Russian people likely to revolt against the Kremlin?

Perhaps no living American knows Russia better than does Averell Harriman. Certainly no one has known Russia over as many years and has talked with its leaders at such crucial moments in the history as has Averell Harriman. He visited Siberia in 1899 with his father. In 1926, while he was winding up a manganese concession in the Caucasus, he talked for 4 hours with Leon Trotsky. In 1941, President Roosevelt sent him to Moscow with Lord Beaverbrook to negotiate the first war-aid agreement with Stalin, and the next year he went back with Winston Churchill for the first of the momentous talks on strategy which led to the final defeat of Hitler's Germany. From 1943 to 1946 he was Ambassador to the Soviet Union, years in which he saw Stalin more often than did any other foreigner.

In the spring of 1959 Governor Harriman traveled for several weeks throughout Russia covering 18,000 miles, seeing parts of Central Asia and Siberia which no American had been allowed to visit previously. He also had a series of long conversations with Nikita Khrushchev, with leading Government officials and with hundreds of Soviet citizens and workers.

Governor Harriman summarizes his observations and reactions after detailing many of them. The following are his words which are illuminating and provocative of serious thought:

The information I gathered and the impressions I gained during my recent travels in the Soviet Union and my conversations with its leaders have, I believe, several implications which may be helpful in the consideration of our future attitude toward the U.S.S.R. Here in brief are some of them.

We can no longer afford to be deluded by myths or have our policies muddled by confusion about what is going on in the Soviet Union. We cannot find comfort in any idea that the Communist regime is going to be overthrown or converted to our own beliefs. For the foreseeable future the leaders in the Kremlin are going to be guided by their firm faith in the triumphal spread of their doctrine across the globe. For a long time to come we are going to face this threat everywhere.

On the other hand, I have never believed and do not believe now that war is inevitable in our struggle to thwart the march of communism. Nor do I think that the present Soviet leaders will bring on war except by miscalculation or mistake.

But we must dismiss as a pleasant daydream any thought of Mr. Khrushchev's peaceful coexistence and apply ourselves to the challenge of all-out competitive coexistence—competition for survival. The Kremlin leaders cannot be diverted from their primary goal of world revolution with a diplomacy of threats and ultimatums. Affirmative action is called for.

Our first and most important job, I believe, is to maintain the vigor and vitality of our own social and economic system. We must speed up our economic growth to make the fullest use of our natural and human resources and to improve American life in all its aspects for all our citizens.

In the second place, we must meet the challenge posed by Soviet advances in science by improving our own system of education and turning out enough qualified scientists and specialists to maintain our leadership in this field, but without for a moment sacrificing our primary aim of developing well-rounded, well-educated individuals.

Until we have reached some agreement on arms limitations with foolproof controls we cannot even consider any relaxation of our effort to maintain our defenses and those of our allies, especially those of the North Atlantic Community.

At the same time we must assert vigorous and imaginative leadership to make the North Atlantic Treaty Organization not only a strong military alliance but also a united and productive Community which combines our resources for the social and economic advancement of its members and the free world.

We must also meet the challenge Khrushchev has posed in the underdeveloped countries by assisting them more effectively and consistently to build their own economies in freedom. And we must also share our political experience and our sociological advances with them so that their political and social development will keep pace with the industrial growth and help them to find solutions to the serious problems which that growth inevitably creates.

We cannot permit our dealings with the Soviet Union itself, any more than our domestic problems or our relations with our allies, to become fixed, rigid, or inactive. The Soviet Union is not a static society. Its Communist leaders are constantly subject to pressure both economic and social.

I believe that they are playing a losing game in their efforts to maintain thought control. Their old dream of creating a new Soviet man thoroughly indoctrinated with Communist ideology has definitely failed. And Khrushchev, I am convinced, is finding it increasingly difficult to maintain thought control without the police control of Stalin which he has abandoned.

I do not believe that radical changes will take place overnight, but I think that the people's justifiable demands for a greater share in the fruits of the Soviet economy will one day substantially modify the emphasis which the Soviet Government has placed on its intense efforts for world Communism, now held to with such fanatical insistence by the present rulers. I also believe that the demand for greater freedom is inherent in all peoples and that it too will make itself felt as the immediate demand for more material needs is met.

These and other pressures will, I think, open up new possibilities for restraining the militancy of the Communist regime. I believe therefore that we should ceaselessly probe every possible avenue of approach to agreements with the Soviet Union rather than reject out of hand every proposal its Government makes.

To increase the pressures on the Kremlin we should encourage the legitimate aspirations of the Soviet people for peace, freedom, and a reasonable living standard, by multiplying our efforts to break down the barriers to communications through exchange both of people and of information. We should not only encourage American tourists to visit the Soviet Union but we should urge Soviet tourists in equal numbers to visit us. We should expand the exchange of students, teachers, scientists, and others and encourage the Soviet Union to participate in continuing international scientific and social research. The contacts established during the International Geophysical Year should not be allowed to die but should be strengthened by continuing association in similar fields, such as worldwide meteorology, oceanography, and the problems of outer space. We should also try to induce the Soviets to become permanent participating members of international organizations in the fields of medicine and education.

Take the case of President Eisenhower's trip to the Soviet Union. It is certain to convince some Russians that it is unthinkable that America would ever start a war. It will lead countless others at least to begin to doubt the accuracy of their government's propaganda against us. This will increase the popular pressure on the Kremlin for a return to the friendly relations which existed with us during the war and which the Russian people crave so deeply.

Though Khrushchev has not abandoned the traditional technique of international communism, he has now made us a new challenge in a realm we know something about. He has said he will overwhelm us by creating an economic and social system so successful that other countries will have to follow it. Here is a field in which Americans have excelled for generations. We can only welcome the challenge and spare none of our native genius in meeting it.

The challenge is not alone in the field of economic growth but in all aspects of our social life. It is in education, public health, and human rights. It is also in the problems of our rapidly growing metropolitan areas—housing, mass transportation, parks and playgrounds, and many others. Many of these tasks require public planning and investment. They are tasks we would accept without the spur of the Soviet Union, but now when they involve our survival in freedom, they demand national action.

For my part I have no doubt that in our free institutions we have a wealth of initiative and creative talent to meet these challenges which no totalitarian society can muster.

Extension of Rural Library Services Act

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mrs. GREEN of Oregon. Mr. Speaker, I have today had the pleasure of introducing a bill to extend the Library Services Act of 1956 for a period of 5 years, and to make certain technical amendments which will not change the effect of the act, but which will, rather, simply take cognizance of the admission of the States of Alaska and Hawaii into the Union, and to leave in abeyance until the Congress has before it the results of the 1960 decennial census, certain policy decisions in regard to the communities covered by the act, as extended.

Let me briefly explain the purpose of my bill. The Library Services Act, as passed by this Congress in 1956, provided for a program of grants-in-aid to the States to stimulate and assist in the provision of Library services to the residents of rural communities. Under the original act, $7,500,000 per year was authorized to be appropriated, to be divided among the States wishing to participate on the basis of a formula recognizing the State's share of the rural population of the Nation as the major factor. The original act further provided that no community with a population of more than 10,000 would be eligible for assistance under the act.

Generally speaking, the first 4 years of this act's history have justified the high hopes those of us who originally sponsored it had for its effect upon the spread of library services to rural communities.

Forty-nine of the fifty States are now participating in this act, and these States have all increased their rural library services programs, not only to the degree made possible by the allocation of Federal funds, but out of their own resources, with the Federal funds serving largely as stimuli, and as a symbol of the national interest in this matter.

State activities in aiding public libraries have increased by 54 percent in the 4 years of the life of this act. Thirty million Americans living in rural communities now have library services available to them which were either not available at all, or not to the present degree, as a result of the working of the act. Sixty-five counties and an equal number of New England towns, which formerly had no library service, are now receiving such service. Two hundred new bookmobiles are in service under the Library Services Act. Two hundred and eighty separate projects were included in the State plans for 1959. Over 5 million books and other informational materials have been added to the library resources of rural communities.

This much has been done, Mr. Speaker, under the Library Services Act in its first 4 years of operation. But, it should be pointed out, this is only an indication of what could have been done, if the act had been allowed to operate at its fullest. The Congress has not been reluctant to appropriate funds for this program, but the Budget Bureau has seen fit, here, as in so many other areas, to pursue its standard policy of penny wisdom and dollar folly. In the 4 years of the act's history, a total of $30 million could have been appropriated, under the authorizing legislation. But in no one of those years was the full amount requested or appropriated. In fiscal 1957, $2,050,000 was appropriated; in fiscal 1958, $5 million; and in the last 2 fiscal years, $6 million each. As a result of action taken by the Congress, allocations to States were made on the basis of the full authorization in the last fiscal year, but the growing needs of our rural libraries might well have come much closer to fulfillment, had the full amount been available through the appropriation process each year. It is too soon to tell what funds will be available in the fiscal 1961 budget, which will be the last appropriation under the initial authorization. But so far, only 63 percent of the total funds authorized have actually been appropriated, and even if the full amount is requested and appropriated next year, nearly $11 million of authorized funds will have been denied this important and profitable program.

The amendments contained in the body of my bill, Mr. Speaker, are simple, and do not change the policy of the original act. The first subsection simply extend the life of the act for an additional 5 years. Subsections (b) and (c) make technical amendments reflecting the fact that Hawaii and Alaska have been admitted to the Union and are already subsumed under the term "State." The final subsection, in effect, freezes the present coverage of the act. Under the present act, no assistance can be extended to a community with a population of more than 10,000. The Department, in issuing its regulations has taken the 1950 decennial census as its guide. The extension bill retains the 1950 census as the guide for eligibility. In this way, the communities now being served will continue to be eligible; none will suddenly be excluded from the act by population growth reflected in the 1960 census.

Mr. Speaker, the Rural Library Services Act is not the most extensive or the most costly of the Federal grant-in-aid programs. But this program is surely one of the most rewarding, one of the most encouraging, and one of the most productive of the educational grant programs. The experience we have had in the first 4 years surely augurs well for what can be accomplished in the next half decade, as library doors swing open for more and more of our people.

Flag Presentation Program at Mark Twain School, Lynwood, Los Angeles County, Calif.

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present to you and to all my other distinguished colleagues in this great legislative body the contents of a most remarkable and appropriate flag presentation program which was presented in the auditorium of Mark Twain Elementary School, Lynwood, Los Angeles County, Calif. I had the privilege and great pleasure of attending this program.

Mr. Speaker, I felt that the text of the program and its outline could well be of considerable value to many, many similar student bodies in our beloved Nation, and suggested to the school authorities that I would consider it a privilege to ask unanimous consent to place it in the daily CONGRESSIONAL RECORD.

Mr. Speaker, I know that you and many other colleagues join with me in complimenting the students and their instructors on the production of this original and significant program with its unique presentation of the history of our United States as relates to the history and development of the Stars and Stripes.

The feature of this program which was appraised by me as most attractive and most valuable in the experiences of the dozens of students who participated was the fact that the students themselves actually put together and created the respective replicas of the flags which they presented as part of the derivative history showing the development of the flag of the United States of America as it is today. It was a most magnificent tribute to the creative imagination and ability of these several dozen students, each of which personally brought to the platform his or her flag thus created by their handiwork. The program follows:

FLAG PRESENTATION PROGRAM, MARK TWAIN SCHOOL, LYNWOOD, CALIF., OCTOBER 9, 1959

Entrance of students and audience; records by Lyle Harbaugh.

Call to order and welcome: Linn Kogut, president of student council.

Parade of flags: Presidents of classes.

Pledge of allegiance: Audience, led by Judy Wilson, vice president.

"America": Audience, led by Mrs. Coffman; accompanied by Mrs. Bostrom.

History of the Flag: Sixth grade class.

Presentation of the 49-Star Flag: Congressman DOYLE.

Student acceptance: Mike Caples, assisted by Hillary Barsky, Rodney Henke, and Deborah Cosman.

School and district acceptance: Mrs. Amy Sherlock, principal of Mark Twain School, Dr. Robert McCaughin, superintendent of Lynwood schools.

School song: Audience.

Adjournment: Linn Kogut.

Retirement of audience and students under direction of teachers and safeties.

American history is being made right before our eyes. We need a new star in our flag now, the 49th, to represent the newest—and by far the biggest—of all States in the Union we call the United States of America. Our present flags with only 48 stars can soon be carefully wrapped and put away as precious heirlooms for our children's children.

The history of our country from its earliest times is woven into the pattern of our flag. Each star and every stripe represents a story of bitter struggle and work, of bloodshed, despair and eventual triumph. Yet how many of us know the real history of our flag's origin? What made Congress choose it? Why red, white, and blue? Why stars? Why stripes?

Our flag stands for the hard work and sacrifice of millions of Americans who have helped to make United States great. It stands for the people today who are keeping its honor bright. But our flag did not come into existence overnight. It took many years to develop to the Old Glory we know today. Now the flag is changing to keep pace with new States—Alaska this year—and soon Hawaii, as they add their star to our field of blue.

When the War of Independence began in 1775, several new flags were used. Some of the flags used were the Pine Tree flag of New England. The Snake flag which said "Don't Tread on Me." The flag most generally used however, both on land and sea, was the Cambridge or Grand Union flag. This was the first time that 13 red and white stripes were used. This flag had the Union Jack of England in the upper left corner. This flag was in general use for a year and a half.

The people needed a national flag to symbolize their unity and independence. On June 14, 1777, after deliberation by a committee of which George Washington was a member, the Congress adopted the following resolution: *"Resolved*, That the flag of the United States be 13 stripes, alternate red and white, that the union be 13 stars white in a blue field representing a new constellation. Our first flag was most likely made by Betsy Ross of Philadelphia according to instructions given to her by George Washington. Betsy Ross was responsible for the idea of using a five-pointed star instead of a six-pointed one. However the story about Betsy Ross cannot be proved nor disproved.

The resolution made by Congress did not say how the stars were to be arranged, so our men fought the War of Independence under different flags. The Horse Shoe Flag and the Circle Flag were two of the arrangements.

Another legend is the quote from George Washington's salute to the flag concerning the meaning of the colors used in the flag. He said, "We take the stars and blue union from Heaven, the red from our mother country, separating it by white stripes, thus showing we have separated from her, and the white stripes shall go down to posterity representing liberty." In 1782 the Department of State said the colors have these meanings:

Red stands for hardiness and courage.

White is the symbol of purity and innocence.

Blue is the color of bigilance, perseverance, and justice.

As new States were added to the union, additional stars and stripes were added. This made a 15 stripe and 15 star flag. Soon Congress could see that this would make the flag too large. This was the flag that "Star Spangled Banner"—which Francis Scott Key wrote about at the attack on Fort McHenry in 1814. In 1818, Congress decided that the flag would be 13 stripes to represent the original 13 colonies of the United States, but that as each new State was admitted to the Union, a new and additional star would be added to our field of blue. As each new State entered the Union, the arrangement of the Union was different. Some of these arrangements were the 24 star "Old Glory of 1831," the 29-star flag of 1845 which was carried in the Mexican War. In 1861 at the beginning of the Civil War, the flag contained 36 stars. During this time, the Confederate States had a different flag, and our country was divided. At the close of the war, we knew that our country was "one and inseparable". By 1898 there were 45 stars in our flag. With the admission of Arizona in 1912 the flag contained the 48 stars as we know it now.

Many people assign positions of stars and stripes, according to the date the State entered the union. There is no legal basis for this belief, however, many States like to believe that their own star is on the flag. We will build the flag of 48 stars showing this arrangement.

First the flag has a flagpole or flagstaff.

The main part of the flag is the field, with the union of blue. Our field is composed of 13 alternate red and white stripes representing the Thirteen Original Colonies. Each also has a star.

1. Delaware (red).
2. Pennsylvania (white).
3. New Jersey (red).
4. Georgia (white).
5. Connecticut (red).
6. Massachusetts (white).
7. Maryland (red).
8. South Carolina (white).
9. New Hampshire (red).
10. Virginia (white).
11. New York (red).
12. North Carolina (white).
13. Rhode Island (red).

The other states entered in this order:

14. Vermont—1791
15. Kentucky—1792
16. Tennessee—1796
17. Ohio—1803
18. Louisiana—1812
19. Indiana—1816
20. Mississippi—1817
21. Illinois—1818
22. Alabama—1819
23. Maine—1820
24. Missouri—1821
25. Arkansas—1836
26. Michigan—1837
27. Florida—1845
28. Texas—1845
29. Iowa—1846
30. Wisconsin—1848
31. California—1850
32. Minnesota—1858
33. Oregon—1859
34. Kansas—1861
35. West Virginia—1863
36. Nevada—1864
37. Nebraska—1867
38. Colorado—1876
39. North Dakota—1889
40. South Dakota—1889
41. Montana—1889
42. Washington—1889
43. Idaho—1890
44. Wyoming—1890
45. Utah—1896
46. Oklahoma—1907
47. New Mexico—1912
48. Arizona—1912

This is our flag of our childhood that we are familiar with. Now, Congressman DOYLE, our Congressman, we have traced the past history of our flag. You have had a part in the making of history as our 49th State of Alaska was admitted to the Union. Will you tell us about it and, of course, we are anxious to see the new 49-star flag.

Congressman DOYLE.

Transportation Tax

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. METCALF. Mr. Speaker, the State of Montana, as well as many other Western States, depend to a very great extent on the airlines, the railroads, and the bus companies to provide fast and dependable transportation between our cities which are separated by great distances. For more than 15 years our citizens have been taxed every time they used these vitally necessary common carrier facilities. At present this transportation tax is 10 percent but by virtue of the passage of Public Law 86–75 in the last session of Congress, beginning July 1, 1960, this tax will be reduced to 5 percent.

I was very pleased with this progress but I sincerely feel that during this session we must abolish the remaining 5 percent. What was the original purpose of this tax? Certainly the raising of wartime revenue was one consideration, but the primary purpose was to discourage nonessential travel during the emergency thereby freeing our facilities for military and defense use.

I feel that it is self-evident that this purpose no longer exists. On the contrary, one of the paramount objectives of our national transportation policy is to foster and encourage travel to strengthen our transportation companies.

Only by increased passenger patronage can the airlines carry out the massive jet conversion that is presently underway and for which over $2¼ billion of capital investment is committed. The Chairman of the Civil Aeronautics Board has urged the repeal of this tax on the ground that it deters travel and depresses airline revenue.

Similarly, the Interstate Commerce Commission has urged repeal because "the tax on passenger travel tends to discourage the public from using common carriers, it thereby aggravates the ever-mounting passenger deficit."—ICC Docket No. 31954, page 70. We all know the plight of the railroad passenger operation and we all know that the only real answer is more passenger revenue.

The bus situation is no different. The number of inter-city busline companies declined from 2,858 in 1950 to 1,700 in 1957; revenue passengers declined from 815 million to 516 million; and busline employees declined from 66,570 to 52,900

during the same period.—Bureau of Census, Statistical Abstract of the United States, 1958, page 571.

Mr. Speaker, I submit that continuation of a 5 percent excise tax designed to discourage travel is against the national interest and extremely unwise. As the ICC stated in the Railroad Passenger Train Deficit Case:

> In strongly urging that the Congress take action to repeal the tax outright, we are not unaware of the efforts which various members of the Congress have made and are presently making in this regard. We are also not unmindful of the revenue needs of the Government. We are, however, convinced that any possible loss of revenue would be more than offset by the public interest in strengthening and preserving a transportation system capable of meeting adequately the country's need for service both in peacetime and during emergencies in conformity with the national transportation policy as declared by the Congress. (p. 70).

I realize that any proposed legislation which would eliminate a source of Federal revenue should be subjected to close scrutiny. However, I am convinced that repeal of the remaining 5 percent tax will not result in any substantial net loss of revenue.

It is widely recognized that the some $110 million gross that the fact that a high proportion of common carriage travel is business in nature and the amount of transportation tax paid is taken as a corporate income tax deduction.

In addition, an offset would result if the tax were removed by virtue of increased taxable income resulting from increased travel once the deterrent tax is removed.

In the airline industry the Federal government pays some $60 million in subsidy per year to make up operating losses of local service and helicopter companies. Yet this tax discourages passengers from traveling on these carriers.

In short, Mr. Speaker, it appears that on the merits no one can justify this tax and everyone agrees it is harmful and outdated. The only question is whether we should sacrifice a revenue source. But even on this score it appears clear that the net yield is not substantial and would probably be more than offset by increased corporate income taxes and by subsidy savings.

The Late Honorable Richard M. Simpson

SPEECH
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. DERWINSKI. Mr. Speaker, I join with the other Members of Congress in expressing the loss that we all feel with the passing of our colleague, Hon. RICHARD M. SIMPSON.

In my brief association with him, I was impressed by his tremendous political courage and the strength of his convictions. His intense loyalty to the Republican Party, his stalwart conservative convictions and his personal desire to give the best possible representation to the people of his district were apparent in all his actions. His leadership will be missed by those of us who looked to him for counsel and inspiration.

I extend to Mrs. Simpson and their family my sincere sympathy.

Twentieth Anniversary of Glen Arden, Md.

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. LANKFORD. Mr. Speaker, I would like to include in the RECORD a recent address made by a most distinguished Marylander and my constituent, Mr. David Hume.

Mr. Hume delivered his address on the occasion of the 20th anniversary of the founding of the town of Glen Arden, Md. In view of the despicable swastica painting and allied desecrations and prejudices plaguing the world today, I feel that his Glen Arden address is particularly timely and appropriate.

The town of Glen Arden has earned for itself the admiration of all of us who have come to know its many fine accomplishments. This Negro community has turned a veritable wilderness into a town of which each resident is justifiably proud. Very little assistance has been accepted by the townspeople, although offers have been numerous.

The speech follows:

ADDRESS BY DAVID HUME, GLEN ARDEN, MD., 20TH ANNIVERSARY

I am grateful for the honor you accord me by your invitation to speak tonight on this 20th birthday of Glen Arden.

In a legal sense, you are short just one year of coming of age—21—but no one in his right mind would contend that as a community you have not already demonstrated wisdom and a maturity far beyond the legal requirements.

I address you tonight more in my capacity as a neighbor than as a politician. And I am not unmindful of what Jonathan Swift once said: And he gave it for his opinion that whoever could make two ears of corn or two blades of grass to grow upon a spot of ground where only one grew before would deserve better of mankind and do more essential service to his country than the whole race of politicians put together.

Anniversaries, you know, and particularly anniversaries following periods of success, are joyous occasions. They are opportunities, too, for looking back and being thankful for the events that have made them possible.

Last Saturday, I had the opportunity to act for Governor Tawes in accepting the John Hanson memorial for the State of Maryland from the Vasa Order, a Swedish-American organization. It came as a surprise to me, in searching the history of John Hanson for the acceptance address I was to make, to learn that this man, who was the first President of the United States in Congress assembled, was of Swedish descent.

And I could not help but feel again the great personal debt I owed to this man and the many others from other lands who had come here and, for the sake of freedom and making a world of their own, had fought so bravely and worked so hard for our independence.

In the course of the ceremony at the John Hanson memorial dedication, there were folk dances by young children dressed in Swedish costumes and there were words of gratitude directed to the Swedish people.

As a result of my attendance at that ceremony, I believe I will always feel grateful whenever Sweden or the Swedish people are mentioned.

But in looking up the history of Hanson, a strange thing happenend—coincidence, if you will—when I turned to the name of Hensen, Matthew, arctic explorer with Peary in the discovery of the North Pole. I recalled that history of this great man, a native of Charles County—born just a few miles from here—and I remembered that Matthew Henson had made his mark in world history just 50 years ago—April 6, 1909, to be exact. The story came back to me and I could visualize Peary and Henson—after 18 years and making their sixth try for the North Pole. In the terrible winds and awful cold which surrounded them, these men, along with four Eskimos, were the first to accomplish what the world still hails as one of the greatest peaks in the history of exploration, reaching the northernmost limit of the earth. They did what men had been unable to do before. And in so doing, they gave to the United States a legal claim to the vast Arctic.

Neither the Russians nor anyone else measured up to these two men, and we were first, in our rightful place.

Though the history of this great act is one we must never forget, what impressed me most was this one fact: neither Peary nor Henson could have done this alone or without each other. They accomplished what men had been unable to accomplish before by combining their strength and their intelligence and their faith and their vision.

And as I said a little prayer of thanks to Hanson of Southern Maryland, a Swede, I now had another prayer of gratitude to Matthew Henson of Southern Maryland, a Negro.

It may be that moralizing on history is a useless pastime, but how refreshing it is in a world which has seen all too much bigotry and hatred to see written indelibly on the pages of history just what happens when men can rise to the spiritual greatness a divine providence intended for them.

It is with the spirit of Henson strong upon me that I congratulate you tonight on conquering the many problems you have had in the development of your community. In the past 20 years of our lives, we have gone through a great world war in which the forces of bigotry and human slavery were beaten back by flesh of our flesh and blood of our blood; we have fought a war in Korea that the great sacrifice might not have been in vain; we have been through the less dramatic but equally demanding ups and downs of a cold war.

We have faced these problems and we have come through them. Now we have other problems, problems that concern us all. I refer to the problems of maintaining peace; of furthering education; of making ends meet in a period of inflation; of making mortgage payments on our homes; of paying for the groceries; of paying for clothes for our families; of meeting payments on the car and television set; of everyday living.

By working together—by working one for the other—by honoring the past and working for the future which promises such greatness to the stout of heart, we can conquer not only these problems but any others which may arise.

This has been our salvation in the past. This must be our lifeline to the future.

The Situation in Hungary

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and the enclosed text of an aide-memoire of the Hungarian Committee to the Secretary General of the United Nations regarding the present situation in Hungary and Sir Leslie Munro's report in that connection:

HUNGARIAN COMMITTEE,
New York, N.Y., November 3, 1959.

Hon. ALVIN M. BENTLEY,
U.S. Representative,
Washington, D.C.

DEAR SIR: May I have the honor to enclose an aide-memoire of the Hungarian Committee addressed to the Secretary General of the United Nations, Mr. Dag Hammarskjöld.

Sincerely yours,

MSGR. BÉLA VARGA,
Former President of the Hungarian Parliament, Chairman of the Hungarian Committee.

Mr. FERENC NAGY,
Former Prime Minister of Hungary, Chairman of the Foreign Relations Committee.

THE SITUATION IN HUNGARY

The Hungarian Committee respectfully submits the following aide-memoire to the Secretary of the United Nations:

1. On December 13, 1958, the United Nations General Assembly adopted by a vote of 54 to 10 the 37-power resolution on the situation in Hungary. The resolution included the stipulation that the United Nations "will continue to be seized of the situation in Hungary in view of the fact that the Government of the U.S.S.R. and the present authorities in Hungary are disregarding the resolutions of the General Assembly."

The resolution also appointed Sir Leslie Munro to report on "significant developments relating to the implementations of the resolutions of the General Assembly on Hungary," and requested the Secretary General to provide the "necessary facilities [to assist Sir Leslie Munro in the performance of his duties]."

2. Although this resolution was passed almost a year ago no report from Sir Leslie Munro has been forthcoming. In addition, the item on the situation in Hungary is not included in the present agenda of the 14th session of the United Nations General Assembly.

3. In the meantime terror in Hungary continues. According to reliable informations:

Thirty-six young freedom fighters were tried and executed secretly shortly before the opening of the 14th session of the General Assembly. During the first 10 months of 1959, more than 200 patriots were executed, among them many youngsters. At present more than a hundred political prisoners are in the death cells in the Communist Hungarian prisons, among them young freedom fighters, awaiting execution.

In the first 3 months of 1959, 200,000 independent peasants were forced into kolkhozes against their will. The Communist regime set up special commandoes of party functionaries, workers' militia members, and secret policemen to intimidate the villages; many peasants committed suicide in their despair.

After the abolition of the workers' councils, which represented the true feelings and aspirations of the Hungarian workers, work norms were tightened.

Churches came under full control of the Communist state in 1959. Autonomy of the churches was abolished with brutal interference in their affairs. The present situation is characterized by the total limitation of priest activities, the education of young priests in the seminaries and intolerance in religious freedom.

Literary and artistic life is under strictest supervision. The regime recently introduced its instrumental control through the reorganization of the Hungarian Writers' Federation with complete denial of the freedom of expression.

Remnants of professional freedoms were destroyed by putting ban on private practice of lawyers and physicians.

Discriminatory measures were extended onto the participants in the Revolution and freedom fight in the field of education, social security and old age pension.

4. The Secretary General, at the press conference of the United Nations Correspondents' Association on September 10, 1959, said he thought it a "good constitutional law that the Special Representative [Sir Leslie Munro] would be entitled to introduce a report."

5. The Hungarian Committee has reasons to believe that recent development in Hungary are of sufficient importance to warrant the presentation of Sir Leslie Munro's report to the United Nations General Assembly.

6. The plight of the Hungarian people should not be forgotten. The Hungarian Committee respectfully asks the Secretary General to facilitate the presentation of Sir Leslie Munro's report personally to the General Assembly of the United Nations at the earliest possible time.

NEW YORK, N.Y. *November 3, 1959.*

THE HUNGARIAN COMMITTEE

The Hungarian Committee is an exile political organization embracing the postwar democratic Hungarian political personalities and the representatives of the 1956 revolutionaries and freedom fighters. The purpose of the committee is to work for the independence of Hungary and for the restoration of the freedom of the Hungarian people.

Chairman: Msgr. Béla Varga, President of the Hungarian Parliament, 1946–47.

Vice chairman: Jozsef Kövágo, mayor of Budapest, 1947–47, reelected during the revolution in 1956.

Members: Jozsef Adoján, Member of Parliament, 1945–48; Pál Auer, Hungarian Minister to France, 1946–47; István Barankovics, Member of Parliament, 1947–49, secretary-general, Democratic People's Party; Lajos Hajdu-Németh, Member of Parliament 1945–47, leader, Christian Democratic Union; Pál Jonás, chairman of the Petöfi Circle; Béla Király, major general, Commander of the Hungarian National Guard during the revolution; Sándor Kiss, Member of Parliament, 1945–46, director of the Hungarian Peasant Association; Imre Kovács, writer; Ferenc Nagy, Prime Minister of Hungary, 1946–47; Zoltán Pfeiffer, Member of Parliament 1945–47, Under Secretary of State for Justice 1946–47; Pál Szabo, Member of Parliament 1945–48, Under Secretary of State of Public Welfare 1946–47; László Varga, Member of Parliament 1947–48; Ferenc Váli, professor of international law; Ferenc Vidovics, Governor of the County of Smogy 1945–46, Member of Parliament.

Address by Former-President Harry S. Truman

EXTENSION OF REMARKS
OF
HON. NEAL SMITH
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. SMITH of Iowa. Mr. Speaker, the Young Democratic Clubs of America held their national biennial convention in Toledo, Ohio, on November 17 to 20 this year and concluded it with a banquet on the evening of the 20th. Former President Harry S. Truman, showing the interest he always does in young people, accepted an invitation to address the concluding banquet and made another of his forthright speeches. So that those who were not among the 2,000 delegates in attendance may have an opportunity to digest his statements, under unanimous consent, I include it in the CONGRESSIONAL RECORD.

The address follows:

ADDRESS BY FORMER PRESIDENT OF THE UNITED STATES HARRY S. TRUMAN DELIVERED AT THE NATIONAL CONVENTION OF THE YOUNG DEMOCRATIC CLUBS OF AMERICA, TOLEDO, OHIO, ON NOVEMBER 21, 1959

As Democrats I know you won't mind if a former Democratic President begins his talk to you on a personal note. It has been very trying for me during the past years to see what has been going on in Washington.

But I am not going to try your patience by reciting a long list of the things that have been done to divert and reverse the forward march of the general welfare of our people as charted in the New Deal and the Fair Deal. I would rather talk to you about the future—about our future as a party and our future as a Nation. If I do touch on the past from time to time, it is only for the purpose of reminding all of us how critically important it is to have a Democrat again in the White House.

Of course I am a partisan Democrat and naturally prefer a Democrat. But partisanship alone is not a good enough reason for these times.

The man we must find for 1960 must be a man not only with a sense of history, but with a vision of the future. He must be a man with the ability to lead. He must be a man with the capacity to make bold decisions.

We need this kind of a man, because we are living in a world trying to find its way through revolution in science and in government, through the birth of new nations and the search for new freedoms. We need a man who understands the problems and needs of exploding populations. We need a man to explore new ideas and methods to improve the welfare of our own people.

We ought to have no patience with men who are content to let well enough alone. We cannot stand still or slow down for the unimaginative, for the privileged, or for the timid.

We need a vigorous, fighting, genuine liberal, and not a hot-house liberal, who talks the game but doesn't play it. I, for one, have no time for the Johnny-come-lately well-fed liberals, who would like to have a disproportionate voice in the party. I think you know who they are. They never won a fight in a precinct, and they never have been conspicuous for their sacrifices in the cause of the everyday man, the common man like you and me. That's real liberalism.

Ask some of these phony liberals where they were in 1948 when we waged the now historic battle for civil rights, when we waged the battle for the saving of national resources, when we waged the battle for better homes. Where were they?

The only party that has produced real liberals who have made contributions to the welfare of the greatest number of our people has been the Democratic Party. This is why we must put a Democrat in the White House in 1960. And I intend to do my very best to help find him.

We need a President who has a sense of our role in the world today and who is not afraid to act to meet changing conditions. More than 10 years have passed since a Democratic administration introduced a program designed to help nations achieve greater development of their resources. It is called point 4 because it was the fourth point in the inaugural message of 1949. Instead of enlarging this program, the Republican administration did nothing more than mark time with it. What was needed was an even bolder application and development of this idea. While we stood still, the world did not. And unless there is a wiser application and expansion of this program of enlightened assistance, some nations may be tempted to turn to Communist Russia.

We need a man in the White House who gives priority to human needs. Our people enjoy the highest standards of living in the world, but we have a long way to go—in the face of our growing population.

But a great many of our people are not yet getting the full benefits of our national prosperity in many things. These are adequate housing, hospitals and medical care on a basis that the ordinary man can pay. We need more schools and better schools. We need opportunities for university educations for those who deserve it and who cannot afford it. We must also face up to the growing and vital problem of caring for the aged.

We need a man in the White House who knows what our resources are and what our people are capable of producing. He must administer the resources of this Nation, not for the privileged few, but in the interest of all our people.

Here is the first give away. In the administration while I was President an argument started about tidelands oil deposits. Tidelands are those lands covered by high tides and uncovered by low tides. Those tidelands as defined belong to the States bordering on the sea. But the offshore lands at the low tide boundary under the sea belong to the Federal Government.

A proclamation was issued while I was President laying claim to all offshore minerals under the sea and other assets including fisheries to the edge of the continental shelf. In some places that shelf runs as much as 100 miles from the low tide boundary.

It is of very high value in the Pacific, the Gulf of Alaska, the Caribbean Sea and the Gulf of Mexico and the Atlantic seaboard.

There are values involved that are fantastic. At least 100 billion barrels of oil, the Alaska fisheries and the defense of all the east coast depend upon that proclamation.

Let's look at some of the record of this Republican administration:

(1) They gave away 100 billion barrels of oil which belonged to and can be protected only by the Federal Government. No State has a navy to protect its seacoast beyond the tideland limit. There were two Supreme Court decisions and two vetoes of bills, such as became law under this administration. You see, the Congress, as the legislative branch of the Government, can pass laws in conformity with Supreme Court decisions which will upset those decisions, and that's what happened in this case.

(2) This administration gave the greatest potential power source in the Northwest to the private utilities for their promotion and exploitation at public expense. It made every effort to do away with the Tennessee Valley Authority, and had it not been for some patriots in the Congress of the United States, the administration would have succeeded. That's the famous Dixon-Yates program which wanted to destroy public power entirely.

(2–A) This administration is now preparing to give away the atomic energy power for which the taxpayers spent $25 billion.

(3) When it comes to agriculture, the cost of the operation of the Department of Agriculture has increased from $1,100 million in 1951 and 1952 to more than $6 billion in the present budget. And the farmer is always at the bottom of the heap, as far as equality of treatment is concerned, in the operation of the Federal Government. At the time of the 1951–52 expenditure, the farmer was receiving between 80 and 90 percent of parity. Under the present $6 billion program, he receives less than 65 percent of parity.

(4) They turned the control of the finances of the Government over to the bankers, just as it was when Andrew Jackson took over the Presidency, as it was when Wilson became President, as it was when Franklin Roosevelt became President. They have exploited homeowners, farmers and little business generally—to the tune of $16 billion in added interest cost on private loans. There are loans to the tune of more than $300 billion outstanding.

(5) They raised the cost of the service of the national debt from $5,400 million to $9 billion, and it will be more before it is less. The Secretary of the Treasury has just sold Government notes, the top prime paper at 5 percent. The average under previous administration was 1½ percent. Who pays that bill? The taxpayer of course.

(6) The Republicans attack the last Congress by calling the Democratic Members spendocrats, while the Congress cut the President's own spending recommendations by more than a billion dollars. The first session of this Congress made one of the greatest records in the country's history in spite of the President's minority veto program.

The President must be the leader in both domestic and foreign policies, and he cannot perform that leadership from his advertising headquarters on Madison Avenue any more than he can control the finances of the country while the center of that control is in Wall Street. Yet, that is what has happened.

(7) The objecive of this administration has been to put labor in its place. Do you know what that place is? Complete domination by the financial interests of the country—a return to peonage. Yet the labor population voted to receive what it has gotten. So did the farmers.

People have been the same since ancient times. In olden times, the Hebrews had to be reminded every so often how they came out of Egypt with God's help. But they soon forgot. Read the Old Testament.

The French have to be reminded how they overcame the policies of Louis XIV.

And we have to be told and told again what our own Bill of Rights means.

Labor, the farmers, the little businessmen forget and forget, and so we must keep telling them the truth. Hitler and Mussolini used the big lie to fool the people, and we must not let misrepresentations by B.B.D. & O. mislead the good people of this great Republic. If we allow that, then all our 170 years of sweat, blood, and tears have been in vain.

There has been considerable glee among Republicans about the uninterrupted record of vetoes by President Eisenhower which Congress could not override.

This has made it appear that the Congress—with a Democratic majority—has, in fact, sustained President Eisenhower.

Nothing could be further from the truth.

The truth is that a minority in Congress—just barely over one-third of the elected representatives of the people—has managed to thwart over 140 times the will of the American people as expressed by the majority of the Congress. And this one-third—working with a willing Republican in the White House—has managed to impose a minority rule upon the people.

This is the fact, and this is the truth, and this is how the people of the United States are being hoodwinked and defeated by the shameful use and, in fact, shocking abuse of the Presidential veto.

The administration is trying to pin a won't-do tag on Congress, and I am sorry to see some Democrats who ought to know better acquiescing in the acceptance of this label.

This Congress is a far cry from the Republican do-nothing 80th Congress which continually blocked legislation proposed by the President, whereas in this administration very little, if any, legislation has been proposed by the White House, leaving it to the Congress to propose necessary measures.

What we have is not a won't-do Congress, but a won't-do administration which has prevented a Congress, with a majority returned by the people on three occasions, from enacting badly needed domestic legislation.

This won't-do administration, in the domestic field, has been responsible for the mismanagement of the national debt and the worst mishandling of our fiscal and monetary policies in recent times.

In the face of an expanding world economy, and an exploding population, this won't-do administration has vetoed the Nation into a lot of trouble for now and in the future.

We can cure that situation. Nominate a man at the Democratic Convention who understands the welfare of the United States, both foreign and domestic. That's the cure.

The Late Honorable Steven V. Carter

SPEECH
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 6, 1960

Mr. O'HARA of Illinois. Mr. Speaker, although I knew the Honorable STEVEN V. CARTER but slightly, he has left with me a memory that cannot be erased. It was on one of the closing days of the first session. The vote was crucial and it was bound to be close. I looked around and saw, a few seats removed, STEVE CARTER, slightly bent forward, his face chalky white, obviously laboring in great pain.

The end was not far away, and he knew it. Yet he was there, at his post of duty, to answer his name when the roll was called. I shall always think of it as one of the sublimest exhibitions of courage, in the challenge of duty, that ever has come to my attention.

My heart goes out to his widow and the members of his family. He left them the inspiration and heritage of a noble life lived nobly, with faith and with courage, to the very last painful moment.

Farm Program

EXTENSION OF REMARKS
OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD the last of a series of five articles on the farm subsidy and surplus problem which appeared in the Los Angeles Mirror News during November 1959.

[From the Los Angeles Mirror News, Nov. 6, 1959]

FARM PROPS CLIP YOU FOUR TIMES

(By Jack Tobin)

(This is the last of five articles showing the city dweller-taxpayer the high cost of the Government's wasteful, outmoded farm price support program. This second most costly facet of the Federal budget is of prime import to the urban taxpayer—the individual carrying the brunt of the load.)

You, the city dweller, the consumer, the taxpayer—every American—pay for our outmoded farm price support program not once, not twice, but four times.

First, you, the taxpayer, put up the money for the original price support loan—an estimated $3.6 billion in 1959.

Second, you, the taxpayer, pay the cost of storing surplus price support commodities in the Federal stockpile—$590.6 million in 1958.

Third, you, the taxpayer, pay the loss sustained in disposal of these surpluses—an estimated $1.5 billion in 1958.

Fourth, you, the taxpayer, due to artificial price setting, pay something extra for your bread, your shirt, your sheets, your shortening.

These excessive costs are a direct result of this wanton, wasteful hodgepodge of a puzzle known as price support.

Every hike in support costs the city dweller, the consumer, the taxpayer—even the farmer—more at the store.

Every segment of America's economy pays.

Inflation increases.

The cost of living soars higher.

But, the farm problem is not solved.

TRIED, FAILED

These tremendous costs are the compound of a support program which has tried but failed to establish a fair standard of living for the farmer at the low end of the economic scale.

This group predominates in the soil-poor areas of the deep South in cotton and tobacco land as well as other deficient land of the Farm Belt.

Last year the cotton farmer's share of a cotton shirt retailing for $3.95 was 30 cents, or about 8 percent.

UP IN SMOKE

In 1957 a package of regular cigarettes cost 25.1 cents on the national average. Of that, 3.7 cents or about 15 percent went to the farmer for his tobacco.

It is obvious that an increase of a cent or two in farm support payment would not appreciably increase the standard of living for the small, low-end farmer—the farmer whom the program was designed to benefit.

Dr. A. B. Cox, professor emeritus of the University of Texas, is an international authority on cotton marketing.

RAW COTTON

In a recent study of the cost of cotton price supports to the consumer and taxpayer, Dr. Cox showed the multiplying cost of a slight increase in raw cotton materials.

The cost to the consumer of a 5-cent increase in raw cotton, is 15.67 cents by the time it reaches the store counter.

Dr. Cox made an exhaustive study of the pyramiding costs to the consumer-taxpayer in the seven steps from farmer to the store counter. The study was based on the 1956–57 cotton subsidy program.

It revealed that the grand total to the taxpayer for the 1956–57 cotton program as a result of the seven step pyramid came to $1,698,588,000.

This 1956–57 program amounted to a payment of about $2,000 for every cotton farm in the United States.

The $1,698,588,000:

Is greater than 1956–57 net profit of all U.S. cotton farmers.

Would have purchased enough cotton at loan prices for all domestic needs in this period and left some over for export.

Would have paid for the purchase and permanent retirement of the acreage allotments of cotton farmers unable to earn an American standard of living farming cotton.

Is a tax of about $10 for every man, woman, and child in the United States.

READ AND WEEP

Today, Mr. and Mrs. Taxpayer, your family has an invested interest in surplus products worth $233.33.

Your family owns:

Sixty pounds of cotton.
Fourteen bushels of wheat.
Twenty-one bushels of corn.
Three hundred pounds of grain sorghum.
A fifth of a pound of tobacco.
A peck of soybeans.
Four pounds of rosin.
Nearly five pounds of dairy products.
And 1½ pounds of shelled peanuts.

AND STILL MORE

Since the inception of price supports in 1933 the taxpayers, by Department of Agriculture statistics, have lost $1,067,215,716 on corn and cornmeal; $813,977,104 on wheat and wheat flour; $172,031,170 on peanuts; $478,533,402 on Irish potatoes; $124,882,914 on rice; $189,698,695 on eggs; $1,760,124,929 on milk and butterfat; $241,601,312 on wool; $225,027,570 on grain sorghum; $167,497,424 on flaxseed and linseed oil; $132,181,378 on barley; $117,612,809 on cottonseed and products.

Total losses sustained under all phases of the farm program, according to one USDA statistics table, since 1933 are $8,894,297,976.

A DOUBLE CLIP

One of the ironies of the entire program is that if you measure the success of the subsidies in the amount of food and fiber produced, you then must pay the penalty of having to store and dispose of the surplus.

For instance, it cost the taxpayers $590,600,000 in fiscal 1958 just to store surplus price-support commodities.

In California, $8,144,000 tax dollars went to warehousemen for rice, grain and bean storage costs alone last year. Stockton Elevators was paid $1,214,759 for storing Government-owned grain. Eight other firms or individuals collected more than a quarter million dollars apiece just for storing surplus commodities.

ON WEST COAST

At one time on the west coast, there were 175 mothballed Government-owned ships used for grain storage which reached 40 million bushels. It cost the taxpayers more than $13,300,000 through last August 31.

One of the disturbing—yes, sickening—sights in the Farm Belt is the towering mound of grain dumped on the open ground, simply because there's no place to store it.

This, too, is a symbol of the wasteful price-support program.

Where does the blame rest for this waste?

Is there a solution?

One of the leading farm writers in the Deep South—where supports have long been sacred—reports mounting discontent among farmers over the support program.

"Some southern Congressmen," this writer reveals, "have quietly ask Secretary Benson how they can get off the hook.

"They are ready to renounce some of the ridiculous farm programs they have supported."

SUPPLY, DEMAND

A survey by a leading southern farm magazine shows 87.5 percent of the farmers felt farming should return to free supply and demand system as soon as possible with minimum government control.

The most often advocated solution by farm experts is to gradually eliminate the farmer from government subsidy.

Plenty of agricultural economists will tell you that this is the only sensible solution.

BABY MUST SURVIVE

Jesse Tapp, board chairman of Bank of America and a member of President Eisenhower's Advisory Commission on Agriculture, agrees, but says:

"However, the Government can't just throw out the baby (the farmer) with the wash (price supports)."

He and others insist we must have a firm, national policy dedicated to step-by-step elimination of price supports. You can't just cut them off—bingo—in one fell swoop. Economic chaos might result. But you can do it on an orderly, scheduled basis.

The trouble is, you can't seem to convince the politicians. To them, it borders on treason and heresy to suggest elimination of farm subsidies. Particularly the lawmakers from the deep South.

The lawmakers from the urban, consumer areas don't seem to demonstrate an equal fervor for protecting the taxpayer.

The answer rests, then, on when the taxpayer gets fed up to the point his voice speaks loud and clear on the banks of the Potomac.

GOVERNMENT FIGURES SHOW HOW SUBSIDY DOLLAR GOES

All objectives of the price support program over the years has been directed toward helping the little farmer.

An official U.S. Department of Agriculture chart shows how the price support dollar was paid out in fiscal 1957. The chart is based on size and class of farm.

Farm product sales	Number of farms	Farms	Market	Portion of 1957 price support	
				Total	Amount per farm
		Percent	*Percent*		
$5,000 up	1,290,000	27	79	$2,571,000,000	$1,993
$2,500 to $4,999	811,000	17	12	391,000,000	482
$2,500, less	2,681,000	56	9	293,000,000	109
Total	4,782,000	100	100	3,255,000,000	

Fate of Young Hungarian Freedom Fighters

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. BENTLEY. Mr. Speaker, I would like to include in the RECORD the following exchange of correspondence with the White House regarding the fate of the young Hungarian freedom fighters facing execution by the Communist regime:

DECEMBER 9, 1959.

President DWIGHT D. EISENHOWER,
White House, Washington, D.C.:

I have been asked by certain Hungarian friends and constituents of mine to request your personal intervention with respect to the youthful Hungarian freedom fighters who are allegedly facing execution by the Communist regime of that country. I am aware that this subject is presently being debated by the General Assembly of the United Nations but feel that a personal statement expressing your horror at such a report might be helpful in marshaling world public opinion against this barbaric undertaking.

Respectfully yours,

ALVIN M. BENTLEY,
Member of Congress.

THE WHITE HOUSE,
WASHINGTON,
December 14, 1959.

Hon ALVIN M. BENTLEY,
Member of Congress,
Owosso, Mich.

DEAR AL: For the President this will acknowledge and thank you for your December 9 telegram respecting your plea in behalf of the 350 Hungarian freedom fighters.

While the State Department has no information at this time concerning this matter, you can be sure that we will continue to follow the situation in Hungary with close attention. In this connection you may wish to have the enclosed statements by Ambassador Lodge on the question of Hungary.

Kindest regards and best wishes for the holiday season.

Sincerely yours,

JACK Z. ANDERSON,
Administrative Assistant to the President.

STATEMENT BY HENRY CABOT LODGE, U.S. REPRESENTATIVE IN THE GENERAL ASSEMBLY, ON NOVEMBER 25, 1959, ON THE QUESTION OF HUNGARY

Mr. President, the United States supports the recommendation by the General Committee that an item entitled "The Question of Hungary" be included on our agenda.

Last year in Resolution 1312 the General Assembly declared that the United Nations will continue to be seized of the situation in Hungary, in view of the fact that the Government of the U.S.S.R. and the present authorities in Hungary are disregarding earlier resolutions of the General Assembly. By the same resolution, the General Assembly appointed Sir Leslie Munro to represent it for the purpose of reporting on developments relating to the implementation of the Assembly resolutions on Hungary.

Sir Leslie Munro has now requested the General Assembly to consider the Hungarian situation. He reports that there has been no improvement of conditions in Hungary and calls attention to the refusal of the Hungarian authorities to cooperate with the United Nations in any way in this matter. In these circumstances, the United States also requested inscription of this item. I may say in our opinion the request of the Representative of the U.N. on Hungary would have been enough.

Nothing we know today leads us to believe that the States concerned have ceased their defiance of resolutions which were adopted by overwhelming majorities at previous sessions. As recently noted by the United Nations Representative on Hungary, foreign armed forces remain in Hungary and the framework of repression remains unchanged. In the shadow of continued trials and executions of Hungarians whose only crime was their barehanded fight for independence against Soviet tanks in 1956, and in the shadow of the continuing reports of impending executions, it is clear that the end of the reign of terror is not yet in sight. It seems clear to the U.S. delegation, therefore, that we must inscribe this item and that we must consider the Report of the United Nations Representative on Hungary.

As I explained in my statement in the General Committee on November 23, we regret the circumstances that gave rise to the necessity for inscribing this item. Recent events encouraged us to hope that there might be real relaxation of international tensions and improved international cooperation, which are, of course, the goals for which this very international organization was established. We still hold to that hope, Mr. President, but we must set down that to attempt to sweep crimes like these under the rug will not cause these hopes to be fulfilled and will not promote peace. We accordingly urge members to join in supporting the inscription of this vital question.

STATEMENT BY HENRY CABOT LODGE, U.S. REPRESENTATIVE, IN THE GENERAL COMMITTEE ON THE QUESTION OF HUNGARY, NOVEMBER 23, 1959

Mr. Chairman, before we adjourn this meeting there are certain fallacies which have been expressed here which I should like briefly to rectify. I took some notes during Mr. Kuznetsov's speech, and I noted some of these phrases: "Dirty work," "sordid assignment," "mouthpiece for slander," "puppet," "slanderous assertions and concoctions" in my letter.

Now, I am not fortunate enough to be familiar with the Russian language, and maybe these are ordinary, routine phrases in Russian. But I have some familiarity with English and with French, and I can say that in those two languages these are extremely violent words. If Mr. Kuznetsov is really interested in lessening the cold war, he could very easily prove that fact by using parliamentary language in a parliamentary assembly. I say that to him in as bland a tone as I can use.

Then he also referred in his speech to the conversations between Chairman Khrushchev and President Eisenhower which were held at Camp David and which in a press release the other day the Soviet delegation characterized as the spirit of Camp David.

Now, Mr. Chairman, we prize—we in the United States—prize what was achieved at Camp David, and none are more opposed than we to doing anything which would destroy it.

One way to live up to that spirit is to conform with United Nations resolutions.

I feel that perhaps I have some right to talk about Camp David for the simple reason that I was there. In fact I was present at all the meetings which took place. These meetings were adequately summed up in the communique which is well known and I can assert that there is nothing in that communique or in what happened at Camp David to justify the declaration that the very modest action on Hungry which we are discussing today is against the spirit of Camp David.

What is against the spirit of Camp David Mr. Chairman, is the subversion of small countries.

What is against the spirit of Camp David are acts which turn a brave little country into a moaning colonialist slum.

What is against the spirit of Camp David is any behavior which makes a veritable mockery of peaceful coexistence.

Mr. Chairman, nothing happened at Camp David which requires us to condone evil.

Nothing happened at Camp David which requires us to pass by in silence on the other side of the street when a brutality is being committed.

Nothing happened at Camp David to prevent us from acting like human befngs made in the image of God when cruelty is being practiced.

The spirit of Camp David was not intended to be a soporific to peoples in the democracies to put them to sleep in the belief that this dangerous world—which we all hope may some day be safe—has actually been made safe.

No one looks more eagerly than I do for the day when the United States and the Soviet Union can work regularly together for the peace of the world. This is an end devoutly to be wished and I shall always work for it.

But we work against such a day when we distort the spirit of Camp David into something which was never meant at all and which no one present thought that it meant.

I realize that there may be colleagues of mine here in this room who think that in speaking as I am now doing I am striking a false note. But I do not agree.

We can only build a peaceful world on truth—and the spirit of Camp David never told us to close our eyes to the truth.

We can only build a peaceful world on deeds—deeds of justice—and the spirit of Camp David never told us not to do such deeds.

Instead of criticizing this proposal, why don't you do something to show that you really believe in the true spirit of Camp David? Why don't you take down the barbed wire and the observation towers which now divide the poor Hungarians from Austria and the free world and which have turned Hungary into a vast human cage? Why don't you chain up the savage dogs which roam along the border to catch the miserable human beings who are seeking freedom?

It is by deeds such as these that we can best live up to the spirit of Camp David.

Let me say in conclusion that the Camp David communique states "that all outstanding international questions should be

settled not by the application of force but by peaceful means through negotiation." If, therefore, we are really to live up to the spirit of Camp David, Sir Leslie Munro ought to be admitted into Hungary, the United Nations resolutions adopted by overwhelming votes should be carried out in Hungary, and the Soviet Union, instead of working against the United Nations, should work with the United Nations. That would be really carrying out the spirit of Camp David.

The United States supports the request of the United Nations Representative on Hungary that an item of an important and urgent character entitled "The Question of Hungary" be inscribed in the agenda of the 14th General Assembly. The United States as a member of the General Committee has itself also requested the inscription of the item.

This request, Mr. President, was necessitated by the resolution on Hungary adopted by the 13th General Assembly and the continued defiance by the present Hungarian regime and the Soviet Union of the General Assembly resolutions on Hungary.

Resolution 1312 declared "that the United Nations will continue to be seized of the situation in Hungary in view of the fact that the Government of the U.S.S.R. and the present authorities in Hungary are disregarding the above-mentioned resolutions of the General Assembly." By the same resolution the General Assembly decided "to appoint Sir Leslie Munro to represent the United Nations for the purpose of reporting to member states or to the General Assembly on significant developments relating to the implementation of the Assembly's resolutions on Hungary."

On July 9, 1959, the United Nations Representative on Hungary in a public statement revealed that his patient and quiet efforts to gain admission to Hungary in order to obtain firsthand information concerning the implementation of the Assembly's resolutions had been rebuffed by Soviet and Hungarian authorities. Sir Leslie Munro announced his intention of submitting a full report on his activities to the 14th General Assembly.

In the explanatory memorandum attached to his request for inscription, the United Nations Representative on Hungary has stated that foreign armed forces remain in Hungary and that the framework of repression remains unchanged. In spite of public assurances of the representative of the present Hungarian regime that reprisals against Hungarian patriots who fought in the 1956 uprising have ceased, the explanatory memorandum records the harsh fact that trials and executions of Hungarian freedom fighters have taken place since the last General Assembly. Apparently, the end of the reign of terror is not yet in sight, for there are disturbing rumors that more executions are pending.

The United States supports the initiative of the United Nations Representative on Hungary. We deplore the circumstances that gave rise to the necessity for this important and urgent request. All members should hear what Sir Leslie Munro has to report and consider appropriate further steps to achieve the objectives of the United Nations.

The Late Honorable William Langer

SPEECH

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 6, 1960

Mr. O'HARA of Illinois. Mr. Speaker, it was with profound sorrow that I learned of the passing of the late senior Senator from North Dakota, the Honorable WILLIAM LANGER. He was my close personal friend for many years. In courageous dedication to what he believed to be right, and in the championing of little people whom to defend was to invite the vengeful wrath of publicized respectability, he was matchless. I hope that the story of his life, with its lessons of devotion to duty regardless of the cost or consequence, and its inspiration to faith and courage in the doing of good deeds, will not be lost to succeeding generations. In the life and career of one of the most colorful statesmen in American history, and one of the giant champions of the oppressed in an era now closing, there is rich material for the biographer.

The Nation and all mankind is the loser with the close of an era when after every election the word came over the wires from North Dakota: "Again the people have rallied behind BILL LANGER and Usher Burdick."

To the family of this noble man and of his fine wife, his inspiration and coworker, and by whose side he now rests in a cemetery in North Dakota, goes my deep sympathy.

Modern Myth

EXTENSION OF REMARKS

OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. ROBISON. Mr. Speaker, I continue to find the "Letters to the Editor" columns of our Nation's newpapers a fertile field for thought. In these days when all of us are so concerned about the educational processes of our Nation, it occurred to me that the following letter to the editor of the Wall Street Journal from Marian C. Lane, of Walton, N.Y., as published in the Journal on January 7, 1960, might be of interest to my colleagues. The letter follows:

EDITOR, THE WALL STREET JOURNAL:

I have just finished reading my daughter's seventh grade social studies textbook and could find no mention whatever of your gloomy observations on widespread bureaucracy, confiscatory taxes, abuses in labor unions, and irregularities in welfare, though all of these subjects are covered at great length.

This book informs me that big government is necessary for a highly civilized society such as ours. It says over and over that the Government is taking care of you every minute of every day of every month of every year, awake, asleep, at work, at home, and en route. Your editorials show scant appreciation indeed for all this attention.

Your remarks concerning labor union abuses and racketeers are apparently mistaken, to say the least. The book informs me that labor is the party that has been abused all these years. Employers are ogres against whom employees need all kinds of legislative protection. Fortunately, the Government is making great progress in this connection for which we all should be duly grateful instead of critical.

According to the book, it is no longer considered shameful to accept financial help from the Government as it once was in less enlightened times. Needy people should expect to be taken care of in their homes and not be banished to a cheerless institution. Again the Government, through extensive social legislation, is making it possible for everyone to have freedom from want. Presumably, even cynical editors are included in this magnanimous concept.

Merely a quick perusal of this book will show you how great, wise, and benevolent the Government is. Who but a few old cranks sees anything wrong in this modern fairy tale?

MARIAN C. LANE.

WALTON, N.Y.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 138, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Appendix

Remarks by Commandant of the Marine Corps to Staff

EXTENSION OF REMARKS
OF

HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 12, 1960

Mr. LANKFORD. Mr. Speaker, for some years now the Commandant of the Marine Corps at the beginning of each new year has addressed his staff on the goals and problems which face the corps in the year to come.

On January 4, in keeping with this tradition, Gen. David M. Shoup, the newly appointed 22d Commandant of this old and distinguished fighting corps, spoke to his assembled staff for the first time as commandant.

His remarks deal in part with matters principally of interest to marines. Other portions of his talk contain advice and instructions which could well be followed to the country's great advantage by all our services.

All of his address, however, constitutes a precept for forthright adherence to the stern dictates of duty performed with honor. It is a statement which all Americans can read with pride and satisfaction. It leaves no doubt that the Marine Corps is in the hands of a leader who is determined that his corps will stick to the fundamentals of its missions, devote its every energy to that effort and nothing more.

General Shoup's message is a call for rededication to the principles of constant readiness, selfless service, and combat effectiveness which have marked the Marine Corps throughout its history. Forthright, hard hitting, perceptive, and fair it deserves the attention of every Member. Under unanimous consent, Mr. Speaker, I include General Shoup's remarks to his staff in the Appendix of the RECORD.

His remarks follow:

REMARKS BY COMMANDANT OF THE MARINE CORPS TO STAFF, JANUARY 4, 1960

INTRODUCTION

To all marines, naval personnel, and civilians who comprise our operating organization: Good morning. Although I speak only to this small representative group personally, provision has been made whereby these remarks will be either read or heard by the majority of marines of all ranks at all posts and stations.

A few days ago, by taking the oath of office, I accepted the challenge inherent in the title of "22d Commandant of the U.S. Marine Corps." I personally assume every responsibility connected therewith. I am mindful of this great burden and I know that I cannot properly discharge these responsibilities alone. I am indeed grateful for the highly professional character of our Marine Corps. It is upon this staff and my field commanders that I shall lean most heavily in the future to insure that the policies of my administration are intelligently implemented, effectively executed, and consistently maintained in force.

It is fitting, then, that I personally acquaint you with my views, designs, and policies.

I shall not adopt the massive new broomation policy. I hope that divine guidance and your help will provide me the wisdom to perceive the things that should not be changed and the courage to change those that should be.

Every individual leaves his own distinctive fingerprints. Thus each person makes a different impression on everything that he handles. So it is with this job that I am undertaking—my way of doing things is bound to be different, and the officer who succeeds me will have his own particular way. But while the impressions which we make are peculiar to each individual, we all have one thing in common: to insure that our corps is always ready, willing, and able to carry out efficiently any mission that we may be assigned, and by so doing to continue to merit the trust and confidence of our people.

GENERAL OBSERVATIONS

1. Since my return from Okinawa and my arrival in Washington one of the most heartening things I have learned is that all services intend to maintain some forces ready to fight now. This is good for the United States. Let's encourage it. There will never be enough ready forces to deal with all the little brushfires and maintain the degree of readiness necessary to meet the big conflagration which we hope will never happen.

2. It has seemed to me that the Marine Corps has within recent years operated too much within the philosophy of a minority group. The corps came of age many years ago. Let us unshackle our minds from the stifling psychology inherent in the slogan "They're sniping at us." This has hampered and hamstrung our thinking too long.

3. Let us not be reluctant, as members of joint boards and staffs, to express our views on the overall problems of our Nation and its Armed Forces. Let us not limit our thoughts and our utterances to those in defense against emasculatory remarks about our corps made by irresponsible persons.

4. Through an even greater understanding and perfection of our relationships and training requirements with the Navy and a deeper appreciation of our position among the Armed Forces of the United States, let us rid ourselves of any fear of occupying any inferior status in the National Defense Establishment.

5. Let us make it impossible for anyone to doubt our complete readiness. Let us sell our own product, but without belittling or degrading the other services by thought or speech or deed. Let us have an explicit faith that those responsible for selecting the combat forces to do each particular job will call upon those most likely to succeed. Thus, I am sure that in the years ahead the American public will continue to extol our corps.

6. I will make a continuous and determined effort to insure that we have but one Marine Corps and that we all serve in that one with equal opportunity in all matters. In furtherance of this policy the last vestige of our 1916 special staff should bow out. Marine Corps supply functions and financial management extend beyond the scope of duties of the officers who are designated for supply duty only. Responsibility for such functions is not limited to these officers but extends to unrestricted and limited duty officers. It follows that there is no justification for the continuation of some 357 officers in this category, and that their designations should be revoked so they will be subject to the laws applicable to unrestricted officers. Legislation will be requested to accomplish this.

7. We shall have a closer integration of staff functions within this headquarters. We have made great progress in this area over the past years. For example, during my first tour here we had seven distinct personnel departments and a few fuzzy ones. Today I conclude we have somewhere between 1½ to 2½. Soon I expect to have but one. Other areas of possible closer integration including that of ground and air staffs, are being studied. The exact course of action has not been determined. But under no circumstances shall such action in any way reduce the careful coordination required between Marine Corps Aviation and the Bureau of Naval Weapons and other Navy agencies.

8. Over the years there seems to have been a remodeling of our yardstick for the measurement of satisfaction in doing duty as an officer. There has also been, I think, some change in the sense of values of many of our marines. Before World War II we meant it when we said the corps came first. Today I fear some are just paying lipservice to that expression. Let us return to the old philosophy of selfless service among all ranks.

9. Marines are expeditionary creatures by their very nature. We are expected to be able to pack and move out on a few hours' notice. Exuding unhappiness in the absence of 4 to 6 months advance notice of change of station is unhealthy. Even with this much warning commanders and individuals have been known to use this advance slate only as a basis for negotiation for changes. Let us help the director of personnel, not hinder him.

10. I am greatly disturbed by negotiations of another nature. Of late, there has been flagrant and self-seeking disregard of a time-honored regulation. I refer, of course, to article 1258 of Navy Regulations which expressly prohibits soliciting for gifts for superiors or members of their families. The regulation is equally clear in prohibiting seniors from accepting gifts. There is no objection, however, to giving or accepting a memento of little intrinsic value. In my view, anyone who solicits money for a gift is merely apple polishing to gain points for himself. A commander who accepts a gift impeaches his own honor. Both violate regulations. This practice must cease.

11. While I am on the subject of personal honor and judgment, I want to emphasize the danger inherent in acceptance of social invitations extended by defense contractors, and other businessmen. With the best of motives, officers can unwittingly place themselves in a position where their conduct in such matters is open to serious misinterpretation. You must exercise the best of good judgment in your relationships with people doing business with the Government.

12. Many bureaus and offices in the Navy Department, and other services habitually

communicate with this headquarters or directly with field commands to advise that they plan to detail a certain officer to fill a certain billet and that they hope such assignment is acceptable. Of course such a communication requires a reply. I hope to save many exchanges of messages and correspondence by requesting that they desist from this practice. I have, and I expect you to have the necessary faith and confidence in those responsible for the selection of officers for assignment to the Marine Corps that they will select the ones best fitted to fill the billets. We can always let it be known if the one who arrives can't "cut the mustard." This will be most unusual, I'm sure. Further, I don't plan to send communications over the world asking various commanders whether or not a certain marine officer is acceptable for assignment to their staffs. I hope these commanders will show toward me the same trust and confidence in my detailing of an officer qualified to do the job. I want them to let me know when any marine officer doesn't meet the standards.

13. After 15 months with the Fleet Marine Force, 7th Fleet, I continue to be firmly convinced that our Fleet Marine Force units in the Western Pacific are properly there, and properly without dependents. I am even more firmly convinced that a tour of 15 months is too long. I am going to take every action open to me to reduce the length of this tour and still maintain our posture of determined readiness.

14. The mission of the Marine Corps and our position within the Department of the Navy is so well defined by law and order as to need no embellishment by me.

Nevertheless, I feel that increased emphasis must be placed on discharging the responsibilities with which we have been entrusted in the field of doctrine and development related to landing force operations. We must be aggressive, visionary, persistent, and timely.

15. The Marine Corps has consistently supported any proposed changes in defense organization which we believe would, in fact, promote the efficiency of operations and administration and at the same time enhance the combat readiness and effectiveness of the services. This we shall continue to do. With this in mind, I plan no change in the Marine Corps position on the questions of merger, one service, a single chief of staff, or a national general staff.

PERSONNEL AND MANPOWER MATTERS

My immediate predecessor stood here 4 years ago aware of the important missions and responsibilities of the Marine Corps. They haven't changed materially.

The military-civilian team of the Marine Corps today however, has some 28,500 less personnel with which to fulfill its responsibilities.

Our budget estimate for 1961 is for funds to support a 175,000-man Marine Corps. The percentage of our three division-wing teams that may simultaneously be committed to combat and the location, intensity, and duration of the conflict could be such as to properly require a ready Marine Corps of 200,000, 215,000, 235,000, or even more.

Nevertheless our most important job is always to think and work hard to get as much fight from our plight as we possibly can.

We will make every effort to relate promotions at all levels to the Marine Corps requirement in the various skills and specialties. We must be more concerned with evaluating a man's potential for promotion by how he actually performs. Written tests are valuable but not to the exclusion of performance on the job.

There are, what has appeared to me to be, inconsistencies in this so-called field of personnel management. For example, an officer must take a physical examination every year. But the backbone of our corps, the noncommissioned officer, need take only one physical during his entire enlistment, which often in the more senior ranks is only once in every 6 years. Again, an officer can be promoted from second lieutenant to general without encountering an examination related to his professional qualifications for promotion. Yet we seem to be forever examining noncommissioned officers professionally for promotion. In fact noncommissioned officers are required to take both general qualification tests and technical tests for promotion to every grade from E–3 to E–7, inclusive.

Another worm which I think has gotten into our apple is the approach some have taken in this business of career management. I first became aware of this when in command of the basic school in 1951. Some of the young lieutenants spent endless hours scheming and planning their future promotion progress. It was always based on the absolute necessity of getting a succession of certain jobs under the command of certain officers, and of getting assignments where the chances of career-killing mistakes are few. I still believe the best career management pattern for all ranks to follow, both officer and enlisted, is to carry out your boss's orders just as fast as you can and as well as you can, and make an extended effort to do the job assigned better than the man who assigned it to you thought it could be done. If you're scheming right now how to get to Paris for your next tour, it's time to retire.

Aided by your requests for assignments on your fitness reports and the recommendations of your commanders, we will, at this headquarters, make every conscientious effort to assign you to jobs commensurate with your demonstrated potential for future assumption of greater responsibilities.

Personnel departments coping with the problems of duty assignments are always overtaxed. Ours is no exception. I propose to help them in the area of assignments to field commands. Insofar as possible we will assign the ranks and skills to every command in numbers and qualifications in accordance with the approved billets. The commander will take the personnel assigned and run his command. If he can't do it, then one of two things is certain. The personnel he received should not continue to hold their rank and get superb fitness reports, or we need a new commander. The field commander can take care of the former.

Further help to the Personnel Department is envisaged by the abolishing of the personal letter approach by field commanders regarding personnel assignments by name. It is hereby abolished. Last week, I saw more than 15 personal letters from field commanders to the director of personnel beseeching and competing for the assignment of specific individuals to their commands. If there is a situation which warrants action by this headquarters, I shall expect you to use official channels. However, I will not object to a personal letter to me where in an exceptional case a commander believes this to be the best way to handle a peculiar or extraordinary personnel problem.

During my administration I do not expect to see the situation exist where a considerable number of personnel on the official and personal staffs of general officers go with them from post to post and endure the same duty assignments year after year without regard to what may be best for the Corps or the individual.

To me the term "general officer" denotes a certain definite thing. That is, that such an officer should be of such a degree of capacity, ability, and personal character that he need no be restricted to one class or field of duty assignment. Naval aviation and supply general officers are surely qualified to command a wider variety of our posts, depots, and stations and to hold a wider variety of staff jobs. It shall come to pass. Further I don't expect officers in the rank of lieutenant general to make a career in this rank. When the time comes to assign them to new jobs in a lower rank it will be done with the best interests of the Corps in mind.

Also I believe the grade distribution within our present general officer rank will be sufficiently responsive to our needs. However, I think some up and some down grading of certain billets is in order. As an example, in due course I propose to make the top billets at Barstow and Albany major generals' billets.

The stringent economies of manpower and resources require that every individual be assigned to an appropriate duty and required to produce commensurate with his potential and capabilities. We can afford no loss of productivity through willful misassignment, improper evaluation of capabilities, or selfish concealment of potential.

It appears to me that through our strict application of criteria for assignment of personnel to certain billets we have created a condition where some types of organizations are almost completely purged of personnel with the intelligence and capabilities peculiar to the upper 25 percent or so of our overall manpower. I intend to mix them up a bit—to have all types of units, where at all possible, operate with the "average Marine."

Our Fleet Marine Force is our main reason for existence. An outfit is only as good as the men in it. Therefore, we must insure the ability of the Fleet Marine Force to skillfully and professionally meet its requirements by sending a proper cross section of Marines to it.

Reports to me indicate that, during the past year, commanders are drifting away from one of the basic concepts of command—training within the command. There have been too many requisitions and requests for already trained personnel by commands whose primary peacetime tasks included development of the selfsame skills. These requests have been made in the face of certain knowledge that such personnel could come only from another identical command, or from commands whose training capabilities in the areas of specialization desired were patently less than the requesting command.

Every commander, at whatever level of command, must understand that training of personnel assigned to his command is a basic part of his mission, that other commands have similar problems and cannot also solve his problems. Matters of effectiveness of training and economy of manpower and money require that each commander exert every effort to fulfill his own training requirements for individuals. Presently, appropriate staff sections are preparing plans to encourage and assist in this program.

I intend to pursue a policy of raising individual performance standards and improving stability in our units and individual billets. However, with the small corps that we have I am firmly convinced that we must keep only the worthwhile individuals. Let us all help to insure this.

For the purpose of advancing the missions assigned the Marine Corps by higher authority and by law, the Marine Corps intends to provide and maintain, or to participate in the provision and maintenance of adequate, safe, and suitable housing for Marine Corps personnel, on or near our installations. Such housing provisions shall include those civilian employees whose duties require their presence on the base or station.

By skillful planning and handling of our personnel resources I am certain that considerable additional stability of organizations of all types can be gained by meaningful action of field commanders. Don't wait for a handyman's book of do-it-yourself programs to be presented to you.

The continued inflation of fitness report markings is a serious matter. So serious is it, that by the increasing lack of differences

we have no accurate comparative measure of individual capacity or capability. Effective use of existing instructions and positive action by reviewing authorities will help.

We must continue to increase the efficiency of our Women Marines. This will provide us with the important mobilization-base requirement.

TRAINING

When I consider that in the Marine Corps today we probably have the greatest concentration of combatwise talent in history, there should be little I need to say on the subject of training. There are, though, a few of my views I wish to make known.

The end purpose of all our training is to place a combat-ready Marine on the battlefield imbued with the will to fight. As a means to this end there exists the continuing requirement to perfect our doctrine of vertical assault. In doing this we must remember to fit our helicopter techniques into those of the still necessary and complementing surface assault forces.

I am convinced that the training of the individual grows increasingly more important as we advance into the modern atomic age. The abilities of our units to mount out or load into any type of transportation quickly and properly must not be slighted. Nevertheless, I would like to be certain that in alloting time and effort to training in these matters, you don't overlook the fact that no battle was ever won by Marines in a boat, amphibian tractor, helicopter, ship or transport aircraft. Battles are won by Marines with their feet on the ground.

Next to the individual, the action of the small unit of which he is a part is the vital factor on the battlefield. We must emphasize our small unit training. Today, more than ever, we must have hard-hitting teams superbly led and efficiently supported.

In future warfare we will need to use, more and more, the best camouflage to be had. It is provided every 24 hours by nature. Emphasize night training.

Field training and exercises of all magnitudes are extremely costly. It is mandatory they be planned and executed with a view to accomplishing definite training missions.

Too much emphasis cannot be placed upon the fact that our units, whose function it is to destroy the enemy, we fail miserably if emphasis in training is neglected in other areas, particularly communications, intelligence, and supply. If you are going to command, you must control. This is done by communications. To lack intelligence is to be in the ring blindfolded. And the right items of supply for the combat man must be in the right place at the right time and in the proper amount. All these, or we lose.

Our school's courses must be kept constantly under review. Are they too long? Are they responsive to the times ahead? Sometimes I fear that perhaps certain of our military schools are more responsive or sensitive to the schedules of dependents' schools than to the requirements of Marines and the Marine Corps. We need to take a good look here.

FISCAL MATTERS

If we are to keep our proper perspective during the budget process, and receive from our field commanders necessary and timely information, they must be kept informed. This we will do.

The general staff status of our comptrollers must continue to be emphasized.

There will never be enough dollars to pay for all things we could use, and do, to insure 100 percent readiness to execute our mission. Financial planning is a direct challenge to all of us.

In our selection of the areas which must go short of the funding we would like, let us ever be mindful that the Marine Corps is doing business for the people of the United States. They are all stockholders. They deserve a high return on their investment. This high return is generated by wise and careful use of the funds which they have invested in their Marine Corps.

The present trend is for less appropriateed dollars for maintenance. The replacement value of Marine Corps property, classes I and II is estimated to be in excess of $900 million. Surely it is mandatory that we get a full dollar's worth of upkeep out of every maintenance dollar. This huge public investment must be protected from avoidable deterioration. It is our responsibility.

ORGANIZATION

The proper composition, equipping, and organization of our training base, security, and Fleet Marine forces is something which cannot be permanently determined at a certain point in time. To become static in this important matter is to wake up, but too late to find that we are not responsive to the demands of the years ahead.

We are in a world of changes. Let us try, at least, to keep up with them in the matters of proper organization and equipment related to intelligent readiness to execute our missions of today and the future. I have directed priority action toward this end.

Recommendations from field commanders are solicited on a continuing basis. In the formulation of your recommendations, I encourage you to listen to the young, both officer and enlisted. Their minds are not likely to be fixed by the 1930's, 1940's, and 1950's; but instead be fired by the technology of the 1960's, 1970's, and 1980's.

With the ever decreasing amount of maintenance and operation funds available, you must be constantly vigilant to recommend the elimination of unnecessary functions at our posts and stations. Be alert to recognize organizations which can be eliminated or in which we can reduce the dollar costs by reducing unnecessary operations and training requirements.

UNIFORMS AND EQUIPMENT

Noncombat type uniform changes now being processed will be the last such changes considered for some time unless directed by higher authority. Anything relating to the uniform of the marine which better meets his needs in combat will be given high priority action.

In general I feel that a clean, neat, well fitted uniform with the Marine Corps emblem is tops. There is no need for gimmicks and gadgets.

With respect to equipment we should emphasize simplicity, ruggedness, and ease of maintenance. And in design and gadgetry the characteristics we demand should be a pattern of the necessary rather than the ideal. We shall continue to strive to obtain in a timely manner the best possible combat equipment.

There is one item of equipment about which I have a definite opinion. It is the swagger stick. It shall remain an optional item of interference. If you feel the need of it, carry it.

INSPECTION

Any military organization is only as good as its inspection system. Be sure you have a good one at all levels of command and within staffs.

I am certain we can devise a better way to have an index of the readiness of our Fleet Marine Force units. Commanders must spend more time more often on inspections of the present "inspector general type." The inspector general will devote less time to these matters and more on ascertaining whether individuals and units are ready to play their roles in combat.

Station and detachment commanders will be assisted by information on the important areas for inspections, and the important discrepancies that all must seek out and correct.

RESEARCH AND DEVELOPMENT

The magnitude and importance of the development programs required to effect the doctrine of vertical envelopment and the requirement for dispersion dwarf all past developmental efforts of the Marine Corps in the fields of equipment, organization, tactics, and techniques. It is of paramount importance that we have the proper organization, procedures, goals, plans and programs to pursue this task effectively.

INFORMATIONAL SERVICES

Next to perfection in combat readiness I believe mutual good will among the Marine Corps, other armed services and the public to be our most important objective.

I want to make known to you my position with respect to our external and internal informational services programs.

I wish to keep the public fully informed of our plans, policies, programs, and developments, insofar as security measures permit.

In addition, I desire that our internal informational services program insure that all marines are kept fully informed of our activities, consistent with proper security, and particularly in those matters which directly affect the morale of the individual marine.

I believe General Lejeune, our 13th commandant, once said in substance, that if, in all matters in battle and out, you made certain all privates knew what it was you were trying to accomplish, success was assured. General Lejeune was a man of wisdom.

Finally, although public relations as such is a command responsibility, it is not enough that the commander alone, assisted by his informational services officer, work at it. It is an "all hands" job. Every commander, every officer, every marine has a stake in good public and community relations for the corps, and a responsibility to do his share in maintaining such relations.

SPECIAL SERVICES

I believe that we now have the best special services program in the history of the Marine Corps. It is a most economical one. Only by exercising command responsibility and alertness can our success continue.

Still there seems to be an inconsistency here also. It has been difficult for me to reconcile the fact that we may at some posts and stations spend several thousand dollars on a few men for a big time athletic team, with questionable spectator interest, and at the same station there are few places where a man can write a letter or read without leaving his home barracks or squadroom. He should not have to sit on the edge of his bunk with improper lighting. Let's all take a resounding whack at improving this inadequacy.

MARINE CORPS RESERVE

The readiness of the Marine Corps Reserve is at an all time high. Never before has our dependence upon the Reserve been so great and never before has our Reserve been more worthy of that dependence. The facilities available to us in which to train our Reserve units are more adequate than ever before and improvement continues.

Practically all members of the Reserve have served on active duty or have performed at least 6 months of active duty training. Attendance at drills and annual field training has never been higher.

We must in the years ahead nurture and maintain these valuable assets to the strength and security of our Nation.

STAFF, HEADQUARTERS, U.S. MARINE CORPS

Our staff manual is a good guide for your functions and duties. If there is question or doubt on your part, make an early appointment with me.

Let there be no mistake; this is my staff. I shall lean heavily on my Assistant Com-

mandant, and my Chief of Staff for whom you will directly perform your labors in order that the necessary staff coordination may be effected.

I shall always strive to have a staff that I believe in and strive to let them work without the constant interference which is so distracting to the best of staffs. Either I believe or I relieve. I have no reliefs in mind.

As it must be with a staff, I expect you to be honor-bound to set forth your views boldly and without reservation until a decision is made. Thereafter your task is to support that decision with all-out energy and make it work.

I believe it most important in your staff actions that everyone having a legitimate interest in a problem under consideration should be given an opportunity to have his say.

Keep me informed. Don't try to keep bad news away from me.

I don't want staff visits by persons from this headquarters to be a burden on our field commanders. I expect all field travel by headquarters staff officers to be so coordinated as to prevent a continuing avalanche of visitors at our posts and stations and Fleet Marine Force units. Further keep routine staff trips to a bare minimum and let one officer take care of many things. He'll be busier and look better at the place he visits. If a field commander receives instructions prepared here and which, after an exchange of letters, he sincerely believes is not practicable because of lack of understanding on the part of my staff, he can request a staff officer visit his command.

I want to make sure that there is well defined staff cognizance over all functions. Decentralize operations to our field commanders, and as much as possible leave them alone to do their jobs. I want to retain policy making here supported by properly administered and effective controls.

I want this headquarters to operate in a happy, relaxed, busy, efficient atmosphere. I will try to keep you informed and oriented on a timely basis. I want you at all times to know my desires and my viewpoints in problem areas in which you must work.

I plan to be aboard most of the time, and I will not be too busy to see you.

ENDING

It is good to feel the grips of the plow in my hands. I have every confidence that with both the regular establishment and the Reserve forces in direct support, the furrow will be straight and true and the years ahead for the Marine Corps will be ones of progress and accomplishment.

Hon. Richard M. Simpson

SPEECH
OF
HON. ALEXANDER PIRNIE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. PIRNIE. Mr. Speaker, the passing of RICHARD M. SIMPSON is a great loss to the Congress and the country.

As a public servant he will long be remembered for his strength of character and unassailable integrity. His sound judgment and keen intellect prompted his elevation to many positions of high responsibility in the House and within his party. These duties he discharged with such quiet efficiency that more and more demands were made upon his time and energy. Until his death he was fulfilling major assignments in a way which commanded the respect and confidence of all with whom he was associated.

He will be remembered for his sympathetic and wise counsel which he generously shared. In all respects he was faithful to his trust.

RICHARD SIMPSON was truly an American patriot, whose services are gratefully recalled and whose spirited devotion to his firm convictions will remain an inspiration.

To Mrs. Simpson and the family, I extend the sincere sympathy of the 34th New York District, trusting that they will be comforted by the enduring blessing of his life so nobly lived.

Awards for Merit

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an editorial appearing in the New York Times of October 10, 1959, entitled "Awards for Merit." The two special awards were presented to Senator LISTER HILL, of Alabama, and Representative JOHN E. FOGARTY, of Rhode Island, for "extraordinary public service" at the annual Albert Lasker Awards luncheon of the American Public Health Association held the early part of October 1959.

As the editorial well said:

The Lasker Awards are rarely given to nonprofessional persons.

In referring to the outstanding work done by Senator HILL and Congressman FOGARTY in the field of Federal health legislation, the editorial well says:

Senator HILL and Representative FOGARTY can hardly be called nonprofessional workers for education, science, medicine, and public health. Both have played a key role in all of our Federal health legislation in recent years.

Both these distinguished gentlemen and Members of Congress have been leaders throughout the years, in proper action on the part of the Federal Government in connection with medical research, and to the activities of a health nature, as a result of which marked contributions have been made to the welfare of all Americans. Too much credit cannot be given to these distinguished legislators in the outstanding work they have rendered for not only the people of the United States, but mankind in general.

The editorial follows:

AWARDS FOR MERIT

At the annual Albert Lasker Awards luncheon of the American Public Health Association this week two special awards were announced. They were presented to Senator LISTER HILL, of Alabama, and Representative JOHN E. FOGARTY, of Rhode Island, for extraordinary public service.

The Lasker Awards are rarely given to nonprofessional persons. But Senator HILL and Representative FOGARTY, can hardly be called nonprofessional workers for education, science, medicine, and public health. Both have played a key role in all of our Federal health legislation in recent years. That role has been a personal, dedicated, persistent, and effective role based on the belief that Federal investments in medical research and services pay off in both lives and dollars.

Senator HILL and Representative FOGARTY well merit the honors bestowed upon them. An even more important tribute to their effectiveness is that their colleagues in the Congress and the American people now share with them their belief in the importance of Federal activities in health as a vital part of our national life.

Both Major Political Parties Should Be Kept Apprised of Negotiations and Deliberations Now Being Carried on by the President and the Secretary of State

SPEECH
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. MONAGAN. Mr. Speaker, I take this time to give notice of a recent recommendation that I have made to the President.

The year of 1960 will be a presidential year and it is entirely possible that 1961 will see a Democratic administration, including a Democratic President and a Democratic Secretary of State.

Unfortunately, however, the international problems of the United States are not bounded by the calendar or by the limitations of our political party organizations and these problems will be just as complicated and difficult of solution in 1961 as they have been in the past. In fact, in delicacy and complexity in many ways they will exceed those of the past.

For this reason, it is more important than ever that both major political parties be kept apprised in detail of the negotiations and deliberations which are presently being carried on by the President and the Secretary of State. If there should be a shift of administration in 1961, the times are too fraught with peril to permit a period of inaction while a new administration is learning the details of the negotiations which are now being carried on. And, the inability to make a prompt, well-informed decision at this time might well have disastrous results for the United States.

The President is now involved in negotiations on a summit meeting and discussions relating to future talks with Premier Khrushchev in Russia. The effects of these talks will last far beyond the end of this year, and I have stated to President Eisenhower my opinion that the welfare of the country would be served by the Presidential appointment of a member of the Democratic Party as a participant in these discussions. By such an appointment, the Democratic Party could be kept informed of the details of negotiations and would be much better able to act in the event that Demo-

cratic candidates are successful at the polls in November.

I realize that Senator DODD recently made a somewhat similar suggestion when he recommended that President Eisenhower take a prominent Democrat on his recent trip to Europe and Asia. In that connection, however, I could also see certain practical objections to the proposal. In this instance, however, there would be no possible partisan objection and only benefit could result.

As James Reston so well indicated in the New York Times of January 3, 1960, the President has already on other occasions taken Democrats into his confidence in various foreign policy matters and in this way has set a precedent.

I would make no particular recommendation as to a person who might be appointed but I will content myself with saying that the chairman of the Senate Foreign Relations Committee or the chairman of the House Foreign Affairs Committee would be the type of key person who might well be considered in this connection. There are, of course, numerous other prominent Democrats who have had widespread experience in international affairs who could serve with distinction.

This suggestion is not made with the intent to embarrass, nor is it submitted with the idea of gaining political advantage. It is a proposal for a practical solution to a substantial problem which is inevitably presented by the periodic termination of the term of our national administrations.

I sincerely hope that the President will give every possible consideration to this proposal because I believe that he will be acting in the best interests of the country if he takes such a step.

Representative Alvin R. Bush

SPEECH
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 6, 1960

Mr. MEADER. Mr. Speaker, unfortunately, it is a human tendency to go along from day to day performing our routine tasks and experiencing intervals of pleasant enjoyment until abruptly we are confronted with the realities of life and death. Such was the shock I experienced upon the sad news of the passing of my good friend, my colleague and office neighbor, AL BUSH.

AL BUSH was a good citizen. In this body of 437 men and women, which we like to think of as the outstanding institution for self-government by the people of all time, AL BUSH, in his quiet way made a most significant contribution. He was not the flashily articulate exponent of popular causes nor one to engage in the repartee and clash of congressional debate. But, with his friendly smile and a devotion to his country and the principles which he deeply believed would further her best interests, he diligently ministered to the needs of his constituency. Both in his participation in the work of his committees, and in the deliberations of the House itself he cast his votes and made his decisions for the benefit of all Americans.

It would be impossible to dislike AL BUSH. He genuinely liked others, and all of his colleagues, whatever their political views or their personal natures, could not help but return the genuine friendliness of this man.

Mr. Speaker, this House needs orators, it needs pioneers, it needs strategists, but it also needs friendly, right-thinking men and women. That is why we all will miss AL BUSH.

The Reds Are After Our Panama Canal

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by Evangelist Billy James Hargis, president, and Julian E. Williams, research director, of the Christian Crusade:

THE REDS ARE AFTER OUR PANAMA CANAL

(By Evangelist Billy James Hargis, president, and Julian E. Williams, research director, of the Christian Crusade)

During recent months there have been increasing rumblings of serious trouble for the American people in the strategic Panama Canal Zone. There have been demonstrations by highly organized student groups, and increasing demands by the Panama Government which is under strong pressure from the agitating forces. The Panama Government has demanded one-half of the revenue from the canal, and has declared an extension of Panama's territorial waters from the internationally recognized 3-mile limit to a 12-mile limit.

Let us remember that the Panama Canal belongs to the United States. Our Nation dug it, paid for it, and by terms of a treaty with the Government of Panama in 1903 has all rights in the area. Article 24 of the Panama Canal Convention of 1903 states "no change either in the Government or in the laws and treaties of the Republic of Panama shall, without the consent of the United States affect any right of the United States under the present convention, or under any treaty, stipulation between the two countries that now exists or may hereafter exist touching the subject matter of this convention." Our Government pays the Government of Panama an annual rental of $1,930,000 for the Canal Zone. The original rent established in the 1903 treaty was $250,000 but it has been raised twice since that time by new treaties.

The Panama Canal has been of great assistance to the Republic of Panama. The Encyclopedia Britannica describes it as "the greatest single economic asset of Panama." The Panama Canal brings to Panama the largest tonnage of shipping of any country in Latin America, and its ports rival the great ports of the world. In other words, the Panama Canal has practically made this little country what it is today.

Our Government recognized the importance of building the Panama Canal, and the Soviet leaders of international communism recognize the importance of it now. They are determined to get it, and some years ago their man, Alger Hiss, was operating toward that end in the U.S. State Department.

While he was Director of the State Department's Office of Special Political Affairs he got hold of the annual report of the Governor of the Panama Canal Zone, and decided that it should be turned over to the United Nations. He argued that the United States was required to turn this Canal Zone report over to the U.N., and cited article 73(e) of the United Nations Charter as his authority. Article 73(e) provides that member nations having responsibilities for the administration of territories that have not attained a full measure of self-government shall transmit to the U.N., "statistical and other information of a technical nature relating to economic, social, and educational conditions in the territories." Through this move, Hiss implied that the Canal Zone was a territory of the United States and that the people of the zone were on their way to self-government. If accepted by the Governments of the United States and Panama this would place us in a perilous spot as far as the canal is concerned.

Actually, the Panama Canal Zone is not a territory in the traditional sense of the word and the people of the zone are not supposed to have self-government according to the terms of the treaty. The only persons who may live in the Canal Zone are officials, employees, military personnel on duty and their families. No one can live in the zone unless they are occupied in work relating directly to the Canal.

At this time Spruille Braden was Assistant Secretary of State for Latin American affairs. Two of his assistants learned about the Hiss plan. They complained. Mr. Braden complained to Under Secretary of State Dean Acheson, but Acheson did not even give him a chance to state his case, according to Braden. During the controversy, Spruille Braden checked with the Pentagon to find out just how important our military bases in Panama really were. He was told that the bases were vitally necessary for the security of the Panama Canal—therefore, of the United States. Regardless of this, Alger Hiss won out just as he always did with Dean Acheson and the report was submitted to the U.N. Braden later found out that Hiss identified the Canal Zone as an occupied territory.

As long as he was Assistant Secretary of State, Mr. Spruille Braden managed for America to keep the vitally important military bases in Panama. However, in the fall of 1947 he read that our Nation had to give up those important bases—134 of them. Alger Hill marched on. No less important than the surrender of our military bases was the dangerous diplomatic precedent which Acheson and Hiss had established. The submission of the Canal Zone's report, and classification of the zone as a territory opened the doors to some dangerous future meddling by the United Nations.

Moscow has had its evil eye upon the Panama Canal should be internationalized. ties of Alger Hiss showed, but during the Suez crisis in 1956 the Kremlin conspirators came out in the open and suggested that the Panama Canal should be internationalized. Top Polish Communist leaders were told by the Soviet commander of the Polish armed forces, "Although the Panama Canal route is longer by some 1,000 miles than the southern sea route through Suez, it has considerable advantages for the Soviet Union—which have been studied in detail by numerous Soviet vessels. Moreover, the Panama Canal has an

outstanding position in communications with South American states and is one of the hubs of the imperialistic policy of the United States in the Pacific and the Far East." The Soviet speaker was Marshal Rokossovsky.

That energetic little product of the Pendergast political machine, Harry Truman, was not going to let the Kremlin get ahead of him. After the Soviets announced their plot to internationalize the Panama Canal, Mr. Truman grabbed the nearest newspaperman and informed him that this was not a Soviet idea at all because he (Truman) had proposed it at the Potsdam Conference in 1945. That is one of the many astonishing examples of America's current political climate in which it is not smart to consider the interests of the American people. This foolish internationalist outlook has been predominant in America's leadership for years. Meanwhile, the American people are kept in a deep sleep by welfare state handouts, and the promise of the beautiful welfare state utopia which is impossible. The welfare state can lead only to the enslavement of the American people.

During a spy trial in Paris in March of 1935, a young American couple from East Orange, N.J., testified. The man, Robert G. Switz, remarked to the court that his missions for the Communist conspiracy network included work in the Panama Canal Zone. Edward Hunter covered this trial for International News Service. Paris had informed the U.S. Embassy, and so Hunter went to the Embassy to find out what was being done about the matter. They informed him that the tip had been cabled to Washington. But Hunter said in National Review magazine of March 14, 1959, that he never found out what interest our Government had shown in the tip. He said that another astonishing thing was the way this important news was slurred over in the American press. Time magazine gave it a couple of paragraphs and made it sound like a joke.

This is a typical example of how vitally important matters have been handled and are being handled by supposedly reputable Government officials, newspapers, and magazines. Important facts—facts which are vital to America's defense—are slurred over, ignored, or ridiculed, but never answered straightforward, and seldom is effective action taken. How grossly misinformed our people are. Good has been made to look evil and evil to look good in the eyes and minds of millions of deceived American citizens.

Back in 1948, the Communist People's Party had a candidate in Panama's presidential race. Panama has had its share of the usual student revolts which break out when Communist agents do their jobs behind the scenes. In 1947, the U.S. Ambassador and a Panama Foreign Minister signed an agreement to renew the World War II agreement by which the United States operated 13 airbases outside the Canal Zone. The next day a student riot erupted in the streets, and there were more than 30 casualties. There were cries of "Down with Yankee imperialism." As a result not one deputy in the Panama Parliament dared to vote for the agreement. This weakened U.S. military strength in Central America and deprived Panama of badly needed employment and money that U.S. expenditures on the airbases would have provided.

Panama student groups have demonstrated for a 50–50 split on the Panama Canal tolls, ignoring U.S. expenditures in operating the canal and building it originally. They have agitated for a monopoly of canal jobs by Spanish-speaking peoples, and for the return of the canal through nationalization. Last May the streets of the Panamanian capital bristled with troops as rebellious students and the Government remained deadlocked for days. Panama was under a state of siege and appeared to be on a war footing, according to news accounts of the struggle. A Government spokesman charged that Communists were involved in the rioting that took 11 lives, and said that the well-known Communist leader Bolivar Davalos was with the students barricaded in the university.

A self-avowed Marxist, Diogenes de la Rosa, is the Panamanian President's economic adviser. He is director of the National Economic Council. He said that Panamanians are so unsympathetic to Americans that they might help the enemy in case of war. This means the enemy of Panama also, as the only enemy on the scene is international communism. This dangerous attitude has been created in a small country which we built and put on the map in turn for rights to the canal which we also built and financed. It took almost miraculous measures of sanitation to make the land habitable.

During 1958 the Panama Government found a number of arms deposits in and near the capital city, and announced discovery of a plot to plunge the country into revolution. During 1959, a small landing force of revolutionists tried to establish a foothold in Panama. Even though only a few men landed, the mission was to build up gradually an insurrection army out of Panamanians. A lecturer at the Moscow Political Academy described the recent events in Panama as a "continuation of the general struggle for the liberation of the peoples of Central America from the U.S. colonialist yoke." The invasion of Panama by a small revolutionary force was the same pattern as the Cuban pro-Communist revolution showed at the start.

Representative DANIEL J. FLOOD, of Pennsylvania tried to alert the U.S. House of Representatives to the perilous situation in Panama after the Panama Government declared an extension of the Republic's 3-mile water limit to a 12-mile limit. In his speech exposing the peril he said, "Also, I desire to emphasize that as regards the Republic of Panama and its people, I hold both in the highest esteem, and count many Panamanian citizens as valued friends of many years standing." For his efforts in behalf of the security of Panama and the United States, Representative DANIEL FLOOD was voted "public enemy No. 1" by the Panama Assembly.

Let us remember the strategic importance to America of the Panama Canal. Will American Government officials follow the same policy in relation to the Communist threat to this lifeline of America as they have to the Communist operations in Cuba and other important Latin American nations? Will the answer be to ignore obvious Communist subversion and propaganda on this continent while lulling the American people deeper and deeper into a sleep of national death through increased foreign aid as the only way to oppose communism? What a hoax. The foreign aid war against communism is as phony as a $7 bill. The strongest proof that it is a hoax is the fact that a large portion of the aid goes to Communist and Communist sympathizing governments—governments that will turn on the American people with a vengeance in the final showdown—governments that are already open in their opposition to America.

Include in your prayers those innocent people in Panama who are being deceived by the clever agents of international communism. Demand of the Congress, the President, and the State Department that we do not allow Communist subversion to continue in the vital Panama Canal Zone area. Demand a realistic approach to the Communist peril in every area of its operation.

Nineteen Hundred and Sixty Will Be Historical Year for Bethlehem Slovaks

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 12, 1960

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Bethlehem Bulletin of Friday, September 4, 1959:

NINETEEN HUNDRED AND SIXTY WILL BE HISTORICAL YEAR FOR BETHLEHEM SLOVAKS

(By John C. Sciranka)

Nineteen hundred and sixty will be a historical year for the Bethlehem Americans of Slovak origin and descent. It will be 80 years on January 18 that the first Slovak pioneers arrived in Bethlehem, Pa.

Recently the writer had an opportunity to discuss this with John J. Bartos, of Bethlehem, who in 1921 compiled an extensive collection on the life of the first settlers.

When it takes now but a few hours to make a trip to Europe or vice versa the first pioneers traveled 28 days until they reached Philadelphia, where they were held for some unknown reasons for several days. Stephen Balshay, George Tomko, Stephen Tomko, John Esternik, John Anderko, John Varga, Andrew Kostelnik, and Stephen Gaspar arrived in Philadelphia after a 28-day voyage on December 27, 1879. Their future was uncertain in the new country until January 15, 1880, when the immigration officials released them. They were penniless and on their own in the new land.

As they later related, they walked through the forests, keeping warm in their meager clothes. It took them a whole night and one day to reach Trenton, N.J., from Philadelphia.

In Trenton the people thought they were Indians, for their Slovak peasant garb was mistaken for the Redskin attire. It was really a hard walk in a strange country and in the snow until they reached Bethlehem on the noon of January 18, 1880. The citizens of Bethlehem, and especially the youngsters, mistook them also for Indians. Here they feared a cold winter night. But a good Samaritan came to their aid; and when they told him in their native tongue that they were looking for work and wanted a place to sleep, he took them to Edward Franco on Second Street. The good Samaritan was Dr. Brauner, a Czech born in Moravia. He arranged the lodging for the first Slovaks and next day took them to Samuel Adams, then in charge of the Bethlehem iron and steel works. They were hired immediately.

On April 15 the next group of Slovaks arrived. They were Michael Balik and son, Andrew Jurasek, Andrew Dernar, George Varga, Andrew Lorinc, and Andrew Sitar. They were more fortunate, although they, too, walked from Philadelphia to Trenton. There they were hired by a forester to be lumberjacks, for which they received $1.25 for a day's work. They remained in the the forest for 2 weeks. In the meanwhile, they contacted their Bethlehem countrymen, where they arrived and started to work on May 15 in the iron works.

On June 16 a third group arrived, consisting of Stephen B. Gazdaska, John Gress, and John Balshay, who also were hired to work in the department of Mr. Shayerman in the iron mill.

In 1882 John Vojtek came with his wife. They, however, went to Shenandoah. But when Mr. Fritz, the manager of the iron mill, found that out, he sent for them immediately. Mrs. Maria Vojtek was the first Slovak woman to take care of as many as 120 of our Slovak pioneers as boarders in Bethlehem. Stephen Gazdaska and George Zboyovsky were first Slovak merchants. In 1889 the well-known Msgr. William Heinen, "Apostle of the Slovak," started to visit the Bethlehem Slovaks, and their first Society of St. John the Baptist was organized, which was followed by the Society of SS. Cyril and Methodius. And thus the parish was established.

Mrs. Maria Vojtek was born on July 15, 1851. In 1921 Joseph Graff was the oldest living Slovak in Bethlehem. He was born on April 21, 1828. Stephen Balshay, one of the first Slovaks to arrive in Bethlehem, was born on February 6, 1858.

It will be 50 years next year that Assembly 78 of the Slovak Catholic Sokol was founded. It is the largest assembly in the organization, which was founded on July 4, 1905, and has its headquarters in Passaic, N.J., with a membership of 52,000. The organization held its most successful 19th national Slet, gymnastic and athletic meet, and 18th national convention in Reading, Pa., last month. Gov. David L. Lawrence proclaimed a Slovak Catholic Sokol Week. The Bethlehem Slovaks and Sokols, no doubt, will make 1960 a great banner year, paying worthy tribute to their pioneers.

Will Self-Discipline Prevail?

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 12, 1960

Mr. BYRNES of Wisconsin. Mr. Speaker, as part of my remarks, I include the script of an address recently delivered in Chicago by Maurice H. Stans, Director of the Bureau of the Budget, and an article excerpted from another address by Mr. Stans at the annual dinner of the Tax Foundation.

It seems particularly appropriate to me, Mr. Speaker, that these remarks of the director of the Budget Bureau should be called to the attention of the Members as we begin a sesssion which marks the opening of a new decade. For Mr. Stans raises a question which is all-important as we face the challenge of the 1960's. He asks: "Can we, a liberty-loving people, close ranks and demonstrate that self-discipline can prevail in our society?"

He points out the enormous existing mortgage on America's future, beyond the regular annual costs of defense, welfare and commerce, and shows that they add up to the unbelievable total of $750 billion. In calling for the self-discipline required to cope with the dangers of this tremendous obligation, to balance the budget, to reduce the debt, to stabilize the dollar and to ward off inflation and then to reduce the burdens of taxation, Mr. Stans says:

Once we accept the idea that all the demands on the budget are synonymous with requirements, we can say goodby to the dollar. By definition, budgeting is a process of selecting first things first, of reining in our spending by priorities. And we can find little reassurance when we face the fact that the Federal budget is saddled to a large extent with yesterday's priorities rather than tomorrow's.

Mr. Stans spells out the kind of self-discipline required:

Neither the President nor any Budget Director can stop the trend of public pressure for spending, purely by exhortation. There is a responsibility on individual citizens and upon organized groups to withhold demands on the Federal Government for spending that can be avoided, or that can be deferred, or that can be more effectively done by local government or by private enterprise. This involves a lot more than being for a balanced budget in abstract terms. It calls for a working familiarity with the budget, an awareness of pressure to enlarge it for the benefit of one interest group or another, and a readiness to take personal action as responsible citizens through their representatives in the Congress to oppose these pressures.

Mr. Speaker, to this, I might add that our fiscal and financial plight calls for self-discipline and self-restraint on the part of Members of Congress. We have been elected, not merely to follow, but to lead. We cannot blame the consequences of our own actions, should they lead to disaster, on the absence of an inflamed public opinion.

It is up to us, Mr. Speaker, to face the fact that the Government has to stop living on credit cards and must pay its own way, and in the light of that fact, to lead this Nation toward strength in freedom and discipline.

The above-mentioned address and article follow:

THE RESPONSIBILITIES OF A FREE PEOPLE

(Address of Maurice H. Stans, Director of the Bureau of the Budget, before the Conference of Bank Correspondents, Morrison Hotel, Chicago, Ill.)

A few weeks from now, the President will meet with the Congress to review the state of the Union. This is one of the specific duties placed on the President by the Constitution, and, when we think about it, one of the wisest and most farseeing acts of the Founding Fathers. Whatever we set out to build or to manage, it is good to pause in our work at regular intervals and consider what we have accomplished, how well we are doing, and what the tasks ahead are. The state of the Union message, much like the annual accounting of a business, is a report on the Nation's assets and liabilities, its strengths and weaknesses, its aspirations and its fears.

The task of building a nation is never finished. We solve problems as we meet them, only to find that new ones inevitably arise. Our ideas and our needs change, too, as well as the tools with which we work. But in one respect there is no change: the privilege of being a free people carries with it a constant responsibility to face our problems with resolution and realism, and with a united purpose.

Never has this been more true than now, as we consider the great questions which face us as we enter the 1960's. Beyond any shadow of doubt, today's world challenges our willingness to accept the responsibilities we have as a free people.

BACKGROUND

Overshadowing all other issues in our present day is the paramount problem of providing for our Nation's security. This is a many-sided problem. One side of it relates to our military security. But another equally important side deals with our financial capacity to support simultaneously a costly defense program and urgent domestic needs, and at the same time achieve economic growth without inflation.

This is a large order, considering all the facts. We are now about half way through fiscal year 1960, a year in which we are doing everything we can to balance the Federal budget, but with the odds now against us, because of the loss of revenue as a result of the steel strike. In the 2 preceding fiscal years, the Federal Government piled up budget deficits totaling $15 billion, in large part because of the recession of 1957–58. Our public debt has reached a new legal ceiling, and is now in the vicinity of $290 billion, while interest costs take up more than $9 billion of the budget.

A further complication stems from the reversal of our international balance of payments into an unfavorable position. The result is a growing accumulation of short-term dollar liabilities to foreigners and potential pressure on our gold reserves.

Finally, Mr. Khrushchev has served notice that he is not interested in war, but that all the energies of the Soviet-controlled society will be concentrated on making the United States a second-class economic power in the world—and in burying the system that in less than two centuries has made us great.

It is no wonder that questions are being asked by the governments and peoples of the nations which are watching to see how well we meet these new circumstances. And this is what is going through their minds:

How strong is the fabric of the U.S. economy?

Will the great adventure of the new world be slowed or turned back by the exploding drive of communism?

Is the private enterprise system sound enough to cause the rising free world nations to follow our example?

Does the American economy contain the strength and stability to support growth without inflation?

Do Americans understand Khrushchev's threat of economic competition well enough to do what must be done to meet it?

And right here at home, there are Americans who think about these questions with growing concern. Until recently, we have been a highly confident Nation—perhaps a little overconfident. It's time for some hard, straight thinking. After all, there has never been a great civilization, nor a great power, that was not tested time after time. Now it is our turn to be tested. That is the simple lesson of history, written plainly for each of us.

Isn't it better for us to criticize ourselves than wait for history to do the criticising? Sensible men and women do not fear facts. They have the merit of forcing us to stop and think, and we don't do enough of that these days. If we are shocked by what we find, perhaps that will make us a more purposeful people.

This country has by no means lost its spirit of enterprise. It is much less certain, however, that we are making the most of it. It is not easy to be truly enterprising in the face of quarrels between labor and management which sap our strength, Government budgets in the red or hovering close to it, taxation which blunts initiative, the constant threat of inflation, costly Government debts which are never reduced, defense costs which cut deeply into our wealth-producing capacities, and on top of all the selfish excesses of what someone has called a pressure group economy. And it is equally clear that we do not muster our fullest strength to compete so long as we carry these burdens on our backs.

COMPULSIVE SPENDING

One of the afflictions of the American scene today, I think you will agree, is summed up in the phrase "compulsive spending." This has assumed the proportions of a national state of mind, and by some confused psychology has become identified with the needs of a healthy, growing economy.

The urge to spend is epidemic. To the extent that it is not governed by a standard of capacity to pay from current income, it is a dangerous feature of the times. We will not build our fortunes by extravagance in spending and borrowing merely to satisfy marginal wants and desires. On the contrary, we will destroy our futures.

Compulsive spending has rubbed off on Government, in particular.

Look at the trends. Using Commerce Department figures, we find that expenditures by all governments in the United States as a percentage of gross national product grew from 18 percent in 1940 to 22 percent in 1950 and to 26 percent in 1957. What this means is that Government spending has grown faster than our national economy. Indeed, one of the paradoxes in the situation is that public spending tends to accelerate in periods when the business economy is in temporary decline.

Even though this year's fight for a balanced Federal budget has received much support, there are no signs to indicate that the urge toward compulsive spending has lost any momentum. The evidence runs the other way. Let me give you something to think about:

Near the close of the last session of the Congress, a table was printed in the CONGRESSIONAL RECORD which listed 20 big spending bills introduced in the House, and another 20 introduced in the Senate, together with their estimated costs. You may find this hard to believe, but the grand total of this shopping list came out to over $326 billion over an average period of about 5 years.

If anybody in the audience can tell me how we could squeeze 50 or 60 billions of additional spending every year within $50 billion of revenues, which is what our tax laws now yield when times are very good, I'd like to hear his formula. This is what I would call "credit card" economics at the national level.

As I said earlier, this compulsive urge has us so preoccupied with wants and desires that we have—only temporarily, I hope—lost sight of our personal and national responsibilities. And that, I submit, is an even worse calamity for the times in which we live, and for the future for which we must prepare.

Public understanding of the Government's budget problem is an essential condition to any drive for fiscal responsibility. Sometimes the facts are hard to come by. There has been a great deal of confusion, for example, as to how the Congress handled the budget which the President submitted last January for the fiscal year 1960. There have been assertions that the Congress reduced the President's budget by over $1.8 billion. I can tell you that this is an illusion.

This is what the Congress actually did in the 1959 session: (1) Appropriation requests were reduced, indeed, by more than $1.8 billion, but almost half of that cut was nothing more than postponements to another year. Of the remaining in appropriations, the effect on 1960 expenditures is only a reduction of about $100 million. (2) On the other side of the ledger, the Congress took no action or only partial action on the President's requests for certain revenue increases, and enacted new legislation and back-door authorizations involving spending far in excess of the proposals in the budget. When the pluses and minuses are totaled up, we discover that the Congress practiced economy this year to the tune of raising net budget expenditures in fiscal 1960 by almost $600 million above the budget, and added $11.5 billion to the taxpayers' bills in future years.

WHAT DO WE MEAN BY "GROWTH"?

The pressure groups that extol that kind of action tell us that budget deficits are not serious and that spending beyond our means is necessary to insure growth. This kind of argument is dangerous demagogery. There isn't a business or a family that could survive long on that basis. When we hear that deficit spending by Government promotes economic activity and creates new wealth and tax revenues, we soon recognize that old doctrine of spending ourselves into prosperity. It dies a hard death.

Let's get our thinking straight about this new slogan called growth.

It isn't a numbers game.

It isn't a process to be trifled with by opportunists.

It isn't a political football.

If the goal of economic growth is to become the rationalization for every impractical spending scheme that comes along, or for political pie in the sky, then we will really be walking over the cliff. Growth is of sterner stuff than the gratification of pressure group interests.

The facts are that Government today is piling up c.o.d.'s for the future at an astounding pace. Even if not a single one of those 40 spending bills which I mentioned earlier should be enacted, we must reckon with the commitments already on our national books. I would like to tell you what some of them are.

C.O.D., THE AMERICAN TAXPAYER

Item: The cost of completing the Interstate Highway System after fiscal 1960 may be as much as $25 to $35 billion.

Item: Expenditures to complete direct Federal civil public works projects which were started prior to fiscal 1960 will amount to about $8 billion.

Item: For public housing, the Government must make contributions after 1960, under present commitments, of $6 billion.

Item: As of next June 30, the Government's books will carry outstanding commitments for capital improvements in communities, such as for urban renewal and college housing, amounting to $3 billion.

Item: For merchant marine subsidies and future ship replacements, the Government's liability comes to $4.4 billion.

Item: For conservation reserve payments to farmers, the Government is under contract to pay $2.2 billion.

All these, together with unexpended balances in the defense program, add up to around $98 billion of commitments for future Federal spending.

Those expenditures, while they are formidable, will in many cases be for values yet to be received. To the extent that they will create future national assets, it is not unreasonable for them to be absorbed in future budgets, over a period of years. But that isn't all. Beyond this $98 billion, the Federal Government is obligated for much larger sums for services already received in full.

The national debt is about $290 billion. But commitments voluntarily undertaken beyond that, and not included in the figure, are even greater. First, there is $30 billion of already accrued liability for military retirement. Next there is $27.5 billion actuarially due on our present obligations to civilian Government employees under the civil service retirement laws. On top of that, the Government is obligated by law to pay pensions and compensation to war veterans and their dependents, and these future benefit payments will cost roughly $300 billion. Here is a total of over $350 billion of past obligations that more than doubles the amount of the national debt. Counting the $98 billion I mentioned a moment ago, our c.o.d.'s already are about $700 billion above the annual costs of providing for national defense, welfare, and commerce. The fact that we expect to pay for these unfunded items in gradual increments in our future annual budgets should be of little comfort to us and certainly will not be to future taxpayers.

BUILT-IN BUDGET GROWTH

Here is another dimension of the same problem. As you know, we expect that Federal expenditures this fiscal year will come out in the vicinity of $79 billion. Now I want you to get this next point.

Even if the next session of the Congress doesn't add any new programs, the level of Federal spending is still going to climb higher, because there are built-in increases in existing programs that will push up our expenditures in future years. For 1961 alone these built-in increases amount to between $2 and 2½ billion. And there are practically no built-in decreases, because Government programs once taken on never seem to end. The President named in his 1960 budget message 18 programs due for revision in order to accomplish future downward adjustments in spending. Only three received attention by Congress, and that with the net result of increasing future expenditures rather than decreasing them.

The catalog of built-in increases in annual expenditures would take a long time to recite. It runs through outer space programs, civil aviation, merchant shipping, urban renewal, science education, medical research, public assistance, loans to underdeveloped countries, and veterans' pensions. The farm price support program will cost more, rather than less, in the absence of realistic changes in present legislation; the meager efforts of the Congress to deal with this problem have not even kept pace with farm technology, and in a few more months we will have $10 billion of farm commodities in storage. Interest charges on the public debt are still tending to be higher. And all this is without reckoning with the tremendous pressure of increasing technological costs for military weapons, or with the further demands that are always with us for new domestic programs.

I ask you to consider the fact that once we accept the idea that all the demands on the budget are synonymous with requirements, we can say goodbye to the value of the dollar. By definition, budgeting is a process of selecting first things first, of reining in our spending by priorities. And we can find little reassurance when we face the fact that the Federal budget is saddled to a large extent with yesterday's priorities rather than tomorrow's.

These figures and facts should explain to you, too, why the President can't send to the Congress—as some people think he can—a budget for any amount from one dollar up. The past commitments and obligations which he must first include—on a basis that increases year-by-year—leave him little room for tightening up, and make his task principally one of fighting off more increases. Another way of saying this is that the actions of the Congress in 1960 on the President's budget and legislative recommendations will affect budgets for years to come.

But there is a bright side to this story, too. The demands of the taxpayers for economy in Government, the support they give the President in his fight for balanced budgets, and debt reduction, can curb the level of spending and the tax level for a long time ahead.

THE BATTLE OF THE BUDGET IS NOT OVER

Why do I go into all this? I do it because, as important as the battle of the budget was this year, we cannot begin to understand our problem if we look only at a single year's

budget. The central problem of the Federal budget is found in the commitments we are accumulating, the c.o.d.'s that we are writing; and much of this mortgaging of our future fiscal capacity is inspired by pressure groups seeking something for nothing from the Federal Treasury.

That's why this year's battle of the budget is not a flash in the pan. We have only begun to awaken the Nation to the seriousness of our problem.

Unless we bring all the facts out into the open, and make clear their real meaning to our ability as a nation to grow on the basis of financial security, we are avoiding our responsibility. And responsibility is one thing this administration is not going to avoid.

CITIZEN RESPONSIBILITY

So, the Government's budget policy is one big factor in how strong we will continue to be. But I must tell you that it's asking too much to expect the President to win the battle of the budget by himself. The President and his Budget Director can lay the facts on the line. They can propose the kind of a budget they believe is right, and they can use their voices to support it. They can point the way to prevent future spending from getting out of hand.

We have done this and we will continue to do it. But neither the President nor any budget director can stop the trend of public pressure for spending, purely by exhortation. There is a responsibility on individual citizens and upon organized groups to withhold demands on the Federal Government for spending that can be avoided, or that can be deferred, or that can more effectively be done by local government or by private enterprise. There is a responsibility, too, on all of us to take up the fight and support the President's leadership in seeking to make the country live within its income. This involves a lot more than being for a balanced budget in abstract terms. It calls for a working familiarity with the budget, an awareness of the pressures to enlarge it for the benefit of one interest group or another, and a readiness to take personal action as responsible citizens through their representatives in the Congress to oppose those pressures.

WHAT WE MUST DO

The job we have to do in the sixties is a big one.

We will have to get all the horsepower out of our economy that it can produce without overheating.

We will have to stop running up bills that will come due when it may not be convenient.

We will have to put our resources where they will feed genuine growth, rather than the mere appearances of growth.

We will have to stop regarding the Federal Government as a broker for pressure groups. The national interest must come before the selfish interest.

We will have to conquer the habit of compulsive spending, and learn to live within our means.

I think that if we bring ourselves to understand that these steps are basic to our continued existence, we will not find it hard to rediscover our great purposes and unite to achieve them.

Then, and only then, will we be able to prove to Mr. Khrushchev that our system is best. Then, and only then, will we dare to be satisfied with the state of the Union.

CONCLUSION

At the root of everything I have said here is the disturbing, but inescapable, question of whether we are willing to accept the responsibilities that go with being a free people—whether our Nation can summon the self-discipline that the times and the issues call for—to balance the budget, to reduce the debt, to stabilize the dollar, to ward off inflation, and then to reduce the burdens of taxation. We have accepted the necessity for discipline in times past, when we had to fight or die. As the decade of the sixties opens, we will be fighting in a different way, with a more insidious opponent. With all the fallacies in communism's logic and economics, it is strong on discipline, and this could spell a fateful difference in the final outcome. Can we, a liberty-loving people, close ranks and demonstrate that self-discipline can prevail in our society? In the answer to this question lies the test of how well our kind of democracy can survive.

[From the New York World-Telegram, Dec. 7, 1959]

UNCLE'S CREDIT CARD SPREE—UNITED STATES ALREADY $750 BILLION IN HOCK

(By Maurice H. Stans)

In many ways the Federal budget today is saddled with yesterday's priorities instead of anticipating tomorrow's. This situation has come about because of our proclivity to legislate benefits, services, and subsidies up to the hilt of our fiscal capacity—and then to hang on to them.

We spend great sums on interest charges on our national debt, but we do not reduce the principal.

We carry on massive Federal programs which State and local governments could do better.

We devote large amounts of money to farm price supports to reduce surpluses, with the opposite results.

We lend money to benefit special groups at rates below those which the Government must pay to its own creditors, when private sources could do the job.

We perpetuate Federal programs which have long since met the objectives for which they were created.

Whatever may be the merits of ancestor worship, I hardly think that the place to practice it is in the budget of the U.S. Government.

We are taxing current earnings to pay for many benefits and services legislated in past years, while we go on legislating new benefits and services without considering how we will pay for them when they come due.

Let me tell you something about the shape we're in.

Fact No. 1, is that the Federal Government is piling up c.o.d.'s for the future at an astounding pace. I'll mention just a few.

It will cost between $25 and $55 billion to complete the Interstate Highway System after this fiscal year. Federal civil public works projects already started will require expenditures of about $8 billion before they are completed. The Federal Government is committed to contribute $6 billion in the future for public housing. Merchant marine subsidies and ship replacement constitute a Federal liability of $4.4 billion.

These and a variety of other obligations, when added to huge unexpended balances in the defense program, total $98 billion of commitments for future Federal spending.

Fact No. 2 is this: Even if the next session of the Congress doesn't add any new programs, the level of Federal spending is going to go up. The reason is that there are built-in increases in existing programs such as outerspace, civil aviation, merchant shipping, urban renewal, science education, medical research, public assistance, loans to underdeveloped countries and veterans' pensions. Interest on the public debt will run higher, and the farm program will cost more and more until we get realistic legislation. Defense technology is putting increasing pressure on expenditures.

Now, for 1961 alone, these built-in increases amount to between $2- and $2.5 billion. Of course there are practically no built-in decreases, because Government programs are almost invulnerable to reduction or elimination. A year ago, in his budget message, the President nominated 18 programs as being due for revision in order to accomplish future downward adjustments in spending. Only three received attention by Congress, and that with the net result of increasing future expenditures rather than decreasing them.

Fact No. 3 is that our present national debt of $290 billion doesn't include present Federal liabilities for past services in even greater amounts. Our already accrued liability for military retirement is about $30 billion. Our unfunded present accrual for retirement benefits for civilian Government employees is $27.5 billion. On top of that, future pensions and compensation to veterans will cost about $300 billion. Now, the $290 billion of current public debt, plus $350 billion of future obligations for past services, plus $98 billion of CODs, add to the almost incredible total of $750 billion.

That is the Federal Government's mortgage on America's future, beyond the regular annual costs of defense, welfare and commerce.

Fact No. 4 is that the pressures for new spending programs are increasing in intensity. If you are troubled by an $80 billion budget, I can tell you that unless we hold the line now the day is not too distant when the budget will rise to the $90 or $100 billion range.

In the absence of a genuine thaw in the cold war which could lead to a major reduction in military costs, the only way to cut back the level of the budget is to look to the Congress to modify laws that are already on the books.

The job is really up to you. The President will continue to put his full weight behind the goal of a balanced budget and a surplus which can be applied initially to reduce our enormous and costly debt. What happens to that goal will depend upon opinion and its ability to communicate with the Congress.

Are we ready to face up to the fact that Government has to stop living on credit cards and must pay its way?

The Late Alvin R. Bush

SPEECH

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 6, 1960

Mr. FLOOD. Mr. Speaker, among the familiar faces for which we find ourselves looking in vain, as the 2d session of the 86th Congress swings into action, is that of my respected and valued colleague of the Pennsylvania delegation, Representative ALVIN R. BUSH, of the 17th Congressional District. The news of AL BUSH'S sudden heart seizure, on November 4, and death in Williamsport Hospital on the following day, brought shock and sorrow to me, as to all who knew him. AL BUSH was a devoted public servant, putting his business astuteness and his energetic determination into the advancement of the sometimes unpopular cause of governmental economy. Much of our legislation, over the past 9 years, has profited from the vigilance and good sense of ALVIN BUSH. His knowledge and experience in the field of bus transportation were often called upon, in his work with the Committee on Interstate and Foreign Commerce, and

with the Subcommittee on Transportation and Aeronautics.

It will long be remembered to his credit that he was an enthusiastic supporter of little league baseball, and proud of the claim of Williamsport, in his district, to have founded little league baseball. In the past session, he had sponsored a resolution to establish a National Little League Baseball Week.

We shall miss his aid as a legislator, but more than that, in the days ahead, we shall miss his quiet, friendly presence, and the feeling that, whatever our differences, we were all trying to accomplish a task together, for the common good of our Nation and of our home districts.

To Mrs. Bush, to their children, Mrs. John H. Eck and Alvin C. Bush, and to the many others who knew and loved AL BUSH, I offer my sincere and heartfelt sympathy.

Will America Survive in Freedom in Coming New World Order?

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. McCORMACK. Mr. Speaker, an outstanding member of the newspaper profession and an objective interpreter of world events, John Cowles, president of the Minneapolis Star and Tribune, made a speech last November to the members of the Minneapolis Rotary Club which should be as widely read as possible. In my remarks, I include the address of Mr. Cowles, entitled "Will America Survive in Freedom in Coming New World Order?"

The address follows:

WILL AMERICA SURVIVE IN FREEDOM IN COMING NEW WORLD ORDER?

(By John Cowles, president of the Minneapolis Star and Tribune)

Most of us would agree, if we really thought about it, that the thing we most deeply want is for our children and grandchildren and great-grandchildren to be able to survive in freedom. And, of course, in addition to freedom we want them to have as full and satisfying lives as possible.

The paramount thing for us is to try to make certain that we are following national policies that will insure that our descendants can survive in freedom.

Probably some of you are shocked that I even suggest the possibility that the United States may not be surviving in freedom a generation or two from now. But if you will think about the implications of what is taking place in the world today, I believe you will conclude that our long-range national security is a good deal less certain than most of us have assumed.

To start with, most people fail to understand that we happen to be living in the midst of the greatest combination of world revolutions that has ever occurred in the history of mankind. Separate scientific, political, and social revolutions, any one of which would have had a momentous effect on the world, have happened to coincide at this particular time.

The scientific discoveries and developments that have occurred in our generation are probably greater than all the scientific discoveries of the preceding thousands of years combined. More than 90 percent of all the scientists who have ever lived since the dawn of history are living and working today. Most of us do not yet comprehend the significance and future effects on the world of the new scientific discoveries that have been and are being made.

Simultaneously, we are having another revolution. This is the alarmingly rapid rate of population growth. The introduction of better sanitation and improved health and medical measures throughout the world has caused a sharp reduction in mortality. As a result we are having an extraordinarily fast population growth everywhere, particularly in the less developed areas. Most people ignore or grossly underestimate the calamitous effect that a doubling of the world's population in the next 30 or 40 years will have.

COLONIAL AREAS WIN FREEDOM

A third revolution that is taking place stems from the fact that more than a billion people who, up to the end of the Second World War, were under colonial rule have recently won their freedom. In addition, other presently colonial areas, largely in Africa, will also become independent nations within the next year or two.

Most of these new countries don't have a sufficient number of educated people to make a democratic form of government function responsibly. Most of the people in these new nations are illiterate and desperately poor.

It does no good to say that these peoples should not have independence until they are qualified for it. They are determined to have their independence now. They are also equally determined to try rapidly to industrialize their nations and raise their educational and living standards.

I recently studied some estimates of world income broken down by nations, with the population of each. If one assumes that $100 a year per person is required for food, clothing, and shelter—about 2.7 cents per day for sustenance and all living expenses of every kind—and if one then computes the amount of excess annual income above $100 a year per person that each country has, the figures are staggering.

The United States alone has 47 percent, or almost half, of the total excess world income above $100 per person.

If one adds together the excess income—that is—the amount above $100 per inhabitant of Canada, Great Britain, Japan, Australia, and the European countries including Russia—that total is only slightly greater than that of the United States alone.

These countries that I have mentioned, including the United States, therefore have between them more than 95 percent of the whole world's total income above $100 per person.

In other words, the rest of the world—Asia, Africa, Central America, and South America combined—has less than 5 percent of the world's total income above $100 per person.

The per capita income of these Asians, Africans, and Latin Americans is only slightly more than $100 a year, or less than one-twentieth of the per capita income of Americans.

DEVELOPMENT CAPITAL NEEDED

There are only two possible ways for these underdeveloped areas to get the capital necessary for their development. They obviously don't have enough of their own to make sufficient voluntary savings to raise the funds needed for schools and roads, water systems and improved ports, power plants, and factories.

They can raise these funds internally only if a ruthless dictatorship forces savings out of them, impoverished as they are, by grinding down their already pitfully low standard of living, by reducing what each human being has to live one, from slightly over $100 a year down to $75 or $80 a year. Of course, this would mean starvation to many and serious malnutrition to more.

Although Russia started from a much higher living standard base than exists in Asia, Africa, and Latin America, this is the precise method the Communist dictatorship in Russia used to secure the billions that it has put into its capital improvement in Russia from about 1920 on.

As a result, today the Russians are turning out enough gross national product so that they can significantly increase the average standard of living above what it formerly was and still have sufficient resources left to put as much money into military expenditures as the United States is doing.

Red China is following exactly this same policy. The Government is ruthless and cruel. Probably hundreds of thousands of Red Chinese have starved to death, but China, with some help from Russia, is lifting itself by its bootstraps.

The only other way for underdeveloped countries to get the capital that they desperately need is from foreign aid; foreign investment, foreign loans, and foreign grants.

Unless the United States and the other developed and industrialized countries of the free world are willing to extend aid on a massive scale for the next 10 or 20 years, I expect to see most or all of Asia and Africa, and much of Latin America slide into similar Communist-controlled totalitarian dictatorships.

The United States and Western Europe cannot live permanently in freedom with most or all of the rest of the world under Communist rule. The Communists would disrupt normal capitalistic world trade. They would dump products at far below cost to disrupt international markets.

They would cut off the natural resources—minerals, oil, etc.—that are essential to the free world. The United States it much more dependent on foreign natural resources for our own prosperity than most Americans believe. We are rapidly becoming a have-not nation so far as many natural resources are concerned.

It is a naive illusion for anyone to assume that we could live and prosper in freedom in an isolated fortress America. Every additional country that goes under Communist control reduces our own margin of future national security.

Although I am delighted that in recent months President Eisenhower has broken through the diplomatic deadlock and has opened the door at least to the possibility that within the next few years we may be able to liquidate the cold war, anyone is reckless if he assumes that the danger of the cold war turning hot has been eliminated. The Russians occasionally change their tactics, but there is no reason whatsoever for us to assume that the Russians have in any way changed their long-ranged ambition for world domination.

It would be an act of suicidal recklessness for us to reduce our defense expenditures until and unless we are certain that Russia is simultaneously reducing hers, and until and unless we are satisfied that we are going to have an ironclad system of international inspection and control.

I hope that events will prove that Russia does want to end the cold war, but until there is proof of that, it would be foolhardy for us to reduce our defense expenditures even a penny. I, for one, think that we should be increasing our defense expenditures so that we would have an adequate capability to meet nonnuclear, limited aggression without our having to go to the alternative of an all-out nuclear holocaust.

Undoubtedly there is great waste in our armed services. Possibly several billion dol-

lars could be saved if we could eliminate some of the overlap and discontinue further production of obsolescent weapons. But when one is dealing with our national security, with our very national survival, one must not take chances.

UNITED STATES LAGS BEHIND RUSSIA

Every informed person knows that we are far behind the Russians in outer space development. It will probably be at least 3 years before we are able to develop engines with as much propulsive power to send heavy weights into space as the Russians have already demonstrated that they now possess.

Every informed person knows that we are behind Russia—opinions of the time lag differ—in our development of intercontinental ballistic missiles.

Every informed person knows that our Strategic Air Force or SAC bases are what is called "soft," that they are too concentrated and are relatively unprotected, and that we might suffer a catastrophic devastating blow if the Russians, a couple of years from now, did decide to attack us with intercontinental ballistic missiles with hydrogen warheads and with the intermediate-range missiles which they could fire from their submarines.

While we could even then undoubtedly make a severe retaliatory strike, probably our capability, if we had suffered the initial blow, would not prove nearly as massive and destructive as most of the American public erroneously assumes.

The thing that concerns me most about America today is the fact that the public seems complacent and largely indifferent to what I regard as the realities of the international situation.

One such reality is the obvious fact that the old world order, as we have known it all our lives, is dying. It seems to me not simply probable, but certain, that during the next decade, the crucial 1960's, a new world order is going to take shape and form.

Whether or not this new world order will be one in which our children and grandchildren will be able to lead full, happy lives in peace and freedom is the paramount question confronting America, but most people are too absorbed in their personal affairs even to recognize that this question exists.

SYSTEM OF WORLD LAW VITAL

If we do move forward courageously and intelligently, with a thorough understanding of what we are doing and why, I think we probably can end up with a new world order that is to our liking. Achieving this will probably require higher taxes, or at least no reduction in present tax rates, but the tax angle becomes inconsequential if one comes to realize what the probable alternative is, if one comes to understand that we may be dealing with the question of our continued survival as a free Nation.

And if we are going to be able to secure the kind of world order we want for our children and grandchildren, we are also going to have to develop a system of world law. This will involve strengthening the United Nations and making basic changes in its set-up. This will also obviously involve some abridgement of what has traditionally been called national sovereignty, but nations as we have known them in the past are becoming obsolescent in an era of intercontinental missiles, nuclear-propelled ships and aircraft, and space vehicles.

The problems facing us are enormous, but certainly not insoluble.

In conclusion, I would like to quote a statement by Arnold Toynbee, who is probably the greatest living philosopher of history. Toynbee has written, I hope not too optimistically, that "the 20th century will be remembered, not as the age of the atomic bomb, but as the first time when man thought it was practicable to distribute all the benefits of civilization to all people."

Independent Transportation

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent I include the following editorial from the Greenville (Miss.) Delta Democrat-Times:

INDEPENDENT TRANSPORTATION

One of the cardinal principles of capitalism is that monopoly is in itself a bad thing. Nowhere is this truer than in the field of transportation, which is as vital to our national economy as the veins and arteries are to the human body.

Thus the warning issued at the Rotary Club Thursday by Baxter B. Carr, president of the American Waterways Operators, against common ownership of the modes of transportation makes good sense. Carr, who represents an industry which carries 8 percent of the intercity transportation of the United States, said that there is a vital need for several independent modes of transportation.

What we do not need, he said, "is a department store of transportation."

We agree wholeheartedly with the AWO president. Here in Mississippi we should easily be able to recall what it was like when we were served by only one carrier, the railroads. The stranglehold this carirer had on the economy was one of the chief brakes on our progress. The cost of shipping goods out was high. The price of incoming products was higher.

With some Government aid and enlightened public support, the waterways carriers came back from oblivion over the past 30 years to fill the need for a cheaper form of transportation. Over the same period the trucking industry and the airlines also began to make sizable inroads into the domain of the railroads.

Today the railroads are still the prime carriers in the Nation's transportation system. But the other carriers now control enough of the market to forestall the possibility that any one carrier can set absurdly high rates and expect to get away with it.

This is as it should be in a competitive society. What is more, there is a definite prohibition in the Interstate Commerce Act against one carrier, such as a trucking concern, controlling another mode of transportation to the detriment of competition.

But there are forces at work today which would erode this prohibition and possibly set the Nation back on the path to a transportation system dominated by one segment of the transportation industry. Recently the Illinois Central and Southern Pacific Railroads announced plans to purchase the John Hay Barge Co., which runs barges on the Mississippi River, the Illinois River, and the Intracoastal Canal.

If the Interstate Commerce Commission OK's the deal, the two railroads will then be operating parallel rail lines down both sides of the Mississippi, as they do at present, plus a bargeline down the middle. They could then put the price squeeze on other water carriers unable to compete on the land.

As Carr pointed out in his talk, it is senseless to believe that the railroad carriers, whose cost per ton-mile is much higher than the waterways carriers, are sincerely interested in keeping water rates at the present low level. The low water rates which competition have kept in effect could vanish quickly enough if effective water-carrier competition was destroyed. This was the pattern in the past once water competition was destroyed by the railroads.

What this Nation does not need is a mammoth and centralized transportation system. Aside from the possibilities for rate gouging, such a system would be too easily brought under Government control whenever anything went wrong, and, indeed, the arguments against Government control of such a monopoly would be weak ones, at best. But the two railroads' proposed purchase could be the first step to that system.

We'll have to agree with Baxter Carr some more. "There is a need for each of the independent modes of transportation," he said. "Without them in the past, we could not have reached our point of development today."

Government's Role in Highway Safety

EXTENSION OF REMARKS
OF
HON. PAUL F. SCHENCK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. SCHENCK. Mr. Speaker, on January 7, 1960, our colleague and chairman of the Subcommittee on Health and Safety, the gentleman from Alabama [Mr. ROBERTS], delivered an address at the annual meeting of the Royal Automobile Club of Canada, held this year in Montreal.

Under leave to extend my remarks, I would like to insert this address so every Member can better understand the role of government in promoting highway safety:

GOVERNMENT'S ROLE IN HIGHWAY SAFETY

You have honored me by your kind invitation to meet with this distinguished group to discuss one of the most important problems facing your country and mine.

For, in my judgment, we cannot overestimate the importance of this problem of highway safety which we face today. Meeting such as this are of great significance because this is a problem that we, as individuals, can do something about. Too many of our space-age problems seem, at least, to be beyond our reach as we go about the routine of our daily lives.

But not so this problem of traffic safety. Here is a problem that, in a manner of speaking, is on our own front doorsteps, crying out for attention.

Not that we as individuals can solve the problem. Not that the problem can ever be completely solved. But we all can help to reduce the appalling toll of life and limb being taken daily in traffic accidents.

I do not pretend to be familiar with your problem here in Canada but I understand that in many respects that our problems are similar. I do know that the two countries are working together closely. I am told that 3,104 lives were lost in traffic accidents in Canada in 1958. In the United States, between 38,000 and 39,000 are being killed each year.

Canada can ill afford to lose 3,000 citizens a year. The United States can ill afford to lose 39,000 a year, especially when you remember that nearly half of them are being cut down at the very crest of their productive years, in the age bracket between 15 and 44.

I don't want to leave the impression that we have made no progress. The fact that during the last 15 years our fatality rate in the United States has held between 35,000 and 40,000 a year, in spite of the greatly

increased mileage driven means that the rate per vehicle-mile has gone down. But a look at the accident statistics shows no cause for complacency. There is much that can and should be done.

The emphasis being placed on safety in this annual meeting is proof you see of the need for action to reduce the traffic toll.

If, by reviewing briefly some of the findings of the congressional subcommittee of which I am chairman, I can throw some light on this problem of ours, it will be the source of much satisfaction to me.

For this is your problem as well as mine. This problem of traffic safety is one that concerns us all. For each of us will have to contribute to the solution of the problem before we get very far in our efforts to reduce this appalling slaughter. It is not enough that we become better drivers. We must give our encouragement and support to those who seek and apply the necessary remedies. That support is going to cost us money. This support may mean a certain curtailment of some of our freedom of action. It may mean that some of those who enjoy driving may have to give up driving. It may mean sending some wornout and unsafe cars to the junk pile. It may mean putting a little less pressure on the accelerator, especially in heavy traffic.

I don't want to bore you with statistics. You are all familiar enough with the facts and figures to know this is a serious problem.

Just for the sake of emphasis let me outline briefly some of the facts brought out in the hearings held by my subcommittee.

These facts are a warning and a challenge to everyone of us. And by us, I don't mean those working on this problem. I mean everyone who drives an automobile, or rides in one, or walks across the road here in Canada, or in the United States, or anyplace, anywhere that automobiles are operated.

You don't have to be a driver to be concerned. The toll of pedestrians killed or injured in the United States is appalling.

The problem for the pedestrian is worldwide. I am reminded of a remark made by the late Fred Allen after a visit to Paris. He said that one reason there is a church on almost every corner in Paris is so that the pedestrians can go in and pray before trying to cross the street.

But let me outline briefly the situation in the United States.

Accidents of all types, including traffic accidents, are the third leading cause of death in the United States, being exceeded only by cancer and diseases of the heart and circulatory system.

We are justified in referring to traffic accidents as a major public health problem in the United States.

The death toll from cancer and heart trouble is the cause of much concern, and justifiably so. But the auto traffic death toll is more heartbreaking. Deaths from cancer and heart disease generally occur in the later decades of life. Traffic deaths are striking down the youth of the land who are just entering their productive years.

Of all the young men aged 15 to 24 who died in the United States in 1957, 40 percent died in motor vehicle accidents. One-fourth of the fatalities among young women in the same age bracket resulted from traffic accidents.

As stated earlier, in the United States we are killing around 39,000 people a year in traffic accidents.

Startling as that figure is, it gives only part of the story. That is the dramatic, headline-making part of the story. But behind and beyond is tragedy multiplied many thousandfold in maimed and broken bodies, in families denied the services of a bread winner—sometimes for months, sometimes for life.

In 1957, the best estimate the subcommittee could get from private sources on the number of traffic accident injuries was 1,400,000.

Then, on recommendation of the Committee on Interstate and Foreign Commerce, Congress directed the U.S. Public Health Service to make certain statistical studies. That study revealed that the true figure on traffic injuries was nearer 5 million persons, nearly four times the private estimate.

Five million injuries means 25 million days in bed in hospital or home. It means 125 persons injured for each person killed.

Half of those hospitalized for accidents in the United States are traffic victims.

Besides the loss of life and the 5 million injuries, there is a staggering property loss, important in striking a balance when we consider the cost of the measures needed to reduce the traffic toll.

In the United States, the property loss from auto accidents amounts to between 5 and 7 billion dollars a year. In addition the cost of auto liability insurance runs to $3 billion a year, or more.

In a report prepared for Congress last year, the U.S. Department of Commerce estimated that traffic accidents cost $116 for each registered vehicle, which averages 1 cent for each mile driven, or roughly 12½ cents for each gallon of gasoline consumed.

We had warm debates in Congress last year over increasing the gasoline tax to help finance the National Highway System.

Yet, we pay scant attention to this 12.5-cent-a-gallon toll levied by highway accidents. That is worse than a tax. At least, we are getting roads and other benefits from the tax. We are getting nothing but heartaches and shrunken bank accounts from the accidents.

Now, anyone who came along with a proposal that would reduce our gasoline tax even half a cent a gallon would get a respectful hearing.

I think it is possible, if we work together and are willing to make the necessary adjustments, that we can reduce this auto accident levy a lot more than a half a cent for each gallon of gasoline we burn.

Now, I don't believe you are going to improve the situation much merely by asking motorists to stop killing and maiming one another.

We are not going to stop this needless slaughter with slogans. Lectures are not enough. Good intentions are not enough.

Unfortunately, we cannot prevent all accidents. We must accept that.

We can prevent some of the injuries and many of the deaths without preventing the accidents. One way to do this is to give the public safer motor vehicles. During the last session of Congress, I got a bill through the House that will help give us safer vehicles. In a moment, I want to go into more detail on that but now I want to digress a moment to discuss some of the things my subcommittee has discovered regarding this problem of highway safety.

This problem has concerned us in the United States a long time. Back in World War I, we drafted a code of rules for the road.

In 1924 we organized a cooperative movement to promote safety. That was headed by Herbert Hoover, later President. That first conference urged the adoption of uniform traffic regulations. A committee was appointed to draft a model code. In 1926 a model code was approved by a national conference. A model traffic ordinance was drafted in 1928.

No one doubts the importance of a uniform code in reducing traffic accidents in a country as vast as the United States, with people moving rapidly from one jurisdiction to another by the thousands daily.

But, after all these years, we are still trying to get the uniform traffic code adopted.

It is apparent that persuasion is not enough. Something more than logic is needed.

In 1956, in the face of the mounting traffic accident toll, I became convinced that the time had come for the Federal Government to take a hand, if to nothing more than to outline the problem and suggest steps to improve the situation.

Accordingly, I presented a resolution calling for a congressional investigation.

As a result, I was appoined chairman of the Special Subcommittee on Traffic Safety. Immediately we set to work to learn what we could about traffic safety. We heard leading experts in the safety field. We visited manufacturing plants. We talked with industry safety engineers. We met with medical men whose gruesome job it is to try to same as many of the accident victims as possible. We talked with law enforcement officers who try to prevent accidents.

We came up with certain recommendations. The efforts of 3 active years are included in the subcommittee reports presented to Congress and which have had a wide distribution among people working in the traffic safety field.

We have urged more aggressive action by local communities and the States in carrying out certain basic recommendations of the President's Highway Safety Conference. We urge expanded research into the cause of accidents. We urge the States to adopt the uniform traffic code. We urge that driver examining and licensing procedures be strengthened.

We urged the industry to drop emphasis on speed and horsepower and concentrate on building safer vehicles. They stopped advertising speed and horsepower but kept right on building bigger and more powerful automobiles until the buying public, by turning in increasing numbers to the smaller domestic and foreign models, forced the big three to take a second look.

Our recommendations regarding research are important, in my judgment. We need to know where we have been and where we are going and how best to get there.

Already I have pointed out the inadequacy of the accident statistics available to our subcommittee in 1957. The figures we were given were merely guesses, and not very good guesses at that.

In large and important areas we still are guessing. Research costs money. For some reason, perhaps because of our fatalistic attitude toward auto accidents in general, it has been difficult to get money needed for research.

We were told, for example, that the auto industry has been spending about $5 or $6 million a year on research. All the smugness was taken away from that statement, however, when it was pointed out that this is only a very small drop in a very big bucket when you remember that the industry is selling around $11 billion worth of new automobiles each year.

Last year the U.S. Public Health Service spent $1 million in doing research on all accidents, even though accidents are the third leading cause of death in the United States. That amounts to about $2.50 for each traffic death. On the other hand, we have been spending $40,000 a year on research for each polio death. For each cancer death, we are spending around $360 a year. For each death from heart disease, we are spending around $87 a year on research.

As a result of our subcommittee study, last September I introduced a bill in Congress to establish a National Accident Prevention Center to concentrate upon this important public health problem.

Previously I had introduced a bill to provide Federal aid for driver training. No one questions the importance of proper driver education in reducting the accident toll,

especially among our younger drivers. Yet only 16 States provide State aid for driver education programs. It is my belief that a little aid from the Federal Government will encourage the States to establish programs which will far more than pay their way in reducing accidents. Here, in my judgment, is one sure and easy way to reduce this 12.5-cent-a-gallon levy from accidents.

Earlier I mentioned my bill to promote the manufacture of safer vehicles to reduce deaths and injuries. That bill would require that all passenger-carrying motor vehicles purchased by the Federal Government must meet certain minimum safety standards set by the Secretary of Commerce. It is my belief that this would result in the production of better automobiles for the public by forcing the manufacturers to adopt as standard, or perhaps optional equipment, the safety features required by the Federal Government. The bill was bitterly opposed on the floor of the House on the grounds that it would increase the cost of motor vehicles bought by the Government.

My answer to that is that the cost of these essential safety features largely could be absorbed by eliminating some of the chrome and frills which serve no useful purpose. Even if the safer vehicles cost more money, we can, in the long run, save money by reducing that 12.5-cent accident toll levy.

My subcommittee has favorably reported and the House has passed another important bill. This would require the Surgeon General of the Public Health Service to make a study of the effect of automobile exhaust gases on human health and report to Congress within 2 years, with recommendations, if any, regarding steps necessary to protect the public health. Legislation to attack the exhaust problem is sponsored by my colleague from Ohio, the Honorable PAUL SCHENCK, the ranking Republican member on the subcommittee. I mention this to show that there are no party politics in the subcommittee's efforts to reduce the auto accident toll.

There is a growing feeling that auto exhaust gases, in addition to contributing to the dreaded smog which is an increasing menace to urban areas in the United States, is a serious health menace and perhaps an important contributor to certain types of motor vehicle accidents.

It was with the greatest reluctance that I came to the conclusion that we need the legislation mentioned, and other measures.

I am from the South, an area where we cherish the time-honored Anglo-Saxon concept of the importance of protecting the rights and liberties of the individual from arbitrary and capricious government. We have held to and defended that concept of freedom from arbitrary rule for many generations.

We follow the doctrine of State rights. Essentially that means local self-government. It means government by the people for the benefit of the people concerned. It means protection of the rights of the individual to enjoy life and the fruits of his labor as long as he does not interfere with the rights of his neighbor. It means freedom from arbitrary rule, imposed by an absent bureaucracy with little or no knowledge of local conditions.

But absence of government does not mean freedom. It means anarchy.

As a nation we abhor regulation. In view of our similar backgrounds I am sure the same is true here. We resort to legislation only as a last resort. We like to see things done voluntarily.

We want those who have responsibility to use it. The States and local communities, by legislative action, could accomplish many of the things that must be done if we are going to reduce the traffic toll. They could pass legislation to require higher safety standards for vehicles sold within their borders. In fact, the Secretary of Commerce in his report to Congress last year, recommended that the States do this. The point is that in view of the record can we afford to wait for the States to do this?

As pointed out a while ago, with convincing arguments to back up our case, for more than 30 years we have been trying to get a uniform traffic code adopted by the various States. Some progress has been made, but we have a long way to go.

Now, I am not advocating that Congress impose by law a uniform traffic code on vehicles moving in interstate commerce. But there are certain things the Federal Government is going to have to do if we are going to make much progress in the near future.

The Federal Government must help the States with driver education programs. We must do more in the field of research. We must promote the production of safer vehicles by requiring that passenger-carrying motor vehicles purchased by the Government meet certain safety standards.

It may be that we shall have to go further than that in enacting Federal legislation.

My point is that if we are going to get the job done, we can not self-righteously hide behind the cloak of State rights, or reject steps which are going to cost money. If we are going to reduce that 12.5-cent-a-gallon levy we may have to add a few cents to our tax bill. We will have to buy a little more research. We may have to pay a few dollars for safety devices. We may have to hire more traffic patrolmen and pay them better salaries. We may have to spend a few dollars in keeping our cars in repair. Some of those now driving may have to stop driving. After all, driving is a privilege and not a right. No one who endangers the life and property of his neighbor has a right to drive.

I don't think you can catch every drunk driver before he wrecks himself or someone else. But, with proper enforcement, we can keep a lot of drunk drivers off the roads.

I don't think you are going to stop drivers from going to sleep just by passing laws.

There always will be careless and thoughtless people behind steering wheels.

Adequate vehicle inspections will keep many unsafe vehicles off the roads.

Still there will be accidents. We can't stop all these accidents but, as I said a moment ago, we can reduce the number of deaths and injuries without stopping the accidents.

How? By giving the driver and his passengers a safer package in which to ride. We need safer automobiles. Reluctantly, I am convinced that the quickest way to get these safer automobiles is by legislation.

That is not my opinion alone. It is supported by leading specialists who have worked in this field. Its soundness is shown by the studies made by the crash injury research project of Cornell University under the able direction of John Moore, who is well known to many of you in this audience.

My position is supported by the American Medical Association, which has gone on record in support of legislative action in this field. The association presented the subcommittee an impressive list of essential safety features our doctors would like to see built into our automobiles.

My position that safer cars will cut the traffic toll was supported by leading engineers and safety experts who appeared before the subcommittee, including such well-known figures as Dr. T. P. Wright, the distinguished vice president for research of Cornell University, and formerly head of the Civil Aeronautics Administration.

To get legislative action, we must have public support. The public must be convinced of the need before they will support legislation to tighten up on driver licensing procedures, to require adequate motor vehicle inspections, to spend tax money on driver education and research, to tell the industry they must build safer vehicles which meet certain minimum safety standards.

As I said before, as a Nation we abhor regulation. We don't like taxes. What is true in the United States likewise is true in Canada, I am sure.

But we have to think of those 39,000 people dead upon our streets and roads. We have to think of the millions of injured.

And, if we want to stop to consider the cost, we must think of that 12.5-cent a gallon levy we pay because of these accidents.

In conclusion, let me summarize briefly the major things I think we must do, and soon, to reduce the traffic toll.

1. We must have legislation to establish minimum safety standards for passenger-carrying motor vehicles bought for Government use.

2. More emphasis must be placed on driver education, both to combat lawlessness which contributes to juvenile delinquency, and to reduce the accident toll in the age bracket where casualties are heaviest.

3. We must continue to urge the adoption of uniform driving rules to apply from coast to coast in both our countries to eliminate dangerous confusion and to plug loopholes contributing to the accident toll.

4. We must spend more on research. Only by research have we made substantial progress against epidemics and mass killers in the public health field and here we are dealing with one of the major public health problems of our time.

Again, let me thank you for your kind invitation to meet with you. My very best thanks go to all of you for your kind hospitality.

As We See It—Students' Oath

EXTENSION OF REMARKS
OF
HON. WILLIAM K. VAN PELT
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. VAN PELT. Mr. Speaker, under unanimous consent to extend my own remarks in the Appendix of the RECORD, I include an editorial entitled "As We See It," which was published in the Milwaukee Sentinel, Monday, December 7, 1959.

I was opposed to the Federal Government's entering into a student loan program when it was considered in the House; however, now that the proposal has become law I would certainly oppose dropping the affidavit and oath required under the program.

The editorial referred to follows:

[From the Milwaukee Sentinel, Dec. 7, 1959]

AS WE SEE IT—STUDENTS' OATH

It is disgraceful that five regents of the University of Wisconsin have alined the UW—though not quite in a straight line—with the eastern colleges which protested the affidavit and oath required under the new Federal student loan program.

Harvard and Yale not only protested the oath but declined the money. Our regents accepted the money and said they hope the oath will go away because it "trammels inquiry, affronts academic freedom, and unfairly and unjustifiably singles out as ob-

jects of distrust and suspicion the needy students in our colleges and universities."

You have to lie quite flat on your face to look this far under the bed.

A member of the board, in attempting to justify taking the loan money while balking at the oath, put his finger squarely on one of the reasons why the regents might better have remained silent on the subject altogether.

From the point of view of those students who have no objection to taking the oath, he said, it would be "dogmatic and arbitrary" to prevent them from obtaining the loan.

He's exactly right. This whole thing should be a matter of personal choice by each student whether he is willing to sign an affidavit and oath as a requirement of receiving a taxpayers' loan, available under our national defense program, and it is presumptuous of college administrators to do his thinking for him. It might even be said to be trammeling of a kind.

Beyond that, what is so terrible about the affidavit and oath? It merely requires a beneficiary of the Government to identify himself as one who agrees to abide by the ground rules of this Republic. His freedom to inquire is in no way restricted, and neither is his freedom to conclude, from his inquiries, that the Republic needs changing. And if he wishes to do something about changing it, the Constitution provides ways and means which have worked passably well for 185 years.

All the affidavit and oath commit him to is the use of these means, rather than the force, violence, or other illegal and unconstitutional methods which are foreign to us but well known to enslaved millions in other countries where they were used to impose the will of a minority.

Is that bad? We think not. We think it is an essential requirement for the welfare of all of us.

It Isn't Benson

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial, entitled "It Isn't Benson," which appeared in the Rockford (Ill.) Morning Star of December 17, 1959:

IT ISN'T BENSON

Timid Republicans who have been fearful that Secretary of Agriculture Benson would be a political liability in the 1960 presidential election should have their backs stiffened by the result of the special election this week in Iowa's Fourth Congressional District. Republican JOHN KYL defeated Democrat C. Edwin Gilmour, who based his campaign on a "get-Benson" pledge.

Iowa is in the heart of the agricultural midwest, where Benson was considered by some strictly political-minded Republicans to be a drag on the party. But KYL carried the rural areas and made inroads in the Democratic stronghold of Ottumwa, the largest population center in the district.

The forthrightness of Benson is recognized by the people. He is an asset to the Republican Party because the policies he advocates point the way to stability for agriculture and its freedom from Government controls.

It is not Benson who is responsible for agriculture's difficulties. Those difficulties began in the New Deal era when the Government tried unworkable methods to guarantee never-ending prosperity to every farmer. When Benson took office, agriculture was fettered with laws that took away its independence and made it a political football. In their frantic search for issues since the Eisenhower administrattion began the Democrats have always pulled out the farm problem as a vote-getting gimmick.

If the politicans would get off the backs of the farmers, agriculture's troubles could be overcome. But the administration has been handicapped in its efforts to help agriculture by obsolete farm laws and programs which Congress has refused to scrap.

Responsible farm leaders agree with Benson that agriculture cannot be made stronger and adjust to changing conditions until Government price fixing and other politically inspired control programs are discontinued. Benson's efforts to move agriculture toward dependence on market rather than government deserve the support of every Americans.

The Future of State Labor Relations Agencies and Federal-State Jurisdiction

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. McCORMACK. Mr. Speaker, a courageous and highly respected leader in the ranks of labor, and chairman of the Massachusetts Labor Relations Commission, and well versed in labor law and labor relations, is Stephen E. McCloskey, of Boston, Mass.

In my remarks, I include an able and informative address made by Mr. McCloskey at the Third Annual Conference of the Association of State Labor Relations Agencies held in Detroit, Mich., on November 18, 1959, entitled, "The Future of State Labor Relations Agencies and Federal-State Jurisdiction."

Mr. McCloskey's address follows:

THE FUTURE OF STATE LABOR RELATIONS AGENCIES AND FEDERAL-STATE JURISDICTION

Mr. President, officers of the association, distinguished guests, chairman and members of State labor relations agencies and their guests, I deem it a privilege to be given the opportunity of addressing you on the occasion of your third annual conference. Thank you for the invitation. His Excellency, Gov. Foster Furcolo has asked me to bring to you the greetings of the Commonwealth of Massachusetts. Before I begin my remarks on today's subject for discussion, I have a few items of interest regarding the Massachusetts Labor Relations Commission, which I would like to mention.

Our commission, in addition to providing advice and information to employers and employees under the statute, also provides information on a multitude of labor relations matters that do not come within the purview of our State labor relations law. Frequently we find it necessary to direct the employer or employee elsewhere. I think it is about time we took credit for the service we provide employers and employees and it is my intention to set up within our commission an information center which will supply the employer or employee with the answer to his inquiry or direct him to the proper State or Federal agency. Perhaps you could do likewise on your own board or commission.

The organizing efforts of State, county, and municipal workers should provide opportunities for increasing the caseload of State labor relations agencies. Cities and towns are excluded as employers within the meaning of our statute. However, in a few cases involving the representation of employees, the city or town, on the petition of a local union, has made certain stipulations, consented to an election and asked us to supervise and conduct an election. For the future I can foresee legislation amending our statute to include cities and towns as employers within the meaning of the statute. When this legislation is enacted it should provide many new representation cases for our commission.

This is an untapped area of additional cases for us and I hope it will provide the member States of this association a similar opportunity for expanded service in their respective States.

In the void that has existed since the passage of the Labor Management Reporting and Disclosures Act of 1959, because no staff or even employee has been made available in the Boston office of the U.S. Department of Labor, who can answer questions about the new law, we have made our staff available to assist employers, union officials, and union members in reaching conclusions regarding their inquiries concerning the new law.

My thoughts on "the future of State labor relations agencies" especially since the passage of title VII of the Landrum-Griffin bill produces mixed feelings of deep concern on the one hand and subdued elation on the other. As a trade union leader and a member of the Bridge Structural and Ornamental Ironworkers Union, I am very apprehensive for the labor movement in the South and those States where no State labor relations law or agency exists. There, unions must face an archaic and reactionary common law and rely on economic force to obtain their objectives while they face labor's mortal enemy, the injunction, in an unfriendly atmosphere.

My feelings of elation, on the other hand, are sudued and not as strong as they might be for the reason I have mentioned and for the additional reason that I am not yet quite sure whether the Congress has given us anything to be happy about.

Under the Taft-Hartley amendments contained in title VII, the National Labor Relations Board is permitted to decline to assume jurisdiction over that class of employers, where the effect of the labor dispute is not sufficiently substantial to warrant the exercise of jurisdiction. The State agencies are then permitted to exercise jurisdiction over those cases which the National Labor Relations Board has declined to assert jurisdiction. However the prohibition in the law preventing the National Labor Relations Board from lowering the jurisdictional standards that were in effect on August 1, 1959, seriously limits State labor relations agencies, for, it is my opinion that the impact on interstate commerce in the cases of many of these employers is not sufficiently substantial to warrant the exercise of jurisdiction. Apparently the National Labor Relations Board is reluctant to permit the exercise of jurisdiction over those cases which commonsense indicates really belong to State labor relations agencies.

If State labor relations agencies are to have a future, a realistic and commonsense approach to the problem of jurisdiction must be developed. The line should not be drawn according to the dollar size of a business or the volume of goods brought from or sent to other States, although the second method should not be entirely excluded as it might be necessary to use it in some cases. I do not believe that Congress should write de-

tailed jurisdictional standards into the National Labor Relations Board. Rather a combination of legislative and administrative action could achieve the desired results. Perhaps we should organize and conduct a study of various segments of the economy in order to formulate a new concept or new criteria for the exercise of jurisdiction by State labor relations agencies. The feasibility of such a course of action and its implementation I leave open for discussion by the lawyers and by the members of this association for your ideas.

The come-to-rest doctrine is one that deserves review and the thoughtful consideration of the State agencies and the National Labor Relations Board.

Such an approach should, of course, recognize those employers and companies that have a truly interstate character and have a substantial effect on interstate commerce.

The employers that should be subject to the National Labor Relations Board are those in the manufacturing and production industries, the transportation industries, newspapers and communications systems, utility industries, and those industries that have a substantial effect on national defense.

Those employers who should be subject to the local control of State agencies are companies operating office buildings, retail concerns such as supermarkets and department stores, hotels, motels and restaurants, automobile agencies, gas stations and metropolitan transit systems. The employment relations of the above employers are not matters of national concern, but rather of local concern.

Local authority means local responsibility which is closer to our democratic philosophies of home rule and to our ideal of self-determination. State agencies are more flexible, closer to the facts and can reach practical and sound decisions because of their knowledge of and familiarity with local conditions. Their familiarity with the individuals involved permits them to appraise the human problems and this, of course, is not the case where the National Labor Relations Board is forced to consider cases on the basis of a printed record.

I think it is most important to the economy of our individual States to see to it that a good industrial climate exists where the labor disputes of local unions and small business may be settled quickly and inexpensively. Since State agencies are able to handle cases more conveniently and expeditiously, local unions and small businesses should not be required to make time-consuming and expensive trips to Washington.

In addition the prospect of 50 States, or in reality 15 States administering a State labor relations law appeals to me for each of these States could supply new ideas and new solutions to labor management problems. No better approach could be developed in providing constructive thought and action in this vital field than by allowing each State to serve as a research laboratory for testing progressive measures.

The views of the Honorable John R. Dethmers, the distinguished chief justice of the supreme court of this State in the area of Federal-State relationships are the most compelling and profound of any I have heard or read. His remarks made in an address delivered before the midwinter meeting of the Massachusetts Bar Association at Holyoke, Mass., on February 14, 1959, are, I think, appropos and particularly deserving of our attention at this time. Your chief justice was speaking by reason of his chairmanship last year of the National Conference of Chief Justices whose report he was discussing. The title of that report was "Federal-State Relationships as Affected by Judicial Decisions."

The following remarks are meaningful to me and, I trust to this association:

"Of transcendent importance to the Nation, overshadowing all others in the concern of the conference, is the matter of Federal-State relationships as affected by judicial decisions.

"No consideration of the report can be balanced or complete without these observations:

"(3) The conference's expressed alarm, and mine, at the noticeable trend toward increased national powers accompanied by a diminishing of the powers of States and local governments, relates not to mere sectional or selfish interests, but springs from the same concern as that of our Founding Fathers that liberty's cause may be lost in too high a concentration of powers in the National Government, and from the conviction that safety for the rights of man inheres in a diffusion of those powers, and maintenance of the highest possible degree of local self-government compatible with national security and well being. So long as we would adhere to the determination of the fathers that the State, the government, exists for man and not man for the State, in the consideration of every proposed extension or withholding of governmental powers and the division of those powers between the States and the Nation, our lodestar must always be, 'How will the cause of freedom best be served, how the rights of man advanced?' The 14th amendment achieves its intended goal when it prevents State action destructive of human freedom; it misses that goal when used as a tool to concentrate power in the National Government at the cost of liberty."

A close analysis of these considerations reveals that a sound labor policy requires participation by both States and Federal Government. Perhaps the criteria to be employed by the board should be whether sound labor policy requires State action and not consistency with specific provisions of the act.

Although a multiplicity of tribunals may well lead to a multiplicity of results, this is not necessarily undesirable for it is in diversity, that this country has found its greatest strength and unity.

Barstow Pioneer, C. B. McCoy, Fought at Battle of Manila

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 12, 1960

Mr. SHEPPARD. Mr. Speaker, under unanimous consent, I insert in the RECORD a newspaper item complimenting Mr. C. B. McCoy, of Barstow, Calif. He served for many years in the U.S. Navy with an outstanding record, and received the Navy Medal of Valor. He is a fine citizen, and beloved by the community in which he resides.

The article referred to follows:

[From the Barstow (Calif.) Daily Sun, Dec. 31, 1959]

BARSTOW PIONEER, C. B. MCCOY FOUGHT AT BATTLE OF MANILA

(By Ray Miller)

BARSTOW.—C. B. McCoy, pioneer desert resident and U.S. Navy veteran who participated in the Battle of Manila Bay, recently received a facsimile page of the Chicago Tribune published May 2, 1898, the day after the historic naval engagement.

McCoy enlisted in the Navy at Vallejo, Calif., in 1891 and was honorably discharged in 1906. An engineer honorably discharged in 1906. An engineer, second class, he was on board the U.S.S. *Petrel*, commanded by Comdr. E. P. Wood at the Battle of Manila Bay.

His ship was seriously damaged in the fighting which took place under the guns of the Spanish shore batteries near Cavite.

SIX VESSELS

In the battle six American naval vessels including the flagship *Olympia*, a cruiser commanded by Capt. C. N. Gridley, to whom Commodore George Dewey issued the famous order "You may fire when ready, Gridley," the cruisers *Baltimore*, *Boston*, *Raleigh*, *Concord*, and McCoy's vessel, the gunboat *Petrel*, engaged the Spanish fleet of 17 vessels. With the America flotilla were the colliers *Nansham* and *Zafiro* and the dispatch boat *McCullough*, said McCoy, but took no part in the fight.

It was the first time in naval history that rapid fire 6- and 8-inch guns were used and they were on Dewey's ships, McCoy said.

In studying the Tribune's account of the naval battle, McCoy found only errors of fact in details. The account of the historic engagement was first received from Spanish sources and was relayed by cable via Biarritz.

The Spanish fleet of 17 ships were all either completely destroyed or put out of any further action. Six of the Spanish cruisers and all of the Spanish gunboats were sunk.

During McCoy's career in the U.S. Navy, he held the title of Navy boxing champion from 1904–05. He outpointed oldtime boxer Tom Sharkey at the Vallejo baseball grounds in 1903 and in a return bout the following year was beaten by Sharkey, when he was unable to answer the bell in the seventh round.

McCoy learned his boxing skill as a student of Gentleman Jim Corbett's school of boxing at San Francisco's Olympia Club.

Born in Aztec, N. Mex., in 1874, McCoy first came to the local desert in 1885 by covered wagon. Later he went to Modoc County and was engaged in the cattle business until he joined the Navy. There was no Barstow at that time and Daggett was the principal trading center of the desert.

After his discharge from the Navy, McCoy returned to the Mojave Desert in 1906 and has been a railroader until his retirement several years ago.

He holds the Navy Medal of Valor, awarded to him for rescuing a man at sea. As McCoy tells the incident, he was aboard the U.S.S. *Vicksburg*, enroute from Manila to the Boston Navy Yard. Midway between Boston and Gibralter, in mid-Atlantic, the *Vicksburg*, a poor sea ship, said McCoy, was battling a hurricane-type storm. A heavy sea swept four men overboard and in attempts to launch a lifeboat, another huge sea broke the lifeboat in half as it was being lowered from the davits. The boat's crew managed to save themselves by clinging to lifelines with the exception of the coxswain, a sailor named Vergler who went overboard.

SAVED FROM THE SEA

As the man came up he shouted "I'm hurt," and McCoy, an excellent swimmer, jumped overboard and held up Vergler until a lifeline was dropped. Hauled aboard, it was found that Vergler had a broken hip sustained when the huge sea struck the lifeboat. A few weeks' later, McCoy was awarded the medal and received a citation from the Navy Department for his gallant action.

Now in his 80's, McCoy still takes an active interest in desert political affairs and has hosts of friends in the desert area. As one of a vanishing breed, he is typical of the

men who assured this country's future in the days of the Nation's greatest expansion, an era which witnessed the United States emerge from second-rate status among nations to that of a first-class power and one that was then respected throughout the world.

Swastika Vandalism

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. GARMATZ. Mr. Speaker, we have witnessed in recent weeks renewed manifestations of that loathsome affliction called anti-Semitism. The news stories from large cities in the United States and in different parts of the world report acts of vandalism and desecration of Jewish homes, institutions, monuments, and places of worship. I regret to say that my own city of Baltimore is one of these cities.

West Germany, of course, has gotten the most attention, since the current rash of anti-Jewish activities seems to have broken out after two young hoodlums in Cologne defaced a synagog on Christmas Eve.

I trust that those who perpetuate these offenses will be dealt with promptly and sternly, and will be punished to the full extent of the law. Where the laws are inadequate, new laws should be enacted without delay.

The New York Times of Sunday, January 10, 1960, reports that Chancellor Adenauer will ask the Bundestag to amend the penal code with the aim of curbing anti-Semitic activities. The same newspaper also reports that a Labor Member of the British Parliament—Sir Leslie Plummer—is drafting a bill to impose jail sentences up to 6 months for painting swastikas on buildings.

The West German Government has a special obligation and responsibility to deal with this matter, for it must show to the world that the evil spirit of Hitlerism is not rising again from the dead ashes of World War II. I believe Chancellor Adenauer recognizes full well that if Germany fails to do its proper duty, it will forfeit the respect and confidence that the Federal Republic has gained in the free world for its hard work of postwar reconstruction, its contributions to NATO defenses, and its diligent effort to make amends to the surviving victims of Nazi persecution and tyranny.

There have been some attempts, in Germany and elsewhere, to discount the recent actions of racial vandalism as Communist maneuvers to discredit the Federal Republic of Germany and the Chancellor and thereby to serve Moscow's propaganda line in advance of the Summit talks. While the Communists are quite capable of resorting to such techniques, so far there has been no real evidence of a Communist plot.

There are indications that the German youth has not been taught in school what the Hitler regime has done in its monstrous assault on humanity. The Federal Republic of Germany would do well, even at this late date, to reexamine its educational policies as well as its laws, in order to extripate the Nazi influence from German life.

We in the United States need not be smug about the problem. There are many acts of violence and depredations against people and property in the United States caused by racial and religious animosities. We have our own hoodlums and delinquents who paint swastikas and burn crosses and even throw bombs. Sometimes the depredations are against Negroes, sometimes against Jews, Catholics, Protestants, or others. Religious bigotry and race hatred are malignant social diseases which can spread throughout the body politic unless they are treated skillfully and in time.

Many of the reports and news stories depict the offenders as juveniles engaging in a new kind of prank called swastika vandalism. Among those who play these ugly games we might expect to find crackpots, fanatics, professional agitators, psychopaths, and other emotionally disoriented persons. If youngsters are taking a fancy to this evil sport, then I fear that juvenile delinquency is assuming a form even more dangerous than street fights, robbery, and mayhem. For actions which associate youth with religious and racial prejudice strike at the very vitals of American life and freedom. America's future is dark indeed if its youngsters become infected with the virulence of religious and race hatred which has torn nations and continents apart and led to mass murder and frightful wars. We can ignore the crackpots and fanatics but we cannot ignore the youth of America.

Next month Americans will salute Brotherhood Week. I hope that the President of the United States will find time, in recognition of Brotherhood Week, to make a nationwide appeal to the American people to spur their efforts, individually and through their civic, religious, and local government institutions, to promote good will and understanding amongst all Americans. We owe it to ourselves, to our children, and to the future of the country to condemn the offenses to which I have referred and to hold up the offenders to national scorn and disgrace as betrayers of the free way of life.

Informed Citizens

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. DERWINSKI. Mr. Speaker, the following editorial from the December 23 edition of the La Grange Citizen, a community newspaper in my district, reports an excellent commentary on the subject of public knowledge and information on the vital issues of the day:

INFORMED CITIZENS

"To invite well-informed, interesting representatives of the various fields of politics, labor, management, public relations and education to speak at monthly meetings."

That is the purpose set forth by the officers of a club named "Horizons," sponsored by members of St. Barbara's parish in Brookfield. Robert Hirsch, the president, informs that any interested person is welcome to attend the meetings held monthly.

Thomas J. Haggerty, opposition candidate to James Hoffa for the AFL–CIO presidency, was brought to Brookfield this week to discuss union controversies.

The fact that this is a church-group-supported organization should not deter others from attending meetings of the Horizons. The Haggerty program is proof in itself that the officers of the club intend to pursue the purposes as stated above.

America needs more than anything else citizens who are well informed on all the topics, and more, covered in the club's stated purpose.

There is no lack of printed material covering all the problem-creating forces that influence our lives, but to know requires reading on more than one side of any controversy. Discussion, questions and answers are the sources, especially when experts, or persons in the know, take part.

Richard Murray Simpson

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. VAN ZANDT. Mr. Speaker, the Altoona (Pa.) Mirror has joined the long list of the Nation's newspapers that have found the life of our late colleague, Richard Murray Simpson, worthy of editorial comment.

The following editorial, titled "Good Statesman," appeared in the January 9 issue and is among the numerous tributes of love and respect tendered in memory of one of the finest Members of Congress ever elected from the great State of Pennsylvania:

GOOD STATESMAN

At the age of 59 years, death has halted the brilliant career of Richard M. Simpson, Congressman representing the largest area in Pennsylvania, a brief illness closing a 23-year service in Washington. Death came at the Naval Medical Center at Bethesda, Md., Thursday morning.

Profound regret at his passing has been expressed by the President and the Governor, as well as by the 30-member Pennsylvania delegation in Congress. He took a leading part in all phases of government, ranking high on various committees.

Congressman Simpson represented the famed "shoestring" district, the 18th, in the State, which contains eight counties, the largest group of any of the State districts. The 18th extends from the Maryland county line to Lewisburg.

He represented the district since 1937, when he was named to fill an unexpired

term, and he has been reelected 11 times in a predominantly Republican district. In Washington he was the second oldest in service from Pennsylvania. Through seniority, he gained a position of great influence. Only recently he was mentioned for national Republican Party chairman.

Dick Simpson fought for liberal legislation and strongly opposed the New Deal and Fair Deal while fighting for high tariffs and strict economy. A forceful speaker, he was heard frequently on the floor and in committees.

Dick, standing 6 feet 2 inches tall and a 210 pounds, was a formidable individual, deeply devoted to his Washington duties, so much so that he took a law course in middle age to become more familiar with Government matters. He never practiced that profession, however.

He graduated at Huntingdon High in 1918 with an athletic record and then enlisted in the Tank Corps in World War I. He played football at Pitt under famed Coach Pop Warner, getting his degree in 1923.

He is greatly mourned by everyone in his district, for he so ably served all his constituents.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. ALGER. Mr. Speaker, following is my newsletter of January 9, 1960:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

JANUARY 9, 1960.

"I, JOHN KYL, do solemnly swear that I will support and defend the Constitution of the United States against all enmies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion, and that I will well and faithfully discharge the duties of the office on which I about to enter. So help me God."

Thus did the Speaker swear in the year's first new Member, JOHN KYL, of Iowa. Not only were all Members reminded of their oath taken a year earlier, but also of the relentless toll that time takes from the ranks of Congressmen. Since Congress adjourned, Representatives Boyle (Illinois), Carter (Iowa), Bush (Pennsylvania), and Senator Langer (North Dakota) have passed on. The total loss since the 86th Congress first convened in January of 1959 now is seven Representatives and one Senator. This saddening experience was heightened by the demise of Dick Simpson (Pennsylvania) Thursday morning. Dick, the ranking Republican on the Committee on Ways and Means, was a 22-year veteran of Congress. There was no question about the sincerity and depth of feeling of members of both parties paying tribute to his memory.

The reconvening of Congress January 6 was accompanied by a spontaneous and enthusiastic camaraderie as, milling about, Members exchanged greetings on the House floor. The Speaker's birthday the same day was the cause of even more good will as all united in wishing the best for Speaker RAYBURN. Earlier many Members had joined the President and Vice President at the traditional church service.

The President delivered the state of the Union message, as usual, before a joint session of the House and Senate in the House Thursday. Present also were Supreme Court Justices, the President's Cabinet officers, and the foreign ministers, including the Russian Ambassador. The smiling Mr. Menshikov looks surprisingly American in appearance and conduct. Vice President NIXON (President of the Senate) and House Speaker RAYBURN jointly presided. The Speaker introduced the President, who looked fit and happy.

The state of the Union message, 40 minutes long, covered a lot of ground, alternately dealing in generalities and then in specifics. The President spoke with unmistakable forcefulness and confidence. His two themes of peace and freedom struck just the right note, it seemed to me. Particularly pleasing was his stress of freedom, not only in the accepted sense as freedom from oppression between nations, but also as a domestic matter within our Nation, where legislation and the role of Federal Government can jeopardize our personal liberties, as we are forced to pay the tax price and suffer the bureaucratic control of Federal Government programs. For example, the President specifically reminded us that the growth problems of cities must be handled within the traditional balanced framework of Federal-State Government, not "yield to the deceptive bait of the easy Federal tax dollar." Equally satisfying was his emphasis on the need for Government living within its income, that is, a balanced budget. The big surprise of the day was his forecast of a $4.2 billion surplus which he recommended as payment against the national debt. Freedom and individual liberty took on new significance and meaning through this treatment of domestic matters. The Federal Government's legislative action obviously affects each individual's personal freedom—as viewed in specific programs mentioned by the President as warranting Congress' attention, such as labor-management relations, agriculture, education, civil rights, and finally in the inflation which may result from governmental action.

Peace, as freedom from aggression and oppression, received major attention. The President laid the responsibility for today's uneasiness squarely at Russia's door. Our efforts are directed to maintaining peace for ourselves and others, backed up by overpowering military strength. As the President put it, the Soviet threat could be competitive incentive to us, not a fear, with our system, not the Soviet's, offering the only worthwhile prize—freedom.

To accomplish our objectives, the President appealed for cooperation from Congress, noting that he has been politically opposed by Congress more than any other President. There was a significant lack of applause by Democrats throughout the speech. For my part, I thought the message excellent. However, it is necessary to receive the later, more detailed messages to understand his specific recommendations. The particular areas he mentioned briefly which need further explanation, as I see it, include foreign aid, labor-management relations, agriculture, aid to education, civil rights, and the International Court, all of which reminds me as it may you, "eternal vigilance is the price of liberty," and we must all pay that price, certainly your Congressman.

My efforts to inform the people of their Government will include regular weekly television (WFAA–TV), Sunday, 10:30 a.m.), weekly radio (KLIF), occasional daily radio reports, the weekly newsletter (available to all who want it), and the yearly questionnaire.

U.S. Senate Subcommittee on Unemployment Visited Altoona, Pa., October 26, 1959

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. VAN ZANDT. Mr. Speaker, for the purpose of gathering firsthand information on the unemployment situation in the central Pennsylvania area a Senate Subcommittee on Unemployment, composed of Senator JOSEPH CLARK of Pennsylvania, as chairman, and Senator HUGH SCOTT of Pennsylvania, as a member, visited Altoona October 26, 1959, taking testimony from over a score of witnesses at both a morning and afternoon session held in Altoona's city hall. Those testifying represented a cross section of business, labor, and industry.

It was my privilege to not only make the following statement to the committee on the unemployment conditions in the three counties of my congressional district but I was accorded the privilege of sitting with the committee in listening to the testimony of other witnesses, many of whom shared my concern over the unemployment situation in my congressional district.

My statement follows:

Mr. Chairman, over a period of years it has been my privilege to appear before numerous congressional committees in support of area redevelopment legislation.

As a matter of fact, I am among a group of Representatives in Congress who are recognized as pioneers in this particular field.

My congressional district comprises the counties of Blair, Centre, and Clearfield, and has been plagued with chronic unemployment for years due to depressed conditions in the coal and railroad industries. At times as much as 18 percent of our total labor force has been unemployed.

Therefore, the residents of the 20th Congressional District know the meaning of ghost towns and the misery that follows in the wake of unemployment as we watch good American families being forced to exist on public assistance and surplus commodities.

Speaking of surplus commodities as of October 1 in my three-county area there are 36,758 persons eligible for surplus food or 12.6 percent of the overall population.

In fact, in Clearfield County nearly 20.1 percent of the population are recipients of surplus commodities and dependent upon them for the necessities of life.

Mr. Chairman, at the present time in the two labor forces in my congressional district, here is the picture.

As of October 1, 1959, in the Altoona area, out of a labor force of 53,700 there were 4,600 unemployed, or an average of 8.6 percent of the labor force; while in the Du Bois-Clearfield area, out of a labor force of 35,400 there were 5,300 unemployed, or an average of 15 percent of the labor force.

Therefore, the unemployment situation in my congressional district is simply this. Out of a labor force of nearly 90,000, there are 10,000 unemployed, or 9 percent of the labor force.

As I have said before, unemployment in my congressional district has been as high as 18 percent of the labor force. One point I want to emphasize is that unemployment conditions are not temporary or seasonal nor can we see any improvement in the coal and railroad industries.

As a matter of fact, employment in these industries is still on the downward trend and nobody dares to predict when employment will level off.

For an illustration my hometown of Altoona is principally a railroad town because it is the site of the largest railroad shops in the world operated by the Pennsylvania Railroad Co. Early in 1951 these shops employed 14,361; while August 1958 employment dropped to 2,500.

According to information at hand employment is expected to level off at 7,000 as it was on October 1, 1959. This means that in the city of Altoona alone, there has been a loss of over 7,000 jobs.

Mr. Chairman, this situation in Altoona is duplicated in the city of Du Bois where hundreds have been furloughed by the Baltimore & Ohio Railroad.

Instead of having around 1,200 employees, as of October 1, 161 were employed with the expectation that employment in Du Bois will level off at 600, which means that 50 percent of the B. & O. labor force will be jobless.

I have been pinpointing unemployment in the railroad industry in an effort to show the permanent loss of jobs. Similar facts reveal that the same condition exists in the coal, brick, and related industries in my congressional district.

One often hears the question: "Why is it that these areas of chronic unemployment cannot help themselves?"

The answer is that while some 1,800 communities throughout the country have active area redevelopment corporations, I can only speak for my own congressional district where such groups have been active for years and have enjoyed a measure of success.

For example, since 1946 in my hometown of Altoona, Pa., as a result of an active industrial redevelopment group that raised nearly a million dollars mostly through voluntary payroll deductions, 11 new industries have been brought into the Altoona area solely through community, State, and Federal effort.

These new industries have provided 3,600 new jobs and a $12 million increased annual payroll.

Seventy percent of the new jobs are for men.

This highly successful effort stems from what is commonly known nationally as the Altoona plan.

Mr. Chairman, in attaining this remarkable record the Altoona group like other groups in my congressional district has borrowed at the banks to the legal limit.

In addition, the Pennsylvania Industrial Development Authority, as well as the Small Business Administration, have assisted to their legal limit.

Therefore, in my congressional district these area redevelopment groups are in need of further financial assistance such as is provided for in the area redevelopment legislation now before Congress.

I think I can speak for all area redevelopment groups in my congressional district when I say that they do not want any Federal handout.

What they need primarily is additional borrowing power which coupled with other forms of Federal assistance as contained in the pending bills will enable them to assist in wiping out these pockets of unemployment and their human wastage.

In achieving this objective, we will not only rehabilitate our economy through diversification of industry, but we will, in effect, be barring a repetition of this chronic unemployment that we have been faced with for years.

Mr. Chairman, I should like to repeat a question constantly asked by many of my constituents—"Why is it that Congress sends billions of dollars to so-called underprivileged nations yet ignores the plight of good American citizens who through no fault of their own are unemployed?"

The answer to this question is that Congress too long has ignored "the pockets of unemployment" that have brought suffering and despair despite national prosperity.

Mr. Chairman, I hold no brief for those who quibble and employ delaying tactics over the cost of area redevelopment legislation. Since we have billions to pour into foreign aid, we certainly have a moral obligation to care for the needs of America's unemployed.

The fact that area redevelopment legislation is fully justified makes it pertinent to ask, "Why solicit a repetition of last year's veto by having the pending Douglas-Flood bill given similar treatment since it resembles to a marked degree the Douglas-Spence bill of the 85th Congress?"

Frankly, it will not be difficult for me to support the Douglas-Flood bill, but I must confess the possibility of another veto is a cause for great concern.

While there is no one in the Senate or the House who would stoop to playing politics with the misery of unemployment, we cannot ignore the fact that unless a bill is enacted the suffering of the people in the depressed areas is not going to be alleviated.

Mr. Chairman, among the sponsors of depressed area legislation there exist two conflicting points of view.

To begin with, in principle the administration has endorsed aid to depressed areas.

In addition, the two great major political parties also endorsed the principle in their 1956 platforms.

Therefore, the question that Congress must resolve is the extent of aid to the depressed areas of the Nation.

In an effort to reach this common objective, it is imperative that reasonable people should be willing to compromise.

In this connection, it is my belief that the President will find it possible to accept a reasonable compromise between the administration bill and the Douglas-Flood version of the legislation.

In my plea for a reasonable compromise, it must be thoroughly understood that I am not presuming to speak for the administration, nor have I had any consultations with administration leaders on the subject.

Mr. Chairman, let us be practical and face the facts concerning depressed-area legislation. In the event of a Presidential veto of the Douglas-Flood bill, I have been unable to find anyone willing to flatly predict that the veto will be overriden by the House of Representatives.

The fear of being unable to override a veto is based on the fact that it requires two-thirds of the votes cast to accomplish that purpose.

Therefore, looking the facts right in the face, when you review the position of those Members of the House today in relation to their last year's vote on the Douglas-Spence bill, one finds that the margin of victory would be insufficient to override a possible Presidential veto of the Douglas-Flood bill.

Mr. Chairman, to improve the chances of enacting depressed-area legislation, I introduced H.R. 4878, a bill which represents a compromise between the administration's approach and the Douglas-Flood proposal.

With a few exceptions, my compromise bill, H.R. 4878, offers the same types of aid contained in the Douglas-Spence bill vetoed last year.

For example, instead of making every depressed area eligible for the same types of assistance, my bill provides different degrees of Federal assistance based upon the level of chronic unemployment and the need in such areas.

In this connection, it is my belief that areas which have suffered greater levels of unemployment should be entitled to a greater degree of aid than those communities whose problems of unemployment are of a lesser degree.

Briefly, my bill, H.R. 4878, provides for the following programs:

(1) Technical assistance: Depressed areas would be eligible for technical assistance to help the communities to appraise their physical and human resources, which would prepare them to plan constructive programs to attract new businesses and expand existing businesses in these areas.

(2) Community loans: Depressed communities would be eligible to receive loans from a revolving fund of $100 million.

We know that the conventional lending facilities in depressed areas are not as venturesome as those in growing and expanding communities.

The fund would put the depressed areas on a more equal footing with other communities in attracting new jobs.

(3) Public facilities: Some communities need improvement in public facilities before they would become sufficiently attractive to new businesses which might desire to locate in these areas.

My bill provides for an establishmen of a $25 million revolving fund from which these communities would be able to borrow.

While the figure may appear modest, attention is called to the fact that legislation is pending before the House which would establish special funds for community facilities.

Meanwhile, under my bill, H.R. 4878, a smaller fund would be allocated and earmarked to aid depressed areas.

In addition, the most depressed communities which do not have the sufficient resources to borrow funds would be eligible to receive grants up to a maximum of $25 million.

At this point, let me stress that this is not an annual appropriation but is intended to be a $25 million revolving fund from which these communities would be able to borrow.

The administrator of the program would be expected to limit the grants only to communities with the greatest need for aid and which do not have sufficient resources to repay the loans in the foreseeable future.

It should be stressed that this is no giveaway program; under the provisions of my bill grants would be made only for projects which would provide lasting improvements and thus broaden the economic base of the communities.

(4) Vocational training and subsistence: One of the big problems of the people in depressed areas is the fact that many of their industries have declined or disappeared and, consequently, the demand for the skills acquired by the people in these areas has also diminished or vanished.

In order to enable these people whose skills have become obsolete to gain new employment, we must provide facilities to retrain them.

Therefore, it is urged that we enact the program contained in my compromise bill, H.R. 4878, as a realistic means of providing an effective program to aid the chronically depressed areas of the Nation.

Since the cost of depressed area legislation has proved a stumbling block in the past and impeded our efforts, let me point out that the cost of the Douglas-Flood bill is $389.5 million as compared to the cost of the administration bill which is $53 million.

By way of contrast, my compromise bill, H.R. 4878, will cost $158 million or just about midway between the cost of the Douglas-Flood bill and the administration bill.

In connection with depressed area legislation, let me state that I have no pride of authorship.

My sole desire is to aid the people in the depressed areas and to attain such a laudable objective the spirit of compromise should be dominant in our minds.

As one who represents two chronically depressed areas in Pennsylvania with unemployment at times as high as 18 percent of our labor force and which has plagued us for years, my goal is that Congress enact without delay an effective bill in a form acceptable to the President, thereby eliminating the prospects of another Presidential veto.

Mr. Chairman, the residents of the 159 depressed areas of the Nation are entitled to this type of legislation, and it is my sincere hope that Congress will compromise any differences and enact a depressed area bill without further delay.

Congressional District Loses Faithful Servant

EXTENSION OF REMARKS
OF
HON. IVOR D. FENTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. FENTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Williamsport Sun-Gazette of November 6, 1959:

CONGRESSIONAL DISTRICT LOSES FAITHFUL SERVANT

Expressions of sorrow over the sudden and unexpected death of Congressman Alvin R. Bush were heard today in all corners of the big eight-county district he served so diligently during the 9 years he was in the National House of Representatives. They were personal, heartfelt tributes.

His warmest friends, his closest political associates, even his sharpest political foes, were as one in paying tribute to his integrity and sincerity as a public official. Although there were critics in his lifetime who differed strongly with his political philosophy, as is always true in public life, there was no man today who denied that he stood loyally to his principles and dedicated himself cheerfully to the work of Congress.

Congressman Bush was not a speech-making Member of the House. He seldom took the floor.

But he make friends easily and counted them by scores on both sides of the aisle. Democrats as well as Republicans recognized his integrity, the absence of self-seeking, the honorableness of his motives.

By reason of having won their good opinion, he was enabled to accomplish much for his district.

As monuments to his memory for long years to come will be such district projects as the flood-control reservoirs and dikes on the upper reaches of the Susquehanna River; the extensive improvements at the City-County Airport in Montoursville; and the preservation of the old Susquehanna Ordnance Depot as an acreage saved intact for industrial development.

He kept himself well informed about the Nation's business. He knew what was going on in Congress.

An inquiry from this newspaper—or from any constituent—about some matter in the legislative mill would receive his closest attention. Information was always forthcoming.

In all parts of his district are persons today who tell of his helpfulness in handling their affairs with either Congress or some one of the departments, bureaus, or agencies of the Federal Government.

Indeed, concerning his activities in Washington, it was frequently surprising to observe how little he talked about the work he was doing and the significance of matters that passed over his desk.

He neither bragged nor sought publicity, but the increasing importance of his House committee assignments attested his growing stature.

For example, as a member of the Committee on Interstate and Foreign Commerce and its Subcommittee on Transportation and Aeronautics, he was close to the Nation's commerce and finance. He had an influential voice in determining Federal disbursements to aviation—which was much to the benefit of this immediate community.

Again, his membership on the Committee on Public Works enabled him to serve his entire district well with respect to flood control and road projects.

Congressman Bush was an independent-minded Member of the House of Representatives.

Although predisposed—because of his years as a county chairman—to be loyal to his party's leadership, he refused to be a rubber stamp. He did his own thinking, and his wide business experience generally qualified him to rely on his own judgment.

He was a champion of good government. It may be said of him that he loved it with a devoted zeal.

He preached the importance of it during 10 years as Republican chairman in Lycoming County; he dedicated himself to it during his 9 years in Congress.

Entirely happy in serving his fellow citizens, consecrated to what he believed was the best interest of his country, persistent in seeking whatever woud benefit the 17th District of Pennsylvania, he was indeed our faithful servant at Washington.

HE DID A JOB FOR LITTLE LEAGUE

His constituents have many things for which to thank Congressman Alvin R. Bush, whose sudden death yesterday is being widely mourned. He loked after their interests well in Washington.

High on the list of his accomplishments stands the national and official recognition of Little League baseball.

The resolution he sponsored early this year, which Congress passed and President Eisenhower approved, sets aside a week annually as Little League Baseball Week. Williamsport, as the home of Little League, is as proud of this recognition as Congressman Bush was pleased to achieve it.

Britain Cried Enough

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. DERWINSKI. Mr. Speaker, the following editorial from the December 24 edition of the Lansing Journal, a community newspaper in my district, is, I believe, a most thought-provoking commentary on a topic of great concern to us all:

BRITAIN CRIED ENOUGH

Of all the free countries, England has had the widest experience with the welfare state, and with the widespread socialization of enterprise that inevitably accompanies that institution. Following the last World War, when the Labor Party was returned to power, there was good reason to believe that England was embarked on a course that could only lead to virtually total socialism.

Yet today further nationalization of enterprise is a dead issue in Britain. Labor Party leaders frankly admitted as much in speeches during what amounted to an election post mortem. They are particularly distressed by the fact that the young voters, on whom the future of any political party depends, not only were unattracted by the Socialist program but defected in droves to the Conservatives. The emphasis in Britain now, under the MacMillan government, is on the encouragement of private enterprise and private investment both at home and abroad.

Well, as the old saying has it, experience is the best of all teachers. And experience has taught a majority of the British electorate that socialism, whatever the theoretical claims made for it, leads to a dreary morass of higher taxes, inflated prices, lessened liberty, bureaucratic dictation, and a loss of national vitality all along the line. And so, in the last election, Britain cried enough in decisive terms.

Let us hope that the people of the United States will profit from the example of the ally with which we share a common language and much of our heritage.

Down With Benson! Back to Brannan?

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. ALLEN. Mr. Speaker under leave to extend my remarks, I include the following editorial entitled "Down With Benson! Back to Brannan?" which appeared in the Telegraph-Herald, Dubuque, Iowa, under date of December 23, 1959:

DOWN WITH BENSON! BACK TO BRANNAN?

Democrats, with an overwhelming majority in both Houses of Congress, attempted no general farm legislation this past session, and yet the Democratic candidates are traipsing up and down the country condemning Benson, and promising farm Utopia—if elected. Senate Majority Leader LYNDON JOHNSON has just finished his nonpolitical tour of Iowa on a theme denouncing Benson.

And C. Edwin Gilmour, Democratic candidate for Congress in the fourth district, comes out flatly with the statement that "Benson is the issue in this campaign. Benson is Republicanism."

Farmers should know by now that they will need more help than mere denunication of Secretary Benson. It's Congress that passes legislation, and if most Congressmen believe that supports should be higher and that Government control should be even more strict, that kind of legislation can be passed—even over a veto.

The trouble is that Congress has not felt so inclined, even with the leaders talking the way they do about saving agriculture. Indeed, in Congress, despite the Democratic majority, the Benson program stands up pretty well. At least, he was successful at the last session in blocking sweeping New Deal farm bills.

The farm problem comes to a head again this week, when it will be debated for 5 days

at the annual meeting in Chicago of the American Farm Bureau Federation.

Some dismal facts must be faced. Prices received by farmers for crops and livestock fell 2 percent in the month ended November 15 to a 19-year low. At the same time, costs of production and living supplies rose 0.33 percent over the month. The parity ratio—prices received by the farmer as against prices he pays—stood at 79, as against 84 in mid-November 1958. Indications were that it would go even lower when mid-December data were released.

Government-held farm surpluses at the beginning of November hit a new high of $9.2 billion—as against last February's previous record of $9.1 billion. They'll continue to climb for several months.

Benson says he will propose legislation next year to extend use of the soil bank, expand uses for farm products, and set realistic price supports.

This plan has been denounced by the Democratic Advisory Council, which has made this announcement: "We look with favor on the system now used for wool * * * which allows prices to find their own level and which makes up for the farmer's income with a direct payment."

This is the program proposed by Agriculture Secretary Charles Brannan in 1949, and rejected in Congress by a Democratic majority.

It is the program now proposed by Iowa's Governor Loveless. He says he intends to try to have it incorporated into the Democratic platform of 1960. Governor Loveless augmented his scheme a few days ago by proposing a minimum wage, so to speak, for farmers.

The Farm Bureau Federation has been relatively conservative about these reforms, and may not go for extremes, however serious the situation seems. For some years the federation has advocated release of agriculture from Government control.

Now the proposal seems to be to exchange one control (Federal regulation of planting, etc., and price subsidies) for another Government control—a direct payment to farmers who have to sell at prices lower than the the Government thinks they should get.

Twelfth Annual Dinner Meeting, Blair County Branch, Pennsylvania Economy League, Inc., Altoona, Pa., November 3, 1959

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. VAN ZANDT. Mr. Speaker, it was my pleasure to attend the 12th annual dinner of the Blair County Branch of the Pennsylvania Economy League, Inc., held at the Penn-Alto Hotel, Altoona, Pa., November 3, 1959, at 6:30 p.m.

Mr. William W. Ward, Altoona, Pa., chairman of the 12th annual dinner meeting was fortunate in securing an outstanding speaker in the person of Mr. David C. Bevan, vice president of the Pennsylvania Railroad in charge of finance, who delivered the principal address, titled "The Pennsylvania Railroad in the Pennsylvania Economy."

Mr. Bevan's address follows:

THE PENNSYLVANIA RAILROAD IN THE PENNSYLVANIA ECONOMY

(Speech by David C. Bevan, vice president, finance, the Pennsylvania Railroad Co., to the Blair County Branch of the Pennsylvania Economy League, Altoona, Pa., November 3, 1959)

I appreciate this chance to meet and talk with the Blair County Branch of the Pennsylvania Economy League. Blair County and the league are both mighty important to the Pennsylvania Railroad. For generations the county's mechanical skills have created much of our equipment and kept it in operating order. In its quarter-century of history, the league has done a great deal to maintain an economic climate that the railroad and other State industries can live in. Without Blair County and the league the railroad would find the going even rougher than it already is, as would a lot of other Pennsylvania industries.

When Carl Maier kindly invited me to appear before you, he suggested you might like to hear from me on the topic, "Citizen Interest in Government." He also sent me by way of suggestion addresses by previous speakers on other aspects of industrial statesmanship. Knowing your demonstrated interest in that side of business, the part that gets away from day-to-day concern with balance sheets, nothing would give me more pleasure than to offer you some of my thoughts on it. Unfortunately, because of the recent recession, a couple of $5 million snowstorms, and the steel strike coming on top of a number of problems we were already living with, the railroad is not in a financial position to sit back and philosophize. I think in a few years we may be, but not right now. Maybe you'll ask me back again, when conditions are more favorable for that sort of thing.

Meanwhile you might like to hear, as fellow businessmen and as fellow Pennsylvanians, what we are doing about some of our most pressing problems. You may or may not agree with all of our approaches, but I do think you will see our reasons for them. Also you will see how our whole situation ties in with the State's economy and your county's economy, and some of the problems they have.

The tie-in goes back, as you know, a good many years. The railroad was put together, beginning back in the 1850's, with three economic purposes in mind. One was to connect the seaport of Philadelphia with the rest of the State and with the developing Midwest and West, via Pittsburgh. Another was to do this before the Baltimore & Ohio Railroad on the south and the Erie Canal on the north got all the business for Baltimore and New York and their respective States. The third economic aim was to help Pennsylvania exploit its magnificent natural resources: farm and forest products, industrial sands and clays, and energy in the form of coal and, to a lesser extent, oil.

There was of course a fourth aim. That was to take money doing this. For years all four aims succeeded handsomely, to the benefit of all concerned. The railroad was helping to create and spread business activity and wealth, and it was getting properly paid for it.

One of our most welcome partners and fellow beneficiaries in all this was your county. It made itself our indispensable workshop and training ground of skilled artisans. Directly or indirectly, it was responsible for the creation and maintenance of most of the "moving parts" of our growing railroad.

Then, with the passage of years, technological change began to rear its not-always-pretty head. The Texans discovered and brought out of the ground more oil and gas than anyone had suspected existed. Factories no longer had to be within reach of coal; homes no longer had to be heated by coal. The economy of Pennsylvania got a jolt which it feels to this day, both as a supplier of fuel and as a logical home for new industry.

Meanwhile, besides sharing in that technological blow, the railroad got a few of its own. The mass-produced and mass-owned atuomobile made it appearance, along with the taxpayer-built highway. Presently these were to turn our passenger profits to a $50-million-a-year passenger loss. As if this were not enough, the taxpayer-built highways were soon swarming with trucks carrying, at unregulated bargain rates, commodities that had hitherto moved by rail. Meanwhile came the commercial airplane and its taxpayer-built airports and airways, plus taxpayer-supplied cash subsidies. This cut still deeper into rail passenger business. As if to make sure the taxpayer missed no chance to make things rough for the railroads, more hundreds of millions of his money were channeled into waterways free to commercial users.

Meanwhile, as a taxpayer itself, the railroad was and is helping to give the party. Last year on the Pennsylvania taxes per share were $4.77. Net earnings per share were 27 cents. It is true that last year was the second worst in our financial history. That does not alter the fact that a large chunk of the tax bill was on fixed plant, which our competitors get for free.

If all we had to do was help the taxpayers support our competition, things would be difficult enough. But, on top of that, as you know, we are not free to compete with them as ordinary business rules dictate, or to tailor our services, especially our passenger services, to the business realities.

Where is this discussion leading us? Simply to this point:

Here you have a railroad which helped build your economy and your State's economy, blindly hampered in its efforts to continue to do so. That, I suggest, is a mutual problem, especially as the State has yet to regain the industrial preeminence it once enjoyed.

Granted the problem is mutual, what are we doing about it?

Before we get into that, we might take a quick look at what we are managing to contribute to the State's economy despite our difficulties:

Servicewise, we furnish travel and freight service within the State and to or from the rest of the country.

Forty percent of our track is here, and so are many of our most important installations. Among them are the giant ore pier at Philadelphia, the huge Enola and Conway yards, and your Samuel Rea shops.

About half our employees work and are paid in Pennsylvania. In a normal year they receive a quarter of a billion dollars or more in salary, most of which finds its way into Pennsylvania banks, stores, and other businesses.

We buy a large portion of our supplies and materials in the State, thus helping to create additional business and payroll. In 1957 and 1958 our purchases in Pennsylvania averaged $60 million a year. In the first 7 months of 1959, thanks to our big freight-car program, they came to $109 million. In Blair County our purchases came to $677,000 in 1958 and to $1,593,000 in the first 7 months of 1959.

Our corporation and property taxes in the State for 1958 were $5,599,000. Included in this was $146,860 paid in property taxes in Blair County. Incidentally, we pay 10 kinds of taxes in Pennsylvania. For years we have been among the State's five largest taxpayers.

In addition to these direct contributions to the Pennsylvania economy, we maintain

a large and expert industrial development department. Its job is to persuade and help new industry to locate in the State, and industries already here to expand. We do this both on our own and in cooperation with chambers of commerce and organizations like your Altoona Enterprises and your Blair County Regional Planning Commission. Naturally, we try to get such new locations and expansions on our lines as a source of new business to us, but we work for them whether they are on our lines or not. In both cases the emphasis is always on working with the local people in the local interest.

I might add that we have a special and deep interest in Blair County, the mechanical skills of whose people have served the railroad so long and well. The passing of the steam locomotive, which you used to build and repair for us, inevitably canceled out a lot of the railroad work done here. The same is true of the decline of the rail passenger business, for which you used to build so many of our cars. It was partly to counteract the effect of these technological changes that we put our big Samuel Rea shops here. I am sure you will be as happy as we are to know that of our big 23,500 freight car program, about which I will say more a little later, approximately 20,000 cars will be built in the State of Pennsylvania and of these 20,000 almost 60 percent, or about 12,000 cars, will be built here at Hollidaysburg. I also want you to know that the shops closed down yesterday because of the lack of steel will be reopened just as soon as we can get more steel. For once it is not a matter of curtailing expenses: the money for the program is available. I might add that our purchasing people did a remarkable job of getting as much steel as they did in advance of the strike.

So much for the railroad's past and present contributions to the economy and well-being of Pennsylvania and communities like Blair County.

The question now is, How, under present conditions, can the railroad and the economy be sure these contributions can be continued, let alone increased?

I don't like to sound like an alarmist, but the fact is that under present conditions it is not likely they can be continued much longer at anything like their present pace.

The only answer to this is to change the conditions, and this the railroad is working on various fronts to do.

Basically, the problem is low earnings, or the low return on our investment of $2½ billion, much of which is in Pennsylvania. In recent years our rate of return has often been less than 2 percent, and never more than 3 percent. By contrast, many utilities make 6 to 8 percent, and 20 percent is not uncommon in other businesses. I am not suggesting we are approaching bankruptcy. No one in this room will live long enough to see that. But I do suggest that until we are allowed to earn in a normal manner, our ability to generate benefits for the State and local economies will be held in check and perhaps even diminished. In short, the rate of return we get on our investment controls the rate of return you and the rest of the economy get on us. We cannot make anything like the amount of money-saving, inflation-fighting, and business-getting improvements we need without the money to make them.

Why don't we make this money? That brings us to the fronts I said we are fighting on. One of our big challenges, as I mentioned, is the technological change that has put air, highway, and water carriage into all-out and ever-present competition against us. Our problem here is not the technological challenge: we have technology too, as our longer and faster trains and the $450 million in diesels we have acquired since the close of the war testify. Our problem is that the challenge is subsidized by the taxpayer, and that we are not permitted to meet it head on in a businesslike way. The matter of subsidy has yet to be squarely faced by the levels of Government doing the subsidizing, but the Transportation Act of 1958 did promise us some limited competitive freedoms. It remains for the various commissions that regulate us to let us translate these promises into business actualities. This has been a slow process, but we are making progress. The other day, for instance, railroads were granted the right to offer incentive rates to shippers of paint. This was a landmark decision, and it took months to get. You can imagine where American business and industry as a whole would be if it were only now being allowed to do such a normal thing, but that is where railroads still are in many aspects of their business. You may be sure that our fight to get out of that corner is continuing, in Washington, in State capitals, and before commissions. Only with reasonable competitive freedom, and some such reasonable solution of the subsidy problem as user charges and tax relief, can we resume our rightful place in the American family of free-enterprise business, and meet our full responsibility to our investors, our customers, our employees, and the economy. In plain English, it is to everyone's advantage that we be treated as a business, and we intend to fight and to shout until we are.

An additional factor which has substantially contributed to the low level of our income is that we are not receiving a fair or adequate share of joint rates with connecting lines on traffic that moves between the East and other territories. As many of you may know, on such traffic, the shipper does not pay our railroad for its service and then, separately, the connecting line for the service which it performs. Instead, the shipper pays a single rate covering the service of all the carriers involved, and it is divided among them on the basis of fixed percentages. If these percentages were revised so that they would more closely correspond to the relative cost of performing the service and to the general revenue needs of the respective railroads, the divisions which are accorded the Pennsylvania and other eastern lines would be substantially increased. Cases before the Interstate Commerce Commission looking to an increase for the eastern railroads are now pending.

Another big and immediate battle we are in is with the railroad passenger deficit. This has cost our railroad alone well over half a billion dollars since the close of World War II. Well-meaning friends sometimes tell me that is just a bookkeeping figure. It isn't. It is better than half a billion actual dollars that should have gone into debt reduction, earnings-producing improvements, and dividends, but which went instead to keep several hundred money-losing passenger trains running. We are not alone in this problem: Every passenger-carrying road has it, including roads that the same well-meaning friends assure me make money on passengers. Last year our own loss, the lowest in some years, was $44 million. Right next to us was the Union Pacific with a $43 million loss, and the Southern Pacific and Santa Fe, with $40 million apiece.

We are attacking this tremendous and chronic drain on our earnings in two ways. One is to tailor our intercity services to the realities of highway and air travel as fast as conditions and commissions allow. This involves taking off trains for which there is no business future, and combining or "consolidating" others which have a future if they are fewer in number.

Businesslike tailoring of intercity services to the available patronage should reduce our annual deficit some. So would abolition of the war tax of 10 percent on train tickets, which we are still trying to get repealed 14 years after the war. So would abolition of taxes on our passenger tracks and stations, making them equal in that respect to tax-free highways, airways, and airports.

That part of our annual deficit generated by commuter services presents a somewhat different problem. Such services lose our railroad over $10 million a year in the New York and Philadelphia areas. Eliminating local taxes on the facilities for this public service would help, but would not make us whole. The only thing that would do that would be outright financial support from communities that want the service. A number of forms such support might take are being studied; we and the city of Philadelphia are experimenting with one now, and progress is being made in New York. It seems odd to be talking about Philadelphia and New York commuters in the wide-open spaces of Blair County, but the $10 million a year we lose on them is $10 million a year that we can't use to help make jobs and business in communities like yours.

So much for examples of what you might call the "defensive" side of our fight to achieve our rightful earnings and so play our rightful part in the economy. Now let's look at some of the constructive and business-getting things we are managing to do.

First, as background, you must bear in mind that the American railroad industry came out of World War II in pretty bad physical shape. This is not surprising. We had gone almost directly from depression conditions to handling 90 percent of the freight side of military production, 97 percent of troop movements, and a lot of civilian travel and freight that descended on us from the highways, airways, and waterways. This left little time and manpower for proper maintenance and improvements; materials were scarce; and the Government drained off a large part of earnings in excess profits taxes anyway. So we faced the postwar period, and a resumption and step-up in subsidized competition, with our plants to refurbish and bring up to date.

That job, on the Pennsylvania, cost over a billion dollars, much of which had to be borrowed. Some $450 million of it went into diesels alone. This borrowing in turn had raised our outstanding debt to an all-time peak of $1,116,000,000 by 1952. Since then we have been in the painful old-fashioned process of paying off this debt. As of the close of last year we had reduced it by $204 million down to $912 million; we expect to reduce it another $30 million this year.

Thus, during seven of the leanest years in our history, we will have managed to reduce our debt by almost a quarter billion. That is of course important as debt reduction. It is even more important for its programed selectivity, aimed at bringing impending debt maturities down to manageable size. Just two examples: some time ago we were facing maturities of $49 million in 1960 and of $125 million in 1965. The 1960 maturity now stands at $95 million, and the 1965 maturity at $70 million—with the expectation that by 1965 the latter will be down to $40 million. In other words, what our program has been doing is to get the maturities of any one year down to where we can take them in stride, no matter how bad a business year it turns out to be. This is in line with our 112-year-old record of never having failed to meet a financial obligation.

Meanwhile, the program has been paying off in another way: it enabled us to swing this year the largest single freight car program in railroad industry history. This calls for 23,500 modern freight cars of various types as I mentioned previously, of which, as I said, 20,000 will be built in the State of Pennsylvania and about 12,000 here in Blair County. The cars alone come to $215 million; in addition we are getting $10 million in diesels and $32 million in electric freight

locomotives. Much of this is by lease arrangements and does not add to our debt structure. As you see, we are not alone in our faith in the business future of our own railroad and of the railroad industry generally.

I cannot help adding that our private success with this huge financing program proves the soundness of the so-called Symes plan. The plan provides for the setting up of a governmental agency to lease equipment to those railroads which need it, but cannot obtain it by conventional equipment financing or by the private leasing arrangements granted to us. The proposal is still in Washington. It would benefit a considerable share of the industry and its customers, and cost the taxpayers nothing.

In the meantime we have managed to get our shippers the benefit of a greatly improved freight fleet. This is an important tool in our aggressive quest for business. Alone with this we are succeeding in speeding up many of our freight schedules, largely with the help of our now-completed Conway Yard, the largest installation of its kind in the world. As Mr. Symes once remarked, we are anything but a dead duck or even a dying duck, we are just an underfed duck. To the extent that outmoded regulations allow us, we are out to get all the nourishment we can, meanwhile fighting for the right to feed and digest normally, as you do in your businesses.

I might mention one other business-getting program, which we are finding successful beyond our best expectations. This is TrucTrain, our version of piggyback or highway-trailer-on-flatcar service. We started this just 5 years ago, with a handful of flatcars and service to four cities on our own lines. Today we serve a couple of dozen cities on our own lines, and through interchanges we reach the main cities on more than a dozen other railroads. The few flatcars we started with have grown to a fleet of 2,300, with 1,300 more on order, owned by a special company representing a group of railroads. The rapid growth of this business is one of the most promising recent developments in rail service. I trust you are not surprised that we are leaders in it.

It occurs to me that I may have misused this opportunity to talk economic philosophy with you by talking so much about what our, and your, railroad is doing. Maybe I am like the fellow who complained that he tried to be a philosopher, but cheerfulness would break in.

The fact is that I am cheerful about the outlook for our railroad and its continuing contributions to your Blair County economy and the Pennsylvania economy. An important obstacle in our way, really, is the inequality of Government treatment we get as compared to our air, highway, and waterway competitors. With the help of perceptive businessmen like you and your League, that picture is changing. We trust you will continue to work with us, as we have always worked with you. Nobody will lose, least of all Blair County and the rest of our State.

Thank you.

In Support of Ike's Pilgrimage for Peace

EXTENSION OF REMARKS

OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 12, 1960

Mr. DAGUE. Mr. Speaker, I am sure that those who are finding fault with the President's avowed intention of giving peace a priority in the final year of his administration are doing so with their tongues in their cheeks and quite evidently have no alternative to the personal type of diplomacy which he is promoting with such skill.

If there are any Members of this House who do believe that the people of this Nation are not enthusiastically in back of Mr. Eisenhower's program, such an attitude reflects an abysmal ignorance of what is taking place in their home bailiwicks. And if anyone thinks he can make capital out of attacking Ike's plan, he is welcome to any rewards such shortsightedness can bring him.

One of the most forceful discussions of this issue is found in an article by the Market Scribe appearing in the Coatesville (Pa.) Record for January 9, 1960, which is included with these remarks and commended to your close perusal:

MARKET SCRIBE SAYS IKE'S TRIP REFUTED REDS—IT PROVED ONCE FOR ALL AMERICA IS NOT HATED BY OTHER PEOPLES

(By the Market Scribe)

One of the most important results of President Eisenhower's recent trip to three continents is that it cleared the air regarding just what the rest of the world—especially the underdeveloped nations—think of this country and its aims and policies. The tremendous crowds that greeted the American President at every stop answered this question in a language that could not be misunderstood by anybody no matter how prejudiced or illiterate.

For several years past there has been a studied effort on the part of some purveyors of doom, supported by the propaganda and claims of the Communists to demonstrate that the United States is the most hated nation in the world. They asserted that because of their wealth and boisterous arrogance and their determination to start another war, the American people were feared and despised by everybody else from the most intellectual right down the line to the most benighted Hottentot.

It is not hard to understand why the Communists should try to disseminate such propaganda both by the spoken and printed word and by promoting rioting and unrest among the people. But why any right minded person should play right into their hands by spreading the same falsehoods is a mystery. It may be that some of these people are sincere and believe that they can spur the American people to greater effort by such means, or it may be that they are inspired by nothing more than an overwhelming desire for political advantage.

In any event up until President Eisenhower started on his recent trip, the Communists and their willing, or unwitting allies had many people in this country believing that everybody in the world hated us despite the fact that during the past few years we have loaned or given them some $75 billion which has gone a long way toward bringing unprecedented prosperity to a war-torn world. We have been told that we cannot buy the good will of the rest of the world, and instead of being grateful for our help these people despise us.

It is true that Vice President NIXON was stoned and mobbed while he was on a visit to South America, and barely escaped wth his life. But it has since been pretty well established that these riots were inspired by Communist agitators who pointed out that the United States supported dictatorships on that continent. But unmentioned was the fact that these agitators were themselves working in the interests of an even more oppressive dictatorship. The reception that NIXON later received in Poland demonstrated that the same feeling of hostility did not exist in at least one satellite country.

The tremendous crowds that greeted President Eisenhower during his trip demonstrated once and for all that the people of at least a large part of the world were not at all fooled by this propaganda. Indeed, it showed that the efforts of the Communists and those persons who wittingly or unwittingly supported them were an insult to the intelligence of these people. It also showed that the people of these countries have a keen knowledge of what is going on in the world and are able to think for themselves, and they are immensely grateful for what America has done and is continuing to do for them.

It is certainly unreasonable to even think that any people would not be impressed with the manner in which the Communist government of Russia suppressed the Hungarian revolt, the deceit and perfidy they employed in trapping the leaders of the revolt and the executions that followed and are still continuing. It is just as unreasonable to believe that they were not impressed with Communist China's more recent aggression against Tibet and India and the settled policy of the Communist government to grab everything they can get their dirty hands on.

At the same time some of the peoples whose countries Eisenhower visited have had uncomfortable experiences in the past with the Communists. For many years they have lived continuously in fear of what the Communists might do next as has the rest of the world during the cold war. As against this, they have seen the record of the United States which has never at any time tried to impose its authority on any one, and on the contrary, has never failed to extend a helping hand even when at times this helping hand was spurned.

There is no reason at all for wonder that the people of the countries that President Eisenhower visited acted as they did. In view of conditions that exist in the world today the leadership that this country is exercising is virtually their only hope for a better life. Without its insistence on freedom and justice for all peoples backed by its tremendous military might, the world would be helpless before the Communist menace and its plight would be sad indeed. And the people of the world know it.

No amount of propagandizing by "pacifist come lately" Nikita Khrushchev can change the record. The Soviets have fooled the people so often that they are in no humor to be fooled again. Khrushchev's agonizing cry for peace may be sincere, but in all probability it isn't. It is true that the Soviet scientists have achieved spectacular success in sending rockets into space, but instead of arousing admiration on the part of the peoples of the world as Khrushchev expected it has only increased their fears and their reliance on America for their future safety.

Congressman Bush

EXTENSION OF REMARKS

OF

HON. IVOR D. FENTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 12, 1960

Mr. FENTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Lock Haven Express, Lock Haven, Pa., of November 6, 1959:

CONGRESSMAN BUSH

The shock of Alvin R. Bush's death will reverberate through the 17th Congressional District for many months to come, and also in the Halls of Congress where, in his 10 years of membership, he won respectful affection from his colleagues. Mr. Bush has been a good Congressman, one who learned his job conscientiously, performed its multitudinous duties with diligence, and maintained an excellent record of attendance at the sessions of the House, meetings of his committees, and hearings which involved the interests of his district.

We of Clinton County have much to thank him for, in his single-minded championing of the West Branch flood-control program. He has been interested in the protection of the communities of Clinton, Cameron, and Lycoming Counties from the flood ravages of the West Branch, ever since he went to Congress as a Member of the session which began in 1950. Even before that he was working for flood control with the community leaders of Williamsport and Jersey Shore. We have seen him in action on our behalf, and have had good reason to appreciate his effective efforts in bespeaking the support of his colleagues in obtaining congressional authorizations and appropriations for the various projects in the program.

His work for flood control is assuming definite and tangible shape on Kettle Creek, where the dam for which he worked and fought, through many hearings and committee sessions, is rising into a monument to the effective efforts which he put forth in company with other flood control workers. Although many others joined in the campaign which is now beginning to produce real flood control in this valley, the basic truth is that, without Mr. Bush and his constant, persistent and unflagging endeavors in Washington, to make sure that the project would not be sidetracked, the Kettle Creek Dam might not be under construction today.

It would be a fitting memorial if that dam, at its dedication, should be named in honor of Alvin R. Bush.

But flood control was not the only interest of Mr. Bush in Congress, nor the only area in which he worked with consistent zeal for what his district wanted and what he thought would benefit his constituents and the Nation as a whole. He was a sincere conservative, but one who modified his attitudes by a human sympathy with the practical needs of the people and an intelligent grasp of the requirements of a changing modern society.

His political opponents could criticize him, as they did from time to time, for his sturdy defense of the Federal budget, and his supporters could chide him, as they did on occasion, for his support of the foreign aid program. But both critics and friends would have to agree that his voting record in Congress has been one that could be intelligently defended—conservative without being reactionary, liberal without being radical.

This does not mean that Mr. Bush did not stand up for his principles. He did that consistently, and his principles included the very defensible one that good sense should dictate the type of legislation adopted by Congress.

Mr. Bush left much unfinished business on his desk. Anyone who takes his place as our Congressman will have a big pair of shoes to fill. Not only the completion of the flood-control program depends upon the type and character of the man who replaces him in the 17th District, but many other items of public business, ranging from appointments to the military service schools to legislation to lighten the tax pressure on the small businessman.

Mr. Bush, loyal to the principles of his party and to the policies of President Eisenhower, nevertheless took an independent position on many issues where he felt the inflexible maintenance of preconceived positions might create hardships and cause practical difficulties. He set a precedent of sensible service and considered action which his successor, whoever he may turn out to be, would be wise to accept as a beginner's guide to successful performance of congressional duties.

In the 17th District, literally thousands of people are mourning the death of Mr. Bush as the loss of a friend as much as the loss of a Representative in Congress. One of his outstanding qualities was the ability to greet his fellow citizens of the district not as a perennial candidate, seeking their votes, but as their personal emissary and spokesman in the National Legislature.

His 10 years in Washington gave him the opportunity to render personal services to many constituents, as the intermediary between them and their Government. He carried out those services with the interest of a personal friend, whether it was a case of helping a serviceman arrange to bring home his wife and child on the same ship on which he would travel, returning from service in Japan, or inviting a colleague to make a speech at a Lincoln Day dinner.

Those who had naturally assumed that he would continue to serve them in Congress to the end of his current term, and probably for several terms beyond that time, suffered a real blow in yesterday's news. It has shocked both friends and political opponents into a new appraisal of the man and his contribution to the huge 17th District, the longest in geographical terms, in the whole country.

He managed to get over that large area frequently, not only during campaigns but in off years as well; and he managed also to maintain an up-to-date grasp of the community problems and needs of the immensely varied territory he represented.

This session has been an extended one, and the legislation with which it has dealt has been highly complicated, controversial, and difficult. A man of Mr. Bush's conscientious feeling would exert himself not only to study the ins and outs of important legislation, but would worry over his own responsibilities and duties in relation to it. He did tell his friends that he had experienced pressures beyond his previous experience and imagination during the height of the session.

It is not an exaggeration to say that his death, at 66, of a heart attack came almost without warning, could easily have been hastened by the stresses and strains of a hardworking session of Congress, during which he had worked unusually hard and long.

He deserves the requiem of that hallowed Scriptural phrase, "A good and faithful servant."

Congressman Alvin R. Bush

EXTENSION OF REMARKS
OF
HON. IVOR D. FENTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. FENTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Review, Towanda, Pa.:

CONGRESSMAN ALVIN R. BUSH

Pennsylvania's 17th Congressional District has lost a great fighter, a man who has been as dedicated to the responsibilities of good government for America as any we have come to know. He was a two-fisted advocate of every measure that came before the Congress of the United States which stood for a better America. Congressman Alvin R. Bush will be greatly missed—by his host of friends who knew him as "Al" Bush.

A frequent visitor to Bradford County, where he received his strongest and most dependable support throughout the entire district, Congressman Bush was just one of those unusual men in the Federal Government today who has a faculty for taking care of business. Congressman Bush has served the needs of the 17th Congressional District and the needs of the Nation in the Halls of Congress as well as any good man could. He was a man of many capabilities and many burdens, but he was never short on hard work or long hours—the very things that probably contributed to his sudden passing. We have heard him say a good many times on his visits to this county: "Let me tell you, it's awfully good to be back with you wonderful folks in Bradford County." And there you have it exactly as he felt.

Congressman Alvin R. Bush has performed his duties with the vigor and the tenacity of a fine statesman. The pressures of the responsibilities on such men as him are beyond the conception of most of us. He has served this country well. We will miss him, for we know that it takes men like Al Bush to keep the ship right side up.

Unified Defense Buying

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. BROWN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following recent article from the New York Herald Tribune written by Allen M. Smythe. I feel it contains information that is worthy of the attention of all Members of Congress:

[From the New York Herald Tribune, Jan. 4, 1960]

NAVY IS SLATED TO START UNIFIED DEFENSE BUYING

(By Allen M. Smythe)

Further details of the Pentagon's plan to unify purchasing of many commercial products under a single armed service have become available. With the beginning of the new year the Navy will gradually take over the buying for the other two services of a large number of industrial supplies. Such purchases are expected to average more than $350 million annually.

The Army has been assigned a long list of general supplies to purchase for all three armed services. Expenditures for these items will be about $140 million a year. The Army also assumes responsibility for the inventories of these same items, the value of which is estimated to be $349 million.

Among the industrial supplies to be handled by the Navy are screws, nuts, bolts, rivets, fasteners, abrasives, paints, sealers, brushes, adhesives, wire, bars, metal sheets, tubing, and shapes. The Navy hopes to have complete control over the buying, shipping, and storing of these products within the next 3 months.

The Army has the responsibility for the handling of a long list of small commercial products that come under the heading of general supplies. Among these are hand tools, containers such as boxes, cartons,

crates, cans, bottles, and jars. Also are included household and office equipment such as furniture, kitchen, and laundry equipment, typewriters, computing machines, and other office equipment, musical instruments and athletic and recreational goods, floor coverings, awnings, etc. Paper, paperboard, and packaging equipment are included.

It has just been decided that the Army will also handle fans and industrial air circulators, self-contained refrigeration units and craftsman's measuring tools. High Navy supply officials had asked that these products be included in the list of industrial supplies to be assigned to them.

Because of the great number and variety of general supplies assigned to them, the Army expects to require at least 6 months before they can integrate common supply functions.

The Army may also be given the responsibility of unifying all defense purchasing of construction and automotive supplies. Decision on these two additional assignments is not expected before 60 days.

The Pentagon has four single manager plans already in operation. Annual petroleum expenditures of $800 million are unified and under Navy direction. Medical supplies to the value of $80 million are also handled by the Navy. Defense clothing spending of $162 million yearly is Army responsibility as well as the $723 million spent for food costs.

Assistant Secretary E. Perkins McGuire (supply and logistics) estimates that nearly $2 billion will be spent by the Pentagon this year for supplies under these unified purchasing policies. They will be, he says, effective for both peacetime and wartime and will save the taxpayers a great deal of money.

Top defense supply officials are pushing the single manager plan of unified buying to head off possible congressional demands for a "service of supply," a fourth defense service to handle all defense purchasing. This suggestion came from Congress after the Hoover Commission had criticized the separate buying practices of the Defense Department.

Welcome Home

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial, entitled "Welcome Home," which appeared in the Chicago Tribune of December 23, 1959:

WELCOME HOME

After 19 days of travel that carried him more than 22,000 miles to 11 countries, where he was seen and cheered by millions, President Eisenhower returns to the United States. He has the sure knowledge that no man in the world has contributed more to the spirit of peace on earth, good will toward men, which is always most hopeful at this season.

Mr. Eisenhower's pilgrimage of peace was undertaken to show the nations that America and its leadership offer them friendship and trust, that this Nation harbors no aggressive intentions, and that it will never abandon its efforts to spare the world the horrors of a new war.

No ambassador could have achieved greater conviction in conveying America's repect for its neighbors than the President. His warmth of personality ingratiates him to strangers. The peoples he visited were aware that, at his age and after a series of serious illnesses, Mr. Eisenhower was risking his life on this journey, and this in itself enhanced the impression that the President attached great importance and meaning to his mission.

That he should have undertaken this task as he approaches his final year in office will fortify the belief that Mr. Eisenhower's principal preoccupation has been with peace, and that he is determined to leave no stone unturned in his quest for peace in freedom and with justice. His countrymen knew this, but now the world knows it, and it will contrast the President's sincerity with the propaganda of threat and blandishment which has marked similar travels by Nikita Khrushchev of the Soviet Union.

Mr. Eisenhower has the gratitude of his countrymen for a difficult task well done in a good cause. We think that the United States will look more attractive in the eyes of the world as a consequence of his journey.

What Is Home Rule?

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. WAINWRIGHT. Mr. Speaker, a common understanding of home rule is expressed in the following letter from a distinguished and able senior partner of the great banking firm of Brown Bros. Harriman in New York City. He writes:

I am sending you the enclosed editorial from the Washington Post on the subject of home rule for Washington. I have followed with interest the progress of this legislation as I have many friends in Washington who have told me about this fight over the years.

I notice that your name is not on the list of those who have signed the discharge petition, and I am writing to urge you to sign it when the second session starts.

I understand part of the problem is Southern Democratic opposition because of the large Negro population in Washington. I feel it is important in this election year, if the Party is to win back the forward looking independent vote, that the Republicans in Congress take a forthright stand in favor of legislation like this which concerns the basic principles of our form of government.

Mr. Speaker, the Washington Star on January 11 had as its lead editorial an article entitled "What Is Home Rule?" In view of the high intelligence of the writer of the original letter, I felt that there must be others who might be incorrectly informed and who might benefit from this editorial. It is at least a partial answer to the many misconceptions that have been spread about this important topic. The editorial follows:

WHAT IS HOME RULE?

In a recent press conference Speaker RAYBURN was asked about home rule and its prospects this session. He replied that he did not know exactly what home rule means. We wish the Speaker's candor were more generally shared among those who yell the loudest for home rule but are yet to offer any honest explanation of its meaning or advantages.

We are not sure what home rule—as defined in several measures parading under that name—really means. As far as any existing demonstration of its meaning is concerned, there just ain't no such animal in this country or, as far as we know, in any other country.

But we are pretty sure what home rule does not mean.

It does not mean self-government. To label it as such is fraudulent. Under home rule the people of Washington would not govern themselves. They would continue to be governed by Congress, in which they would have no voting representation.

It does not mean a better form of local government. Any form of local government established in Washington will remain an agency of Congress. It can be nothing else, as long as the Constitution assigns exclusive control over its seat of government to Congress. No one can seriously contend that the existing form of local government is less honest or efficient than anything proposed under various schemes of home rule.

It does not mean more revenue for local undertakings or National Capital development. In all probability it would mean less. To be sure, some locally elected city government would be assigned the financial responsibility. But it would not be given the power or the means to discharge that responsibility. In no pending home rule bill is there any commitment, beyond pious generalities, of Federal financial participation in local government. Existing responsibility in that connection is by implication passed on to the local government and in practice would be lodged there.

It does not mean a more rapid or more orderly development of this city as the Capital of the United States. On the other hand home rule is in a very dangerous sense a contradiction of the concept of Washington as the Nation's city, set aside as the seat of its Government, placed under the control of Congress, by stages developed as a still uncompleted symbol of this Nation.

It does not mean "half a loaf," or even a "step," in the direction of real representation in their Government for the people of Washington. It does present the likelihood of a dismal failure in the exercise of the strictly limited voting privilege, inviting another debacle—as in the early seventies—which would make more difficult the attainment of real voting rights: The rights to vote for President and for representation in the exclusively controlling Congress.

Home rule is a negative proposition. It promises nothing of value. It is not self-government. No valid principle of democracy is involved. No voting privileges worth anything are permitted. It does offer grave threat to the well-being of this city as the American Capital.

Speaker RAYBURN is only being honest when he says he is not sure what it means.

Eternal Vigilance Is Ever the Price of Liberty

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I take pleasure in calling to the attention of the House a speech made by Rear Adm. Carl F. Espe, U.S. Navy, commandant of the First Naval District, on the subject of communism. Admiral

Espe was the guest speaker at the celebration of Independence Day on July 4, 1959, in Boston, Mass. Admiral Espe is a distinguished naval officer of our country. He is eminently qualified to speak on this subject, as for some 3½ years he was Director of Naval Intelligence. In his 37 years of naval service he has had many assignments of high responsibility. During World War II among other assignments, he commanded the destroyer force screen for our fast carrier forces in the Pacific. He was awarded the Legion of Merit, with two gold stars in lieu of second and third Legion of Merit; the Silver Star Medal; and the Bronze Star Medal. I commend his remarks on communism to you. There is in them a stern warning of the growing threat that communism poses to our American way of life.

The address follows:

ETERNAL VIGILANCE IS EVER THE PRICE OF LIBERTY

(Independence Day oration, 1959, by Rear Adm. Carl Frederick Espe)

Your Honor, Mayor Hynes, reverend clergy, distinguished guests and my fellow citizens, we are foregathered here today in this hallowed and historic hall to celebrate our birth date as a nation, and to pay tribute to the memory of those patriotic forebears whose courage, blood, perseverance, and wisdom bought for us freedom from tyranny.

One hundred and eighty-three years ago, on July 4, 1776, the Second Continental Congress, meeting in Philadelphia, approved for adoption that great document of human rights, the Declaration of Independence. It proclaimed these American colonies "to be free and independent States" and included in its tenets "that all men are created equal; that they are endowed by their Creator with certain inalienable rights"; and "that among these are life, liberty, and the pursuit of happiness."

To colonial America, this was a very serious step indeed. It meant commitment to an all-out war for which the States were utterly unprepared—militarily, economically, and politically. Certainly it called for considerable soul searching not only on the part of those who drafted the declaration but on the part of all citizens as well. The day after the Declaration of Independence was formally adopted by the Continental Congress, John Adams, one of is signers, wrote to his wife as follows: "You will think me transported with enthusiasm, but I am not. I am well aware of the toil and blood and treasure it will cost us to maintain this declaration and support and defend these States." George Washington told his troops that "now the peace and safety of this country depends (under God) solely on the success of our arms."

We know, of course, that colonial America was equal to the task it set itself to accomplish, though the freedom and God-given rights for which it was fighting were not easily won. John Adams' apprehensions were well grounded. After those first ragged volleys on Lexington Green, eight long, cruel, and bitter years had to pass before independence was fully and finally obtained.

One hundred and seventy-six years have now elapsed since the end of the Revolutionary War. These have been eventful years, years of growing pains in which our country has passed through many trials and tribulations. Fortunately, from each of these she has emerged greater and stronger than ever, to become the foremost Nation on the face of the earth.

However, as the United States has tended to consolidate her position in the world, I am afraid that we, her citizens, have been inclined to take our freedoms and God-given privileges more and more for granted and to assume that without any further action or initiative on our part the cherished rights we have enjoyed these many years will be ours forever. Freedom, unfortunately, does not thrive on apathy. Eternal vigilance is ever the price of liberty—and this is something every citizen should remember, for today we are again faced with the task of fighting for the principles upon which our country was founded.

But today our enemy is a far more insidious one—it is communism—and the threat it poses to our way of life is greater than any other we have had to meet in our history.

Communism is like a disease; in fact, a threefold disease. It is like a disease of the body because it kills. It has already killed millions, and it proposes to kill many millions more, for the Communists consider that when they have conquered the world they will be left with the residual capitalist classes whom they must destroy. This, they seriously reflect, is their proletarian duty. But communism may also be considered a disease of the mind because it is associated with systematized delusions that are not susceptible to rational argument. And it is a disease of the spirit because it denies God, materializes man and robs him of spirit and soul. We cannot afford to be apathetic regarding this wicked malady.

Forty years ago communism was confined to a rented room in Zurich, Switzerland. Today we find it has engulfed two-fifths of the earth, and another fourth of mankind is being swept ever more swiftly toward the cataract of the Kremlin and the whirlpool of Peiping.

Let us take a moment to look back.

Many years ago Lenin said that the Communists would first take Eastern Europe, then the masses of Asia, then they would encircle the United States, which would be the last bastion of capitalism. He concluded by saying that they would not have to attack us; that we would "fall like an overripe fruit" into their hands. Lenin's strategy of encirclement is well underway to fulfillment. It is quite within the realm of possibility that within a few short years the Kremlin might wrest from us many of our remaining allies, our oversea military bases, our foreign investments, as well as our access to raw materials and markets—all without fighting a major war.

Why is this possible? Because trained Communist cadres already saturate the precincts of southeast Asia. They manipulate puppets in the Middle East; they have won elections in India. They swarm through all of Africa and on to our Latin doorstep to the south.

Khrushchev recently said, in essence: "We won't have to fight you; we are going to overcome you through trade, and we will plow you under." And, I might add, he also boasted that our grandchildren would live in a Communist United States.

We Americans are naturally an ingenuous people; in fact, we are inclined to credulity. We like to believe that others are just as sincere and honest as ourselves. Some of us still believe that skillful compromise can solve our problems with the Soviets—that they can gradually be educated to believe that reason is the best guide of conduct. But experience has shown that you cannot negotiate nor can you compromise with the Communists. They adhere to treaties and agreements only so long as they are deriving a benefit from them. Postwar history is replete with one Communist violation after another of solemn agreements made between allies. Time and time again the leaders in the Kremlin have callously disregarded treaties, contracts, obligations, customs, and traditions in order to expand their power and control.

As far back as 1920, the then Secretary of State, Bainbridge Colby, reported that responsible leaders of the regime in Soviet Russia had frequently and openly boasted that they were willing to sign agreements and undertakings with foreign powers, while not having the slightest intention of observing such undertakings or carrying out such agreements.

Lenin, in speaking of treaties and agreements, said: "Promises are like piecrust, made to be broken." Stalin was even more specific. He said: "Words must have no relation to action—otherwise, what kind of diplomacy is it? Words are one thing, action another. Good words are a mask for concealment of bad deeds. Sincere diplomacy is no more possible than dry water or iron wood."

Regrettably, the Communists have thoroughly demonstrated this thesis during the past 25 years. Our country's representatives have had over 3,400 meetings with various Communist leaders and groups since we first recognized Soviet Rusia; these meetings included, among others, Teheran, Yalta, Potsdam, Panmunjon, and Geneva. The sum of these negotiations resulted in 52 treaties and agreements—and to what end? Fifty of these have already been broken, in whole or in part, by the Communists, and they have been trying their best to abrogate the fifty-first—that having to do with Berlin.

So there is no use deceiving ourselves. We cannot rely on the treaties or the spoken word of Communist statesmen. Consequently, we have to be prepared, at all times, to meet the threat of general war, Communist-created local wars, or the challenges presented by the cold war—each with its own tactics, its own strategies, and its own weapons.

The price of our liberty is indeed eternal vigilance.

One of the great words in the Communist's vocabulary is "peace." Communist leaders ever speak of wanting peace. It makes wonderful propaganda and it is tailor made for us Americans. They know that we are a peace-loving people and that we are ever striving for a better world. But their idea of peace and our idea of peace are two different matters. The so-called "peace" that they visualize is not an everyday peace but a Communist peace—after world communism has been established. Every act that contributes to Communist conquest is considered by them as promoting peace, murder included. And the tragedy of communism is not merely that it murders, but that it makes murder a moral and righteous act.

When Soviet tanks rolled into Budapest to butcher and destroy, it led to peace—a glorious peace—from the Communist point of view.

Khrushchev has been talking much lately about "peaceful coexistence." But what does he mean by "peaceful coexistence"? Recently he stated publicly that peaceful coexistence would lead to victory for world communism. If the Soviet's views and our own were the same concerning the meaning of peace, how could a peaceful state of affairs lead to a victory? To Moscow peaceful coexistence means, simply, conquest without the use of too much military hardware.

It is quite evident that we and the Soviets not only have ideological differences but, also, that we place different interpretations on what is moral, what is peaceful, and what is true. Any act that assists Communist conquest is by their definition "good." Any act that advances Communist world triumph is by their definition "peaceful." And any statement that advances Communist world conquest is by their definition "true."

What about communism's views regarding religion? Here, as elsewhere, we appear to have no common meeting ground.

Christianity and Judaism teach us of the dignity and value of the individual. Not only is this our religious philosophy, but in

those countries embracing democracy it is also the political philoshophy; that is, that the state exists for the benefit of the individual. But not so with communism. To the Communist the individual exists, wholly and solely, for the state. Communists, of course, do not believe in God. Lenin exhorted his people with: "Down with religion. Long live atheism." He said: "The spread of atheistic views in our chief task."

In all their plans and actions the Communists mark religion as their No. 1 enemy. Communism abhors and fears religion, brands it as the opiate of the people, and is bent upon its destruction. Communism would substitute the state for religion, would teach the writings of Marx and Lenin, and would accept the dictates of a Central Communist Committee instead of the Holy Scripture of the Prophets.

The violence of this antireligious apostolate is lesser or greater depending on whether circumstances counsel the Communist hierarchy to be prudent or permit it to carry out deadly persecution. But in either event there is no deviation in principle. To those of us living in the free world it should be understood that:

Communism cannot dominate unless it has the power to remake the life of people. It cannot ignore religion and do this.

Communism cannot dominate family life until it has fought its way past the influence of religion upon the family.

Communism cannot force its own brand of moral code upon a person without first destroying his own moral code rooted in religion.

Further, communism cannot make education a weapon in its hands so long as religion is secure in its own right to teach and educate.

It hardly needs saying that one cannot be a Communist and believe in God—and one cannot believe in God and have a peaceful life under communism.

It is very important to our future well-being that we as a people recognize the hidden dangers of communism as well as the more apparent ones, and that we start a positive campaign to defend ourselves against the inroads of this malignancy. His Eminence Richard Cardinal Cushing, recently stated: "The greatest asset the Communists have at the present time is not the hydrogen bomb, nor earth-girdling satellites, but world ignorance of their tactics, strategy, and objectives." I thoroughly agree—this is really the root of our problem.

If we, as a Nation, are to take a strong stand against this evil, the American public must become alert to the machinations of communism in the world today, for the fundamental foundation of opposition to this danger is an informed public opinion and a dedicated citizenry. On these, and on these alone, can the necessary legislation, administration, judicial, military, economic, and educational programs be built.

The realization that our Constitution and our Nation are in jeopardy must be accepted by each and every one of us. We must give more and more thought to the defense of those principles and freedoms which are the basic elements of our national life; to those inalienable rights for which our forefathers fought and which they won for us 176 years ago.

And now, if I may have your further indulgence, I'd like to close with this poem:

"Where the northern ocean darkens,
Where the rolling rivers run
Past the cold and empty headlands
Toward the slow and westerning sun,
There our fathers long before us,
Armed with freedom faced the deep.
What they built with love and labor
Let their children watch and keep.

"By our dark and dreaming forests,
By our clear and shining skies,
By our green and ripening prairies,
Where the western mountains rise,
God who gave our fathers freedom,
God who made our fathers brave,
What they built with love and anguish
Let their children watch and save."

Responsibility for International Negotiations Should Be Bipartisan

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT

Tuesday, January 12, 1960

Mr. MONAGAN. Mr. Speaker, in connection with the suggestion that I made on the floor of the House yesterday that President Eisenhower appoint a prominent Democrat to share the responsibility of the upcoming international negotiations with him, I was interested to read an article in the New York Times by former President Harry S. Truman which made a point very similar to mine.

I append the section of President Truman's article herewith:

TRUMAN SUGGESTS BIPARTISAN STAND—WANTS CONGRESS LEADERS OF BOTH PARTIES TO ATTEND NEXT SUMMIT TALK

(By Harry S. Truman)

I think our partners in freedom throughout the world may have reason to be apprehensive about the coming contest for the Presidency of the United States, unless foreign policy is kept out of and above partisan politics.

The President of the United States is the one person in a strategic position to prevent the misuse of foreign policy for narrow partisan advantage. If he fails to take the necessary steps at home to insure the Nation and himself of the bipartisan support and cooperation in foreign affairs, we risk losing important ground in our work for peace.

CONSULTATIONS SUGGESTED

Since the President himself, before undertaking his recent journey, called attention to the fact that he has little more than a year to remain in office, we have to bear in mind, for practical considerations, that whatever develops as a result of the summit meeting with the Russians will be the responsibility of the next President to put into effect and for a new Congress to support.

It would make good sense, it seems to me, for the President to appoint Democratic congressional leaders as well as congressional leaders of his own party, to accompany him to the first summit meeting with the Russians in Paris.

This, of course would call for frequent prior consultations and briefings, similar to what was done during the administrations of President Roosevelt and my own.

An historic example of what could happen when a President, who is responsible for the making of foreign policy but who fails to avail himself of bipartisan congressional support is to be seen in the tragic frustration and failure of Woodrow Wilson's inspired peace mission. This failure paved the way to a second World War. Wilson's great statemanship and noble goal were destroyed because of failure to take into account some of the political realities of our form of government, which in his day made it possible for a group of "willful men" to keep the United States out of the League of Nations.

In the interest of continuity in the conduct of foreign affairs, this Nation, in recent times, has depended upon bipartisan cooperation—not only from the Congress but on the part of the Executive as well.

HARMFUL DEBATE SHUNNED

Bipartisanship was not used by the two previous Democratic administrations to eliminate criticism of our foreign policy but was conceived as the only way of avoiding destructive debate, dividing the Nation when unity was indispensable in the face of a threat to our security.

Man of the South, 1959

EXTENSION OF REMARKS
OF
HON. CHARLES RAPER JONAS
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 12, 1960

Mr. JONAS. Mr. Speaker, it is a high honor to win the award as "Man of the South." This honor was bestowed upon one of my distinguished constituents, Mr. Norman A. Cocke, of Charlotte, N.C., chairman of the board of Duke Power Co., for outstanding accomplishments in 1959.

Mr. Cocke was presented his award at a banquet held at the Charlotte Country Club on December 14, 1959. The Honorable SAM J. ERVIN, JR., senior U.S. Senator from North Carolina, presented the award to Mr. Cocke.

Under leave to extend my remarks in the Appendix, I am pleased to include the significant remarks of Senator ERVIN on that occasion:

ADDRESS BY HON. SAM J. ERVIN, JR., U.S. SENATOR FROM THE STATE OF NORTH CAROLINA

Our friend has been chosen to receive this, the Man of the South for 1959, Award by the vote of those who know the vast contributions which he has made to the industrial, educational and religious development of the Carolinas.

It is not often that one has an opportunity to express publicly his admiration and affection for a friend whom he has known for many years. Even though the task is simply that of presenting the award, I shall trespass upon your time for a few moments to say something concerning him whom we honor.

On an occasion such as this, we are conscious of the inadequacy of words. We long for the power to use what the poets have called the language of the heart. This is a silent language which finds its expression in deeds rather than words. You spoke the language of the heart when you laid aside your exacting labors and came to this meeting to manifest your love for him whom we honor.

I am compelled, however, to use mere words on this occasion. For this reason, I shall use words which come closest to the language of the heart—the words of a poet—to describe our friend. They are the words which are used by a great poet of free enterprise, Rudyard Kipling, to describe a great American. They are a fitting description of Norman A. Cocke:

"Leal servant, loved master,
Rare comrade, sure guide."

Mr. Whitaker, Mr. Sutton, Dr. Edens, the Reverend Mr. Blair, and Mr. Robertson have recounted to us in well-chosen words the vast contributions of Norman Cocke to the industrial, the educational, and the religious life of the Carolinas.

They have given eloquent expression to the fact that Norman Cocke has been a servant to the people of the Carolinas. I love the old Scotch adjective "leal," and apply it to Norman Cocke because he has certainly been at all times a true-hearted servant to our area.

During the course of his career, Norman Cocke has attained solely upon his own merit positions of high responsibility. For this reason, he can also be fittingly described in the words of the poet as a "master." In his capacity of "master," he has always applied to those subject to his authority the golden rule. As a consequence, all of those who have labored under his supervision join me in declaring that he is a "loved master."

Those of us who are privileged to enjoy Norman Cocke's friendship know that his great qualities of head and heart make him a rare comrade, and that his unerring integrity and sense of the rightness of things make him a sure guide.

This brings me to this question: What makes Norman Cocke a "leal" servant, a loved master, a rare comrade, a sure guide?

It seems to me that the answer to this question is crystal clear. Norman Cocke walks among us in simpleness, and gentleness, and honor.

I use the word "simpleness" to describe Norman Cocke's complete freedom from affectation, from artificiality, and from duplicity.

I do not use the word "gentleness" to imply that he lacks in any respect the characteristic of firmness in circumstances which call for the exercise of that characteristic. I use it to indicate the considerate and kindly attitude which arises out of his inborn love for people of all sorts.

Norman Cocke walks among us in honor because of his complete integrity of thought, word, and deed.

For these reasons, Norman Cocke was well chosen to be the Man of the South. It is my happy privilege to present to him at this time the physical symbol of his selection as such.

Tribute to Hon. Isidore Dollinger

EXTENSION OF REMARKS
OF
HON. JAMES C. HEALEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. HEALEY. Mr. Speaker, as we begin the 2d session of the 86th Congress there is one colleague whose absence is especially felt by me. I refer to my very dear friend, Isidore Dollinger, who served New York's 23d Congressional District with distinction from the time of his election in 1948 until his recent resignation from Congress.

Isidore Dollinger will be deeply missed by all of his friends here in the House, but especially by those of us from New York who have been closely associated with him. He was very helpful to me when I first came to Congress and I am grateful for his friendship and our association in Congress. I consider it an honor to serve in his place on the House Interstate and Foreign Commerce Committee. He is respected and liked by all who know him and his fine record in public service and politics have earned him his new position as district attorney of Bronx County. I know he will continue to serve the people of the Bronx in the same capable way he did in the U.S. Congress.

I do not know of anyone who does not consider our new district attorney of the Bronx an outstanding and distinguished gentleman. It is my pleasure to join his many other friends in the House of Representatives in wishing him good luck and happiness.

Red Strategy in South America

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. FLOOD. Mr. Speaker, despite millions of words of publicity concerning the operations of the subversive forces to the south of us known as international communism, relatively few in the United States really understand the Red strategy of subversion with which we have to deal.

An informative article on that subject by Constantine Brown, distinguished columnist of the Evening Star, Washington, D.C., was published in the January 9, 1960, issue of that newspaper, which is commended for reading by all Members of the Congress in connection with their consideration of resolutions now pending to extend the Monroe Doctrine and to safeguard the Panama Canal.

The article follows:

RED STRATEGY IN SOUTH AMERICA—CHINESE HIT-AND-RUN TACTICS REPORTED AGREED ON BY MOSCOW AND PEIPING

(By Constantine Brown)

Arrangements for President Eisenhower to visit South America are more complicated than for his recent trip to Europe and Asia because communism is far more rampant south of the Rio Grande than in Europe or those parts of Asia not under direct Communist rule.
